The Cecilian Society (instituted 1785) performed on Thursday night at the Albion Hall, London-wall, Romberg's "Song of Victory," and Bach's "Mendelssohn's "Elijah" will be given Dec. 4th, and Handel's "Messiah" Dec. 24th. Next Friday, the London Sacred Harmonic Society, under Mr. Surman's direction, will commence their season with Handel's "Belshazzar." Mr. Macfarren's "Charles II." will be produced at the Haymarket Theatre for the re-opening. Jullien will commence his promenade concerts, next Monday, at Drury Lane Theatre, with a stirring programme. Miss Mallie Lind gave her first concert, since her repose at the Niagara Falls, at Buffalo, on the 16th inst.; the proceeds were given to a charity; on the 17th she sang at the Washington-street Church, at her farewell concert in Buffalo, assisted by Salvi, the tenor, Mr. Joseph Burke, violinist, Signor E. Bellchi, the clarionettist, and Herr Goldschmidt, the pianist. Miss Catherine Hayes has given two concerts in Fremont Temple, Boston, with signal success, but, owing to indisposition, was obliged to postpone her third concerts from the 18th to the 21st ult. A serenade was given to h r by the Germanic Musical Society, at the Winthrop House, and Miss Hayes had to address thanks to the multitude, who called for her vociferously.

THE THEATRES.

SURREY.

If critics had not a very vivid recollection of the blame, abuse, and derision which attended the first production of the operas of Rossini, Donizetti, Bellini, and Meyerbeer in this country, it would be a very disheartening task to attempt to write a word in praise of Verdi. The wholesale condemnation which has been passed on all his works brought out on the Ang.-Italian stages has always appeared to us signally unjust; but it is not at all necessary, in defending this much-abused composer, to conceal the manifold vices of his school. The main objection, that his writings are destructive of the voice, concerns the Singer principally. His defective phrases, his jejune melody, his unsonorous artifices, the lack of novelty in the harmonies, and his general meanderings, may all be admitted drawbacks; but, on the other hand, he has a vivid and passionate imagination, a quick perception of dramatic power and combination, and no small knowledge of orchestral painting. His "Ernani" has survived seven years of incessant raising, and has at length reached the English boards, an adjudication having been intrusted to the audiences at Saint Saturnin day night with decided success. Now, this is a curious fact, for we were not a little curious to know in what manner one of our southern and musical y uneducated audiences would confront the hyper-lyric drama, given in its entirety, the score having been so closely adhered to that even the recitatives were retained. Let it be recorded to the high credit of the Surrey auditory, that "Ernani" was listened to with profound attention, only interrupted by the applause, in precisely the same situations in the opera which always exacted the enthusiasm of our more aristocratic amateurs on the side of the Thames. This enthusiasm at the Surrey more strongly confirms the impression that Verdi has been underrated by criticism; for the vitality of "Ernani" is mainly owing to the support of the public, which is always sensible to musical earnestness, if it cares not largely for learned combination. The most ingenious construction, the want of which, qualification has been pronounced to be fatal to "Ernani." Divided as the opera is into four parts, we have never witnessed a more profound attention, only interrupted by the finding that the audience have been much moved, by some pieces in each act. Why the muse o effect must be rejected and anathematized, is quite incomprehensible; and, most assuredly, in "Ernani," a sensation is never wanting for the admirable concerted ensembles

The Surrey execution was on the whole careful, conscientious, and in some portions, more than respectable. Even at the "cheap prices," we think that the management could afford a more liberal outlay in the engaging of the vocal forces. Why cut off the harp, or the lovely duo of the second act, between Elvira and Ernani, so charmingly sung by Miss Romer and Mr. Travers, and rapturously re-demanded; and why, in the second part, not have given the private the exquisite melody in the minor, sung by *Carlo* (Mr. Charles Romer), of half its fine effects and contrast from the harp accompaniments, the subject being given to the lower tones, and the voices sustained by the entire orchestra? The last act quite exceeded the house, so powerfully did Miss Romer, Mr. Travers, and Mr. Bernau—whose picture of the morose, revengeful *Silva* was life-like—act and sing in the well-known trio, in which, with demoniac jealousy, *Silva* inexorably exacts from *Ernani* the performance of the fatal pledge to die.

The part of *Don Carlos*, originally written for a high barytone, is here sustained by a tenor, Mr. Charles Romer; this is not unprecedented; Gardoni having played the part at Her Majesty's Theatre, and Alboni, the contralto, once essayed it at the Royal Italian Opera. Mr. C. Romer has most excellent enunciation and a very good voice, but he has in style, and acting particularly, everything to learn.

OLYMPIC.

Miss Laura Keene appeared in a new character on Monday, that of *Rosalind*, in "As You Like It." In this she gave evidence of her possessing decided comic talent, and the best-conned lady-like manner to this lady in the delivery of the lighter *rôles* or the drama, leaving the stronger to physiques better adapted for forcible demonstrations.

ASTLEY'S.

Some recent differences between the management and the company have led at length to a change of entertainments. The everlasting "Mazeppa" has given place to "Azael; or, the Prodigal of Memphis." The success of this production will ensure its attraction. Mr. Batty has emulated the Opera in the appointments of his drama, which, by the way, we may mention has been manipulated for the stage by Mr. Lacy, from the pen of Mr. Gilbert à Beckett. With these we have solely to do in this transplantation of the story to a transpontine theatre. The spectacle and scenery are indeed magnificent, nor was the acting to be despised. Mr. Batty as the *Jew*, and Mr. Maddocks as the *Prodigal*, are at least respectable representatives of the characters. The principal dancer of the Almées, *Lea*, was effectively represented by Mrs. W. H. Payne, and the last scene introduced the heroine, *Jepchè*, looked and acted the character admirably. The house was crowded.

THE BATEMAN CHILDREN.—We are glad to learn that these *petite* artists have been highly successful in Edinburgh. The *Edinburgh Advertiser*, speaking of their performances of "The Young Couple," describes them as "happy, delighted children, gambolling through private theatricals in their mother's drawing-room. The audience were most enthusiastic; and, as the Young Couple came before the curtain at the close, the pit was a mass of waving hats. Next summer they are to return to America, so that this may be their last, as well as their first, visit to our northern metropolis."

The grand Polish and Hungarian ball and concert at Guildhall will take place on Thursday next, the 13th inst., and promises to be a most magnificent *fête*. The hall will preserve all the splendid fittings used on the Lord Mayor's day; and the floor will be this time covered with cloth, to obviate the inconvenience of the dust arising from the chalk formerly used. Among the list of patrons and patronesses, many of whom will attend, shows the interest of all classes in this praiseworthy object. To vary the attractions of the ball, a very select concert will take place in the council chamber, in which the most accomplished *artistes* have generously proffered their assistance. The concert will be under the direction of Mr. Lindsay Sloper, supported by Mrs. Weiss, Mademoiselle Therese Magner, Miss Amelia Edwards, Miss Rainford, Miss Dolby, Mr. W. H. Harrison, Mr. Benson, Mr. Frank Bodda, and Mr. Weiss. Owing to a positive intimation of the illustrious Hungarian patriot, M. Kossuth, to be present at the ball (for which purpose he has delayed his departure till the 14th instant), the applications for tickets are incessant; and the committee, with regard to the comfort of the visitors, have properly limited their issue.

The *Moniteur de l'Armée* gives the following account of the new French Minister of War:—General Count Randon, who succeeds Marshal St. Arnaud, entered Grammont's company of the *gardes-du-corps* on the 16th December, 1816. After having passed sub-lieutenant in the 49th regiment of the line, he quitted the service for some years, but resumed it in 1831. In 1837 he became captain in the foreign legion, and in 1844 named colonel of the 32nd regiment. Being promoted in 1847 to the rank of major-general, he was named commander-in-chief of the division of Constantine, and in 1851 was appointed to the command of the second division of the army of Paris. General de St. Arnaud has been employed in all the campaigns in Africa since 1837; and the energy and ability he displayed in the late operations against the Kabyles have been justly lauded.

THE GREAT EXHIBITION.

The contrast between the British and Foreign sides of the Transept of the Exhibition Building becomes more and more mark d every day; and to those who remember the same effect in the earlier period of the arrangements this will be a full confirmation of the opinions then expressed, that the men of business were certainly to be found on the British side; and we do not doubt that, were any day fixed for the final clearance of the Building on the Foreign side, our Continental friends would be as far behind as they were on the 1st of May, when the display was inaugurated. Doubtless, as we have before stated, the Customs' restrictions interfere with very rapid movement, but not to the retarding of the process to the extent shown. In fact, in many instances, there does not appear to be a disposition to move at all, and the reluctance to quit the Building is quite as great as the original tardiness in getting into it. The Swiss exhibitors, as also the Tunisians, have nearly cleared their space; and are, as at the outset, honourably in the van of their neighbours. In some instances, where rifts and purchases have been made by learned and scientific societies, the Treasury has remitted the duty. This is the case in some French weights and measures presented to the Society of Arts, as also some anatomical models purchased by medical societies.

The Royal Commissioners appear to be determined to act liberally by all engaged in this magnificent undertaking, and that the surplus, whatever it may be, shall be a real one; and that, as far as possible, every one shall be amply rewarded for the labour and pains they have bestowed on the work. £3700 has been voted to the police force engaged during the Exhibition; and every one will say that they have well earned their gratuity. Mr. Superintendent Pearce, whose anxiety and responsibility have been very great, gets £200 and each of the inspectors £150. The sergeants and men receive each a proportionate share, and 4000 goes to the Police Fund, which, it will be remembered, was commenced by a portion of the £1700 presented to the force by subscription in 1848, for its services during the Chartist agitations of that year. The Royal Sappers and Miners, too, are each to receive a suitable present, as a record of the very useful and efficient services they have rendered during the whole period, but only to the laying out of the general plan of the Building, the measuring off of the spaces allotted to the various exhibitors, but in the constant care and attention they have taken of everything under their charge. The Engineer officers, however, imitating the disinterested act of their commander, Colonel Reid, have declined accepting the remuneration voted to them. However honourable this may be to their sense of duty, it is to be regretted that they should have felt compelled to do this. Many of them have laboured incessantly for nearly twelve months, one of them, Captain Owen, for more than that period; for it is, in connection with Mr. Henman and Mr. Wallis, had the whole question of the allotment of space in hand as early as this time last year. Lieutenant Ward, as secretary to the Jurors, had no sinecure. Captain Grenfell, Lieutenants Drummond, Stopford, and Tyler, had equa responsible though less arduous duties; and in a *corps* where promotion only comes by seniority these gentlemen might indeed claim some indulgence, except that the satisfaction of having assisted so materially to carry out so great a work must be, after all, the best reward to them, though not so substantial an one as they certainly deserve. It is useless now to speak of military arrangements, having assisted in a commercial undertaking, and that the peculiar notions and wants of manufacturers could not be, as they certainly were not, understood by officers whose vocation was so different, and who did not see the importance of many branches of manufacture to the extent which in all probability they now do. It is sufficient that there were those who did, and that these gentlemen did their duty, and, deserving their reward, ought to receive it in some form. The Prince has recognised the services of the whole corps employed in the Exhibition, in an autograph letter addressed to the Master-General of the Ordnance, the Marquis of Anglesey, and we understand that they are all to receive service medals, as also the police employed. These medals are to be of bronze, the same as all the others, although by some strange mistake a notion has got abroad that they are to be of silver.

It is now generally believed that when the Building is perfectly cleared, and the medals are prepared, a ceremonial of distribution will take place, and the leading prize-holders and the principal officers be publicly decorated. Whether such is the case or not, we trust that the process of distributing the medals will not be prolonged beyond the period absolutely necessary for their preparation.

In addition to the recognition of the services of the officers employed on the British side of the Building, a return has been required to be made by the Foreign Commissioners of all persons employed by them in the work of the Exhibition during its progress, and the Royal Commission offer pecuniary acknowledgments to such individuals, which is a graceful act, and one which will make a lasting impression on the minds of those who left distant homes to attend the world's gathering of the works of industry.

The question as to the purchase of the surplus stores with speculative minds. One ardent individual has proposed as its most appropriate investment the gilding of the dome of St. Paul's Cathedral, at a cost of £150,000; another proposal has been made to agree with the Treasury to add that sum to a similar vote by Parliament, and purchase Gore House and its grounds for the erection of a School of Design and Galleries of Manufactures, &c. One of the best and most appropriate claims we have seen is that from the Royal Dublin Society, for a very small share of the surplus, on the ground that the society has for more than a hundred years been engaged in the promotion of arts and manufactures in Ireland; that, since 1839, an Industrial exhibition of manufactures has been held in the building of the Society, which much good has been effected to native industry; and that, as it is intended to continue these exhibitions, and that portion of the society's premises in which the exhibitions are held being now appropriated to the use of the Government School of Design, it is desirable to erect a suitable building upon the grounds belonging to the Society, the cost of which would be about £5000. for this sum a return is made, as being entirely consistent with the purpose to which the Royal Commission pledged itself to devote any surplus which might arise from the Great Exhibition. How far the application may succeed remains to be seen, but the claim for the balance in hand does not to be decided; but it certainly has the advantage over all other claims of being more directly to the point.

We perceive that Mr. Wade, the indefatigable registrar, has issued a very interesting official memorial of the Exhibition, pictorial as well as statistical, showing daily, from the opening to the closing, the number of persons paying at the doors, and at what rate; the amount received; estimated number of persons attending each season ticket; number including staff, exhibitors, and attendants; greatest number of persons in the Building at any one time; and the mean temperature in the Building.

On Thursday evening a thanksgiving meeting was held at Exeter Hall for the purpose of gratefully recognising the Divine hand in the various circumstances which led to the Great Exhibition, in the auspicious manner in which it had terminated, and in the success which had attended the Sabbath services held in that hall. Mr. Samuel Morley took the chair, and stated that the services performed during the summer months had numbered forty-four, and had been conducted by upwards of 130,000 persons of various sects and denominations. On the opening of the Great Exhibition several prognostications of evil had been foretold, but they had not been verified; and it is on that account, that those who had taken an active part in these proceedings had wished to appear on the present occasion to express their fervent gratitude. Several appropriate chapters from the Holy Scriptures were then read; and at intervals during the evening the congregation joined in hymns, and other devotional exercises provided for the occasion.

An excellent portrait of Sir Joseph Paxton has just been drawn on stone from a Daguerréotype by Kilburn; the likeness is admirable.

SALE OF THE COTTINGHAM MUSEUM.

—The sale of this valuable collection—presumed to be the most ample and varied series of examples of medieval architecture ever brought together—commenced on Monday last. The following are the particulars of a few of the more remarkable items disposed of:—The bust of Shakspeare, from the mouth rent at Stratford-on-Avon, was bought by Mr. Lacy, for the museum at the Shakspeare Tavern, York, for £9. The enamelled fire-dogs, once belonging to Sir Thomas Moore, were bought by Mr. Rogers, for £5 0 10s.; as also were the two groups of figures from St. Sebold's Church, Nuremberg, for £8 8s. The carved Saxon cradle, some of the early carvings in wood, and the portrait of Queen Elizabeth, by Holbein, were purchased by Mr. H. Bohn, the bookseller. The ebony table from Nonanch Palace, a unique work, was secured by Mr. Dobbinson, for £18 18s. The Flemish altarscreen, once in possession of Philippe Egalité, after a very spirited competition, passed into the possession of Mr. Woolley, of Campden House, Kensington, at 172 guineas. The chasse, or reliquary of the seventeenth century, was bought by the Rev. Doctor Duncan, the bursar of Magdalen College, Oxford, for £18 2s. 6d. Mr. Henry Bohn also bought a most choice original work in terra-cotta, with the date 1549, and artist's initials on it, the whole richly illuminated in gold and colour, for the sum of £16 5s. The African girl's head, in marble, from Pompeii, an antique gem of first excellence, after an animated contest, was finally knocked down to Mr. Lacey, for the Ame ican Museum, at 14½ guineas. The bust of Wallenstein-place, Pall-mall, bought the next lot, a head of Socrates in marble, brought from Pompeii, for 11 guineas, quite equal as a work of art to the black girl's head—indeed to them rare works of art the national trustees ought to have secured. Mr. Walesby also bought the famed Crosby Hall Council Chamber ceiling, the Chaucer monument, and several other valuable and interesting lots. The auctionary sale was purchased by Mr. Farrell, for the sum of £16 5s. The African girl's head, in marble, from Pompeii, an antique gem of first excellence, after an animated contest, was finally knocked down to Mr. Lacey, for the American Museum, at 14½ guineas. The bust of Wallenstein-place, Pall-mall, bought the next lot, a head of Socrates in marble, brought from Pompeii, for 11 guineas, quite equal as a work of art to the black girl's head—indeed to them rare works of art the national trustees ought to have secured. Mr. Walesby also bought the famed Crosby Hall Council Chamber ceiling, the Chaucer monument, and several other valuable and interesting lots. The auctionary sale was purchased by Mr. Farrell, for the sum of £16 5s. The African girl's head, in marble, from Pompeii, an antique gem of first excellence, after an animated contest, was finally knocked down to Mr. Lacey, for the American Museum, at 14½ guineas. The bust of Wallenstein-place, Pall-mall, bought the next lot, a head of Socrates in marble, brought from Pompeii, for 11 guineas, quite equal as a work of art to the black girl's head—indeed to them rare works of art the national trustees ought to have secured. Mr. Walesby also bought the famed Crosby Hall Council Chamber ceiling, the Chaucer monument, and several other valuable and interesting lots. The auctionary sale was purchased by Mr. Farrell, for the sum of £16 5s.

A letter from Messina, in the *Genoa Gazette*, states that on the 16th ult. the captain of the Sardinian brigantine *Secondo Vittorioso* perceived a vessel without colours steering towards him, and, having ascertained that the crew were the Greek costume, he conceived they might be pirates. Two musket shots being fired, they changed their course, but were again seen on the following day off Cape Spartivento. The captain of the *Vittorioso* immediately gave information to the Neapolitan Government, who, it is said, have despatched a war steamer to give chase to the mysterious vessel.

NAVAL AND MILITARY INTELLIGENCE.

THE ARCTIC COMMITTEE.—The members of this committee continue to hold their sittings, and examine officers of the recent Arctic expeditions. It appears that Captain Sir John Franklin, when parting with an intimate acquaintance at Woolwich on the night previous to the day of his sailing in the *Erebus* for the Arctic regions, said it would be a long time before he would return home, as it was his intention to obey the instructions he had received from the Admiralty as far as possible, but this own impression was that he would obtain a passage up Wellington Channel, and he would leave no means untried to effect a passage up that channel before he returned. The safety of the Admiralty and of Lady Franklin that the search for the missing expedition should have previously been made in the direction of Melville Island was adopted from the best of motives, as in the event of the vessels having been wrecked the most probable place to find any of the survivors would have been in that direction; but having now been ascertained, as the result of the recent expeditions of Captain Austin and Captain Penny, that the *Erebus* and *Terror* have not been wrecked in the direction of Melville Island, the exertion of the officers and men of future expeditions will be to effect a passage up Wellington Channel, as the only direction in which it can now be expected to find or ascertain the fate the long-absent officers and crews of Sir John Franklin's expedition.

VISITORS TO WOOLWICH DOCKYARD.—The following is a return of the number of British and foreign visitors who visited the dockyard, the gun and armour manufactories, and the museum of ordnance, during the month of September, 1851, viz.:—English, in May, 2418; in June, 6147; in July, 17,049; in August, 34,443; in September, 50,983; and in October, 24,625; making a total of 135,663 in those six months. Foreigners, in May, 199; in June, 383; in July, 223; in August, 2414; in September, 3133; and in October, 894; making a total of 9758; and the grand total, including English and foreigners, 145,421. The number of visitors to this dockyard in the months of May, June, and July, 1850, were in May, 1897; in June, 1937; and in July, 2067 English; making a total in three months of 5831, the total of the same months in 1851 being 25,611. The number of foreigners in May, 1850, who visited the dockyard was 23; in June, 27; and in July, 41; making a total of 91, the total number in the same months of 1851 being 3315.

THE BREVET.—It was believed to be in contemplation to postpone the brevet this May next: but it is now understood it has been decided to publish it on Tuesday next. It is confidently expected that it will embrace the following:—Lieut.-General Charles Gold, Scots Fusilier Guards—Major-Gen. Aitchison—Major Lieut.-General; Colonel Chamberlayne to be Major-General, and the Lieut.-Colonels, Majors, and Captains of 1840 will each advance a step. It is hoped the services of the present military secretary at head-quarters will not be lost sight of by promotion. The Duke of Cambridge obtains the command of the cavalry in England.

On Wednesday a Court of Directors was held at the East India House, when Captain Sir Henry J. Locke, R.N., was appointed Superintendent of the Indian Navy.

A good-service pension of 25*s.* per diem is at the disposal of the Commander-in-Chief by the death of Lieut.-General Arthur Lloyd.

Major-General Aguilar assumed the command of Portsmouth garrison and the south-western district during the absence on leave of Major-Gen. Lord Frederick Fitzclarence, on Tuesday.

LAW INTELLIGENCE.

OLMONDAY, which was the first day of Michaelmas Term, the Court of Queen's Bench granted, on the application of Sir F. Thesiger, a rule to show cause why a criminal information should not be filed against James Steel, the printer and sole proprietor of the *Carlisle Journal*, for a libel published on the 15th of August last, on the Earl of Lonsdale, arising out of circumstances connected with the management of the Whitehaven union workhouse; the imputations in the article were denied on oath by Lord Lonsdale.

In the Court of Queen's Bench, on Tuesday, Sir F. Thesiger obtained a rule, calling on Messrs. Hanson and Lambert, the publishers of a pamphlet entitled "Letters on the Present Position of the Catholics of England; addressed to the Brothers of the Oratory; by Dr. Newman; Letter V."—to show cause why a criminal information should not be filed against them for a libel on Dr. Achilli, the minister and preacher of the Italian Protestant Chapel, near Broad-street, Golden-square. Dr. Achilli, in his affidavit, denied the accusation reflecting on his character in the pamphlet, and charged the publishers, Messrs. Hanson and Lambert, it had been in vain tried to fasten on Dr. Newman, in order that the legal proceedings might have been taken against him.

Messrs. Ingham, Williams, Phillimore, Mellor, Warren, Pashley, Bramwell, Hugh Hill, and Mr. Commissioner Hargreaves, took their seats within the bar of the Court of Common Pleas, on Friday, as new Queen's Counsel.

In the Court of Exchequer, sittings at Nisi Prius, before Baron Martin, an action for slander, arising out of the same affair as that to give evidence, was for the first time acted upon, and the plaintiff and defendant were both examined.

At the Bristol District Court of Bankruptcy, on Tuesday, the choice of assignees under the flat against the Newport Old Bank (Monmouthshire) took place, and debts to the amount of £51,000 were proved.

At the request of the Marquis of Salisbury, the Lord Lieutenant, the magistrates of all the hundreds of the 17th inst. at the Session-house, Hertford, to carry out the Act of 14 and 15 Victoria, c. 55, authorising the justices to alter or amend the several sessional divisions of the county of Middlesex, many of which, from their size, are not only inconvenient to the public, but to the local magistrates who attend them.

On Monday, before the Master in Chancery, Sir William Horne, an application was made on behalf of Mr. W. H. Besley, to have his name struck off the list of contributories, in the matter of the Royal British Bank. Counsel for Mr. Besley had been a provisional committeeman of the Direct Exeter and Plymouth Railway, and had acted and attended several meetings in that capacity. The case present for winding-up involved the affairs of numerous joint-stock companies. Originally, Sir W. Horne placed Mr. Besley on the list as liable; but, upon appeal to Vice-Chancellor Knight Bruce, Mr. Besley's name was removed from it. It was then taken before the late Lord Chancellor Cottenham, who directed Mr. Besley's name to be put on again. Ultimately the whole case was reheard before Lord Chancellor Truro, who decided that Mr Besley's name should be struck off. His Honor Sir W. Horne, in striking the name off, expressed his regret at the present anomalous state of the law. To its uncertainty was to be attributed, in a great degree, all the litigation that was going on in analogous matters.

MR. RAMSHAY OF THE LIVERPOOL COUNTY COURT.—OFFICIAL INVESTIGATION.—On Wednesday the inquiry into the conduct of Mr. Ramshay, the judge of the Liverpool County Court, commenced at the court-house, Preston, before the Right Hon. the Earl of Carlisle (the Chancellor of the Duchy of Lancaster), Mr. Elis, Q.C. (the Attorney-General of the Duchy), sitting as assessor. Mr. Danvers (the Clerk of the Duchy) was also in attendance. A considerable number of gentlemen from Liverpool were present, and great interest was manifested in the inquiry. Mr. Monk and Mr. Tindal Atkinson appeared in support of the inquiry; Mr. Sergeant Wilkins, Mr. Cowling, Mr. Owens, and Mr. Pigott appeared on behalf of Mr. Ramshay. The proceedings were opened by Mr. Danvers reading the memorial presented by the inhabitants of Liverpool, signed by upwards of 2000 persons. It complained generally of the conduct of Mr. Ramshay, and, after detailing several instances of misconduct, prayed for the removal of the gentleman from his office. Mr. Monk then opened the case of the promoters of the inquiry, going into the details of Mr. Ramshay's conduct and language generally on the bench, and particularly in the matter of the Messrs. Whitby, of the *Liverpool Journal*, who it was recently before the public. On Thursday Mr. Monk concluded his address, and then called witnesses in support of the charges. Evidence was chiefly directed to prove the accuracy of the reports recently given of Mr. Ramshay's conduct and proceedings. Mr. Monk, in commenting upon this evidence, said it completely proved that the whole conduct of Mr. Ramshay exhibited such irritability and want of temper as to render him unfit to sit on the bench, as was alleged by the memorialists. The liberty of the press and the liberty of the subject were deeply involved in this inquiry; and liberty would exist only in name if the proceedings of Mr. Ramshay could be tolerated. The inquiry is likely to be a protracted one.

FINE ARTS IN HOLLAND.—The King of Holland has just issued a decree dissolving the Royal Netherlands Institute of Science, Letters, and Fine Arts, from the 1st of December next, in accordance with the petition lately addressed to his Majesty to that effect by that body. From the 1st of January, 1852, this institute is to be replaced by a Royal Academy, which will specially devote itself to exact and natural sciences; this body will receive from the state an annual grant of 6000 florins (12,000*l.*). It will be composed of 26 ordinary, 22 extraordinary members, 12 honorary members, will be also 18 foreign members, and an unlimited number of correspondents. The names of foreign members appointed are MM F. Arago, Becquerel, H. K. W. Berghaus, R. Brown, M. Burnas, Dumas, Encke, Faraday, C. F. Gauss, Thomas Horsfield, Baron Alexander de Humboldt, Baron A. de Liedig, Lindenau, H. de Mohl, J. de Oomalius, E. Owen, A. Quetelet, Ramon de la Sagra, E. Tiedemann, and the Duke d'Ursel.

M. Godard made an ascent in his balloon l'Aigle, from the Hippodrome, on Sunday, having with him in the car his brother and three amateurs. Soon after ascending, the balloon was caught in a violent storm, and proceeded towards Vincennes at the rate of more than sixty miles an hour. The wind was so high that M. Godard feared if he descended in the plain his passengers would be thrown out, and therefore resolved to come down in the forest, so that he and his companions might have the advantage of the branches of the trees. He did this successfully, and by the branches they reached the ground safely. The balloon was secured to the trees until assistance could be procured to remove it.

The following extraordinary statement relative to the immigration into Canada is made in the *Toronto Herald*:—"Complaints are loudly preferred by the provincial press of the number of destitute pauper emigrants sent out to Canada by Irish and Scotch landlords. From estates in South Uist and Barra, in the Highlands of Scotland, more than 1100 destitute tenants and cotters have been sent off under the most desolate temptations, they being assured that they would be taken care of immediately on their arrival at Quebec by the emigrant agent, receive a free passage to Upper Canada, where they would be provided with work by the Government agents, and receive grants of land on certain emigrating conditions. 71 of the last cargo of 460 have signed a statement that some of them fled to the mountains when an attempt was made to force them to emigrate."

THE ILLUSTRATED LONDON NEWS.

NATIONAL SPORTS.

The list of racing fixtures is getting "small by degrees and beautifully less," and but two days more will be finished. The meetings to come off are Newcastle-upon-Tyne, on Tuesday next; Hampton, on Wednesday, with a little "go" in the way of steeple chasing; Liverpool, on Thursday and Friday, for flat and steeple racing; Warwick, on the following Tuesday and Wednesday (the first day for the "legitimates," and the second for "across the country"); and Aberystwith, on Thursday. The coursing fixtures for the ensuing week stand as follows:—Kenilworth and Newcastle, on Tuesday; Baldock, on Wednesday; and Swaffham, on Wednesday following.

TATTERSALL'S.

MONDAY.—Owing to the time necessarily occupied in settling, speculation was limited and unimportant, affording only the following brief quotations:—

	EPSOM AUTUMN HANDICAP.		
9 to 2 agst Ishia	7 to 1 agst Stafford	10 to 1 agst Alp (t)	
6 to 1 — Don Pedro	10 to 1 — Bel Demonio (t)	10 to 1 — Castle Gorge (t)	
	DERBY.		
20 to 1 agst Augur	8 to 1 agst Worth Paley	50 to 1 agst Little Harry (t)

	50 to 1 agst Marionilla colt (taken)		

EPSOM RACES.

The Annual Autumn Meeting came off on Tuesday, but owing to the inclement state of the weather there were not above a dozen gentlemen present, and only a section of the ring. The grand stand was more thinly attended than we recollect on any former occasion. The fields for the principal events were large, and speculation moderately brisk; it commenced with—

PADDOCK STAKES of 5 sovs each, with 25 added.—Mr. Carew's Prestige (Bailey), 1. Mr. Magenis's Deceitful (Wells), 2.

BEDDINGTON STAKES of 10 sovs each.—Mr Mcgrath's f by Epirus out of Joanna (Wells), 1. Mr. Massingberd's Kate (J. Mann), 2.

EPSOM AUTUMN HANDICAP of 200 sovs.—Mr. Douglas's Don Pedro (T. Sherwood), 1. Mr. J. Osborne's Achyranthes (J. Osborne), 2.

SELSEY STAKES of 3 sovs each, with 50 added.—Mr. Magenis's Deceitful (Wells), 1. Mr. W. Fry nd, Madamo Wharton (Lowe), 2.

BENTINCK PLATE of 100 sovs.—Mr. Russell's Iantho (Preece), 1. Mr Bedford, Miss Flyaway (Wells), 2.

TWO-YEAR-OLD STAKES of 5 sovs each, with 25 added. Mr. Armstrong's Sabra (Charlton), 1. Mr. Wind.'s Herschel (Treen), 2.

EPSOM STEEPLE CHASES.

These events came off on Wednesday, but, like the racing of the previous day, drew but a thin company. The sport was not of a character to require more than a brief return.

THE WALTON FREE HANDICAP STEEPLE CHASE of 5 sovs each, with 50 added.—Mr. B. Land's The General (Owner), 1. Mr. C. Huggins's Forest Lad (C. Flanagan), 2.

FREE HANDICAP HURDLE RACE of 5 sovs each, with 50 added. Mr. C. Higgins's Mati Monk (Planner), 1. Mr. Mansell's Malmesbury (Horsley), 2.

THE SCRAMBLE STEEPLE-CHASE of 3 sovs each.—Mr. Marsom's Guinare (Archer), 1. Mr. Beaman's Link-Boy (Hill), 2.

THE EPSOM AUTUMN STEEPLE CHASE.—Mr. Carew's The British Yeoman (Oliver), 1. Mr. Anson's Spring Buck (Jones), 2.

TESTIMONIAL.—A massive silver salver has been presented to Mr. Samuel Groves, of London, by the trustees of Parliament-street Chapel, Nottingham, as a testimonial for the very satisfactory manner in which he has completed the erection of their organ.

The overseer of the poor at Colchester was fined in the mitigated penalty of 40*s.* on Saturday last for having forgotten to return the jury list of the parish in time for it to receive the signature of the magistrates.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The growing abundance of unemployed capital, and the narrowing limits of its safe employment, occupy much attention at this moment. Foreign loans are now completely rejected, the absorption in railway securities has nearly reached its limits, while investments in joint-stock enterprises—save for banking or other purposes—have been gradually falling into disfavour, from the ruinous results to shareholders in so many instances within the last few years. These circumstances naturally direct attention to some modification of the laws of partnership, for the treble purpose of facilitating trade, employing capital, and at least limiting the loss that any sleeping partner may be disposed to risk, without, as the law now stands, involving the whole of his property. The subject is, however, too extensive to admit of its being canvassed within the limits of such a paper as this; attention is directed to the subject, as bearing upon the price of the funds as the recent period of Consols will return little more than 3 per cent.; nor does any improvement in the value of money appear probable. The foreign exchanges from the gold-producing countries continue in our favour, and the abundance of money will render the importation of corn (should any be required) a mere trifle in amount. A striking instance of the present difficulty of employing money has been shown during the past week. Notwithstanding the success of the Spanish loan, which

BABY LINEN, of superior work, and CHEAP

Parcels of £5 and upwards forwarded to the Kingdom free of all railway carriage.

SAMPLES, which may be returned, SENT

for inspection, on receipt of a respectable reference or money-order.

LISTS, with PRICES, sent POST-PAID.

FORD'S EUREKA SHIRTS.—"The Great Exhibition has produced a garment we wish had been invented before, and which astonished the world. How many of these will survive for any practical purpose is a question. One thing is certain, if any article of dress can bring half the practical comfort of a good shirt, Mr Ford, of the Strand, has an invention of this kind, which is a most unexpected improvement upon the old plan, and will be a great enjoyment to worth nineteen-twentieths of the marvels of the huge building in Hyde-park."—Atlas.

Ford's Eureka Shirts are not sold by any hosiers or drapers, and can therefore be ordered only at 185, Strand. They are made in two qualities, the first of which is 40s the half dozen, and the second quality 30s the half dozen. The list of prices according as they may be required, and the rules for self-measurement, sent per post free.—RICHARD FORD. 185. Strand

SHIRTS.—PATTERNS of the new coloured SHIRTINGS, in every variety of colour, upwards of 300 different styles, for making FORD'S EUREKA SHIRTS, sent per post, free, on the receipt of six stamps. Price 37s the half dozen.—RICHARD FORD, 185, Strand, London

FORD'S EUREKA SHIRTS and FORD'S EUREKA SHIRT-COLLARS are not sold by any hosiers or drapers, and can therefore be obtained only at 185, Strand. The Collars possess an improved method of fastening, which entirely disperses with the use of strings, tapes, or elastic constructions, adapted to any size, suitable for once or twice round cravats May be had in three different sizes, and deliver rounded or pointed Price 11s 6d per dozen. Two, as sample, sent post free on receipt of 26 postage stamps.—RICHARD FORD, 185, Strand, London.

WALKING, EVENING, and WEDDING DRESSES, FAMILY MOURNING, &c.

KING and CO., SILK-MERCERS, &c., 243, Regent-street, beg to announce that their new Alumes and Winter Silks, Velvets, Shawls, Mantles, &c, are now ready for inspection, and that they will forward PATTERNS of SILKS, &c, POST-FREE, to any part of the United Kingdom or Colonies.

Broaded, Moire Antiques, and Pompadour Silks, Satins, &c, from 39s 6d to 63s the full dress.

At KING'S Silk and Shawl Warehouse, 243, Regent-street

LYONS SILK VELVETS, from £3 10s to £5 15s the full dress.

Long and Square French Cachmere Shawls, from 21s to 45 each

Patterns sent post-free. Address to KING and CO, 243, Regent-street.

SUPERIOR BEDDING and BEDSTEADS, 72, patent German spring and French mattresses, and thoroughly purified feather beds; the largest variety of bedsteads in wood and metals; in London, fitted for public inspection, including all the new patterns just received, and the prices are marked in the plain figures. Good quality feathers, 7½d per lb; grey goose, 11½d per lb; rich grey Canadian, 1s 8d per lb; very fine white goose, 2s per lb; best white Down, 2s 8d per lb. Bedding list sent post free on application Patent iron bedsteads, with dovetail joints, in six sizes; mahogany wash-stands, with marble slabs, 30s each.—DEANE and Co., bedding factory, furniture galleries and show rooms, 56, 58, and 59, Baker-street, Portman-square.

NEW SHOW-ROOMS for BEDSTEADS.—A HEAL and SON have erected some extensive warerooms for the purpose of displaying their description of bedsteads. In one large stand will include every sort manufactured, from the cheap stump, for servants' use, to the handsomely ornamented tubular pillared carriage as well as brass bedsteads of every shape and pattern; and in wooden bedsteads their rooms are sufficiently extensive to allow of their showing a handsomely polished birch and mahogany, of four-post, canopy, and French, and also of japanned bedstead—in fact, to keep in stock every sort of bedstead that is made: and they have also a good assortment of furniture chintzes, damasks, and dimities, so as to render their stock complete for the furnishing of bedsteads as well as bedding. and without attempting to compete with the prices at which the lowest class of furniture is sold, and which is fit for no useful purpose, their new stock will be found to be priced on the same principle by which their bedding trade has during the last thirty years been so successfully extended and the goods, whether of a plain and simple pattern, or of a handsomer and more expensive character, are of well-seasoned materials, sound workmanship, and warranted. Heal and Son's list of bedding, containing full particulars of weights, sizes, and prices of every description of bedding, sent free by post on application to their factory, 196, opposite the chapel, Tottenham-court-road.

NEW MUSIC.

NUNN'S VEGETABLE OIL, 4s. per imperial gallon, gives a clear and brilliant light in every description of lamp, perfectly free from smoke or smell, is not affected by the temperature, neither does it clog nor corrode the lamp, and is recommended as the most cheap and economical oil that can be used. Sold only by Thos. Nunn and Sons, 26 years purveyors to the Hon. Society of Lincoln's-inn, 19, Great James-street, Bedford-row. Delivered to town and country.

ELEGANT TOILET REQUISITES.—ROWLANDS MACASSAR OIL is highly and universally appreciated for preserving and beautifying human tresses ROWLAND'S KALYDOR is a preparation of unparalleled efficacy in improving and beautifying the skin and preventing and REMOVING CUTANEOUS DEFECTS. It is invaluable for its beautifying and preservative effects on the tooth and gums. The patronage of Royalty throughout Europe, and the remarkable constantly increasing demand of their efficacy, afford the best and surest proof of their merits Beware of spurious imitations. The only genuine of each bears the name of "Rowlands" preceding that of the article on the wrapper or label. Sold by them at 20, Hatton-garden, London; and by chemists and perfumers.

Recognised by the Royal College of Surgeons of England, the University of London, and the Apothecaries' Hall of London and Ireland.

COLLEGE OF CHEMISTRY LIVERPOOL, Tuesday, October 14th, 1851.

Messrs. W. and S. Kent and Son, Upton-on-Severn

Dear Sirs,—The cask of French wine vinegar came safely to hand. I have submitted it to analysis and find it to be perfect in pure. I shall only commend those matters which are in all fermented grape juice. It is very much liked in my house, being a most agreeable acid. The remainder of my sending I shall use for culinary purposes on account of the fearful mixture sold here under that name, some of the samples I examined contained upwards of 2% of vitriol, and arsenic.—Yours truly,

SHERIDAN MUSPRATT, F.R.S.E., Dr Phil., &c.

TREASURES of NATURE.—It has been well remarked that there is not an imperfection that is not a step for which a remedy is not at hand, to discover which we have only to search the vast laboratory of nature. A more apt illustration can scarcely be given than in the application of a natural production, of American growth, namely, the Balm of Columbia, in cases where the human body has been deprived of its becoming and natural ornament As a promoter of growth, strengthener, and restorer of the human hair the BALM of COLUMBIA is unrivalled, and even in cases of baldness its virtues are inestimable. 3s 6d 6s, and 11s per bottle no other prices Ask for Gutridge's Balm, and never be persuaded to use any other article as a substitute.—13, Wellington-street North, seven doors to either the Strand

THE ILLUSTRATED LONDON NEWS.

SUPPLEMENT.

VOL. XIX.] FOR THE WEEK ENDING SATURDAY, NOVEMBER 8, 1851. [GRATIS.

THE GREAT EXHIBITION.

THE GREAT EXHIBITION AWARDS.

(SECOND NOTICE.)

THE outcry, both on the part of the Exhibitors and the public, against the awards of the juries continues unabated: it may be said to be universal. By one consent it seems to be agreed that, as respects the only authentic and useful result for future reference or guidance of which such a congress of intelligence was susceptible, the Great Exhibition of 1851 has been a nonentity, and all owing to the inefficient manner in which those intrusted with the responsible duty of deciding upon the merits of competitors got through—we will not say performed—their task. In ridicule and disappointment, and angry contention and bickering and ill-feeling, therefore, ends the great enterprise which, two years ago, was so well begun.

Meanwhile, the Commissioners, Executive Committee, and others—so glad to get the thing over anyhow, and too agreeably occupied in counting up their gains and complimenting one another, not only with 'honourable mention," but slices of "solid pudding"—turn a deaf ear to all rebuke, all appeals for a revision of particular awards; and, when their prize medal is indignantly refused, complacently pocket it. In this, perhaps, they are wise, for the matter is past remedy at their hands.

But with the journalist the case is different; indeed it becomes with him a duty the more paramount, and in itself the more interesting, to correct the errors and supply the deficiencies of others, in respect to acknowledged or ascertainable results. It becomes his duty, also, to investigate the causes of a failure which has led to so much disappointment, in order that upon any future occasion this important feature, inherent in Industrial Expositions, may be more efficiently provided for.

The grand secret of all the blundering appears to be reducible to this—that the juries, severally, did not know what they were about, and that they were regulated in their proceedings by instructions," framed by the Council of Chairmen, which nobody could possibly understand, being probably studiously framed in such ambiguous terms as to leave them open to the widest latitude of discretionary interpretation. So much for the principles upon which prizes were to be awarded. In practice, the several juries were absurdly hampered by being lumped into groups, composed of juries upon other distinct branches of art or industry; the consequence of which was that an award upon a pianoforte, or an ingenious piece of horological mechanism, after receiving the fiat of the musical or horological jury, or sub-jury, respectively, had to run the gauntlet through a miscellaneous "group" of juries, representing railway carriages, naval architecture, manufacturing machines, civil engineering, and architectural contrivances, agricultural machines and implements, surgical instruments, &c.; and so *vice versâ* with awards upon any article in any one of those departments which had to receive the assent of the musical instruments and clock machinery juries before they became final.

The award of the Council Medal was subject to the ordeal of a third and a still more mixed tribunal, namely, "the Council of Chairmen," consisting of the chairmen of the thirty juries. And as these awards were to be given for excellence in the highest degree, in products of all kinds, upon the representations of the respective juries, it followed that justly to award these distinctions preconceived the idea that all the chairmen of the thirty juries were men of such high and universal attainment that every branch of production, natural and industrial, in its most perfect manifestations, was familiar to them. T is is an amount of attainment, a grasp of mind, and an infallibility of Judgment which the jurors of several classes, and the candidates whose interests were in their hands, seem not disposed to admit. The case of Messrs. Broadwood, the pianoforte-makers, has already led to a protest, which we printed a fortnight ago, wherein the subscribing jurors, Sir H. Bishop, Dr. Schafhauth, the Chevalier Neukomm, Mr. Sterndale Bennett, Mr. Cipriani Potter, and Sir G. Smart, aver that

In this case, a decision which was arrived at after due deliberation by the Jury Class 10a, specially qualified and selected in consequence of technical knowledge of the objects to be submitted to its judgment, and which received subsequent confirmation from the group of associated juries, *has been set aside by a body of gentlemen, who, distinguished as they are for their general attainments, may have no special and technical knowledge of pianofortes and pianoforte-making*, nor have they, in their capacity of chairmen (except the chairman of C—, 10a, whose opinion and statements ought to have had due weight), *even inspected, or been called upon to become acquainted with, the instruments upon which the award which they rejected was made.*

But the injustice in the pianoforte award has not been confined to Council of Chairmen appear to be in fault. Messrs. Collards were also awarded a council medal by the musical instruments jury, in common with Messrs. Erard, and Messrs. Broadwood; but of these three the "group" jury, who—lost amidst railway carriages, machinery for direct use, architectural contrivances, surgical instruments, &c.—knew nothing of pianoforte mechanism, knocked off one, and the Council of Chairmen knocked off another, so that, of three recommended to equal honour, Messrs. Erard were left "alone in their glory."

In respect to the awards in another branch of the same group (that of Scientific Instruments), Mr. Pritchard has published the following protest, addressed to the "Late Council of Chairmen at the Great Exhibition";—

Gentlemen,—I beg to bring before your notice, and through you before that of the public, the following statement of facts, which may be substantiated by a reference to documents hereafter to be published:

A jury, comprising among them some of the most illustrious philosophers in Europe, such as Sir John Herschel and Sir David Brewster, associated, moreover, with other men of great eminence and undoubted competence, such as Mr. Glaisher (of the Royal Observatory, Greenwich), M. Mathieu (of the Paris Observatory), Professor Miller (of Cambridge), and others, reported to you, as their *unanimous* decision, that the astronomical instruments exhibited by Messrs. Troughton and Simms merited the highest award it was in their power to confer.

This *unanimous* decision of these most eminent men—in a matter, be it observed, wherein they, beyond almost all other men, were most competent to decide—you thought fit to set at nought.

Thereupon followed an expostulation from the reporter of the jury, sanctioned by Sir John Herschel and Sir David Brewster, wherein those great men told you that "Mr. Simms's exhibition of astronomical instruments is not only the finest in the Exhibition, but there are more important inventions in their construction than in all the other exhibited astronomical instruments put together."

Still you refused to award the council medal, though in at least two other instances you did award it for astronomical apparatus. That is to say, you, who, whatever may be your eminence in other respects, are no astronomers, set aside the verdict of a Herschel and other eminent astronomers in the matter of astronomical instruments.

In [illegible] tion and admirable execution displayed [illegible] no real injury; but through your verdict, you have substantially injured them in the eyes of that far greater multitude, who, though quite competent to purchase, are not able fully to appreciate the real merit of astronomical instruments.

I believe I am not altogether without some claim upon your attention—firstly, because every man has a natural right, and in this free country a natural tendency, to express his disapprobation of injustice; and secondly, because, perhaps, the most important of these beautiful instruments was, to my great inconvenience, removed from my observatory, for the purpose of the Exhibition.

I am, gentlemen, your faithful servant,

Clapham. CHARLES PRITCHARD, M.A., F.R.S., F.R.S.A., &c.

Still in the same group we find the Horological Jury not going exactly like clockwork. We will not go into the wrongs of the various repudiators of proffered medals and honourable mentions; we will confine ourselves to quoting one passage from a report of a committee of watch clock, and chronometer makers, at a meeting held some days ago, which imputes something more than error of judgment in the proceedings of the Council of Chairmen:—

The committee had received additional communications from members of the jury and others, which proved to their minds, beyond the possibility of even a doubt, that *the functions of the jury had been entirely usurped by one of their body*, and such evidence had been given to the committee as convinced them that the Juror who made the award *had actually superintended the construction of the instrument for which he had given the council medal.* The secretary then read a letter from Sir John Herschel, in which that honourable baronet stated that he did not consider himself in any way responsible for the horological award. Also, a letter from Professor Potter, another of the jurors, stating that the *proceedings on which the horological award had been given were quite irregular.*

Now, it happens that, in respect of this very Class X., council medals have been more lavishly disposed of than in any other; amounting, as they do, in all, to 43 out of the 170—more than a quarter of the whole; and, amongst other matters which are rewarded with this high distinction, we find such entries as the following:—Count E. Dunin, "For the extraordinary application of mechanism to his expanding figure of a man" (many of our readers recollect this huge toy, which was a laughing-stock to all beholders, being positively useless, except as a tailor's "dummy"). Of contributions from France and Algiers, one has a council medal "for good telescopes, the object glass being of rock crystal;" another, "for the goodness of the work of his theodolites and divided metre;" a third, for "a platina alembic, to hold 250 pints, all in one piece, without solder, seam, &c.;" a fourth, "for his application of the pneumatic lever to a church organ;" a fifth, for "a clock with a continuous motion, for driving telescopes, and for his collection of turret clocks—displaying great fertility of invention;" a worthy Dutchman has a council medal in the same class "for the excellence of the magnets shown by him." Several have first-class awards for Talbotypes, photographs, &c., but there is not a single council medal awarded for a chronometer, an important branch of mechanism, in which it is well known English makers have long been held unrivalled throughout the world.

It is not in reason—it is not in dullness, to attribute all this to stupidity. We are afraid that the imputation of unfair dealing boldly averred by the committee of watchmakers is but too well founded, as characterising not only the award in question, but many others which seem so palpably at variance with the real merits of the case. We all know how a great majority of members of committees, and other

WOOD CARVING.—STUDIO OF MESSRS. COOKES, WARWICK.—(SEE NEXT PAGE.)

deliberative bodies, having no very strong convictions of their own, are apt to be swayed and influenced by the busy few who make a trade of their little brief authority; and we can easily understand how the machinery of a *clique* acting first in the juries, then amongst the "groups," and, lastly, upon the Council of Chairmen, should have eventuated in a systematic jobbing in awards intended as honourable distinctions, but which, under the circumstances, must be considered utterly valueless in any other light than as the groundwork of a "puff." And in the pursuit of this one common object, no sense of shame or delicacy restrained the zeal of the members of the *clique*, whenever an opportunity offered of carrying their point. To recur to the pianoforte case, we have reason to believe that to the accidental absence of Lord Canning from the Council of Chairmen, which placed a distinguished foreigner in the chair, we have to attribute the refusal of the council medal to Messrs. Broadwood, and its being granted to M. Erard; *both* having been recommended for that honour by the "courts below." There is something very significant, as bearing upon this point, in a passage in Lord Canning's address, wherein, after explaining (?) the intended object of the distinction (without a difference) between the prize medal and the council medal, as defined by the Council of Chairmen, and approved by the Commissioners, he says:—"Its application, however, was not without difficulties, *especially as regarded the foreign jurors.* Many of these had taken part in the National Exhibitions of France and Germany; and to them the distinctive character of the medals, and the avoidance of all recognition of degrees of merit between the recipients of prizes, were novel principles, and at variance with their experience; inasmuch as one of the chief purposes of the National Exhibitions on the Continent has been *to distinguish the various degrees of success attained by rival exhibitors.*"

No doubt about it. The foreign competitors "meant business," and the foreign jurors entered into their views; not intentionally in an unfair spirit perhaps, but still in a spirit of rivalry, as between producers of different nations. And, unfortunately, the arrangements of the juries already commented upon, and the reasons given for those arrangements, foresaw, if not courted, this sort of feeling. "Again, quoting Lord Canning's address, we find that he thus explains the object of subjecting decisions of particular juries to revision in groups:—"The chief object of this provision was, that none of the many foreign nations taking part in the Exhibition should incur the *risk of seeing its interests overlooked or neglected from the accident (an unavoidable one in many instances) of its being unrepresented in any particular jury.*"

Before we read this we had always considered that the "interests" of industry were common; at least, we fancied that it was in this spirit that the late great international gathering was projected. And, whatever may be the case of a certain class of "interests," which are not always held subservient to truth, we had always considered, and would still maintain, that the language of science is a common tongue, the achievements of industry, the revelations of discovery, patent to all, appreciable by all having comprehension for such matters; and with these convictions, therefore, we hold that to subject the awards of particular juries to revision by groups of juries, the members of which must be more or less unacquainted with the scientific and technical questions involved, was unwise in itself, and rendered still more repugnant to the feelings of the jurors themselves by the explanation about "interests" volunteered by the noble President of the Council of Chairmen. As to the Council of Chairmen itself—that was as much more ridiculous a contrivance than the group scheme, as 30 is to 6 or 4.

In the present article we have pursued—and, as we think, pursued to the end—the obvious errors of contrivance involved in the whole scheme of juries, groups of juries, and council of chairmen, as distinct jurisdictions; we have also pointed out some errors of principal, and some particular cases of grievance immediately deducible from those prime vices in the organisation of the constituted authorities. In our next we shall proceed to examine some of the awards affecting important branches of production, in which we consider that the general interests of science and sound commercial policy have been sacrificed to chance, caprice, or adverse influences. We have no predilection for the task we have thus entered upon; we undertake it from a sense of duty in a cause which we have already laboured not unworthily, we trust, to promote, and in the hope of doing justice to the public interests and to private deserts, before the only tribunal which now remains available for the purpose —namely, that of public opinion.

WOOD CARVING.

AMONGST the decorative arts, Wood Carving has a distinct and legitimate position, and, confined within due limits, is always effective. Nevertheless, its province is a restricted one; it should be viewed purely as an appliance for the ornamentation of the material when applied to a useful purpose, and not as a work of art *per se*. Another restriction should be put upon the fancy of the operator; namely, that the object decorated be one proper for decoration, that it be decorated with appropriate device, and that the devices be not in excess as to character, nor in dimensions, so as to risk being injured themselves, or inconveniencing those who are to use the articles to which they are applied. All attempts to confound wood carving with sculpture we utterly denounce; and for the simple reason, that the material is not worthy of a work of the highest art, and that its colour is more inappropriate to represent the human frame than white marble; whilst it is also less susceptible of fashioning into the round and smooth surfaces than that material. Let any one doubt this assertion, and then call to mind that most objectionable representation of the Crucifixion which occupied a prominent place in the Fine Art Court, or the figure-head of her Majesty close at hand, or the figures (and especially the faces) in that very magnificent production the Kenilworth buffet, or the human lineaments in any other work of wood carving in the Exhibition, and compare their relative truthfulness of effect as to contour and colour with that of other objects, such as flowers, foliage, and fancy devices, and they will at once admit the force of the principle that we now contend for.

The two principal contributors in this department are W. G. Rogers, of Carlisle-street, Soho; and T. Wallis, of Louth: and their works, which were placed in juxtaposition on the same wall, have been daily visited by crowds of eager gazers, who warmly contested their respective merits. Until the appearance of Mr. Wallis in the field, Mr. Rogers had enjoyed the reputation of being not only first, but almost without a rival, in this interesting branch of art; and, although the Lincolnshire carver now certainly treads pretty closely upon his heels, we must, after a very careful examination of their respective performances, still give the metropolitan artist the preference. We do so in consideration of the greater number and variety of the works exhibited by him, and of the greater success which he has achieved in the application of the art to legitimate decorative purposes. In this he seems to have studied the examples of Gibbons, by far the greatest carver of wood that ever existed, and who, whilst he possessed a wonderful fertility of fancy and facility of execution, knew exactly where to apply them with advantage and propriety. It would be impossible to enumerate all the little beauties of device lavished by Mr. Rogers in the various works—sixty-one in number—which he exhibited: we must restrict our attention to one or two of the larger ones, in the production of which he appears to have taxed his resources to the utmost. No. 61 is a Royal trophy, carved in lime tree, upon a gold frame, 5 feet by 4 feet, and projecting 1 foot 2 inches. It is intended to represent the Crown as the chief power, the source of all titles and dignities—the patron and promoter of the arts and sciences, field sports, &c. The centre group is composed of musical instruments, scrolls, books, palettes, pencils, coronets, sceptres, helms, swords, and other in ignia, bound together by a rich drapery of Spanish point lace, which stands out in remarkably bold relief. In the lower part are medallion portraits, including those of the Queen, Louis Philippe, &c. Around the whole is a border, composed of groups of game, fruit, flowers, fish, and shells No 8, a trophy emblematical of "Folly," is also worthy of distinct notice, introducing a skull crowned with a garland of oak leaves, a group of musical instruments, the wings of Time, &c. No 2 is a large mirror frame, 11 feet high by 9 wide, composed of English flowers and fruits, with various insects revelling amongst them in the style of Gibbons, but including many flowers never introduced by him in his works. The carved box-wood cradle, by the same artist, exhibited by her Majesty, must not be passed unnoticed, although we by no means participate in the wild admiration which it has excited amongst the numerless mothers and daughters of England, who have gazed enviously at it. The shape itself is not elegant, being heavy, and more like a sarcophagus than a cradle; and the decoration, though doubtless appropriate as "symbolising the union of the Royal house of England with that of Saxe-Coburg and Gotha," is neither picturesque nor interesting in a general point of view, whilst the execution, though exquisitely neat, is perhaps a *tant soit peu* tame.

Mr. Wallis has some wonderful productions, though, as already observed, fewer in number and less varied in character. He has worked, perhaps, with more the spirit of an artist than Mr. Rogers, and has aimed almost exclusively at the accurate embodiment of beautiful objects of nature—such as birds, foliage, flowers, insects, &c., but without regard to conventionalities of forms or adjunct. Nothing can equal the downy softness of his dead game, producing, but for the colour, the effect of perfect illusion; nothing can be more exquisite than the delicate articulation of his foliage, copied, as he states, from nature: not even Mr. Rogers can surpass him in the delicacy of handling which he has displayed in the production of the minutest objects, and in the boldest efforts of under-cutting; but his works are more to be admired for their individual beauties than for their applicability to decorative purposes. Mr. Wallis's principal effort is a group of flowers, &c., emblematical of spring, carved in a solid piece of lime tree, about 2 or 2½ feet high, by 1½ wide, and projecting 1 foot or more. Spring is allegorically represented by the grape buds and apple blossoms; and in this space we have no less than 1060 buds and 47 varieties. Here we see the blue-cap titmouse picking insects out of an apple blossom; there another taking food to its young, which are partially concealed in their nest; in a third, caterpillars dragging their slow length along. A shepherd's crook and lamb's head are added, symbolical of the season. The whole of this work has been copied from nature, and executed expressly for the Great Exhibition.

Amongst the other contributions in this line on the British side of the Building we find several who deal in small conceits, more or less creditable in execution, but with little of a useful character, even as matters of decoration, to recommend them. Richard Fuller, a self-taught artist, of Farnham, has a village cherry-making, somewhat roughly handled. G. Cook has a piece of carving in lime tree, "Virtue surmounts all obstacles;" another of Alexander attacking the Persians, and another of the Duke of Wellington at the Battle of Waterloo—the last two after engravings which may be bought for a few shillings, and which are much more effective than these laboured copies. Perry, of Taunton, another self-taught artist, who states that he did a great part of the carving in the Royal cradle, has a small "Crucifixion," carved out of a solid piece of wood, embellished with various allegorical devices, in diminutive size, illustrative of the Great Exhibition; but here, again, is labour comparatively thrown away, by reason of the nature of the material. Mr. Field exhibits a specimen of wood carving of about the middle of last century, by Demontreuil a childish composition, with bird's nest, &c. Arthur Harvey, of Penzance, has several small subjects in boxwood, as the "Equestrian Statue of Peter the Great," the "Labocon," wild sports of the East, "Attack of the Lion," which are executed in a hard manner. R. Pullen, of Farnham, has also some *pièces de genre*, attempted in the same material with moderate success. J. Gordon, of Bristol, has several subjects, including a "Vase from the Antique," and a "Belisarius," in boxwood, the last named executed with great finish and delicacy.

From Ireland we have several productions in carved furniture, and ornamental works, executed in Irish bog yew, and exhibited by Mr. Jones of Dublin, the execution of which, barring a little crudeness, is generally creditable. Some of these we have engraved.

From Scotland we have very little in this line. We remarked, however, in the Fine Art Court, a pier-table and mirror in carved wood, "with a design representing the seasons, Peace, War, Commerce, Navigation, Science, Art, and the progress of civilisation," wrought in a wood of a very coarse grain, in a barbarously clumsy style. Jersey sends an oak sideboard, with a representation of King John signing Magna Charta in figures nearly two feet high—rather stiff in character, but not badly executed. Mixed up with this class of wares is a "God save the Queen," in worsted work, by Mr. Thompson: all, doubtless, cut out of his own head! In short, there is no end to the ingenuity of the whittlers of wood, as Brother Jonathan would call them.

In the above observations upon wood carving, we have considered it in the light of an art, entitled to rank, according to its degree, with the other "arts of design." Of late years, however, the manufacturing spirit of the age has prompted several very ingenious individuals to attempt wood carving by machinery, and, what is worse still, imitations of wood carving in various materials, as leather, *papier mache*, *carton pierre*, gutta percha, &c. We have already had to denounce such trash against these presentments: they are impostors. They pretend to be what they are not; they look something like the real thing at a distance, and mock our credulity. When we come to examine them close, we find them wanting in all that bargaining and flow of outline, all that variety of conceit in repetitions of similar objects, which distinguish the hand of the inventor and producer, and the labour which is loved for itself. For vulgar, clumsy-sighted people, these imitative works of art may do very well as substitutes; and all the punishment we might wish them for their bad taste would be, that they may never have anything better to look at, nor the capacity to appreciate anything better, but that, as by such exhibitions they inflict a positive nuisance and expense upon those who have occasion to come near them in their villas *ornées* and Cockney *boudoirs*, they are entitled to some signal penalty for the sake of public justice and public example. Wallis, however, the commonwealth of taste are devising the proper mode of punishment, we must only hope that no squeamish delicacy will prevent individuals from pointing "the slow unerring finger of scorn" at all such efforts of spurious adornment, whenever they are thrust in their way, just as they would denounce a mosaic chain, a paste diamond pin, or a pinchbeck bracelet, which was attempted to be palmed off upon them as jewellery. Independently of this falsity in appearance, which applies to all the above "manufactured products," there is about gutta percha, *papier mache*, &c., another falsity much more to be deprecated in an utilitarian point of view: "breach of promise" of service: as any man may find out to his cost who subjects them to ordinary wear and tear for a twelvemonth. We have met with these castings in paper and gutta percha on sea and land, in steam-boat and tavern parlour, and we have scarcely ever met an instance where some member of the family group had not been torn or shaken from his allegiance by the force of circumstance.

With respect to the applications of carving, as decorations of articles of furniture, we have already spoken in the case of several examples, both of British and foreign make, which we have illustrated from time time. It may be proper, however, to add a few general observations upon this branch of the subject.

The exhibiting artists, both British and foreign, with few exceptions, show great skill of handicraft, great inventiveness, and a determination to spare neither labour nor expense in the production of works which they fondly consider will be admired for the amount of decoration lavished upon them. In aiming at striking effects, however, they have very often gone into an undue excess of ornamentation; and, in not a few instances, in the choice of decorative devices, have lost sight of what would be appropriate in that light. Accordingly, we have high art—or what assumes to be such—playing second fiddle to the cabinet-maker; and poetry—poetry run mad sometimes—decorating the footboard of a bedstead, the leg and back of a sideboard, the various limbs of an arm-chair, &c.; the conformableness of which to their several useful purposes is absolutely impaired by the obtrusiveness of these devices, which break that smoothness of outline so essential to comfort in contact, and to pleasurable contemplation in the mind's eye. All this is wrong. The decoration of the material of a work of utility should be a secondary consideration—beauty and convenience of form the primary; above all, lightness of appearance, combined with actual strength of structure, which can never exist in perfection, when a single square inch of wood projects beyond the necessary sweep of the outline, however highly and ingeniously it may be carved. Our upholsterers would do well to consult the exquisite models of carved furniture from India and from China, in which the true principle is adhered to—where all is elaborate in beauty, but in the centre, from the bottom upwards to a distance of five spans, so as to form the legs of tronser; and let the whole be sewed entirely round, leaving no opening at the hands or feet. Instead of a collar, a friar's cowl, or capuccino, to be cut out, which will fall to the face like a nightcap, and to be used close under the chin by two tapes. This hood is to be attached to the dress by sewing it round the neck; as it will be a very loose fit, the seam must be lined by a tape, so as to admit a running riband. On each side of the opening in front, a plain frill of four inches wide, *without any fulness*, is to be sewed from top to bottom, and three pair of narrow tapes, for tying, to be fixed at regular distances close to the setting on, and on each side of the frill.

Having put on the dress, tie the hood under the chin, draw the riband round the neck as close as may be considered convenient, and, if the traveller should be unable to do it himself, let his valet *roll up the frill lengthways*, and slightly tie the three pair of tapes. He may then lie down and defy the encroachments of the most numerous insects.

Some articles of furniture, we have already spoken in the case of several examples, both of British and foreign make, which we have illustrated from time time. It may be proper, however, to add a few general observations upon this branch of the subject.

The exhibiting artists, both British and foreign, with few exceptions, show great skill of handicraft, great inventiveness, and a determination to spare neither labour nor expense in the production of works which they fondly consider will be admired for the amount of decoration lavished upon them. He may then lie down and defy the encroachments of the most numerous insects.

Some

TOYS.

Toys are a comprehensive subject. The toys in the Crystal Palace might strictly be made to include at least one-fourth of the whole collection from the Koh-i-Noor and other diamonds—the toys of Princes—to the farthing rattle, the cradle-music of the babe. But, happily, our labours are not of this herculean description, as we have restricted ourselves in this article to those toys alone which, properly speaking, belong to the amusements of children.

It has been remarked that *play* and *work*, amusement and instruction, *toys* and *tasks*, are invariably, but most unjustifiably, employed as words of contrast and opposition; an error which has arisen from the indefinite ideas which we attach to such words. If the degree of mental exertion be said to constitute the difference between *play* or *work*, the definition would be violated in the first illustration; for when do boys exert so much thought as in carrying into effect their holiday schemes? The human mind is ever gratified by the acquisition of information; every occupation soon cloys, unless it be seasoned by this stimulant. Is not the child idle and miserable in a nursery full of playthings? and what expedient does he instinctively fly to relieve his *ennui*. Why, he breaks his toys to pieces, as Miss Edgeworth justly observes, not from the love of mischief, but from the hatred of idleness, or rather from an innate thirst after knowledge; and he becomes, as it were, an enterprising adventurer, and opens for himself a new source of pleasure and amusement in exploring the mechanism of their several parts. And how would the learned man unbend his mind to the perceptions of youth? The three grand laws of motion can be demonstrated by a game at ball, while the composition and resolution of forces may be beautifully exemplified by a game at marbles. The author of "Philosophy in Sport" enumerates the various philosophical principles which are involved in the operation of the several more popular toys and sports. The ball will illustrate the nature and phenomena of elasticity as it leaps from the ground; of rotatory motion while it runs along its surface; of reflected motion, and of the angles of incidence and reflection as it rebounds from the wall; and of projectiles as it is whirled through the air: at the same time, the cricket bat may serve to explain the centre of percussion. How many laws in practical philosophy may not a marble serve to illustrate, and by their familiarity impress them indelibly upon the mind. Take one, and press your fore-finger strongly upon it, it springs forward a short distance and comes rolling back again. Here are two motions given to the marble—the one impulse which send it forward, the other which gives it a rotatory motion round its axis, which comes into action after it has lost the first, and back the marble rolls into the hand. The same thing is done with a hoop. Impel it forward with force, and at the same time giving it a spinning motion, and it flies away a pace or two, but so soon as it touches the ground it revolves back in an opposite direction, and returns to the hand that cast it forth. Jack-in-the-box will serve to elucidate the nature of natural springs, assisted by the numerous leaping frogs and cats with which the nursery abounds. The various balancing toys elucidate the nature of the *centre of gravity*, *point of suspension*, and *line of direction*; the see-saw, rocking-horse, and the operation of walking on stilts, come in aid of such explanations. The combined effects of momentum, and a change in the centre of gravity of a body, may be beautifully exemplified by the action of the Chinese tumblers. The game of cup and ball proves the influence of rotatory motion in steadying the rectilinear path of a spherical body, whence the theory of a rifle gun may be deduced.

The common leather sucker, which by being wetted and closely pressed upon a stone, raises it even if it be of heavy weight, exemplifies the nature of a vacuum; and even the immense pressure of the air thereon causes the leather to adhere to the stone. Limpets have this power of converging themselves into suckers; and the claws of the polypus are provided with arrangements of a similar description, by which they draw towards them, and hold firmly, any prey within their influence. The feet of flies, by which they can walk with security upon glass, and other very smooth surfaces, are similarly provided. The well-known pop-gun, formed of a piece of elder-wood, with the pith extracted, and by which pellets of chewed brown paper are projected with great force, shows the expansive nature of the air, while it illustrates the principle of the air-gun and air-pump. Will those, who, well acquainted with the simple principles of astronomy, thoughtlessly scoff at toys, say, when they learn that the gyrations of the top depend upon the same principles as the precession of the equinoxes? How much, then, depends upon the first impressions of youth. While the parent is anxious, and the youth is eagerly looking around for the means of storing the young mind with the most useful of knowledge, lo! the practical illustrations of the profoundest truths of science and philosophy are already endeared objects in the possession of the pupil. Coleridge's metaphor upon the juvenile mind of the present century will equally apply to the best class of toys—they may be truly said to represent a collection of mirrors set in the same frame, each having its own focus of knowledge, yet all capable of converging to one point.

The sling teaches the youngster, while whirling it around his head, the *centripetal* motion; while the act of discharging the stone, when this action is at its highest, imparts a knowledge of *centrifugal force*—the projected body flying off from the centre. The passage of the missile through the air, in which the gravity causes it to form a curve, illustrates the theory of *bola*. There are many pleasing experiments which serve to show the reason why the stone does not fall out of the string while being whirled about. A tumbler of water, for instance, may be placed in the bottom and inner rim of a flat hoop, and, if dexterously swung around the head, not a drop of water will escape, and the glass will remain in the position in which it was placed. The trundling of a mop is another familiar example of this fact: the fibres of the rags fly off from the centre, but, being secured to the stick, they cannot escape, while the moisture it contained is effectually thrown off at a tangent. The centrifugal drying-machines at our large bleaching and calico-printing establishments; the apparatus for drying the blankets at the Bank of England, between which the damp bank-notes are pressed, are upon this principle; and the recent invention for separating the sugar from molasses is somewhat similarly constructed, as is likewise that for the rapid cooling of brewer's wort. It may be here mentioned, that the children of the ancient natives of the Balearic Islands were so expert at the sling, that they were allowed no food by their parents but that which they could knock down by this means from a high post, upon which it was purposely placed.

The kite, that favourite toy of Newton in his boyish days, at once developes the composition and resolution of forces, and explains many subordinate principles. The form commonly adopted for it is the best. The curvature of the bow assists it to avoid the resistance of the air as it rises, which, after having struck it, slides off just as the current is more effectually turned aside by the gently curved prow, than by that which has a sharp outline; for the same reason, the mast of a ship, though it has a conical shape, is more easily drawn through the water with its broad than with its narrow end foremost; for although the primary obstruction is no doubt greater in the former case, yet the water, escaped as it were on the front, is made to stream off with a right divergency, and, therefore, does not hang on the sides of the mast as it would in the latter case. This shape of the kite, moreover, presents the largest surface at the point upon which the wind can act with the greatest effect, while the centre is lightened by the removal of parts that would obstruct its action. The tail has also a greater control over a figure of such a description. It is supposed that we are indebted for the invention of the kite to the Chinese, in which country the pastime is of very ancient date. They make a second to unmeasurable heights, and by means of round holes supplied with vibrating cords cause them to produce a loud humming noise like that of the top. The ninth day of the ninth month is a holiday especially devoted by them to this national pastime, on which day numbers may be seen repairing to the hills for the purpose. Strutt alludes to the kite, but he traces its introduction only 150 years back from his own time. In a French and English dictionary, by Miege, 1690, the kite is given as *cerf volant*, or flying stag; but why thus called we have no means of ascertaining, although in this toy has been one of various shapes. There are many very interesting inquiries which the kite and its flight naturally suggest, but it must be obvious that our space is far too limited to enter into philosophical induction to any extent upon the subjects under notice. We must add, however, that it was by means of the kite that Dr. Franklin was enabled to demonstrate the identity of electricity and the cause of lightning, and thus to disclose one of the most awful mysteries of nature. And how much of philosophical enquiry does not the healthful game of battledoor and shuttlecock suggest. A learned physician speaks of that pastime as a most invigorating one, being admirably calculated for females; expanding the chest while it creates a graceful pliancy of limbs, and muscular exercise being gained without compromising gracefulness. Can any one call forth the agreeable sounds of the Jew's harp, or, as it is supposed to have been originally called, the jaws harp, without being awakened to a whole train of agreeable associations, involving the desire to know more of the science of acoustics and the mysterious sympathy of harmonious vibrations. Is not a child eager to know why the pea is inserted in the whistle, and does an inquiring mind rest satisfied when told that it was to agitate and break the current of air, and thus to produce a succession of quick vibrations, upon which the acuteness of its sound depended. And how admirably have optical illusions been of late accounted for and explained by numerous toys? The magic lanthorn and phantasmagoria have had their effect in dispelling the "bugaboos" of the nursery, and affording the child the power of smiling at the ignorant and superstitious tattle of the illiterate, who was wont to disturb the most healthy fancies out of a tender brain with sleep-dispelling or night-mare courting tales of fright and horror. The see-saw unfolds the general principle upon which mechanical powers are founded, and the boy may thus be easily led to the theory of the lever, by being shown how readily he can balance the heavier weight of a man by riding on the longer arm of the plank. The theory of colours may be pointed out to him as he blows his soap-bubbles (see Herschel's Preliminary Discourses)—an amusement which will at the same time convince him that the air must exert a pressure equally in all directions. For explaining the theory of sound, the whistle, the humming-top, the whiz-gig, the pop-gun, the bull-roarer, and sundry other amusements, well known in the playground, would amply suffice.

There are few marbles to be found in the Crystal Palace. Part of those few are thrown carelessly amongst some toys in the Dutch department, but are scarcely equal to those of our own potteries. They are of a description which very readily split upon contact, and would never do for "pinking out" at long distances, and in "bonciug" would go to shivers. Marbles is a very ancient game, it being related by Suetonius, that Augustus, when a boy, spent many hours at this sport. Despite the bad specimens alluded to, the Dutch are excellent makers, and very large exporters of marbles, which they make by grinding fragments of stone and alabaster in a peculiarly-constructed mill of iron, in which there are several partitions furnished with rasps, which turn with great velocity; and, after rounding the stones, they roll out of themselves. They are brought down the Rhine, and thence dispersed through Europe. India and China, likewise, export immense quantities, although we were not successful in finding any in either of those departments. The inferior kinds of our own potteries are made of clay, covered with a glaze and burned in a furnace. The term *taw* and *ally* appear to be derived from the brown colour, *tawny*, of the one, and the mottled *alabaster* of the other.

In Saxony (No. 35), is a large quantity of tin and lead toys, of a very low class. They are principally intended to represent soldiers, cannon, chairs, tables, cups, &c. They bend almost with their own weight, and the colouring matter upon them stains a moist finger, and seriously injures the health if applied to the mouth. They are not made much better than are often made at school or at home, with a mould cut out in two exact pieces of Bath brick, and an old iron spoon as the ladle for the lead—an early lesson in the casting of metals. The zoological specimens in tin are good, having evidently been traced from a judiciously embellished work upon natural history.

No. 32 and 83. Messrs. Wittich, Kemmel, and Co., of Geislingen, have an upright case crowded with bone and ivory toys for children. The taste and finish of these are worthy of admiration. The Swiss cottages are in excellent proportion, admirably carved. The doll's furniture, cut with the nicest detail; an occasional stain, to imitate horn, giving a variety to the colour of the ivory. The miniature sideboards, the cabinets, dumb waiters, with their champagne glasses, hot-water jugs, bottles, &c., are cut with a sharpness equal to many of the more pretentious examples of the Chinese. The baby's rattles and whistles are of novel designs, and the frames of the puppet looking-glasses, of open-through work, are singularly tasteful for this description of toy. Every design, however, to turn the human figure, is a signal failure.

No. 80, F. H. Riess, of Gmund, Wirtemburg, is a collection of toys in wax—dogs, ducks, cats, &c. The heat has made sad destruction amongst them. Dogs have run away without their legs, mice have sought sustenance with cats, and swans have sunk to the bottom of ponds. The beasts of the field and the fowls of the air will be soon mingled in one heterogenous mass, and it would be a mercy at once to turn them over to the chandler. There is some children's crockery-ware near this, of the most ugly forms.

No. 95, J. Kominger, Stuttgard, are tin and glass toys, lamps, decanters, glasses, and every conceivable vessel, *in little*, to teach the young idea how to drink. In a second case is dolls' furniture in bronze, which exhibit some taste, and cast-metal baskets of open work, requiring a very little more attention to detail to make them really good.

No. 94. H. Blumhardt, Stuttgard, has a collection of Japanned, tin, lead, pewter, bronze, iron, and wood toys, which are correct delineations of the objects sought to be imitated, and would serve as models to artists and local manufacturers of the articles used in those countries.

No. 92. C. Hedinger, Stuttgardt, has some very neatly-made carriages, steam-engines, &c., in metal, which serve to give youth a general notion of the construction of these things.

No. 96. Detrich, G. F., of Ludwigsburg, shows several well-made juvenile agricultural instruments, boxes of tools, &c.

No. 91. Froeglen, G., Ulm, has a very large assortment of toys in sugar. The largest is the capture of a lion, in which much anatomical knowledge both of lions and men is displayed. The Arabs in full costume are ably treated, and the whole is deserving of a better material.

No. 87. Baur Brothers, Biberach.—Toys in sugar and chalk, well worth a close inspection. The figures in costume have evidently been well studied, and the modelling of the faces, the hands, and the feet is really exquisite. Amongst them is a comic race on horse and on foot, and the mishaps in which, while perfectly natural, are laughably droll. There are likewise several quaint conceits, upon which a care and finish have been bestowed by a gifted hand: a mouse has built its nest in a withered apple; a cupid is asleep in a slipper; another cupid is riding full tear, with a love-letter, on a lap-dog, &c.

There are no toys discoverable in the Swiss department. The Swiss are amongst the largest exporters of toys into this country; but it may be, like many others, they did not attach sufficient importance to the Exhibition, or they attached too much, and considered toys as articles of too small a purpose. In either case, they erred.

Austria sends a very large quantity; and in No. 652, from Widow Hallers, of Vienna, will be found the greatest display. Here has been erected an immense pyramid on the top of which are dogs, kept in their places by *papier maché* cuirasses, breast-plates, cuisasses, and all the panoply of war, &c., highly embossed, surrounded, as each step of the pyramid arrives at its base, with toys of almost every description sufficient, indeed, to supply all the booths at a fair. We had to make our way through a dense mob of children, who were greedily devouring the whole with their eyes, and complaining loudly of the cruelty of their parents not being permitted to purchase what they so much coveted. There is some reason in this complaint, for it is difficult to persuade a child that toys are placed within his reach for mere display; and for the first time he either doubts his parent's word of the truth of the fact, or the omnipotence of money receives an early and perhaps enduring blow from so unexpected an announcement. In this group there are several mechanical toys, in which cobblers at work, soldiers exercising, &c., are set to their respective avocations with a comicality truly ludicrous, and an energy perfectly marvellous. These toys are not new, but are noticeable from the readiness with which almost any lithographic drawing may be cut up, and turns set to humour.

No. 701. H. Schinen (Wien) exhibits wax dolls under small glass cases; boxes of wooden culinary toys, which appear to have much improved of late years. The turning in this selection is very good, and the shapes taken from fair examples.

No. 709. J. Buerger (Vienna).—A large collection of artificial flowers grouped and framed, of the lowest order of taste. They are of that class which is, even now, occasionally met with hung over the mantels in the cottages and village ale-houses of England, suspended between plaster poll-parrots and plastic poodles. They were brought over in very large quantities, and hawked by itinerant vendors through the country, until a better taste kindled a desire for a higher order of chimney ornament, and gave thought and employment to a more gifted class of domestic rustic decorators. These "gim-cracks" would stand but little chance of encouragement now, except in some far-off region where the age of iron has not yet dawned.

No. 702 (Serafino and Co., Venice) is an admirable selection of masks, similar to those used by the first family in the carnivals of Venice. These masks are very ductile, and closely resemble the colour of flesh, in which respect they differ materially from even the very best masks lent out or sold in England, which are generally hideous imitations of the exquisite beauty and semi-transparency of the face of woman.

Near this spot, without a number, are several *papier maché* figures of gipsies bivouacking, viol-players, beggars, &c., which are good of their kind, but they have amongst them a very nasty dog, which ought at once to be turned out, or, rather, should never have been let in. There are, likewise, several baskets of imitation fruit, quite sufficiently natural to tempt the teeth, which would be most undoubtedly broken by the contact, as the plums are all stone, and the apples *pomme-granite*. These alabaster imitations are carried to a considerable stage of perfection, and are used in a variety of ways. In some cases, for the explosion of practical jokes. For instance, pieces are broken to imitate lumps of sugar, which are slyly mixed with those in the basin, and it becomes a lottery, at a tea party, to whom they are helped. Suddenly, a lozenge or an old bean is observed struggling hard with one of those incorrigible pieces, which refuses all the stirring up to make it diffuse. The family plate suffers in the encounter; and those spoons which are worn the most, to the mortification of *la dame*, often break in the engagement. Imitations of tallow candle ends are unexpectedly met with, to the great disgust of the finder, in pies and puddings, custards and pottages—the suddenness of the discovery not allowing the thought to arise, that, had they been real, they would not have borne the warmth of either oven or pot. Near this collection is a target for cross-bow practice, of a novel kind. It is formed of a comic male head, with mouth wide agape, and eyes at full stretch; should the shot hit either one of these three features it is known by a separate and distinct noise, and the hit scores accordingly.

In fitting state proximity to the last will be found a very large collection of wooden dolls, unclothed. Their waists are cut away to the spider or wasp form; and if the first dolls which were ever made were as these, we have at once the origin of tight lacing—the desire to imitate being strongly inherent in the young mind. One of these dolls would prove an useful and instructive contrast by the side of any of the many fine unrestricted developments of the female form in marble to be found in the Crystal Palace. Next to these (No. 655, Austria) are several toys of a religious kind, well known upon the Continent, but certainly seldom seen here. They represent either monks or nuns, the folds of whose garments, from the waist, fall in a bottle or bell shape. The head and chest of these figures draw off from the body, and the body, by a hinge attached at the back, is made to open, and, in the inside, which is hollow, is discovered a complete altar-piece, with a monk or nun upon his or her knees, at their devotions. One of these has a placard thereon, "Exhibited for cheapness."

Here, too, are sufficient frogs to stock the fens of Norfolk, or the whole common of Peckham. Their tails (for these frogs have tails for the nonce) bend down to a piece of cobbler's wax beneath the body, which, after a while, gives way, and the spring of the tail sends them croaking in mid air

The next counter—that of T. M. Essayer, of Nuremberg—displays a tolerably good assortment of magnetic toys—fish, ducks, crabs, lobsters, swans, mermaids, boats, frogs, and nondescripts. These are hollow, and, of course, float upon the surface, and, by a piece of steel being attached, are led by a magnet in any direction upon the water. Some of the other toys in this collection have their prices marked, and certainly are very cheap. An open landau, well made and finished, in metal, with panels and wheels painted and picked out; her Majesty and Prince Albert seated therein, well modelled and tastefully dressed; coachman, two footmen, four grey horses, and postilion, and the whole at least four feet in length, for six francs! This contributor's tin culinary utensils are nicely made and finished. There is likewise a screw press for dolls' linen and several other pieces of furniture, which would serve to teach a girl the first rudiments of house-keeping It is in the dressing of her doll she first learns to cut and contrive, to fashion, and to arrange; and in the inquiries of her elders, which naturally arise during the examination of these little examples of furniture and utensils, facts are elicited of the greatest use in after life. The "puff and dart," a game that is at once dangerous to the player and to those around, is also here: dangerous to the player, as the respiration necessary to the preparation of the expulsion of the lungs, often draws the dart up the tube into the throat, where strangulation has more than once followed; dangerous to those around, as the slightest inequality in the worsted surrounding the needle or arrow, has a tendency to carry it out of a direct line. This toy has its origin in the Indian blow-pipe, with which the natives go in quest of small birds. Waterton, in his "Wanderings in South America," gives a long account of this weapon, which, in the hands of the *natives* of Macoushi, appears to be a very formidable instrument. In this collection are likewise several boxes of wooden building materials, which may serve to stock a future engineer or railway contractor, and yet, after being stocked about, be equally useful for succeeding children from one generation to another. Besides the common wood bricks, pillars, and arches, are boxes of geometrical solids, together with the octahedron, the rhombic dodecahedron, and the icositetraedron, with Chinese pagodas vertebrated like the spine of a shark; fountains as good as those of Trafalgar-square; fortresses that a child may take, and no one can get into; rock-work of sanded paper, and pine trees of curled goose quills.

265. G. Schike, of Berlin.—A case representing a painting of Windsor Castle in the water-colour taking place in the foreground. The figures are all of lead, coloured, and are for the most part well cast. Prince Albert is seen with his staff, and the Queen rides a palfrey most gracefully. Her Majesty is, however, clearly out of temper with something. In a second case is a complete dinner and tea service in tin and gilt, well modelled and finished. The candelabra and looking-glasses in the same case are equally commendable.

317 and 329. C. F. Gerlach and W. Leopold, of Prussia, have respectively several excellent examples of culinary ware, and puppets, the costume of which has been well considered. Near these dolls rent by A. E. Bahn, of Berlin, and Gustavus Neubronn; the wax faces of which are better than usual from this country, although the faces are too large and out of proportion, and the attempt to give the effect of eyelashes, by drawing lines up and down from the lids, is a failure.

91. Lowerthal and Co., of Hamburg.—Wax dolls' heads, with staring eyes; feet and hands misshapen. These are the size of life, yet far from nature. What could be more easy than to take casts of an infant hand and foot and what more beautiful? If this is pronounced a difficulty, there are hundreds of Flamingo's glorious figures of children accessible to all, from which the most perfect forms are at once obtainable.

May we designate the next a toy—"Rosenau Castle, the Birth-place of Prince Albert," executed, as it states, by an association of Souneberg, in the Duchy of Saxe-Meiningen? It is a very large model of some (we are guessing) thirty feet by eighteen. A fair, or village festival, is being held, and various games are going forward. Punch, with an admiring group, is very droll little bit, excellently composed. A fellow preaching on a tub with his audience is another group of character. Amongst these figures, of which there are some hundreds, there are no two alike, either in contour, costume, or expression; but each has his or her own individuality, an individuality which shows the artist for artist he must be—it is nature—nature of human nature. These figures are so true, that they at once impress us with the fact that they might be grouped *ad infinitum*, without detracting a jot from their consequence or value. The only thing in the Exhibition at all comparable with it is the Gulliver, which it does not, however good, approach in quiet humour and high finish.

In the Gallery over the north-east of the Transept are the dolls contributed by Madame Montanari, of Upper Charlotte-street. These are the aristocracy of all dolls—in every sense as superior to anything of which we have been writing, as a Raffaelle or a Claude to a sign-board or the Chinese landscape on a tea-chest. But, with all their superlative perfection in form, grace, and life-*ism*, we much question whether they are not far too good *as dolls*. They are too finely dressed to be pulled about, and they are intimidate as faithful copies of real little misses, but as dolls they are next to useless. But what have we here in this next case? Dolls made of rags; legs and feet of rags; arms and hands of rags; and oh! a miracle—faces of rags! And very cleverly indeed is it done. Here is softness—poor Popsys need not be again hurt by that wooden lump, yclept a doll, falling upon her dear little forehead. Durability—defying all the mishaps which dolls are heir to. Cheapness—cheap as rags. Little Dick in his rage may "shy" it at his nurse, but it will fall as harmless as drifting snow. It may get wet through—you have but to cook-horse it over the fender to dry. Serve a wax one thus, and you will find its pottery eyes in its shoulders ere you could snatch it from its *auto da fé*. Yes, after all, these are the dolls for our nursery, and Madame Montanari deserves every patronage for her ingenious invention, which at once introduces peace into the ranks of our infantry even in arms. And now let us have one more peep into the first case. Yes, we are right. These are fine ladies, and not dolls; the others are dolls best fitting even for fine ladies.

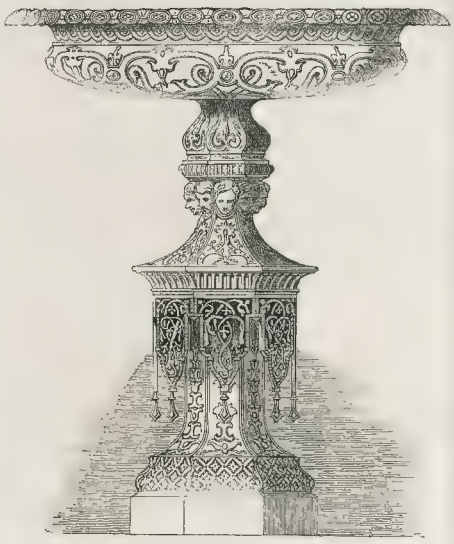
(To be continued.)

ENAMELS, ETC.—BY DUTERPE GENEVA.

PENCIL-CASE, FROM GENEVA.

IRON VASE. BY HANDYSIDE, DERBY.

This is an "object" which must not be passed over in silence: the extreme absurdity of the "one idea" calling for one word at least of reprobation. For the vase itself, it is a common, ordinary-looking wash-hand basin enough, of cast iron, partly gilt. The feature which excites our spleen is the gibbeting of the heads of Shakspeare, Wellington, Milton Peel, Watt, Scott, and a lot more, midway up the pedestal objects of commiseration and ridicule as long as the vase lasts, which we hope will not be long; for the sooner it is consigned to the melting-pot again, the better for Mr. Handyside's reputation, and for our peace of mind



IRON VASE.—BY HANDYSIDE, OF DERBY.

CLOCK.—BY VITTOZ PARIS.

This is one of several clocks exhibited by this manufacturer, upon a very favourite model, in which the dial occupies a place upon the face of an urn or globe, with attendant figures, either in illustration of the march of time, or the passions and frivolities which very often help it in its march in the busy world.

SILK PATTERN.—FROM SWITZERLAND.

The silk manufactures of Switzerland have always held a very high rank, ever since their first foundation by emigrants from France, at the time of the revocation of the Edict of Nantes. Notwithstanding the fiscal restrictions of surrounding countries, the Swiss producers maintain a very good trade in this article. The pattern before us is a very pretty sample.

SEVRES PORCELAIN.

The Sèvres porcelain in the Gobelins Room was so much and justly admired, that we engrave one of the principal groups as it there appeared. The artistic merit of the designs, and the richness and beauty of the colours, are such as to stamp these productions, for the present, at least, as unique. The group consists of a variety of vases, chased and ornamented with designs chiefly after the great masters; artistic articles of furniture, as a richly ornamented table, complete tea and coffee, services, enamels, &c.

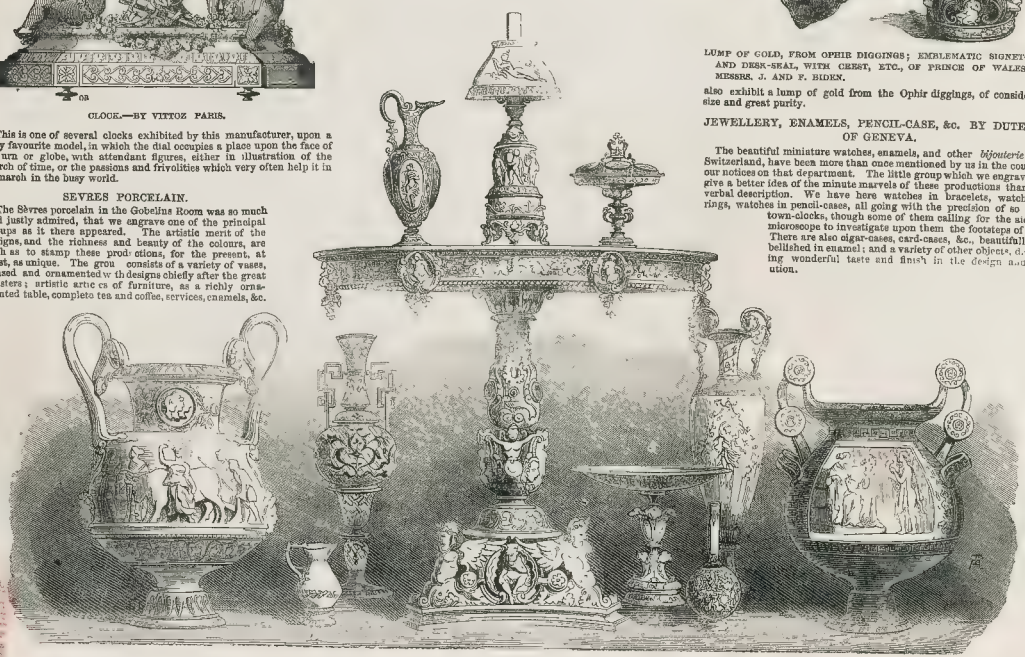
SEAL, RING, &c. BY J. AND F. BIDEN.

This house exhibits a variety of solid gold seals, rings, &c., of the good old substantiality, and with great good taste in the designs. Amongst them is a library seal of a fine cairngorm, engraved with the arms and badges of the Prince of Wales, and a ring with a rich setting emblematic of the wide and valued regions of the globe. They also exhibit a lump of gold from the Ophir diggings, of considerable size and great purity.

LUMP OF GOLD, FROM OPHIR DIGGINGS; EMBLEMATIC SIGNET-RING AND DESK-SEAL, WITH CREST, ETC., OF PRINCE OF WALES.—BY MESSRS. J. AND F. BIDEN.

JEWELLERY, ENAMELS, PENCIL-CASE, &c. BY DUTERPE OF GENEVA.

The beautiful miniature watches, enamels, and other *bijouterie* from Switzerland, have been more than once mentioned by us in the course of our notices on that department. The little group which we engrave will give a better idea of the minute marvels of these productions than any verbal description. We have here watches in bracelets, watches in rings, watches in pencil-cases, all going with the precision of so many town-clocks, though some of them calling for the aid of a microscope to investigate upon them the footsteps of time. There are also cigar-cases, card-cases, &c., beautifully embellished in enamel; and a variety of other objects, displaying wonderful taste and finish in the design and execution.



SEVRES PORCELAIN.

'THESEUS AND THE AMAZONS."—BY T. ENGEL.

"THESEUS AND THE AMAZONS." BY T. ENGEL.

This group, which is the property of Prince Albert, occupies a good position in the South Transept, facing the crystal fountain. The artist is a Hungarian by birth, but has studied many years in this country, and also at Rome, at which latter place this group was executed.

The situation intended to be presented is an incident supposed to have occurred in the course of the war of the Athenians under Theseus against the Amazons; when one of the female warriors being badly wounded, a sister in arms rushes to her rescue; and, having seized her in her arms, is about to deal vengeance on the foe, when on a sudden a sentiment of pity touching the breast of the wounded Amazon, as she views his prostrate position, she restrains the arm which was to have dealt his death-blow.

The group, which is executed in marble, is prettily conceived, and carried out with graceful rather than powerful effect. There is in truth a certain tameness about it leading to disappointment, which may be accounted for by the fact that the artist has not sought to embody the Amazonian *physique* in his female subjects. M. Engel's heroine wants a little of the masculine energy of the Amazon of Kiss. With this reservation, we must add that the figures in this group are executed with great artistic feeling; the character of the heads is dignified and expressive. The draperies are not so successful they want flow and smoothness.

The actions of this race of heroines, whether fabulous or not, were often the subject of the ancient sculptor's chisel. There are various representations of the figures and costume of Amazons among the terra-cottas in the British Museum. The battles of the Athenians and the Amazons are represented on the friezes of the Temples of Theseus at Athens, and of Apollo Epicurus on Mount Cotylion, near the ancient city of Phygaleia, in Arcadia. In the latter sculptures, which are now in the British Museum, the Amazons are all represented with perfect and well-shaped breasts. Indeed, the same is the case in all the other ancient works in which Amazons are introduced; they are invariably sculptured with both breasts entire; but they have generally, like the huntresses attendant on Diana, one exposed and the other concealed by drapery.

Among the ancient artists who are reported to have painted these heroines, Pausanias (Attic. c. xv. and xvii.) describes the walls of the Temple of Theseus to have been paintedwith the battle of the Athenians under the command of Theseus against them, but does not mention the names of the artists; but Pliny says that the paintings were executed partly by Polignotus and partly by Micon. Adrian and Aristophanes, on the contrary, relate that the Amazons was painted by Micon.

In the late collection at Paris was a very fine antique statue in Parian marble of an Amazon; and there is also a very beautiful one of a Queen of this nation, at Wilton, a seat of the Earl of Pembroke, among his Lordship's numerous and fine collection of ancient marbles, sculptured by Clesmenes.

BRONZE VASE.—BY MATIFAT.

BRONZE VASE. BY MATIFAT, OF PARIS.

The bronze castings of Matifat are very bold and successful—crisp and well defined in all the essential points, and of an admirable colour The design of the vase before us is very original and spirited. It representsan ice scene in the polar regions, with bears disporting themselves.

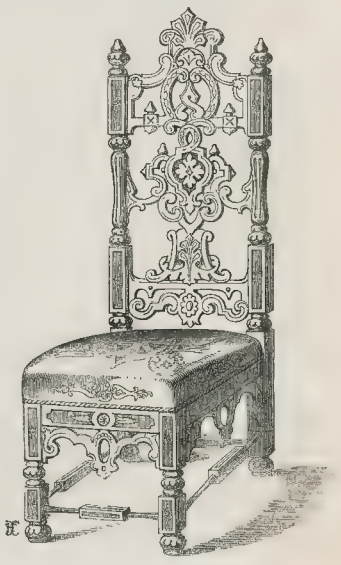
THE MADONNA. BY JEHOTTE, OF BRUSSELLS.

This little marble work is treated in a manner somewhat peculiar to the Belgian school, combining great study and laboured effects, but very little of the true inspiration of genius. In accordance with the doctrine of the Roman Catholic Church, Mary is treated as the principal object of the group, the infant Christ holding a subsidiary position.

STATUE OF THE MADONNA.—BY LOUIS JEHOTTE, BRUSSELS.

PAPIER MACHE CHAIR. BY JENNENS AND BETTRIDGE.

This very graceful and highly decorated chair in *papier mache* is described as of the Elizabethan style, but we are inclined to think it would be more properly referred to the period of William III. Whatever its period, it is very pretty, and is remarkable as one of the first instances of the application of this material to articles of furniture.



PAPIER MACHE CHAIR.—JENNENS AND BETTRIDGE.

KOSSUTH AND THE PEOPLE OF THE UNITED STATES.

The following address by M. Kossuth to the people of the United States has been published by the *New York Herald*, together with an introductory letter to the editors and writers of the public journals of America:—

Washington, D. C., Oct. 17, 1851.

Gentlemen,—In the month of February last Governor L. Ujhazi, late of Hungary, sent me a proclamation of the Hungarian leader, Louis Kossuth, addressed to the people of these United States, requesting to cause the same to be published, and to deposit its original, written in the Magyar language, in the archives of Congress.

When that valuable document came to my hands a negotiation was pending having for its object the liberation of Kossuth from the Turkish custody. This consideration induced me to consult confidentially with a number of distinguished citizens, occupying high and exalted stations, whom I knew to be the truest and warmest friends of the Hungarian cause and its great leader; and, finding that each of them concurred with me in the opinion that the publication of that document at that time might have defeated the object of the negotiation, I informed Governor Ujhazi of it; whereupon he authorised me to retain in my possession its original until it could be safely published.

This time has now arrived. The great Hungarian leader being already under the protection of the stars and stripes, and approaching these hospitable shores, there is no necessity of withholding it longer from the public eye.

Having set forth the foregoing explanation of the reasons why the proclamation referred to was not laid sooner before the people of these United States, to whom it is addressed, I respectfully beg for it the liberality of your columns.

The original of the proclamation will remain in my possession until the next session of Congress, when it will be respectfully deposited within the hands of the representatives of the people.

I have the honour to remain, with great respect, your obedient fellow-citizen and servant,

G. TOCHMAN.

[TRANSLATION.]

ADDRESS OF KOSSUTH TO THE PEOPLE OF THE UNITED STATES OF NORTH AMERICA.

BROUSSA, March 27, 1850.

Two years ago, by God's providence, I, who would be only an humble citizen, held in my hands the destiny of the reigning house of Austria.

Had I been ambitious, or had I believed that this treasureous family were so basely wicked as they afterwards proved themselves to be, the tottering pillars of their throne would have fallen at my command, and buried the crowned traitors beneath their ruins; or would have scattered them like dust before a tempest, homeless exiles, bearing nothing but the remembrance of their perfidy, and that royalty which they ought to have lost through their own wickedness.

I, however, did not take advantage of these favourable circumstances, though the entire freedom of my dear native land was the only object of my heart. My requests were of that moderate nature which, in the condition of Hungary and Europe, seemed best fitted for my countrymen. I asked of the King, not the complete independence of my beloved country—not even any new rights or privileges—but simply these three things:—

1. That the inalienable rights sanctioned by a thousand years, and by the constitution of my fatherland, should be guaranteed by a national and responsible Administration.

2. That every inhabitant of my country, without regarding language or religion, should be free and equal before the law—all classes having the same privileges and protection from the law.

3. That all the people of the Austrian empire that acknowledged the same person as Emperor whom we Hungarians recognised as King, and the same laws of succession, should be preserved their ancient constitutional rights, of which they had been unjustly despoiled, modified to suit their wants and the spirit of the age.

The first demand was not for any new grant or concession, but simply a fresh guarantee. In the arrangement made between our ancestors, when, by their free votes, they elevated the house of Hapsburg to the throne, a condition was made that the King should preserve the independence and constitution of the country. This independence and this constitution were the very vitality of our national being. During three centuries twelve Kings of the house of Hapsburg had sworn, in the presence of the eternal God, before ascending the throne, that they would preserve our independence and the constitution; and their lives are but a history of perpetual and accursed perjury. Yet such conduct did not weaken our fidelity. No nation ever manifested more faithfulness to their rulers; and, though we poor Hungarians made endless sacrifices, often at the expense of our national welfare—though these Kings, in times of peace, drew their support from us, and in times of war or danger relied upon the unconquerable strength of our army—though we ever trusted in their words, they deceived us a thousand times and made our condition worse.

While other nations were able to apply all their energies to promote the general welfare and to develop their means of happiness, we had to stand on guard, like the watchmen mentioned in scripture, for three centuries, to prevent our treacherous Kings from destroying entirely the foundation of our national existence—our constitution and independence.

I, as the representative of my countrymen, asked nothing more than a constitutional Ministry, whose responsibility would prevent the King from violating his oath.

The second demand was still less for any political right. We asked for nothing more than a reform in the internal administration of the State; a sample act of justice which the aristocracy owed the people; and in this how much the King would have gained! He would have secured what have been increased tenfold by thus winning the affections of his faithful people

The third demand was prompted by humanity and fraternal feeling. It was the proper and holy aim of every nation, possessing a constitutional existence, and possessing a constitutional form of government, to raise its voice in behalf of those sister nations under the same ruler, and who were united to us by so many ties of consecrated rights of freedom, while it left them free as to themselves alone; we would not boast of privileges that others did not enjoy, but desired to be free, in fellowship with free nations around us. This motive was inspired by the conviction that our power—a constitutional and a despotic crown—could not be worn by the same head, no more than two opposing dispositions can harmonise in the same breast, or that a man can be good and evil at the same time.

The King and Royal family granted these requests, appealing to the sanctity of their oaths as a guarantee of their fulfilment; and I—weak in myself, but strong through the confidence of my countrymen and the noble sympathy of the Austrian people—proclaimed everywhere, amid the raging storm of revolution, that "the House of Austria should stand; for, by the blessing of the Almighty, it had begun to move in the right direction, and would be just to its people." It stood, and stood, too, at a time when, whatever might have been the fate of Hungary, the revolutionary tempest, under my direction, would have blown away this antiquated and helpless dynasty like chaff before the winds of Heaven.

I not only preserved the House of Austria, but placed in its hands the materials of a long and glorious future—the foundations of an indestructible power in the affections of 32,000,000. I imagined, although I stood on the very pinnacle of my own heroic Hungary, which alone was able to defend them against the assaults of the world. I afforded them the glorious opportunity—more glorious than had ever been granted to princes—of establishing an impenetrable barrier to protect freedom, civilisation, and progress against the Cossack power which now threatens Europe. To attain this honour, this glory, one thing only was necessary—that they should remain faithful to their oaths. Who could dream that Austria was not treacherous? We look in vain for so much honour as is found even among robbers in the Hapsburg family.

On the very day they regarded as last of those moderate demands of the Hungarian people, and solemnly swore before God and the nation to maintain them, they secretly resolved and planned the most cruel conspiracy against us. They determined to break their oaths, to deceive the land with insurrection, conflagration, and blood, till, feeble and exhausted under the burden of a thousand miseries, Hungary might be struck from the roll of living nations. They then hoped, by the power of the bayonet, and, if necessary, by the arms of Russia, to erect a united and consolidated empire, like the Russian, of 16 various nations; they hoped to realise their long-conceived purpose of making themselves an absolute Power.

Never were so many hellish arts used against a nation before. Not suspecting a counter-revolution or an attack, we were not prepared to defend ourselves when suddenly we were surprised by danger. The perfidious Hapsburgs, destitute of all shame, and rejoicing in the anticipation of an easy victory, hesitated not to disclose before the civilized world their horrible plans—to subjugate us by the force of arms, to excite hatred of race, to call in the aid of robbers, incendiaries, and rock-ess insurgents.

At this crisis of great danger, when many of our ablest men even were ready to yield themselves to despair, to desolate

quer one race after another, and thus bring them all under the yoke of slavery.

It is true, some of the races in Hungary had reason to complain: but these subjects of complaint were the inevitable consequences of the pre-existing state of things and the Austrian interference. But the Croatians had no reason to complain. This race of half a million, in a separate province, had a National Assembly of its own, and enjoyed greater privileges than even the Hungarians. They contributed proportionally but half as much in taxes. They possessed equal rights with Hungary: whilst the Hungarian Protestants, on account of their religion, were not suffered to hold lands in Croatia. Their privileges and ours were the same, in the perpetual violation of the constitution by the Imperial Government. But their own peculiar grievances arose from the evils of former times and from the Austrian system of government, which forcibly placed the Slavonian, Servian, and Wallachian boundary districts on the German military system.

The moment, however, our people became free and enjoyed their political rights they became just, and placed all things upon the basis of freedom and perfect equality. But some of these races, blinded by the infernal slanders and suggestions of Austria, took up arms against us. This people, who for centuries had endured slavery, fought against their own freedom! God forgive them! They know not what they did.

In America people of different languages dwell, but who says that it is unjust for six states and representatives to use the English language in their debates, and to make it the official language or the Government?

This was the Magyar case asked in Hungary. There was this difference only, that in America it was not necessary to establish this by law, for the original settlers had stamped their language in the country; but in Hungary a law was necessary to make the Magyar the official language, for the Latin language—a bad relic of the middle ages, which the clergy and aristocracy preserved as something precious, imitating the ancient despots who caused the laws to be written in small letters and placed on high towers that the people might not understand their rights—had been retained among us. It was necessary to have a living, spoken language. And what other could we have than the mother tongue?

How often have I and other leaders with me said to my countrymen that they must be strictly just, and seek their future greatness, not in the predominance of one race in the perfect equality of all? My counsel was adopted, and made the basis of the Government. The same freedom, the same privileges, without regard to language or religion, the free development of each race under the protection of the law, were accorded to all. We not only guaranteed the right to use any language, but schools and schools, but we afforded all for the education and development of each nationality. The principle we announced was that either the State should protect no religion, no nationality—leaving all to find protection of people—or that it should protect all alike.

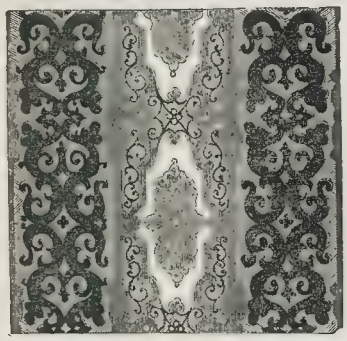
In the general administration, the predominance of our language, and, consequently, the race that spoke it, was a necessity; but, in the administration of county affairs, in some respects resembling that of the individual States of North America, the use of each language was granted. In the courts, in the trial by jury, in the right of petition, in the republication of all laws and ordinances, the various races were placed on the same footing. Of

DAMASK PATTERN.—BY SHEPHARD AND CO, HALIFAX.

We give three Illustrations of damasks contributed by Messrs. Shephard and Co., of Halifax. One of them is called a Victoria velvet, and has this peculiarity—that the design is in part raised in worsted velvet pile,

DAMASK PATTERN.—BY SHEPHARD AND CO., HALIFAX.

which adds considerably to the richness of effect; so that, in fact, it scarcely seems, without close examination, to be wrought only in wool and cotton, and producible at a very moderate price.



DAMASK PATTERN.—BY SHEPHARD AND CO., HALIFAX.

STOVE.—BY DEANE, DRAY, AND DEANE.

IMPROVEMENT IN BANKERS' PAPER MANUFACTURE.

The specimens of paper (for which a prize medal was awarded), exhibited by Mr. T H. Saunders, of Queenhithe, London, and Dartford, Kent, comprised, in addition to superior samples of book and writing papers, a sheet of paper which, although weighing less than one ounce and a quarter, sustained without fracture more than five hundred weight.

In Case 36, Section 17, Mr. Saunders also exhibited the tinted cheque papers in ordinary use by bankers, as well as another specimen of his manufacture called "Stone's patent cheque paper," the object of which is the prevention of fraud. The great improvement consists in rendering a paper perfectly resembling ordinary writing paper secure against the removal of ink by chemicals, as, on the application of the usual means for dissolving ink, the proof of its having been tampered with immediately becomes manifest, the paper becoming indelibly discoloured.

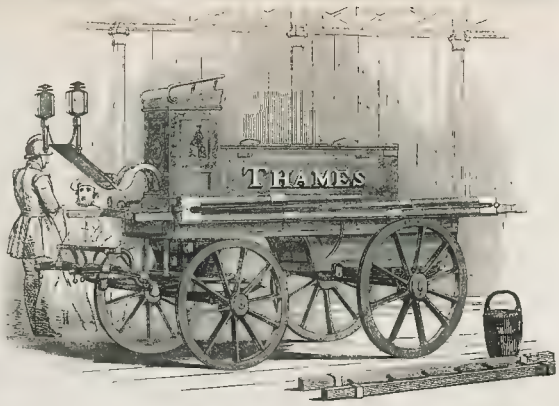
Two large transparencies were devoted to specimens of outline and shaded watermarks. In several of the designs great artistic skill and much taste were displayed—particularly in the view of York Cathedral, in which the elaborate architectural details of the front of that noble structure were accurately delineated; the St. George and Dragon, after Wyon; and a copy of the "Wooden Bridge" in the Vernon Gallery. The gracefully flowing and delicate tracery of these subjects formed a very decided contrast to the antiquated figure of Britannia, so long and well known as the accompaniment to the sheet of foolscap.

But more remarkable and interesting were the highly successful attempts to secure the effect of light and shade evinced in Raphael's "Holy Family," and a female head, which were perfect pictures—works of art. *Habitués*, in their rambles through the Crystal Palace, must have frequently heard the inquiries of "What is the use of this or that?" applied, say, to Rodgers' knife, with its myriads of blades, and a host of other things. These, however, showed the powers of the manufacturer. The maker of the greater can produce the lesser. Copeland can produce a statuette, and an ordinary plate: so with these artistic watermarkings, which in their present form are beautiful curiosities; yet their object and utility are equally apparent; for there can be no better security than making the paper itself thus bear witness of its authenticity. Such a plan at this particular period, when forgery has unhappily become somewhat common, comes in as a check very opportunely.

Under all these circumstances, it is not, therefore, surprising that the jurors have awarded a prize medal to this exhibitor.

SHAND AND MASON'S IMPROVED BRIGADE FIRE-ENGINE.

In this very efficient and powerful Fire-engine, for which a prize medal has been awarded, the manufacturers (who have succeeded the well-known Mr. Tilley, of the Blackfriars-road) have introduced several improvements upon the engines now in use by the London Fire Brigade. It has attracted considerable attention, from its elegant and highly finished appearance, and conspicuous position in the South Transept (where it was placed at the request of the Executive Committee), to be available in the event of fire, and where it will remain while the firemen of the London Brigade continue on duty in the Building.



FIRE-ENGINE.—BY SHAND AND MASON.

TEA SERVICE OF CALIFORNIAN GOLD. BY MESSRS. BALL, THOMPSON, AND BLACK, NEW YORK.

This very handsome tea service was presented by the Mayor and citizens of New York to E. K. Collins, Esq., the owner of the splendid steam-vessels trading between England and New York, and known as the Collins line. The gold of which the service is made is of a very beautiful colour, and was but six months since extracted from the mines in California, and is of 22 carats degree of purity. The tea service, in point of workmanship, reflects much credit on the skill of the transatlantic goldsmiths, Messrs. Ball, Thompson, and Black.

TEA SERVICE OF CALIFORNIAN GOLD.—BY MESSRS. BALL, THOMPSON, AND BLACK.

STOVE. BY DEANE, DRAY, AND DEANE.

This is one of the fire-lump stoves (Leslie's patent) manufactured by this firm, and of which they exhibited several samples. The peculiarity in their construction is, that the bottom, sides, and back are formed of a single fire-lump. The front, facings, and other parts are of iron. The curved bottom of the fire-lump projects in front to with n half an inch of the grate-bar, and it rests upon a cross-bearing, which is turned up behind, in order that the latter may offer resistance to any thrust from the front against the fire-lump. The fire-lump is removable without disturbing any other part of the stove. The peculiar recommendation of this grate consists in the receptacle for the fire being entirely in front of the reflecting cheeks, and the additional reflector below the grate; the heat being thus all thrown out in the room.

BEAM OF HOLLOW BRICKS. BY J. B. WHITE.

The beam of hollow bricks represented in our Engraving was constructed by Messrs. John Baxley White and Sons, of Millbank-street, Westminster, for the purpose of testing the strength of Portland cement, and of showing its superiority over Roman cement. It was erected in the month of April, at the west end of the Exhibition Building, and was broken down after the lapse of five months, on the 22d of September, in the presence of several members of the Jury of Class 27, consisting of Signor Pistrucci, Professor Ansted, and Mr. Godwin, besides Sir Charles Pasley, Captain Owen, and many other engineers and gentlemen of eminence in the scientific world. The dimensions of this beam were nearly identical with one built at Nine-elms in the year 1835, of solid bricks and Roman cement, which, after standing eighteen months, was broken down with a weight of 50,652 lb. The dimensions of the hollow brick beam were as follows:—Length, 21 ft. 4 in clear bearing between the piers thickness, 2 ft. 3 in. at bottom; 1 ft 6 in. at top of beam; depth, 4 ft. 5 in. The hollow bricks (9 in. long by 6 in. by 4 in.) were bedded in Portland cement, gauged in equal parts of cement and sand; and, as in the case of the Roman cement beam, fifteen strips of hoop-iron were inserted through the beam, between the lower courses. The weight was suspended from the centre by a scale, in which pigs of iron were successively placed till the fracture was accomplished. The testing was commenced on Saturday, the 20th of September: when the loading had reached 15,000 lb., the beam was left with this weight suspended till Monday the 22d, when the loading was resumed. At 41,600 lb. a crack appeared in the centre, and soon after two other cracks right and left of the centre were observed. These fissures extended gradually upwards until at 52,800 lbs. the beam gradually separated into two equal parts, the fracture being vertical and passing indiscriminately through bricks and joints. Of the 14 layers of hoop iron, 7 were broken and 7 were drawn. The stone slab, 4 inches in thickness at the top, was broken, and one of the piers was forced 7 inches, the other 2 inches, out of the perpendicular, the whole experiment terminating in the most satisfactory manner for the reputation of Portland cement and hollow brick construction. These hollow bricks were made with Mr. Clayton's prize machine, which was shown at the Exhibition.

THE ILLUSTRATED LONDON NEWS

No. 529.—VOL. XIX.] SATURDAY, NOVEMBER 15, 1851. [SIXPENCE { WITH SUPPLEMENT. GRATIS.

THE CORPORATION OF LONDON.

THE annual celebration popularly known as "Lord Mayor's Day" is an event of so little novelty and importance as rarely to call forth the comments of the journalist. Yet there are times when the ancient ceremonial of the day excites reflection, and when antecedent circumstances invest it with unusual interest. At present the Corporation of London and its doings are prominent topics of discussion. It has foes within and without. Its champions defend alike its undoubted merits, and its equally undoubted but perhaps more palpable and evident defects. On the other hand, its opponents, who are in this respect as unreasonable, or as unreasoning, as its friends, deny its merits altogether, and assert it to be a gross anomaly, anachronism, and abuse. But truth, as in most instances, dwells in the centre between the two extremes; and is expressed by a steady, unimpassioned, growing public opinion, which, admitting neither its very great merits nor its utter uselessness, demands and anticipates its thorough reform. Public opinion, as it always does, will work its way. The Corporation of London, and that at no distant date, is destined to be reformed, even although Lord John Russell, its promised reformer, has abated in the zeal of his youthful days, and has no other phrase by which to express his respect for it than the "*esto perpetua*" which Blackstone applied to the constitution of England.

But, while numbering ourselves with those who desire that the corporate London of the nineteenth century should be as useful a reality as the Corporation was in its earlier days, we are not of those who would sweep it from the land, as a thing of the past, that had lived its hour, and was only fit to be decently buried in the grave of all the Mischiefs, and to be surmounted by the quiet *hic jacet* of all the Absurdities. There is yet vitality in its frame. It is impossible to look without respect upon an institution which has stood so long, and done such good service. The Mayoralty of London during the six hundred and seventy-two years that have elapsed, since Richard Fitzalwyne was nominated its first Mayor by Richard Cœur de Lion, has been the stanch ally of that sober and enduring liberty which Englishmen understand better than any other nation in the world. It would be a long list that should attempt to include all the services it has rendered to the Crown and the people, from the days of Fitzalwyne and Walworth to those of Beckford and our own. Its politics have been uniformly sound. In good times and in evil times it has been alike true to the principles which make nations great, and keep them so. The Plantagenets, the Tudors, and the Stuarts have passed away in succession; but the Corporation of London, that always supported them when in the right, and opposed them when in the wrong, has outlived them all, and still flourishes in political vigour, not only the oldest and most illustrious, but the most powerful, municipality in the kingdom. To cut down so noble a tree, with its roots so deep in our history, would indeed be a wantonness of destruction quite alien to the habits and ideas of the English people, and which we are certain will not be attempted by any statesman from without, or by any ardent reformer from within, who desires to maintain a character for prudent common sense.

But the Corporation of London, strong in the consciousness of its past services no less than of its present merits, must not shut its eyes against the fact that, in an age when all is growing around it, it cannot be permitted to stand altogether upon the ancient ways, and to maintain itself at the expense of that wider metropolis which is known to the world as London, but which is not London, legally speaking. All corporations have a strong tendency to do selfish things—a tendency stronger than exists in individuals—because it is not tempered and subdued by the same sense of responsibility. Corporations, as a great law lord once remarked, will commit actions in their corporate capacity which every person composing them would scorn to do as an individual. "A man," as the acute judge remarked, "has not only a soul to be saved, but a part of his person that *may* be kicked;" but a corporation, *as* a corporation, has neither, and has no fears of punishment either in this world or in the next. Upon this principle we may account for most of the abuses that have crept into the administration of the affairs of the ancient city, and the obstinacy with which these abuses have been defended, and with which all proposals of reform have been met. It must be admitted, at the same time, that the Corporation of London is not altogether to blame for being what it is and nothing more—for contenting itself within its ancient limits, and for insisting upon the expenditure of its own funds for its own purposes. If other cities and boroughs have clustered around it as their great parent—if they have increased in population, wealth, and power, without adopting adequate means for their own local government—it has not been the fault of ancient London, but of the modern metropolis, and of the statesmen who should have provided, with a wise forethought, for the extension of the old jurisdiction or the creation of a new one. This oversight or neglect on the part of the State has been the occasion of most of the odium into which the Corporation has fallen, and it is this defect which at the present day most loudly calls for a wise remedy. London would not have so putrid a river—so abominable a cattle-market—such a congestion in her one great artery of Cheapside, and such narrow and inconvenient thoroughfares, if the proper extraneous influence had been brought to bear upon her, to prove to her that the "City" was no more to be considered the whole metropolis than the abdomen was to be considered the whole man; and that what was good for the centre was also good for the extremities, and *vice versâ*. But this great want can be supplied without the destruction of the ancient Corporation. The necessary reform may be operated either by the extension of its powers, subject, of course, to revision and readjustment; or by the creation of a congeries of new Corporations, equal in authority and power, for all the constituent boroughs of the metropolis.

It is pretty evident that one or other of these courses must be speedily adopted, not merely for the sake of the "City," and its tributary borough of Southwark, but for the sake of that wider London, which includes the city of Westminster, and the boroughs of Finsbury, Marylebone, Lambeth, the Tower Hamlets, and the immense outlying district which is not yet entitled to Parliamentary or civic privilege. Over all this district, and a

ACCIDENT TO THE STEAM-SHIP "DEMERARA," ON HER PASSAGE DOWN THE RIVER AVON.—(SEE NEXT PAGE.)

far wider one, extending to a radius of twenty miles from the Mansion House, the City at present exercises powers of taxation, in lieu of which it renders no equivalent benefit. Indeed, it may be said that it renders no benefit at all. It levies an impost upon the coals consumed in the whole metropolis, and in a large portion of the frontier counties of Herts, Bucks, Surrey, Kent, and Essex. Even if it spent the money thus obtained upon the improvement of its own inconvenient streets, and upon the general beauty and amenity of its ancient site, and not upon guzzling, and other abuses, it would be a series question to consider whether its property of taxation were for the general benefit, and whether the necessary improvements of the city of Westminster, or of any borough or parish of the metropolis, ought not to be paid for out of the funds hitherto restricted by City men to City uses.

But this is not a matter in which the City itself can act. The needful reform must come from without; and although Lord John Russell, if we may judge from his short speech at the Lord Mayor's banquet on Monday last, is too well satisfied with the Corporation to think of meddling with it in any way whatever except in grazing its festivals with his presence, there can be little doubt that, in his default, some one else will be found to undertake the work. We only hope that, when the inevitable reform shall have been accomplished, the new municipality, if there be but one, and the new and coequal municipalities, if there be several, will Go as good service as the old Corporation of London, and be entitled, after the lapse of ages, to as much popular gratitude, and to as little blame, as the venerable body whose faults we admit, without any disparagement of its great and enduring merits.

ACCIDENT TO THE DEMERARA STEAM-SHIP.

It is with greatfregret that we announce the occurrence of an accident to this splendid vessel, constructed by Messrs Patterson and Co., of Bristol, for the service of the West India Mail Steam Packet Company. In going down the river from Cumberland-basin, on Monday morning, her bow unfortunately struck on a bank of hard gravelly soil, a few hundred yards below the spot known as the "Round Point," on the Gloucestershire side of the Avon, and, the tide ebbing strongly at the time, her stern was carried round to the opposite bank, where it grounded so firmly as to preclude all hope of remedying the disaster.

It was arranged that the *Demerara* should leave Cumberland-basin at seven o'clock on Monday morning, for the purpose of going to Glasgow, to be fitted with her machinery, and a pilot for the charge was appointed by the harbour-master. A steam-tug, named the *Independence*, of between 150 and 160 horse power, had been despatched from Glasgow to wait upon the *Demerara* as a tender during the voyage.

On Monday morning it was a high spring tide, flowing to within a few inches of 30 feet, the *Demerara*, with 1200 tons of ballast on board, not drawing more than 15 feet. It was intended to quit the basin some minutes before high water, so that the more difficult reaches of the river might be made with a full tide; but some delay being experienced in getting the vessel to the entrance of the lock, the tide had turned before she was fairly in the river. The detention was said to have arisen from her having sank rather deeply in the mud of the basin, while the water was at a low ebb. No difficulty was experienced in shooting the lock, and, when outside, the *Demerara* was taken in tow by the *Independence*, which commenced steaming away at four or five knots an hour. The dangers attendant upon this fast progress were evident, the great length of the *Demerara* rendering it difficult for her to follow the windings of the river—a disadvantage increased by the great size of the *Independence*.

Mr. Patterson, who was on board the *Demerara*, was sensible of the danger caused by the great speed the vessel had attained, and called out to the *Independence* not to go so fast; that there was "too much way" upon her. In a short time Mr. Patterson's fears were realised. Soon after passing the "Round Point," the vessel's bow struck on a hard bank, which it penetrated like a wedge to the depth of several feet; the stern swung round to the bank on the opposite side of the river, and the vessel lay diagonally quite across the entire current, settling into an immoveable position as the tide ebbed. Strenuous efforts were made to get her off the mud, but without effect; and, as the tide left the hull, her butts started, her form twisted, and there seemed to be every prospect of her becoming a total wreck.

Many offers of assistance were tendered to and accepted by Mr. Patterson. All day a crowd of men were engaged in lightening her by getting out a quantity of ballast, and making other preparations with the view of enabling her to float with the next tide. As night came on, a number of tar-barrels and torches cast a most unearth.y glare over the busy multitude, who were making the air ring with the noise of their labours. The scene, as viewed from the top of St. Vincent's rocks, was very exciting; the numerous small craft that kept plying about the *Demerara*, conveying ropes from shore to shore, and carrying out other necessary arrangements for helping the vessel from her sticking position, and the multitude of ants round the carcase of a prostrate giant. Their exertions were not in vain. As the tide flowed the *Demerara* gradually floated; by seven o'clock she was lifted from the banks, and, though sadly altered from her original symmetry, again sat upon the water, and, amidst the hearty huzzas of the thousands who watched the proceedings with the most intense interest, was towed to a soft bank of mud opposite St. Vincent's rocks, where it was thought she might lie when the tide ebbed, until the damage she had sustained was sufficiently repaired to enable her to be brought back to the harbour, the leakages in the lower part of the hull rendering her unfit to return quite impossible. Anchors were thrown out, and other means adopted to secure her in her new position, but despite these precautions further misfortunes still awaited her.

About ten o'clock the force of the retiring tide broke her away from her moorings dragging the anchors out of the ground, and again casting the hull across the river in a most dangerous manner. In this critical situation she remained until the reflux of the tide on Tuesday morning, when operations were again renewed, and with success, for her conveyance to the entrance of the Cumberland-basin was effected without further misfortune or mishap, and she was moored there to await further proceedings on the part of her builder.

On Wednesday morning, by the directions of the dock-master, the *Demerara* was moved from her position at the entrance of the lock, to a place on the Somerset shore bank of the river, known by the name of "Transport Hole." It is *Demerara* will remain in that place, where she will offer no obstruction to the trade of the port, about ten days, when it is thought she will be sufficiently repaired to allow of her being docked.

Captain Maugles, R.N., managing director of the Royal Mail West India Packet Company, with Commander Hast, has inspected the hull, and, we believe, has given it as his opinion that the vessel must be abandoned to the underwriters, for them to say what shall be done with her. The most prevalent idea is that the hull is far too serious y injured to admit of its being repaired, and that the vessel must be entirely broken up, when, it is said, her materials might be sold for £12,000.

The vessel was insured for a sum very little short of £30,000, and any question as to the amount of damage will, as we understand, have to be settled between Mr. Patterson and the underwriters.

With the exception of the *Great Britain*, the *Demerara* was the largest steamship afloat: her length of keel is 276 feet; length between the perpendicular, 284 feet; length over all, 296 feet—about 6 feet shorter than the *Great Britain*. It is stated in quarters like y to be well informed that a new vessel will be forthwith laid down for the company, and that such is the confidence entertained in Mr. Patterson's superior abilities as a marine architect, that the building of the new ship will be entrusted to him. All accounts agree in ascribing the disaster to the improper conduct of the pilot, who, it would seem, was cautioned by Mr. Patterson and Lieutenant Hast against the dangerous rate of speed at which he was propelling the ship.

LONDON DOCKS AND THE CUSTOMS.—A correspondence between the secretary, Mr. J. D. Powles, of the London Dock Company, the Commissioners of Customs, and the Lords of the Treasury, has been published. Mr. Powles' first communication contained the admission that there might be legal and other grounds for making seizure of some of the goods on the score of irregularity, which the Commissioners having submitted the letter to the Lords of the Treasury, with the expression of their wish that the goods might be released from detention, the Government proceedings have been abandoned, and the goods relea sed, on the payment of a fine of £100. The secretary of the company, in his answer to the Commissioners of Customs, complains that, after some personal communications had taken place, a publication should be sought to be advanced for the benefit of the public a matter that had been taken against the company, and denying imputations that had been cast upon the company's servants and justified this infliction of a mockery fine, however small in amount, but pressed, in consequence,

COUNTRY NEWS.

DESTRUCTIVE FIRE AT THE WALMER BARRACKS.—On Thursday night, last week, a fire broke out in the north central building at Walmer Barracks, occupied by the staff of the 30th regiment. After several hours' exertion, the progress of the fire was stayed, but of the central building nothing remains but the blackened walls, the whole of the interior having been consumed. The loss will prove considerable; but a quantity of the valuable furniture was preserved. Captain Fakenham and Lieutenant Green are severe sufferers.

NEWLY-ELECTED MAYORS.—Liverpool, Mr. Thomas Littledale; Manchester, Mr. Robert Barnes, Salford, Mr. Frank Ashton; Leeds, Mr. G. Goodman; Oxford, Mr. W. Ward.

THE MANCHESTER "ROYAL EXCHANGE."—On the 28th ult. Sir John Potter, Mayor of Manchester, with a view of commemorating the Queen's visit to Manchester, communicated through Sir George Grey a respectful request that her Majesty would be pleased to grant her gracious permission that the Exchange of Manchester should henceforth bear the designation of "The Royal Manchester Exchange." Thereupon the Mayor received the following reply from Sir George Grey:—"Whitehall, 3rd November, 1851. Sir,—I have had the honour to lay your letter of the 28th October before the Queen; and I have the satisfaction to inform you that her Majesty has been pleased graciously to comply with your request, that the Exchange at Manchester should henceforth bear the designation of 'The Royal Manchester Exchange.'—I am, sir, your obedient servant, G. GREY. The Mayor of Manchester." On receiving this, the Mayor having communicated this gratifying fact to the committee of the Exchange, at a meeting held by that body on Thursday, they passed unanimously the following resolution:—"That the best thanks of the proprietors of the Royal Manchester Exchange be given to Sir John Potter, Mayor of Manchester, for his very great kindness in obtaining from her Majesty the honourable distinction or title of 'Royal' to be in future affixed to the Manchester Exchange;" and which the request was complied with in another proof of the very great kindness which her Majesty has taken every opportunity to manifest towards her loyal borough of Manchester, since her gratifying reception there.

CAR-DRIVERS' STRIKE IN LIVERPOOL.—The coach and car-drivers of this town struck, on Saturday night last, for an advance of wages, and for the privilege of having leisure on every alternate Sabbath. The wages at present given by the masters is 14s. per week; from which, provided the men do not clean their own cars and coaches, a deduction of 3s. 6d. a week is made for paying persons to do that work. The advance sought by the men is 4s., making the weekly wages 18s. Fourteen days' clear notice of the intended "strike" was given by the men to their employers. On Sunday forenoon nearly three hundred of the car-drivers assembled in Clayton-square. They there formed in procession, and marched to St. Saviour's Church, where Rev. Mr. Connor, in the course of his sermon, alluded to the turn-out, saying he would not interfere with the question of wages, but contended that the men were in the right in seeking for the enjoyment of the Sabbath. On Monday thirty masters were reported as having replied by the secretary, conceding the terms. If they fail in their endeavours, they say they will appeal to the public for sympathy and support.

THE ST. ALBAN'S BRIBERY COMMISSION held several sittings during the week, but the interest of the investigation has been exhausted. On Tuesday, upwards of one hundred "free and independent" electors were called up by the commissioners, and acknowledged, some with the greatest nonchalance, some with the subdued decency, to having received £5 and £10 at the hands of Messrs. Edwards, Blagg, Vass, and other election agents. Amongst the more noticeable *nuances of* the scene were Waggett, Bunker, and Mr. Knogs, who, it will be remembered, forwarded to Bentinck from the committee of the House of Commons, and in connection with whose absconding a Royal proclamation of £400 reward was offered. They are men in the humblest rank of life. On Wednesday several other voters were examined as to their having been bribed, bringing up the number of admitted cases of corruption to 250. This branch of the inquiry it was expected would be brought to a close this week.

ELECTION INTELLIGENCE.—Mr. G. F. Young has not abandoned the honour of representing Cambridgeshire in Parliament. He says, in a letter to one of the electors, he regards himself as only the temporary representative of Scarborough, elected upon an emergency under peculiar circumstances, so that with the present Parliament his connexion with the borough in question will, in all probability, cease. Mr. Duff has visited the principal districts of Cumbershire. Grant is also prosecuting his canvass with the help of a scion of the house of Richmond.

COUNTRY LETTER CARRIERS AND PERPLEXMENT OF LETTERS.—The following notice was issued by Wednesday by command of the Postmaster-General:—"Instructions to all Postmasters and Sub-postmasters. General Post Office, November, 1851. Although money prepayment of postage on inland letters is no longer compulsory, any person desiring to prepay the postage on letters are at liberty to do so, according to the former practice, to receive money for the postage of letters which may be handed to them along their routes for the purpose of being posted, it being the duty of the messengers to affix stamps for such money payments immediately on their arrival at the post-office."

CORPORATION OF THE SONS OF THE CLERGY.—On Thursday last the annual meeting of this society was held at the Corporation House, Bloomsbury-place, for the election of officers for the ensuing year, and for general business, Sir R. Inglis, M.P., in the chair. The report stated that the income arising from dividends on £8000 Consols, subscriptions, donations, and collections amounted to £1164 11s. 5d., all of which had been expended in carrying out the objects of the charity. The report was adopted, and, after a vote of thanks to the chairman, the meeting separated.

DIOCESAN AND CHURCH MISSIONS, COUNTY KERRY, IRELAND.—On Thursday a public meeting of the clergy connected with, and others interested in, these missions was held at the Hanover-square Rooms, for the purpose of bringing the claims of the society before the attention of the public. The chair was taken by the Hon. William Cowper, M.P., in the chair. After a few observations from the chairman, the Rev. Mr. Moriarty and other gentlemen addressed the meeting, inculcating the duties of officers for the ensuing year, and for general business, Sir R. Inglis, M.P., in the chair. The report stated that the income arising from dividends on £8000 Consols, subscriptions, donations, and collections amounted to £1164 11s. 5d., all of which had been expended in carrying out the objects of the charity. The report was adopted, and, after a vote of thanks to the chairman, the meeting separated.

BRITISH AND FOREIGN SAILORS' SOCIETY.—On Thursday evening a meeting of this society was held at Crosby Hall; Rear-Admiral C. R. Moorsom in the chair. The report stated that the society maintained the Sailors' Church, near the London Docks, where a chaplain preached on the Lord's day and during the week. The seats were all free to sailors, and whom more than 5000 had attended the service during the past year. In connection with this church there was a Sunday School and a Sick Visiting Society, by which the neighbourhood had been greatly benefited. It employed in the Port of London five missionaries, who were daily engaged in visiting the English and foreign ships lying in the Thames, and in the various docks. There were lodging-houses where sailors, while in port, were accommodated; and where both their property and morals were respected. Several gentlemen having addressed the meeting, resolutions were passed to the effect that the maritime population of every country, not excepting that of Great Britain, must of necessity labour under great disadvantages, both temporal and religious, and therefore possessed the strongest claims on the generous sympathies of all British Christians, especially as parties, though not to the Mohammedan Church, were equally entitled to the Christian name. The Rev. J. Russell, of Enfield, secretary to the Ecclesiastical (late Cambridge Camden) Society, with numerous other purchases, became possessor of a splendid processional cross of copper, silver plated, of the 14th century. There yet remain upwards of 500 lots for the ensuing three days' sale, and a supplementary sale of two days; comprising an infinite variety of models and casts connected with the study of architecture, with further portions of works in metal and metal work, together with some more painted glass and furniture. One of the items which next Monday's sale will comprise consists, in one lot, of considerable portions of the alabaster canopies, &c., to the niches which formerly surrounded the tomb of Queen Philippa of Hainault in Westminster Abbey, and of which a specimen and proposal for restoration were exhibited this year at the Great Exhibition, by Mr. Scott, the architect. The pieces are all of the most beautiful workmanship, and are sold without any scruple with several other portions of the shafts, &c. of the supporting pilasters, and two large pieces of the canopy to the effigy. These were all purchased by the late Mr. Gottingham at the sale of the effects of Mr. Gage, the Abbey mason, 25 years ago, who discovered them, covered with the dust of half a century, in a loft in the Abbey, among much old lumber there deposited.

RAILROAD PROJECTS IN ITALY.—It is said to be pending for the connexion of a railway purposing to start from Milan, and to join the Pavia and Genoa Railway, branching off towards the Lago Maggiore. The commercial treaty with Piedmont is said to be in a fair way towards being brought to a conclusion. Austria would consequently derive much benefit from the establishment of this line. The projected route is as follows:—From Milan by Gravellons to Pavia. From Milan by Vigevano to Abbiategrasso. A project also exists for a railway from Milan to Seno Calende.

The three hundredth anniversary of the day on which the family of Hohenzollern, the reigning dynasty in Prussia, and the citizens of Berlin embraced Protestantism (27th Sep, 1551), was celebrated on Sunday last with very great pomp in all the Protestant churches of Berlin.

NAVAL AND MILITARY INTELLIGENCE.

THE BREVET.—The promotions by brevet which have been expected for some time past were *Gazetted* on Tuesday last, the 11th inst., from which day the commissions are dated. By the changes consequent upon the brevet the following commands and situations in the army have become vacant:—District Commands: York, Birmingham, Portsmouth, Davonport, Carmarthen, Jersey, Guernsey, Edinburgh, and Cork. Staff Situations: The Inspecting General of Cavalry, Commandant at Madras, Commandant at Chatham, the Deputy-Adjutant-General and Deputy-Quartermaster-General in Dublin, the Inspecting Field Officers of the recruiting districts of Newry, Bristol, Liverpool, and Leith, three Aide-de-Camps to her Majesty, Regimental Commands: The 3d Buffs, 54th, 93th, and Cape Mounted Riflemen. The general officers commanding the troops in Ceylon and New South Wales have been promoted, but this does not as a matter of course oblige them to relinquish their present employments.

THE ARCTIC COMMITTEE.—The members of this committee, of which Rear-Admiral Bowles, C.B., is president, still continue their sittings, and it is not now expected that their labours will be ended until the latter part of next week. A short-hand reporter from the House of Commons has been in attendance daily, but the proceedings are necessarily kept secret, and the result is not expected to be made public until Parliament meets.

In consideration of the extreme heat which prevails during some months of the year at the military stations in the Bombay Presidency, the Commander-in-Chief has sanctioned white linen jackets being worn during the hot season in "undress," in lieu of the cloth shell jacket.

SIR JOHN FRANKLIN.—Admiral Taylor, C.B., has addressed a letter to the Secretary of the Royal Commissioners of the Exhibition, suggesting that the Crystal Palace should be opened as a promenade for one or more months, on the same terms as at the Exhibition, to raise funds to send out three squadrons with volunteers in search of the missing expedition, to leave on the 10th of May; to have a board constituted for carrying on their work from whom Cape Inaos to Cape Bowden, and the north of Cornwallis island. We shall look forward with great interest to the result of Mr. Rae's boat exploration, which was to be carried on last summer in the direction of Banks' Land. As we imagine, since, though of no value as regards the search for the missing expedition, because many degrees to the southward of its now ascertained course, the geographical interest of such a search is very great. Any decision on this point which might naturally arise for the safety of this little party must give way before Mr. Rae's singularly satisfactory report, that they had returned from their expedition even better prepared for carrying on their work than when they started. Letters have again been received from the *Prince Albert*, mentioning the purchase at Upernavik of dogs for sledge travelling, together with the fact that attempts had been made to send off the carrier pigeons, but that they refused to quit their floating home, either singly or in pairs, a very important fact appears in the postscript of Sir John Richardson's very interesting account of his boat-voyage in search of Sir John Franklin's expedition, viz., that the 700 empty preserved meat-tins left upon Beachey Island by the *Erebus* and *Terror* formed only a very small proportion of the entire quantity taken out in those ships, amounting to about 24,000 in all

INSTRUCTION OF OFFICERS IN STEAM MACHINERY.—The subjoined circular has been issued by command of the Lords of the Admiralty:—"Admiralty, Oct. 30, 1851.—My Lords Commissioners of the Admiralty are pleased to direct that all subordinate officers (except clerks) serving on board any of her Majesty's ships having steam power be instructed by the senior engineer on board in the knowledge of the component parts of the engine and boilers, and the practical working of the machinery, as it is their Lordships' intention, at some future period, to institute an examination on the above subjects when officers come forward to pass their final examination for rank. But should any officer who is now serving wish to be examined as to his knowledge of the above subjects when passing for his final examination, he is to submit his wish to his captain, for the information of the commander-in-chief or senior officer, and, if found to possess a competent knowledge thereof, the same is to be certified on his passing certificate for rotation in the Admiralty Office. Commanders-in-chief are, in such case, to give the requisite orders for the examination, and to nominate a senior engineer officer to attend on the day of examination, should the passing captain require his services.—By command of their Lordships, JOHN PARKER.—To all commanders-in-chief, captains, commanders, and commanding officers of her Majesty's ships and vessels."

PRESERVED MEATS.—The following circular has been issued:—"Admiralty, Oct. 31, 1851.—The attention of my Lords Commissioners of the Admiralty having been drawn to the frequent and heavy condemnations that have occurred on board her Majesty's ships, in consequence of the bad quality of the preserved meats supplied under the contracts of Mr. Goldner, their Lordships are pleased to direct that no further issues of Goldner's preserved meats shall be made to the crews of her Majesty's ships, and that the whole of such as may be on board the ships at home shall be immediately returned into store, and that the whole of such quantities as may remain in store, and on board her Majesty's ships abroad, at the time of the receipt of this circular, shall be returned to England free of expense by any of her Majesty's ships, as opportunities shall offer, in order that the same may be surveyed by the proper officers who may be appointed for the purpose, and disposed of in such manner as their Lordships may direct: but any canisters which may be found to emit offensive effluvium from the decomposition of the meat, or appear to be unfit to be sent to England, are to be destroyed; care being taken in all such cases that a survey be held previously thereto, at which a medical officer is to be present; and the name on the canister, its weight, and any other particulars are to be stated in the report of survey. By command of their Lordships, J. PARKER.—To all commanders-in-chief, captains, commanders, and commanding officers of her Majesty's ships and vessels."

NATIONAL SPORTS.

A long and busy, but not very brilliant, racing season comes to a close next week, with the Newmarket Autumn Meeting, on Tuesday, the succeeding day being exclusively devoted to hurdle and steeple-chasing. If the turfites, however, are preparing for the vacation, the "lovers of the leash" are coming out with vigour—their calendar, which extends up to December, and promises an abundance of sport, offering the following meetings for the ensuing week:—Malleny, on Tuesday; Sundorne, on Wednesday; and the South Lancashire, at Chatsworth, on Thursday. The Steeple-chase Meetings are, the Warwick on Wednesday; Abergwilwh, on Thursday; and the Liverpool (Hoylake), on Saturday.

TATTERSALL'S.

MONDAY.—About a dozen bets were laid at the following prices:—

CHESTER CUP.—50 to 1 agst High Sheriff; 1000 to 15 each agst Nancy, Lucio, Hippolyta, Goldfinder, Truth, and Grey Tommy

DERBY.—20 to 1 agst Lapidist, and 50 to 1 agst Barbarian.

THURSDAY.—A blank day.

HAMPTON AUTUMN MEETING.—Tuesday.

HANDICAP PLATE of £50.—Mr. W. Fry ns Madame Wharton (Gilbert), 1. Mr. Carew's Prestige (Holt), 2

FREE HANDICAP HURDLE RACE.—Mr. Salt's Sir Alexander (Salt), 1. Mr. Bowman's Michael Brunton (Archer), 2.

SELLING STAKES of 3 sovs each.—Mr. Ewitt's Amoroso (Kendall), 1. Mr. Lee's Petticoats (T. Sherwood), 2.

HAMPTON STEEPLE-CHASE of 10 sovs each.—Mr. Thomas's Rendsburg (Maher) walked over.

SELLING STEEPLE-CHASE of 3 sovs each, with 20 added.—Mr. Routh's Recruit (Archer), 1. Mr. Lane's Frank (Owner), 2.

SHREWSBURY AUTUMN MEETING. Monday.

HUNT STAKES of 3 sovs each, and 20 added.—Selina, 1. Lady Bibina, 2.

ASHBY STAKES were won by Urbanity

SHREWSBURY HANDICAP.—Youth, 1. Le Juf, 2.

ABBEY STAKES.—Young England, 1. Selina, 2.

Tuesday.

GREAT SHROPSHIRE HUNT STEEPLE-CHASE.—Peter, 1. The Young 'un, fell.

COLLEGE STAKES.—Selina, 1. Cobweb, 2.

HURDLE RACE.—Tallyho walked over.

LIVERPOOL AUTUMN MEETING.—Thursday.

HANDICAP HURDLE RACE.—Lord George, 1. Little Queen, 2.

THE SEFTON HANDICAP.—Chief Justice, 1. Gholab Singh, 2.

On Monday the hired convict ship *Absolkie* came to moorings off Woolwich Dockyard, where she will receive on board 400 male convicts, for conveyance to Hobart Town, among them being the notorious burglar BARRS, and the gangs that were concerned in the Frimley murders. She is appointed to sail on the 1st of December.

The Spanish Cortes were opened at Madrid, on the 5th inst., by a decree of the Crown. There was no speech. A vote of thanks to the army and the inhabitants of Cuba was carried unanimously. The Minister has refused to suppress the *Nacion*, on demand of the Pope's Nuncio, on account of the clerical indignation called forth by the suppression of the *Europa*, the Radical evening paper. However, the *Nacion* and four other morning prints have had informations filed against them by the fiscal.

The following prophecy of the *Boston Herald*, a Protectionist journal, on the opening of the Great Exhibition, appeared as a leader on Tuesday, May 6, 1851:—"This monster plaything was opened on Thursday last. We express no low sentiment of levity when we say we do not consider it worth while to clog our columns with its details. The principle and its celebration we will probably die in contemptuous silence, or amidst the irrepressible disgust of a deluded and repentant people."

It appears, from the accounts relating to trade and navigation which have just been issued, that there was a decrease in the consumption of spirits in the last nine months, compared with the preceding year. In the nine months ending the 10th of October, 1850, the quantity of spirits—rum, brandy, and Geneva—was 3,521,936 gallons, and in the nine months ending the 10th ult. the quantity entered for home consumption was 3,449,089 gallons, showing a decrease of 72,846 gallons. Less spirits were consumed during the time the Great Exhibition was opened than in the preceding year.

THE JUDGE OF THE LIVERPOOL COUNTY COURT.

OFFICIAL INVESTIGATION.

The inquiry at Preston was to be resumed on Monday before the Earl of Carlisle, but Mr. Sergeant Wilkins, appearing for Mr. Ramshay, not having been quite ready with his defence, an adjournment took place to next day.

On Tuesday, accordingly, the proceedings were resumed. The court was crowded to excess, the bench being completely filled by magistrates, the body of the court by well-dressed inhabitants of Preston, and the galleries by elegantly-attired females. The most intense curiosity was manifested by all present. The Earl of Carlisle took his seat at twenty-five minutes past ten.

Mr. Sergeant Wilkins proceeded to address his Lordship on behalf of Mr. Ramshay. He trusted that the adjournment which had taken place would contribute to any want of confidence in the intrinsic merits of Mr. Ramshay's case, for he should be prepared to show that the only real delinquents in the business which his Lordship sat there to inquire into were those who had agreed the memorialist had committed to prison; that their object was to rob his Lordship of the patronage of the office of county court judge, by wounding him through the sides of Mr. Ramshay. Having commented at considerable length on the evidence adduced in support of the memorial, he contended that the authorities to which the courts have freely exercised the right of committal for contempt, or of inflicting a heavy fine for disobedience of merely verbal orders or admonitions. In the case of Clement the fine was £500, and Chief Justice Abbott and the whole bench concurred in its propriety. He next brought before his Lordship's notice the specific words of the act of Parliament under which Mr. Ramshay had been appointed, maintained that he had acted strictly and properly applied its provisions, and vindicated the powers which had been vested gin him.

The speech of the learned sergeant occupied the whole of Tuesday, Wednesday, and Thursday. On the latter day the learned sergeant, having finished his commentary upon the evidence, took a review of the whole case, and contended that Mr. Ramshay had acted *bonâ fide*, and legally, and properly.

[Towards the end of his speech Mr. Sergeant Wilkins referred to the private character and good personal qualities of Mr. Ramshay, and exhibited so much emotion that he sat down, burst into tears, and covered his face with his hands for a few seconds. He concluded his speech by calling upon the Earl of Carlisle, "in the name of God," and of the Queen, not to yield to clamour and faction, but to do that which justice demanded.]

LAW INTELLIGENCE.

SIR George Turner, Vice-Chancellor, has given judgment in the case of the Kidderminster Grammar School, being an information filed in the Attorney-General's name, on the relation of certain inhabitants of Kidderminster, against the Bishop of Worcester as visitor, and other defendants, as trustees and feoffees of the Free Grammar School, praying that the whole of the proceeds of the charity property might be applied to the free scholars; that the master of the school should be prohibited from taking boarders; and that children of dissenters should be admitted to the school, and all children who could read should be admitted independent of age; and that it should be referred to the master to settle the new scheme. His Honour's decree dismisses the information with costs, except in reference to the prayer to alter the scheme of religious qualification and instruction; and to save expense by a reference to the master, if the parties would agree to such a course, he would amend the scheme himself. His Honour refused costs even in this portion of the case, as he highly disapproved of subscriptions got up at public meetings to contest matters relating to charities, the effect of which was to waste the funds. The defendants, therefore, by this decree, will have their costs out of the fund, and the promoters of the suit will have to pay their own costs and a portion of those of the defendants, with the advantage that dissenters will be hereafter admitted to the benefit of the school.

In the Queen's Bench, Lord Campbell, at sittings *in banco*, has given two important judgments in respect to public bodies and institutions. In the case of the East London Water Works it has been ruled that water companies cannot be rated by the trustees for lighting and paving, although they were liable to be assessed for the relief of the poor; in the case of the Manchester Athenæum his Lordship decided that institutions of that nature were liable to be rated, like the Manchester Concert-hall, as it did not come within the exceptions contained in the act relating to the rating of buildings. Lord Campbell stated he should have been surprised if the legislature had created an act to exempt institutions from which the members derived a particular benefit—as hardly a club in London might not then claim to be freed from rates. The liability of the United Service Institution to poor-rates is now a question; but the Queen's Bench has taken time to consider its judgment, after a long argument on Tuesday, on behalf of the authorities of St. Martin's parish and the institution. On Wednesday in the Court of Queen's Bench conference, Lord Campbell's view of the law, by deciding that the Manchester Athenæum was liable to be rated to the relief of the poor, on the ground that the institution was a source of profit to the proprietary, and not established for purposes of literature, science, or the fine arts, and owing to the exceptions laid down by the Legislature

In the Court of Exchequer, on Tuesday, Miss Sarah Mary Hoare appeared in person to show cause against a rule obtained by Mr. Bovill to enter judgment, in the name of a nonsuit, in the action brought by Miss Hoare against the proprietor of the *Morning Herald*, for libels on her character, during the years 1845, 1846, and 1847. The action was to have been tried at the Middlesex sittings after Trinity Term, and the plaintiff's inability to produce copies of the journal filed at the British Museum, the record was withdrawn. The Lord Chief Baron, having asked Miss Hoare if she wished to try the case, and the lady having answered affirmatively, his Lordship stated that he must pay the costs of the day. Miss Hoare argued that she was not bound to pay the costs, at considerable length, relying on some authorities, which the judge explained had been superseded by new rules. "Then why," rejoined Miss Hoare, "does the Court of Exchequer place them into my hands, my Lord?"—The Lord Chief Baron: We can't have all the old books burnt.—Miss Hoare: They ought to have been sealed up. (Laughter.) His Lordship then repeated to the plaintiff that she must enter into a peremptory undertaking to try the case, and consent to an order to pay the costs of the day of the last trial. Miss Hoare having consented to this, the rule nisi was discharged.

In the Court of Exchequer, on Wednesday, a writ of delivery, ordering the Commissioners of Customs to give up the goods seized on the premises of the London Dock Company, on payment of duty, was granted in all the cases against that company.

The vestry of St. Pancras and the North-Western Railway are at law respecting the amount of the rate imposed on the property of the company.

The Michaelmas Term calls to the bar (Middle Temple) were made on the 8th instant, and include Messrs. C. Pridham, W. Brandon, J. B. Smith, J. Motteram, and W. Henfrey.

The magistrates of the county of Surrey within the metropolitan police district have received notices from the clerk of the peace announcing that the new prison or house of correction at Wandsworth was ready for the reception of prisoners committed by them summarily for hard labour, or non-payment of fines, for wilful damage, and assaults on police-officers.

There are indications of an approximating severe winter. Great flocks of sea-fowl have visited and remained on the coast of Northumberland, during the last few days, apparently *en route* from the inclement and boisterous coast of Norway to a milder climate.

CALIFORNIAN LYNCHINGS.

ANOTHER terrific "Lynching" took place at San Francisco on the 31st of August last. We trust this will prove a timely warning to the public, and prevent the mania from spreading of growing 200 per cent. premium on Fire Insurance Companies formed for the ostensible purpose of working quartz mines in California. Owing to the lax conduct of the United States officials, the inhabitants of California found their lives open to the attacks of the assassin, and their properties subjected to the mercies of the incendiary. Three had Firemen had been almost reduced to ashes, and numerous attempts were made on the part of those entrusted with the maintenance of order to bring the wretches to justice, when, for this purpose, "a Committee of Vigilance" was formed, supported by the most wealthy and respectable inhabitants of California. The following are the details of the painful scene of the accompanying Illustration

Two persons, Whittaker and M'Kenzie, were arrested and confined by the Committee of Vigilance, who acknowledged to an almost unparalleled amount of crime, and were consequently sentenced to death. Their confession, duplicated and numbered, many in official capacities. On the 31st the Governor and Sheriff Hays attended at the warehouse where the committee held its sittings, and seized the two prisoners and took them to the County Prison; a writ of *habeas corpus* having been previously issued on an affidavit made that the two parties were unjustly imprisoned.

On Sunday, 24th ult., the city was startled by the peals of the Vigilance bell, and before the excited multitude could concentrate at any point, to impede or promote action, a carriage had dashed through the principal streets and conveyed the two prisoners again into the hands of the committee, at their chamber of deputies, many in official capacities. On the 31st the Governor and bolts of the authorities. They were hung at high noon from the loft of the committee-rooms—the fifteen thousand people beneath venting their approbation in one unanimous and terrific assent. This event only occupied eighteen minutes.

Two days previous to this appalling event, on the 29th, Sacramento City was agitated by the thrilling scenes of an execution, under the following circum-

BURNING THE BODY OF THE LATE DEWAN MOOLRAJ, ON A SANDBANK IN THE GANGES.

ances:—Robinson, Thompson, and Gibson had been tried by the Courts for highway robbery, and under the new statute had been condemned to death. On the morning fixed for their execution a reprieve arrived in the city for Robinson, which the Governor had subsequently asserted he was induced to issue on the representation of about forty respectable men. The people, believing Robinson to be the greatest villain of the three, took him away from the authorities; and, after the execution of Gibson and Thompson, he was made to swing from the same rope's end. An indignation meeting was held that evening, which passed resolutions requesting Governor McDougal to resign.

The sketch was accompanied by a letter, whence the following is an extract:—

I enclose, with a specimen of gold dust, a drawing of two men who were hung, or "Lynched," by the Vigilance Committee. They were exceedingly bad characters, from Sydney. This is a good place for young indigotions people to settle, as they must with care realise a competency within a reasonable period. I do not, however, like the place myself, as I have not had really good health since I have been here; and I intend to sell out, business not being so good since the fires, owing to parties in general having lost the major part of their substance by them; but the place is overdone with mere traders and traffickers.

This is a very fine country for farming; vegetables grow here better and larger than I ever saw elsewhere; they are, however, still high-priced, owing to the heavy cost for labour. You must not believe all that is said about fortunes being made by gold-hunting. Charles went home by the steamer a fortnight ago; he was at the mines sixteen months, and only cleared about 1000 dollars. Notwithstanding this statement, I believe, with others, well informed, that as much, or more, gold will be raised this year than any previous one; but the time for individual mining is fast passing if it has not already passed away. With skill, machinery, and capital combined, immense fortunes may yet be realised by quartz mining—in fact, the last-named is all the rage

You will, no doubt, have numerous bubble companies by this time, with pretended titles and grants of rich gold quarts; but we don't want capital: it is skill, machinery, and labour that we require to develop our resources.

Notwithstanding the apparent difficulties that the resolutions offer to companies of large means, miners' claims can be easily purchased and a secure tenure thus obtained; if, however, mere parchment titles are bought in England, those embarking their capital on such securities must expect to lose their money. The idea of paying "royalties" is laughed at here. Such a one as —— ought to do well here with his skill in mining and metallurgy, particularly as he has paid so much attention to both as connected with gold. Legal tenures, other than those of possession, whether as respects mineral or agricultural land, are not recognised, as you might and no doubt have anticipated. With regard to the public lands, all the candidates for senatorial honours advocate that every male of twenty-one years shall be entitled to a quarter location, 160 acres. Goldmining grounds will for some time to come belong to those only in occupation, according to the resolutions of the miners; and, as they are now assumed to be 200,000 strong, you may easily imagine that their resolutions have more effect than an act of Congress, as no force can be brought to bear against the fiat of the Miners' Committee.

DEATH OF THE DEWAN MOOLRAJ.—BURNING OF HIS BODY.

A CORRESPONDENT, writing from Berhampoor, Bengal, says, in a postscript:—"As the mail was about to leave, news reached us that the ex-Dewan of Mooltan, Moolraj, who was a Government prisoner, had just died on board one of the Government steamers in the Ganges." Our Correspondent has sketched the Hindoo ceremony of burning the body, which we have engraved.

In the *Friend of India* we find the following interesting notice of the ex-Dewan:—"This chief—of the pacific caste of Indian Bankers—went into rebellion against the vast power of England in April, 1849; and although he had at the time but an inconsiderable body of troops, and a very limited supply of cannon, yet he was enabled, by dint of the most extraordinary exertions, so to improve his resources of men and artillery as to stand one of the best contested sieges in the annals of British India. The siege of Mooltan will long continue to be remembered for the skill and perseverance of the assailants, and the chivalrous and obstinate defence of the besieged. So gallant was the bearing of the brave Moolraj in circumstances the most difficult, as well as the most foreign to his previous habits, that it naturally led many to overlook the disloyal position in which he stood, and to consider the severe penalty meted to him, when we had at length succeeded in reducing the fortress, as incompatible with the proverbial generosity of our national character; and it was therefore with no small delight we learnt that the idea of subjecting him to a punishment worse than that of death, by transporting him to the Straits, had been abandoned. We have learnt, on what appears to be good authority, that during his confinement in the fort he was treated with great consideration, and with every indulgence compatible with the security of his person. But the climate of Bengal and the barracks of Fort William were totally unsuited to the constitution of one born and bred in the Punjaub; and his health at length suffered to such an extent as to render it necessary to remove him, as the last chance of saving his life, to Allahabad. But he was past recovery before he embarked; he died on the steamer during the voyage; and he who had so gallantly borne the terrific storm of our artillery, and refused to yield his fortress till it was crumbling around him, and his army had been reduced to the lowest ebb, died among strangers and in captivity, and his body was burnt on a sandbank in the Ganges, by a few of the faithful adherents to his fallen fortunes—another addition to the numerous instances of the mutability of human affairs with which the history of British India is crowded."

LYNCHING IN SAN FRANCISCO.

HORNS FOUND IN A BEECH TREE.

ABOVE four years since a man was seeking for strayed cattle in a forest in the fourth concession of the township of Thurlow, in the county of

HORN OF DEER FOUND IN A BEECH-TREE IN CANADA WEST.

Hastings, and Victoria province of Canada West; he discovered, cleft and partly grown into the trunk of a beech tree, part of the antlers of a deer, as shown in the accompanying Illustration

Trees of such size (says a correspondent) are usually cut about four feet from the ground, the top of the stump being left square or flat across, and the lower end of the falling tree being cut in the fashion of a wedge. The horn was found within about one foot above the gap made in the wood with the axe.

The deer now found as denizens of the forest in Canada West are commonly called red deer; their hair is a mixture of red, grey, and white. The antlers in the wood were precisely such as are found in the present day. The tree was cut down by Andrew Bruce, a man well known to our correspondent, in the month of March last

The occurrence is a very remarkable one, for the horns appear to be *grown over* by the timber; in which case they must have remained undisturbed for many years.

THE POTATO ROT IN INDIA.

(From a Correspondent.)

In the years 1848, 1849, and 1850, the presence of that fearful scourge, the rot in the potato, occupied not only the attention of England and Ireland, but the attention of all Europe, America, and a part of Asia. In India we have not escaped, the disease having attacked the tuber in all parts of the country.

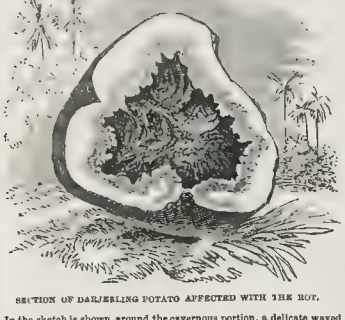
Enclosed is a Sketch of two Dageling Potatoes affected with the rot.

The hilly sides of the lofty Sub-Himalayah Mountains produce the finest potatoes in India; they are cultivated by the natives of the hills, and are grown at an average height of 6000 feet above the sea, and in sight of the perpetual snows and glaciers of the Great Kunchinjinga, whose peak rises to upwards of 28,000 feet above the sea. The produce is exported to Bengal, and all the bazaars and large cities and stations from Benares to Calcutta are supplied from this mountainous region.

During the year 1850 nearly the whole crop was affected with the rot, the disease appearing in two forms—the wet and the dry: specimens of both diseases, drawn from nature, are here exhibited, and are of the average appearance of a great many that were opened. The potato was in no way affected externally, or, rather, there was no external sign to indicate that the potato was diseased. The dry specimens generally contained the ova of insects, and in some cases the insects themselves, such as earwigs, red ants, &c., and were all pierced at the insertion of the stalk. The wet specimens were entirely free from insect life.

SECTION OF DARJEELING POTATO AFFECTED WITH THE ROT.

From the numerous specimens examined it appears that the disease commences at a point near the centre of the potato, where the disease appears as a black and soft spot, which rapidly spreads, and by corrosion speedily forms itself into large rugose cavities, the walls of which give out a fœtid, ichorous fluid. When the disease reaches the skin, the potato collapses, and the whole mass is speedily converted into a heap of corruption.



SECTION OF DARJEELING POTATO AFFECTED WITH THE ROT.

In the sketch is shown, around the cavernous portion, a delicate waved shade: this is the spreading disease, but, strange to say, it is separated from the actual decayed portions by a belt of sound potato.

THE AUSTRALIAN "DIGGINS" AND THE ROAD TO THEM.

The Bathurst way is steep and long,
The mountain airs are keen and strong;
The winter rains are heavy too,
And food is scarce, and dwellings few;
These things are disagreeable, no doubt;
But virgin gold is lying all about.

When I am digging out the mud,
That buries with gold its lumps and grains,
Up to my middle in the flood,
Will thou, my fair, gloat o'er the gains?

When I the glittering quarts to pieces knock,
Will thou with scugs the golden crevice rock?

* * * *

Vigorous and healthful, sanguine, sleek,
With provisions for a week and day,
Pistol and pistols, spade and pick
He look that mens the upland way.
We have not looked in his pocket with a pry,
But think he may come back an altered man.

Sydney Morning Herald.

ALTHOUGH every fresh arrival from Sydney brings some additional piece of news from the diggins, as the letters and reports are chiefly written by old colonists, they take it for granted that every one knows where the gold regions lie, and how situated as regards means of cultivation and facilities of communication with the settled districts. The fact is, that even among the educated part of the English community the most extraordinary ignorance prevails as to the geography, natural resources, and population of Australia, considering the important share its colonies have in supplying raw material for our manufactures and in consuming British produce.

A clergyman of superior literary attainments, who was the other day enlarging on the superior attractions of New Zealand as an emigration field, was astonished, and at first quite incredulous, when informed that the whole white population of all the colonies of New Zealand scarcely equalled that of the city and port of Adelaide, and that the whole annual exports of New Zealand fell short of the value of one week's exports from either Sydney or Melbourne. Yet such is the fact!

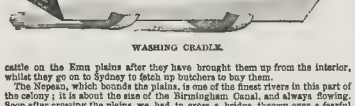
In the same manner persons ignorantly fancy that the gold regions are as barren and inaccessible as those of California, the truth being that they lie within about thirty miles of a post-town, founded in a fine table land, nearly forty years ago. Mistakes equally absurd prevail as to the character of the people, whom it has been a sort of fashion to represent as a mixture of felons and semi-savages.

For these reasons it may not be amiss to give, before describing the actual diggins from the latest intelligence, the following

RIDE FROM SYDNEY TO BATHURST.

Our first stage was to Paramatta, fifteen miles, with villas or cottages almost all the way on either side, Paramatta being a sort of suburban dependency of Sydney. After baiting at the Brown Cow, we pushed on over a macadamized road to Penrith, twenty-two miles, where we put up for the night, after a light supper of a mutton chop nicely broiled, fried eggs, ham, a potato, and a cup of tea. They call Penrith a town. I should call it a village; it stands on the river Nepean, which stream we crossed the next morning on a floating bridge or punt worked by men. On reaching the opposite side we crossed the Emu Plains, which are the grazing ground or "lays" for graziers. They leave their

"OFF FOR THE DIGGINGS," AT BATHURST.



WASHING CRADLE.

cattle on the Emu plains after they have brought them up from the interior, whilst they go on to Sydney to fetch up butchers to buy them.

The Nepean, which bounds the plains, is one of the finest rivers in this part of the colony; it is about the size of the Birmingham Canal, and always flowing. Soon after crossing the plains we had to cross a bridge, thrown over a fearful abyss, and began to ascend the celebrated Blue Mountains, which formed an impenetrable barrier to the first colony, until after many attempts a pass was discovered across them in 1813. Since that period a capital road has been constructed, planned, and executed by Sir Thomas Mitchell, over a country which in physical difficulties may be compared to the route executed by order of Napoleon over the Alps. As we ascended Lapstone Crag the road wound along the sides of the mountains; crag towering over crag, and rocks overhanging, seemed every moment about to fall and crush us. For miles the road zigzags to find a gradient over which drays can travel—in some places cut through solid rock. We did not halt until we reached the Weatherboard Inn, so called from the materials of which it was first built, distant twenty-two miles from Penrith. Travelling in these regions is dear, but good—no less than £2 a day for myself and horse. We had roast fowl, ham, beefsteak, and potatoes served as well up as at any roadside inn in England.

After dinner we rode over a very fair macadamised road, up and down like the dales and hills of Derbyshire, occasionally passing over a wooden bridge uniting two mountains meeting on the skew. At the next inn, Pulpit Hollow, we only took a glass of brandy and water, without dismounting, and went on to Blackheath, which is 70 miles from Sydney, where we slept.

The inn at Blackheath is on the top of a high mountain, one of the coldest dwellings in the colony, exposed to continual rain, with snow and rain for a change. Potatoes grow here, which they won't do to perfection on the Sydney side. Here we had a capital dinner and supper combined—good vegetables, with roast fowls, a bottle of colonial wine, and pancakes. I mention these things to show how comfortably we got along, so different to the accounts from Californus. For the horses there was a good warm stable well bedded down, and plenty of corn. The next day we arose at daylight and rode to the foot of Mount Victoria, so named in 1832, after our Queen, then Princess, by the Governor, Sir Richard Bourke, when Sir Thomas Mitchell, the Surveyor-General, by means *of correct labour*, cut a road through the mountain, which any dray can now descend locked, and can ascend with a full load and ten bullocks; thus superseding a dangerous pass by Mount York. Our railway cuttings have nothing more formidable than this Victoria Pass.

We were now within fifty miles of Bathurst, but instead of keeping the mail road we turned off over one of the old tracks used before the road was cut, to visit a friend of my companions.

ASCENDING A PASS IN THE BLUE MOUNTAINS.

On this day we had our first feed on bush fare, viz., damper (unleavened bread baked in ashes) and salt beef, at a bush inn.

On the second day we reached Bathurst, although we might have saved twelve hours had we been so inclined.

Bathurst is situated on the borders of immense plains of the same name, and was founded by Governor Macquarie; the Macquarie river runs through the centre of the town. It contains some capital inns (Mrs. Black's the best), and a famous store, where everything may be had from a needle to a dray complete; but although the inhabitants, with a magnificence which is truly colonial, call it the "City of the Plains," it struck me as rather a mean-looking place. The population is about 6000. In the immediate neighbourhood reside some of the wealthiest men in the colony.

On the Bathurst Plains, comprising 250 square miles of open downs, without a tree, great fortunes were made by the first grantees and squatters, in pastoral pursuits and corn-growing, but the great drought in 1839 destroyed their agricultural reputation. It is chiefly held in large grants of 2000 acres. The whole district is more than 2000 feet above the level of the sea, which renders it peculiarly suitable to grow potatoes and other vegetables which cannot be raised in the lower latitudes of the Sydney district. A mail runs regularly three times a week between Sydney and Bathurst.

The Ophir Gold Diggins are distant from Bathurst about thirty-five miles, in a country to which as yet no roads beyond dray tracks extend. Although the gold is found within a circle of the most sterile and inaccessible hills (or colonial ranges), within a circle of a few miles of the diggins are large tracts of land admirably suited for dairy purposes and growing all the ordinary produce of English farms. At the Cornish Settlement, about seven miles from Ophir, Mr. Thom (commonly known as Parson Thom), a Cornish farmer, who came out to the colony about three years ago, and obtained a grant of land, made 4260 000 by growing wheat in the face of the great drought, when crops failed at Bathurst as well as throughout the greater part of New South Wales. His neighbours are chiefly Cornishmen. The climate there and all round the Cannobelt Mountain, from whom the streams descend that wash the gold country, resembles that of the south of England—rather hotter in summer, not so cold in winter; at that, beside the Cornish settlement, on Emu Swamp, Blackman's Swamp, King's Plains, Pretty Plains, Frederick's Valley, there are lots of small settlers, either free-holders or leaseholders, who have their gardens, and raise wheat, potatoes, melons, pumpkins, Indian corn, make butter and cheese, and do all that can be done with the help of their own families, without much hired labour. There a penny of land fit for plough, on which it would not be necessary to cut down a single tree, beside other land, that a very little clearing would render cultivable; and, now that gold has been found in quantity, there is no place in the world which offers a better opening for a hard-working farmer than the Bathurst and Wellington districts.

On the Summer-hill Farm, close to the Summer-hill Creek, where Mr. Hargreaves's first discovery took place, there are 120 acres of the dark loam, which scarcely a tree, out of a grant of 10 000 acres, and the whole, if cleared, is fit for growing wheat. It is also a capital dairy district, and the traditionary prices of 2s. 6d. per lb. for butter are now likely to be obtained again. Peas and broad beans may be seen growing alongside of melons, pumpkins, and cucumbers.

Thus it will be seen that the gold diggins of Australia lie within forty miles of a town where every luxury is to be obtained, with a post-road all the way to Sydney, and that they are surrounded by tracts of fertile land, partly occupied, where food for millions may be grown if required.

Although there are three or four thousand at work where twenty men were never seen in one day before, a good meal of damper and mutton can be had within a few miles of Summer-hill for 2s.

THE ILLUSTRATIONS.

The Picture speaks for itself. One of the parties which it has become customary to make up on the joint-stock principle is engaged in loading a dray with the necessaries for a month's encampment at the diggins, and a journey of 150 miles, of which 120 to Bathurst are over a macadamised road, sadly cut up now by the army of gold-seekers; the rest a bush track.

Our second Engraving represents a stream of gold-diggers on foot, on horseback, and with drays, ascending the pass cut through Lapstone Crag, one of the formidable obstacles which the Surveyor-General, Sir Thomas Mitchell, had to overcome in making his celebrated road over the Blue Mountains. Many of the Sydney horses have broken down on these steep ascents, which are more suited and used by oxen than horses. The roads are so cut up that the ruts often cover the axletrees, and breakdowns are met on every steep pass.

THE CRADLE.

This represents the simple machine by which the sand, mud, and gravel is washed from the gold. Water being poured in, the cradle is rocked until the heavier gold falls through a sort of cullender into a receptacle below.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

SIR J. M. RICHARDSON BUNBURY, BART.

Sir James Mervyn Richardson Bunbury, Bart., of Castle Hill, in the county Tyrone, was the only son of Sir William, the first Baronet, by his wife, Eliza Richardson: he was born in 1781, and married, in 1810, Margaret, daughter of John Corry Montray, Esq., of Favour Royal, county Tyrone. Sir James succeeded his father, as second Baronet, the 29th September, 1830, and on the 30th April, 1822, he assumed, by sign manual, the additional surname and arms of Richardson. The worthy Baronet died on the 4th inst., at his seat, Augher Castle, or Castle Hill, in the county Tyrone. He leaves three sons and seven daughters: his eldest son, John, succeeds him, and is now the third Baronet of this old and highly respectable family.

MATTHIAS ATTWOOD, ESQ.

This gentleman, a distinguished member of the House of Commons, and an able debater there on questions of currency and finance, was a London banker, one of the eminent firm of Spooner and Attwood. He entered Parliament in 1819, and from that time, till 1841, he continued to have a seat in the Lower House. He first was elected for Callington, then for Boroughbridge, and lastly for Whitehaven, being its first representative when the Reform Act, in 1832, made that seaport a parliamentary borough. Mr. Attwood was a determined and persevering opponent of the monetary policy adopted by the late Sir Robert Peel in 1819: his researches and the evidence he gave before Parliamentary committees on the subject display great knowledge, research, and ingenuity. The private life of Mr. Attwood was much respected and beloved for his disinterested kindness and unostentatious benevolence. Of late years he lived a great deal in retirement. He died a convert to all his house, Dalwich Park, on the 11th inst.: he was at the time in his 72nd year.

THE RIGHT HON. H. M. PIERREPONT.

The Right Hon. Henry Manners Pierrepont, of Coubbett Park Hants, Baron Kenyon in the Court of Denmark, was the third son of Charles, first Earl Manvers, and the next brother of Charles Herbert, the second earl. He was born the 18th March, 1780 and was educated at Christ Church, Oxford. He afterwards entered into the diplomatic service of his country. He was appointed a Privy Councillor in 1807. The Right Hon. Gentleman married, the 14th of May, 1818, the Lady Sophia Cecil, only daughter of the first Marquis of Exeter by whom (who died the 3d Nov. 1837) he leaves an only child, Augusta Sophia Anne, the wife of Lord Charles Wellesley, second son of the Duke of Wellington. Mr Manvers Pierrepont died on the 10th inst., at Thoresby Park, Notts, the seat of Earl Manvers.

THE HON. LLOYDAS KENYON.

The Hon. Thomas Kenyon, of Peckfoe, Salop, was the third son of the eminent Lloyd Kenyon, Chief Justice of the Court of King's Bench, and first Baron Kenyon; his next brother, George, is the second and present Baron. Thomas Kenyon was born the 27th September, 1750, and married, the 12th April, 18 3, Louisa Charlotte, second daughter of the Rev. John Robert Lloyd, of Acton Park, Salop; by whom, who survives him, he has seven sons and one daughter: Thomas, the eldest son, Robert, D.C.L., Barrister-at-law, is Recorder of Tewkesbury. Mr. Kenyon's son was formerly Clerk of the Outlawries in the Court of King's Bench. His father lived at his seat, Peckfoe, as a country gentleman, and was esteemed for his usefulness and benevolence. He died a widower, on the 4th instant.

The mortal remains of the late Right Hon. Sir Edward Cromwell Disbrowe, Master of the Household, arrived in the river, by the Government steamer, on Wednesday, and were landed at the Tower, in this country. The First Secretary of Legation will act as Minister *pro tem.* until the appointment of Sir Edward's successor.

The Hon. Augusta Mary Byron, better known as the Hon. Augusta Leigh, died a few days since at her apartment in St. James's Palace, in the 68th year of her age. She was the half-sister of the author of "Childe Harold" by a former marriage. Her mother was Amelia Darcy, Baroness Conyers, divorced Duchess of Leinster. In 1807 she married her cousin, Lieut.-Col. George Leigh, of the 10th Light Dragoons. By this marriage she had several child en, some of whom survive her. She had been a widow for some time. Lord Byron is known to have entertained for his sister a higher and sincerer affection than for any other person. One of the few presentation copies of "Childe Harold" was sent to his sister with the inscription—"To Augusta, my dearest sister, and only best friend, who has ever loved me much better than I deserved." This volume is presented by her father's son and most affectionate brother." This attachment is has himself chosen to account for, but wisely not. Lever having been much together, we are nature ly more attached to each other." Nor was "Augusta" forgetful of her brother. She publicly evinced her regard for him by the monument which she erected over his remains in the little church of Hucknall.

KOSSUTH IN ENGLAND.

In the Press, and speedily will be Published, Price 1s.,

AUTHENTIC LIFE of his Excellency LOUIS KOSSUTH, Governor of Hungary. His Progress, from his Childhood to his Overthrow by the combined Armies of Austria and Russia, with a full Report of his SPEECHES DELIVERED in ENGLAND, at Southampton, Winchester, London, Manchester, and Birmingham, with his ADDRESS to the INHABITANTS of the UNITED STATES. The whole EMBELLISHED with BEAUTIFUL ENGRAVINGS.

London: Bradbury and Evans, 11, Bouverie-street.

THE NATIONAL ILLUSTRATED LIBRARY.

Now ready, the New Volume for November.

PICTURES of TRAVEL in the SOUTH of FRANCE; translated from the French of Alexander Dumas. Illustrated with 50 spirited Engravings on Wood.

"The great charm of these impressions, however, is their off-hand cleverness, and the lively ease with which the story flows."—Atlas.

London: Office of the National Illustrated Library, 227, Strand; and to be had of all booksellers, and at the railway stations.

CALENDAR FOR THE WEEK.

Sunday, Nov. 16.—Twenty-second Sunday after Trinity.
Monday, 17.—St. Hugh. Lotteries abolished, 1826.
Tuesday, 18.—Cardinal Wolsey died, 1530.
Wednesday, 19.—Blackfriars-bridge opened, 1766.
Thursday, 20.—St. Edmund, King and Martyr.
Friday, 21.—Princess Royal born, 1840.
Saturday, 22.—St. Cecilia.

TIMES OF HIGH WATER AT LONDON BRIDGE, FOR THE WEEK ENDING NOVEMBER 22, 1851.

ROYAL PRINCESS' THEATRE, OXFORD-STREET.—SATURDAY NEXT, the 15th inst., will be performed, for the SECOND TIME, the MERRY WIVES OF WINDSOR. Principal characters by Mr Bat, Mr Bennett, Mr A Wigan, Mr Harley, Mr Meadows, Mr A Lee, Mr James Vining, and Mr Keeley; Mrs Keeley, Mrs Stirling, and Mrs Keeley after which the petite comedy, FATHER AND GUARDIANS. London Monday, 17th inst., for the second time, Shakspeare's play, first time of the First Part of Henry the Fourth. On Tuesday, for the first time, a new and original Comedy, in two acts, entitled Tender Pressure, or the Romance of Marriage, in which Mr and Mrs Keeley and Mr and Mrs A Wigan will appear. The Management have much pleasure in stating that they have entered into an engagement with Mr Sheridan Knowles, for a limited period, to perform the character of Sir John Falstaff—A Romantic Drama in Three Acts is in preparation, and will speedily be produced.

ASTLEY'S ROYAL AMPHITHEATRE.—Proprietor and Manager, Mr W. Batty.—Brilliant success of the highest popular and much admired Spectacle. MONDAY, NOV. 17, and following Evenings, will be presented, for the 16th time, the Grand Equestrian Historic Drama of AZAEL, Introducing New Scenes, gorgeous Panoramic Decorations, magnificent Stud, and rare Equestrian Feats of Skill will be introduced Banks's prominent and peerless SCENES of the ARENA; assisted by Mr. Batty, Mr. Cooke, and the whole of the Company. The whole concluding with a laughable Afterpiece, entitled THE DAY AFTER THE FAIR.—Tickets may be had at the Box-office, from 9 till 4 Four daily.

ORCHESTRAL SOCIETY.—FIRST CONCERT, MONDAY EVENING, November 17, will be performed, Overtures—"Don Carlos" (MS.), Macfarren, and "Preciosa," Weber. Pianoforte Concerto in D Minor, Mozart; Septet for Wind Instruments, Lucas. Symphony, No. 8, Beethoven. Vocalists—Mrs. Endersohn; Messrs. Wilworth and Lockey. Solo Instrumental Music K Loder, Messrs Pratten, Nicholson, Reeves, Maycock, Harper, Baumann and Lucas. Subscription to the Eight Concerts, £2 2s. Stall 8, 2s 2d; Single Tickets, 10s 6d and 15s. To be had only at Messrs ADDISON'S 210 Regent-street.

MR. CALDWELL'S SOIREES DANSANTES every Evening, from Eight o'Twelve. Admission, 6d; per quarter £1 1s. Splendid new Ballroom, with all the arrangements complete. Musical Director Mr J Bradley of the Royal Italian Opera Covent-garden. Mr. Caldwell's Quadrille Band of performers entirely unconnected with the routine of the ball room, and are worth grace and attention, as music, part to the fashionable amusement, in all private Soirees for the Ball Room.

MR. JOHN PARRY'S ENTERTAINMENT.—Mr. John Parry will repeat his NOTES, Vocal and Instrumental, on MONDAY EVENING, the 17th November, at Newman-street, on Tuesday, 18th, at Reading; on Thursday, 20 h, at Gloucester, on Friday, 21st, at Bristol; on Monday, 24th, at Taunton, on Wednesday, 26th, at Brecknock, on Thursday 27th, at Edgbaston; and on Friday 28th at Leamington.

GALLERY of ILLUSTRATION, 14, REGENT-STREET.—The CRYSTAL PALACE and VIEW GARDEN is exhibited immediately previous to the Diorama of the Overland Mail to India, showing Southampton Docks, Ghiza, the Pyramids, Gibraltar, Algiers, Malta, Alexandria, Cairo, Suez, the Red Sea, Aden, Ceylon, Madras, Calcutta, and the magnificent Mausoleum. The Two Models of the Great Exhibition, the beautiful gateway, and gorgeous interior. Daily at 3 and 8 o'clock. Admission, 1s, 2s 6d, and 3s. Doors open half an hour before each performance.

PRINCE of WALES'S BAZAAR, or the CRYSTAL PALACE of REGENT-STREET, 207 to 209, and COSMORAMA.—This beautiful BAZAAR, fitted up in a style of elegance never before attempted in this or any other country, open daily from 10 to 6, and includes every useful and fancy article for the ensuing season, together with a splendid STAFF of Native and Foreign Birds, and also a fine collection of PAINTINGS for SALE, by the old and modern Masters, and their works before the list of December, and they will then be fully particularized in the Catalogue.

The INSTITUTION will be re-OPENED on the 1st of DECEMBER.

R. I. LONGBOTTOM, Secretary.

ZOOLOGICAL GARDENS, REGENT'S PARK.—The URAN UTAN, presented by the Governor of Singapore, is exhibited DAILY; together with the ELEPHANT CALF and the ORANG-OUTANGS, presented by his Highness the Viceroy of Egypt. Admission, 1s; on Mondays, 6d.

LANGHAM BAZAAR, Langham-place, Regent street.—The above spacious GALLERIES, comprising an area of 18,000 superficial feet, situated in the most fashionable locality, are OPEN for the Season, 1851, 1852, &c. Models, Works of Artists, Works of Virtu, Works of Fine Arts, and Manufactures of high order, for Sale on Commission. The premises are handsomely fitted up, and may be considered nearly disposed. For terms apply to the Manager, personally or by post.

THE DEPOSITORS of WORKS of ART and INGENUITY in the POLYTECHNIC INSTITUTION, are respectfully informed that the ROYAL purpose of receiving approved Deposits for sale or otherwise, without expense to the Depositors. Those who wish to embrace the opportunity should send their works before the list of December, and they will then be fully particularized in the Catalogue.

The INSTITUTION will be re-OPENED on the 1st of DECEMBER.

R. I. LONGBOTTOM, Secretary.

THE BIRMINGHAM CATTLE and POULTRY SHOW.—The THIRD GREAT ANNUAL EXHIBITION of FAT CATTLE and the various kinds of DOMESTIC POULTRY will be held in the SPACIOUS EXHIBITION HALL, BIRMINGHAM, on the 9th, 10th, 11th, and 12th of DECEMBER next. The Private View on Tuesday, December 9.

ROYAL ACADEMY of MUSIC.—KING'S SCHOLARSHIPS.—The Examination of Candidates for the two King's Scholarships, one male and one female, annually awarded at Christmas, will take place at the Academy on Friday, the 19th of December next. Candidates (whose age must not exceed fifteen years) will please forward their names and address to the Secretary at the Academy, accompanied by the recommendation of a Subscriber of the Institution, on or before Saturday, the 13th of December. The Certificate of birth must be produced previous to the Candidates being allowed to compete for a scholarship.

By order of the Committee, J. GIMSON, Secretary.

Royal Academy of Music, 4, Tenterden-street, Hanover-square.
November 3, 1851.

LONDON to DUBLIN, via HOLYHEAD, in 13½ Hours.—Four communications in each week days, two on Sundays. Sea passage 4½ hours. First class fare, £1 10s.; second class, £1; deck passengers, 10s. For full particulars of the booking-through system see "Bradshaw's Guide," page 192; "Walsh's Irish Guide," page 2; and "Slater's Irish Guide," page 2.

WITH THIS WEEK'S "ILLUSTRATED LONDON NEWS" IS GIVEN A SUPPLEMENT, GRATIS.

On the 20th November will be published, price 1s.,

THE ILLUSTRATED LONDON ALMANACK FOR 1852.

In the form of a rich and useful Almanack, containing Twelve Engravings of the Months, Designed by William Harvey, and Engraved by Dalziel; Twelve Designs by Gavarni, Engraved by Mr. Thomas; Events of the Month, with numerous Illustrations; Fifty Astronomical Diagrams, by James Glaisher, Esq., F.R.S., and of the Royal Observatory, Greenwich; a History and Tables of the Great Exhibition, and Twelve Portraits of the Royal Commissioners, &c. &c.

Published by William Little, 198, Strand, London.

*** Country Orders supplied for Cash only.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, NOVEMBER 15, 1851.

There are many predictions that work their own fulfilment. In like manner, to have a strong faith in one's destiny is half the battle of life. Louis Napoleon is reported to have a superstitious notion about his star; and certainly the events of his extraordinary career are of a nature to strengthen his belief, and to make him do and dare many things which he would not attempt unless supported by so invincible a conviction. It was his belief in his star that guided him to attack the throne of Louis Philippe from the barracks of Strasburg. It was the same idea that impelled him to invade Boulogne with a handful of men and a tame eagle; and that led him after the events of February, 1848, to step into the arena, and carry off the crown of victory from all competitors. The same conviction has impelled him in his long and arduous struggles with the Legislative Assembly, and has probably caused his last defiance to that body to appear as prudent and wise to himself as it appeared imprudent and unwise to the lookers-on of Europe. But circumstances are rapidly justifying the President in the conviction of his own high fortunes which he has so long felt and acted upon. Events no longer creep in France; they march—or gallop. The luckless Assembly, with scarcely an honest statesman within its walls, pays the penalty both of its want of principle and of indivisuality of will; and the President, with whatever degree of rashness he may seem to proceed, uniformly comes out a conqueror in the strife. His greatest foes serve him even more effectually than his friends; and every succeeding move in the mighty game narrows the issue, and points him out as the inevitable winner. Nothing, for instance, could have been devised more fortunately for him than the inquiry originated by his opponent, M. Baze. That representative of the people, foreseeing that the day was close at hand when the President might attempt to imitate the example of Oliver Cromwell, and of Napoleon, thought it expedient to moot the question of the power of the Assembly to call out an armed force for its protection. It was straightway discovered—what every body knew—that the Assembly had the undoubted right to call out its own army; and it was also discovered—what scarcely anybody knew, not even the President himself—that, although the Assembly could summon an army to protect it against the assaults of foreign or domestic enemies, the power of naming the General remained with the President. The Assembly has thus been egregiously checkmated, and the friends of Louis Napoleon are consequently in high spirits. The President himself has been elated as to make a speech to the officers of some regiments recently arrived in Paris; in which he has, in terms by no means ambiguous, declared what his own intentions are in case of a final rupture with the Assembly. "*If ever*," said he, "*the day of danger should arrive, I will not do as the Governments which have preceded me have done; I will not say to you, 'March! and I will follow you,' but I will say to you 'I* MARCH! FOLLOW ME!'" There can be no mistake about such language, and there can be as little mistake that the President will be supported by the army in case of conflict. General Magnan, the Commander-in-Chief of the Army of Paris, anxious to ascertain the sentiments of the Generals under his command on the embarrassing question raised by M. Baze, summoned a meeting at his house, at which most of the Major-Generals were present. They declared, with significant unanimity, that, whatever orders might be issued by the Legislative Assembly, they could not constitutionally obey any which were not issued by or through the Minister of War. Under these circumstances it is scarcely surprising that the Assembly should awaken to the conviction that it is playing a losing game. Temerity, not timidity, is the policy which events indicate; for Louis Napoleon, however much he might be inclined to act tardily and warily, is compelled to act boldly by the very blunders of his adversaries. The succession of events is now so rapid, that it becomes doubtful whether, after all, the year 1851 will not see the catastrophe which was not expected until 1852.

The great Hungarian patriot continues his triumphal progress through England, and is everywhere received with a warmth and an enthusiasm that must be balm to his wounded spirit. His experience of England must inspire him with the confidence, so valuable to his cause, that, whatever may be the opinions of the great potentates of Europe, the sentiments of the people are sound. M. Kossuth, with a not unnatural impatience, considering the circumstances, seems to rely more upon the physical than upon the moral support of the nations; but the spectacle offered to his gratified eyes at Birmingham, and also at Manchester, if it give him no money, must certainly give him hope and courage. Such moral support is by no means to be despised, even by a warrior. A cause less noble than his might well derive strength from such manifestations of sympathy; and although we shall not go to war with Austria or Russia in support of Hungarian independence, our good wishes, and those of all the civilised nations of Europe, Austria included, ought to count for something. But M. Kossuth has a more potent ally than Great Britain would prove, even if she were disposed to draw the sword in his behalf. He has the senility and rottenness of Austria to work for him. A state that has been several times bankrupt—that is notoriously insolvent at the present time—that is keeping up an immense army at a stupendous cost to overawe and coerce its own subjects; and that could not live an hour but for the armies of an ambitious neighbour, whose support is a national disgrace—cannot long continue to duty freedom to Italy and Hungary. It can only keep by robbing the future to help it over the present; and neither men nor nations can carry on for any lengthened period such a course of procedure as that. The evil day must inevitably come, even should no extraneous accident cause a sudden dislocation of the crazy fabric. Such an accident, for instance, as the withdrawal by the French Government of the army it has so wantonly maintained in Rome would be a perilous incident for Austria, and a hopeful one for Kossuth and Hungary. The Emperor of Russia could not intervene in Italy as well as in Hungary without an outrage to English opinion, which, powerful as he is, he would be frightened to attempt. M. Kossuth's best friends are, after all, to be found in Italy, Germany, and Austria. He has also friends in France who dare not speak, and friends in England who may; and he will, in due time, there can be no doubt, find sufficient physical aid in the three first to enable him to dispense with any support from the last mentioned than that which the English have so largely afforded in Southampton, Winchester, London, Birmingham, and Manchester. And there is this to be said, that the physical aid might not have been so readily available in continental Europe had not the sympathy of such a nation as ours prepared the way for it.

KOSSUTH FUND.

From all quarters of the country, people have manifested their intention of subscribing to a Kossuth testimonial, worthy of the nation offering it, and of the man to whom it was to be presented. Now, though Kossuth has privately and publicly declined any such personal acknowledgment, he has declared in his speech at Manchester that, though he will accept nothing for himself, he would not for his country be ashamed to beg from door to door.

In the midst of the autumnal demonstration with which we have been greeting him, we must not forget that he is rather a man of deeds than words—the great deeds he has achieved being more than his words, though eloquent and many—and that the noble Magyar is always asking us, like a practical man as he is, whether our sympathy is to prove barren. We owe it to ourselves that this reproach should not rest upon us, and that whilst thousands, tens of thousands, and hundreds of thousands, in accumulating multitudes, as he progresses, assemble to do him honour—whilst each corner of England forwards its addresses—whilst Birmingham turns out its populations, and Manchester its quarter of a million of spectators, to greet him, that this welcome should not be limited to a mere tossing up of hats and empty vociferation.

M. Kossuth fund—that is to say, a fund to be placed at Kossuth's disposal, for the purpose of forwarding his country's cause, and with it the cause of true liberty and social order—is wanting, and has been advertised. The names of the treasurer, bankers, and committee have been published. We call, therefore, on all our readers who unite in sympathising with this great man, and the principles he represents, to pour in their contributions, large and small, from the bank-note to the postage stamp, which may prove equally the practical good-will of the donor.

COURT AND HAUT TON.

THE COURT AT WINDSOR CASTLE.

Her Majesty the Queen and his Royal Highness Prince Albert, with the youthful members of the Royal family, continue in the enjoyment of excellent health. Her Majesty and the Prince have taken daily walking and driving exercise during the week, frequently accompanied by the youthful Princes and Princesses.

The birthday of the Prince of Wales occurred on Sunday last, when his Royal Highness completed his tenth year. The Queen and the Prince Consort entertained at dinner on Sunday evening her Royal Highness the Duchess of Kent, the Lady in Waiting to her Royal Highness (the Baroness de Speth), the Dowager Lady and the Hon. Caroline Lyttelton, Lady Caroline and Miss Barrington, Colonel the Hon. Charles and Mrs. Grey, the Right Hon. Sir Charles Wood, Sir George Couper, Sir George Bowles, the Rev. Mr. Birch, Mr. Glover, and Mr. Becker.

On Monday the Queen and the Prince Consort, with the Prince of Wales, the Princess Royal, and the younger members of the Royal family, walked in the Home-park, accompanied by the visitors, and witnessed the firing of a *feu de joie* by the Royal Horse Guards and the 2d battalion of Grenadier Guards (now stationed in Windsor) in honour of the Prince of Wales's birthday. After the firing the troops marched past in slow and quick time At a subsequent period of the morning Prince Albert, accompanied by Sir Charles Wood, went out shooting, attended by Col. the Hon. Charles Grey and Col. F. H. Seymour.

On Tuesday the Queen and Prince Albert went to town by a special train of the South Western Railway, attended by the Lady in Waiting, the Countess of Charlemont; the Lord in Waiting, Lord Elphinstone; the Equerry in Waiting to his Royal Highness, Col. F. H. Seymour; and the Master of the Household, Col. Biddulph. Her Majesty and his Royal Highness arrived at Buckingham Palace at ten minutes past eleven o'clock, and at noon proceeded to the Exhibition Building in Hyde-park, where the Royal party remained nearly an hour, returning to Windsor in the afternoon.

On Wednesday her Majesty and his Royal Highness Prince Albert, with the Prince of Wales and the Prince Alfred, took a drive in an open carriage and four. Lord Charles A. Fitzroy and Lieut.-Colonel F. H. Seymour attended on horseback. The Duke and Duchess of Bedford, and the Lady Cowley, arrived at the Castle on Wednesday on a visit to her Majesty.

On Thursday Lord and Lady John Russell arrived at the Castle on a visit to her Majesty.

The Earl of Litowel has relieved Lord Elphinstone in his duties of Lord in Waiting, and Colonel Berkeley Drummond has relieved Mr. R. Ormsby Gore as Groom in Waiting.

Her Majesty and his Royal Highness Prince Albert will pay a short visit to their new residence in the Isle of Wight next week

The Duchess d'Orleans is about to leave Eisenach, to pass a short time in England

The Earl and Duchess of Beaufort and the Ladies Somerset, after a lengthened absence, have arrived at Badminton, from Granard Lodge, Roehampton.

The Duchess Dowager of Bedford and Lady Rachel Russell are about to cave Campden-hill, Kensington, for Nice, where they purpose to past the winter.

The Marquis and Marchioness of Douglas and family have arrived in St. James's place from Scotland.

The Earl and Countess Fortescue are entertaining a select party at Castle-hill, Devon. The Viscount and Viscountess Ebrington are staying with their noble relatives

The Duke and Duchess of Richmond, with the Ladies Augusta and Cecil in Gordon Lennox, and Lord Geurge Leunox, are now in London, for the celebration of the nuptials of Prince Adolphus of Saxe-Weimar with the Lady Augusta Lennox which is to take place towards the end of this month, at St. George's, Hanover-square.

The Duchess of Sutherland and the Lady Constance Leveson Gower arrived at Trentham Hall, Staffordshire, on Sunday last, from Dunrobin Castle, North Britain; and her Grace left the same seat on Tuesday, for Dublin, whence her Grace is expected to proceed on a visit to the Duke of Devonshire, at Lismore Castle. The noble Duke, with the youthful Lords Ronald and Albert Leveson Gower, is still staying at Trentham.

CHURCH, UNIVERSITIES, &c.

NEW CATHEDRAL FOR MANCHESTER.—The Rev. Dr. Parkinson, Principal of St. Bee's, Cumberland, and Canon of Manchester, has proposed, by way of commemorating Her Majesty's visit to that city, the conversion of the Collegiate Church into a suitable cathedral, at an estimated cost of £50,000, of which the sum of £10000 has already been raised within a year, according to a design prepared some time since by his directions.

The Hon and Rev. C. Leslie Courtenay, vicar of Bovey Tracey, Devon, is about to erect, on a site in the handsome new church, with a parsonage house, about three quarters of a mile from the present church, to meet the spiri ual wants of the population gathering at or near the Pottery. The site chosen is on the heath, at the distance from the turnpike, and the good work, we understand, will soon be commenced.

ROCHDALE VICARAGE.—The living of Rochdale is worth between £3000 and £4000 per annum. The *Bradford Observer* states that the vicar, Mr. Molesworth, intends applying to Parliament for a bill enabling him to divide the revenues of the vicarage on a plan similar to the one adopted in Leeds

RESTORATION.—Steeple Barton Church, Oxfordshire, is now complete, and quite as beauty of detail most restored churches: one of its interior features is the split, made of oak, presented by the Rev. W. C. Risley. The re-opening is to take place on Friday, the 28th inst., when the Bishop of Oxford has promised to preach.

PREFERMENTS AND APPOINTMENTS.—The following preferments and appointments have been made:—*Prebend:* The Rev. W. F. Neville to Barter Saint David, in Wells Cathedral. *Deaneries Rural:* The Rev. F. Bagot to Axbridge; the Rev. F. Whitaker to be Assistant Rural Dean (Burnham District) of Axbridge. *Honorary Canonry:* The Rev. C. G. Granville to the seventeenth of St. John's. *Rectories:* The Rev. R. Bickersteth, incumbent of St. John's, Clapham, to St. Giles's-in-the-Fields; the Rev. W. Cockin to St. George's, Birmingham; the Rev. S. Fairles to Ludgershall, Sussex; the Rev. J. Garrett to Biscathorpe, Lincolnshire; the Rev J. Hill to Wyke Regis, Dorset; the Rev. C. J. H Hon to Badlesmere and Leaveland, Kent; the Rev E. A. Sanford to Combe Raleigh; the Rev Dr Mills to St. Paul. Exeter; the Rev. C. J. Hughes D'Aeth to Knowlton, Kent; the Rev. J Bullock to High Ham, near Lonsport, Somersetshire. *Vicarages:* The Rev. E. W. Wilson to Mears, Somerset, the Rev F. H. Thompson to Llanllwchaiarn, Montgomeryshire; the Rev. T. Phillips to Wa ton, with Felixstowe annexed, Suffolk

TESTIMONIALS.—The following clergymen have recently received testimonials of esteem and regard:—The Rev. John Hayes, incumbent of Christchurch, Harpurhey, and Mossop, from his congregation; the Rev. Thomas Cawse, vicar of Ashbourne, from his former pupils; the Rev. James Fawcett, Immanuel Church, Manchester; the Rev. Mr. Woodhouse, from the parishioners on his preferment to the vicarage of Knaresborough; the Rev James Rushton, from the parishioners of Brackenfield; the Rev. W. M. Townsend, curate of Rockfield, Stafford shire, from his congregation, on his removal; the Rev. H. Hamilton, from the parishioners of St Matthew's and St. Mark's, Holbeck, near Leeds; the Rev Charles Hayes, Rotherham, from his pupils; the Rev. David James, of St. Mary, Kirkdale, Lancashire, from a number of gentlemen connected with the Welsh Methodist Association recently held in Liverpool; the Rev. G. F. Keogh, curate of St Mark's, Lyncombe, Bath, from his friends and the members of the church, and from the poor of the parish; the Rev. Edmund Wa., on his leaving the curacy of Upsall; the Rev. F Kitchen, incumbent of Christchurch, Stoke, Staffordshire, from the congregation, on his removal.

VACANT PROFESSORSHIPS.—Sydney College, New South Wales.—Of class ics and principal ship, salary, £600; of mathematics, salary, £500; of chemistry and experimental philosophy, salary, £300; with £100 per annum for residence. Testimonials before December 1.

An application is to be made in the next session of Parliament for new rs to enable the Woods and Forests to convert Kensington-common and the two p ces of vacant land east and west of it into an ornamental park, to be open to the public

WHAT IS A POUND ?—In 1758 the House of Commons issued a commission to adjust the standard of weight, and under the superintendence of officers of the Mint, and eminent scientific men, the standard was determined, and two troy pounds, of extreme accuracy, were produced. One of these pound weights was deposited in the Houses of Commons, and was destroyed in the fire in 1834, and another, similar, has been in private hands. This duplicate, a model of the original standard troy pound has been, since the destruction of its fellow, the weight always appealed to in any commission for the trial of weights It was on Wednesday sold by auction by Puttick and Simpson, of Piccadilly, amongst other effects of the late S. Aichorne, Esq., formerly King's assay master. The we ght produced £17, and was understood to have been purchased for the Government. The hydrostatic balance, used for the trial of the standard in 1758, with several boxes of extremely accurate weights, were withdrawn, no bidder appearing for the same The sale included many curious MSS on mint affairs. An ongst these was Crocker's Register Book of drawings for medals, certified under the hands of various officers of the Mint, and containing thirty autographs of Sir Isaac Newton, sold for £40, and will find its resting-place in the British Museum Lot 179, a £5 piece, of George III., dated 1820, and in very fine condition, sold for £3 1.

METROPOLITAN NEWS.

TRIBUNAL OF COMMERCE.—At a meeting, on the 8th inst., at the London Tavern, Mr. Macgregor, M.P., in the chair, of the committee of the Society for Promoting the Establishment of Tribunals of Commerce, and reducing our various mercantile laws into one commercial code, Mr. Levin Levi, at the suggestion of Lord Brougham, explained his views. Mr. Levi has written a work on the subject. Mr. Levi advised that a qualified person should prepare a project or digest of law comprising the permanent law and what was acceptible or modification, taking where the differences existed between the English and Scotch laws, and then this project should be submitted to the various mercantile committees, in order that an inquiry of at least six months should take place in local situations. This plan was accepted, and every preparation made for a bill might then be submitted to the Legislature The chairman approved of Mr. Levi's advice, but thought the Government would do nothing, unless there was the support from without. Letters were read from Sir James Duke, M.P., Mr. Hume, M.P., Mr. R. D. Mangles, M.P., &c., expressing their concurrence in the objects of the society.

METROPOLITAN COMMISSION OF SEWERS.—A special court was held on Wednesday, Mr. Lewis in the chair. A rate of threepence in the pound on the Holborn division—the largest under the new act—was ordered. This rate was estimated to produce £12,952 8s. 6d., and the probable expenses of the new works were £29,154. A similar rate was ordered for the Rankeigh district. Various new works were ordered in various districts, and applications for detective drainages disposed of

CHURCH EXTENSION FUND SOCIETY.—On Tuesday night a meeting of the inhabitants of St. Pancras took place in the Collegiate school Rooms the Rev. T. Dale, the vicar, in the chair, who stated that the Duke of Bedford had granted a site for a new church, with a contribution of £500; the Archbishop of Canterbury, £200; the Metropolitan Church Fund, £300, provided the edifice should be roofed in by Midsummer, Lord Southampton, £100; an anonymous friend of the vicar, £100; and there was every reason to expect £500 more from the Pancras Church Extension Fund Committee. A committee had arranged to have the foundation completed at £1070, so that the first stone might be laid in the spring The vicar now appealed to all classes, to aid with their half-pence, shillings, and even pence, for he expected that the first difficulty was the erection of the new edifice. The Rev. Mr. Laing, the Rev. C Phillips, M.A., Mr. Shorbridge, the Rev. Mr. Williams, and other gentlemen having spoken in favour of the church extension, the proceedings ended.

CAREY-STREET DISPENSARY.—A special general meeting of the governors and subscribers to this useful charity, which was founded in the year 1782, was held on Tuesday. The number of patients admitted during the past quarter had been 1232, of which 227 were visited at their own homes. The financial statement is not so satisfactory, and the committee expressed regret that, whilst the number of patients have increased during the last three years from an average of 4000 to 6000, the funds had seriously decreased. The various reports having been adopted the meeting separated.

SCHOOL FOR THE INDIGENT BLIND.—On Tuesday a meeting took place for the purpose of electing seven male and three female children to the benefits of the institution. The school at present contains 75 boys and 76 girls, it has a manufactory attached, the produce of which last year sold for £1301 os. 10d. Three of the pupils have recently received testimonials of merits in chronicles at the respective salaries of £50, £30, and £20. The receipts of the charity reached £10 000 last year.

THE KAFFIR WAR.—On Tuesday night, at the London Tavern, a public meeting was called by the Peace and the Aborigines' Protection Societies, to investigate the cause and to consider a remedy for the war in south Africa. Samuel Gurney Esq., took the chair, who addressed the assemblage, as also Mr. John Hodgkin, the Rev. Henry Richard, Secretary to the Peace Association, Mr. Merington, a colonist, Mr. G. W. Alexander, the Rev. John Burnet, Mr Chesterton, Secretary to the Aborigines' Protection Society, and Mr. R. N Fowler. It was agreed that a memorial should be presented to her Majesty's Ministers, recommending them to inst tute an open inquiry on the spot, under the presidency of respected civil commissioner ers, so as to cause an immediate suspension of hostilities, and to regulate our future relations with the Kaffirs on the humane principles as outlined in this

LONDON UNION ON CHURCH MATTERS.—The usual monthly general meeting took place on Tue day, at St. Martin's Hall, when the report of the committee was adopted, and re olutions, expressive of acknowledgment for the recent exertions in favour of the revival of synodical action, were passed. The recently published charges of the Bishop of Gloucester and Bristol, the Bishop of Salisbury, the Bishop of Oxford, and the Bishop of Lincoln, and which the expediency of the speedy revival of Convocation is maintained, were approved of in the report.

FEMALE EMIGRATION.—The nineteenth of the series of embarkations of emigrants, under the auspices of the society formed by Mr. Sidney Herbert, took place at Gravesend on the 8th inst. There were twenty-one females, who went in a steamer from Blackwall, and embarked on board the Bengal barque of 500 tons; there were 100 emigrants in all on board, besides the females sent out at the society's expense. The vessel is the first chartered by the Australian Assurance Association, recently established for the purpose of sending out emigrants to Western Australia, one of the leading features of which is, that it conveys passengers at a very low rate, on the condition of receiving a grant of land as a part of the consideration. The whole cost of the passage is £5 per head for the voyage; the Colonial Government making up a most adequate remuneration by transferring to the company 20 acres of land for every such passenger. Parties purchasing land of the corporation to the extent of £50 money are offered free passage for three labourers. The Rev. John Sandford, the Rev. Sydney Smith, of the committee of the Female Emigration Society, feelingly addressed the 21 emigrants. Mr. Quakett stated that one of the first emigrants had saved enough money, as domestic servants, to purchase 200 acres of land in the district of Australia. Mrs. Johnson, a widow, who was lately so cruel y robbed of all she possessed, and for whom a subscription, amounting to £100, had been raised, was also there. Mr. Wright, the chief engineer, was engaged in making a most substantial cub-matron. Hearty salutes were exchanged with the emigrants by the visitors to the *Will Watch*, and in the afternoon she sailed for her destination, Perth, Western Australia.

CHURCH OF ENGLAND YOUNG MEN'S SOCIETY FOR AIDING MISSIONS AT HOME AND ABROAD.—Sir E. H. Inglis, M P, took the chair, on Monday night, at the Mission Hall, Store-street, at the lecture delivered by the Rev. Rand Rev. R. M. Villers, Rector of Bloomsbury: the subject was "The Liberty enjoyed by Protestants contrasted with the Slavery at Rome." After the usual vote of thanks was passed to the chairman.

LAW AMENDMENT SOCIETY.—Mr. Commissioner Fane presided at Monday's meeting, which was well attended. The following gentlemen were ballotted for and e cted:—Mr. James Hannen, barrister; Lord Robert Grosvenor, M P; Mr. H. P. Roche, barrister; James Patchelli; Gabriel Murray, Lord of Session, Scotland; Mr. C. Colvin, judge of the Sudder Adawlut, Bengal; Lord Ashburton; Mr. R. M. Kerr, barrister; Mr. Edward Walker, clerk to the County Court, Belgrave; Mr. C. Tegart, solicitor; Mr. Serjeant Jas. Stephen, barrister; Mr. Edward H. J. Crawford, barrister; Mr. Samuel Bowler Bristowe, barrister; Mr. Arthur Sparing; Mr. Sheriff Barclay, sheriff substitute of Perth; Mr. Robert Wallace, Mr. Thomas Bell, Mr. William Hosack, barrister. It is proposed to form branch Law Amendment Societies in Scotland, to co-operate as to the best means to assimilate the laws of England and Sco land, where it can be advantageously done. On the motion of Mr. Pitt Taylor, a committee was named to draw up the present report, consisting of Counsellor, the attorneys, and the clients, and to report what alterations can be made with advantage to the pub lic. A discussion took place, on a paper by Mr Stewart, on framing the articles of the Court of Equity, by which the masters carry out their own decrees without the intervention of the Masters in Chancery. The paper was referred to the Equity Committee to report thereon as speedy as possible

INDUSTRIAL EDUCATION.—Professor Forbes, on Monday, at the Government School of Mines, delivered a lecture, showing the application of natural history to industrial purposes. Trap protrusions were the appearance of obtaining an exact knowledge of natural history in many industrial operations. He quoted numerous cases of the waste of capital in the search for coal, against the palpable evidences of natural history that the formations were much below the carboniferous strata; and that the only chance of success was to sink through the centre of the earth, in the hope of reaching coal at the Antipodes. To natural history we owe the resources of gutta percha and vegetable wax; the former would be much benefited also by a study of natural history.

WESLEYAN REFORM.—A very crowded meeting took place at Exeter Hall, on Wednesday night; the Rev. Jabez Burns, D.D., in the chair. The Rev. J. Rowland, the Rev. J. G. Manley, and the Rev. W. Burns, addressed the meeting respecting at sed acts of persecution by the Conference. Messrs. Rowland and Burnett had been expelled, and Mr. Manly had been suspended, because he would not submit, as he affirmed, to the despotism of Methodist government. The Rev James Everett, one of the expelled ministers, and Mr. Langridge moved resolutions expressive of sympathy for Messrs. Rowland, Burnett, and Manley.

GOVERNMENT APPOINTMENTS.—Mr. Baldwin, collector of Customs at Douglas, in the Isle of Man, has been appointed to the situation of collector at Stockton, and the following promotions have taken place in consequence, viz.:—Mr. Wearing, collector at Penzance, to be collector at Douglas; Mr. Beresford, collector at Newport, to be collector at Penzance; Mr. Lee, collector at Boston, to be collector at Newport; Mr. Strike, comptroller at Rochester, to be collector at Boston; Mr. Thomas, collector at Cardigan, to be comptroller at Rochester; Mr. Edwards, principal coast officer at Fwilheli, to be collector at Cardigan; Mr. Aikey, principal coast officer at Ryde, Isle of Wight, to be principal coast officer at Fwilheli; and the situation at Ryde, held by Mr. Aikey, has been abolished, and the duty will in future be performed by the coast guard there. Alexander Barclay, Esq., is appointed Receiver-General of Jamaica. Captain Frome, of the Royal Engineers, is appointed collector of Customs in Trinidad. R. C. Temple has been appointed Chancellor of Durham, one of the offices held by Mr. Kinnersley. This is a place of honour, not profit, and was formerly filled by Lord Elden, Sir Samuel Romilly, and Sir Charles Wetherell

ROYAL COLLEGE OF SURGEONS.—The following gentlemen were admitted members of the college on the 7th inst.:—Messrs. R. Bowman, Richmond, New South Wales; W. Haughton, Dublin; J. B. Paterson, London; R. S Colston, Bombay; J. W. Howard, Fenchurch-street; J. Wills, Shaftesbury, Dorset: W. T. Colby, New Malton, Yorkshire; W. Robinson, Carlisle; and W. H Harris, Australia. At the same meeting of the court Messrs. F. Mangor and H. M. Smith passed their examination for naval surgeons.

THE IRISH SOCIETY OF LONDON.—The above society was incorporated by Charles II. and James I., for colonising the county of Londonderry, in the north of Ireland. By the report of the companies just issued it appears that this work has been long since accomplished, and that the society has become valueless to the locality, having no common interest with the residents. It further states that the society's income is about £13 000 a year, value about 25 years' purchase—new £300,000. The report proposes to alter the charter, to a large the object of the society.

A NEW WESTMINSTER BRIDGE.—We understand from positive authority that a new Westminster Bridge is to be erected. It is to be built as near as possible to the present structure Notices were, on Tuesday last, given to the inhabitants of the north end of Bridge-street, Westminster, of Manchester-buildings, of Canon-street, up to the Board of Control, and of other portions of the east end of Parliament-street, that Government were prepared to bring in a bill in the ensuing session to pull down their houses to make room for the new bridge—*Herald*

WARD SCHOOL OF COLEMAN-STREET.—Perhaps one of the most pleasing features connected with the recent celebration of the election of Lord Mayor was the entertainment, by order of his Lordship, of the children belonging to the ward school of Coleman-street, of which he has long been president and a most liberal patron. The best old English fare was given to the children, 99 in number, and every one of them was presented, by order of the Lord Mayor, with a new shilling, after which they sang the National Anthem. We understand that this excellent example has been followed by several inhabitants of other wards within the city of London.

THE INVENTION OF PRINTING.—The Rev. C. M. Robins, M.A., on Tuesday night, began the first of a series of lectures on the progress of printing, at the Moorfields Literary Institution

ECCLESIASTICAL DISTRICTS.—The St. Pancras vestry resolved on Wednesday that the vestry clerk should give notice for an application to Parliament for a provision to give the vestry efficient power in the inspection of rates in Church matters, the new bill for the division of St. Pancras parish into ecclesiastical districts placing such power in the hands of church trustees, without any concurrent jurisdiction of the vestry

CHARACTERISTIC.—A meeting was held on Wednesday night at the British Institution, Cowper-street, City-road, "to consider the best means of securing a measure of social and political reform based on manhood suffrage, and the other points of the People's Charter." The attendance was chiefly of young tradesmen, and the discussion was boisterous. After divers divisions, a declaration in favour of the Charter was carried.

DEPARTURE OF THE HON. R. J. WALKER.—It is stated that it is proposed to invite the Hon. R. J. Walker, late Secretary to the United States Treasury, and now in England, to a public dinner on the 25th Instant. The Liverpool American Chamber of Commerce have taken the initiative in making the necessary arrangements.

METROPOLITAN IMPROVEMENTS.—The Commissioners of Woods and Forests have given notice that they are about to form a new street from the end of Lower Grosvenor-street to the north end of the Chelsea Suspension-bridge, to afford direct access to Battersea-park, now in the course of formation; also an embankment along the north side of the Thames, from Vauxhall bridge to Chelsea Hospital; also, to enclose Kennington-common, and to lay the same out as a park, with ornamental walks and shrubberies, for public recreation; the toll-gate in the Clapham-road is to be done away with, and the new road from Camberwell-gate widened and improved. In order to facilitate the carriage approaches to Victoria-park, Bethnal-green, a new street is forthwith to be formed from the junction of Bethnal-green and Cambridge-heath roads, near the church of St. John's, in a north-easterly direction, across Bethnal-green to the Old Ford-road, through the Bishop's-road to the west entrance of the park; and another from the turnpike at the meeting of the Hackney and Cambridge-heath roads, in an easterly direction, along Prospect-place and Bishop's road, to the latest entrance of the park.

PROPOSED CENTRAL RAILWAY TERMINUS IN THE CITY OF LONDON.—A meeting of aldermen and councilmen took place in the Egyptian-hall of the Mansion-house on Wednesday—Sir G. Carroll in the chair—to hear Mr. Charles Pearson's explanation of his plans for the improvement of the City, and relieving its thoroughfares by means of a central railway terminus. The scheme is to widen Holborn, extended now even from Farringdon-street to Berkeley-st, by raising it on a level with the high ground of the adjacent streets, and extending it to King's-cross; by constructing a trunk railroad on a well lighted and ventilated subway under the surface of the street connecting the northern railroads and suburbs, with terminal in Farringdon-street and the new street leading to Holborn valley 17 feet, nearly on a level with Holborn-hill and Snow-hill; and by removing the wholesale meat and vegetable markets and the railway carriers' receiving houses to spacious sites in the n ighbourhood, so that the present overcrowded streets may be relieved of a large portion of the railway waggons and omnibuses from the northern railroads and suburbs. The connexion between the Blackfriars and Ye tralway terminus is to be underground, so that the three minutes the letter-bags could be at the station. A vote of the next Court of Common Council is to be taken on Mr. Pearson's plan.

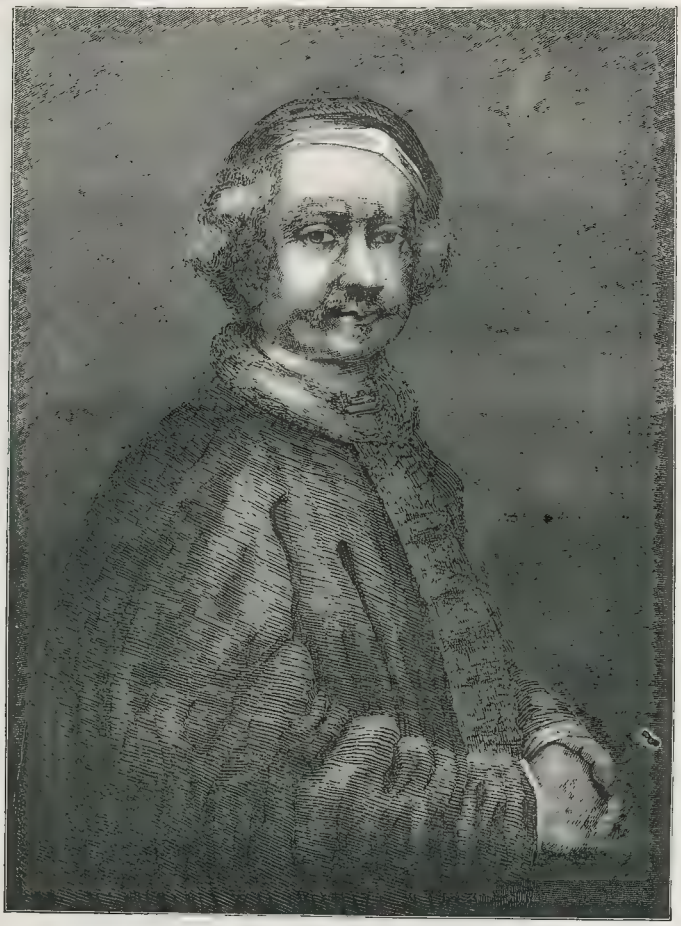
THE GRIEVANCES OF OMNIBUS SERVANTS.—At a meeting on Saturday night last of the Omnibus Servants' Provident Society, a discussion took place on the threatened measures of the omnibus proprietors to reduce the men's wages. The chairman of Mr Alderman Wilson as to the abolition of the centre seat in the omnibuses led, it is known, to the gross imposition on the public of raising the 3d. fares to 4d., to which, during the time of the Exhibition, the public were compelled to submit; but, in spite of the extra labour required from the men, the masters made no mention of increasing the wages. Now, however, that their conduct has irritated the public, and a general support is given to the penny-fare system, the omnibus proprietors propose to meet it by a reduction of the wages of an already underpaid and overworked class of men. Mr. Scully said that at last the public began to know the real condition of the men employed about omnibuses. They suffered a severity from which their wages were exempted, whilst they dared not remonstrate. After a day's work of fifteen or sixteen hours, the men were liable to be told they were not wanted. Even if ill, their places in the omnibus could find time to attend, unless they met, as on the present occasion, at midnight. The masters defended themselves by saying that they paid such excellent wages. Was that the fact? For 8s. or 4s. the conductor worked sixteen hours a day, out of which he had to pay 1s. a day to his master's servants; and the driver, who realised in the finest weather about £1 16s. a week, had 11s. 6d. to pay out of it for various items. There was no rest to the omnibus people, for they sometimes got a few hours' sleep on a Sunday." In fact, no days was so imposed upon. If the masters persevered in their attempt to reduce the wages of the men, the matter must be brought before the public, and some plan proposed by which the men might be protected from a gross tyranny. It concluded by recommending the men not to combine, for their masters did that, and they, the servants, had found it to be tyrannous. Neither ought they to take the law into their own hands, but resolve the public in a manner that could scarcely be calculated upon; but he would recommend them to call a meeting at Exeter Hall, and then they could make their appeal to the public to protect them.

UNDERGROUND LODGINGS.—The General Board of Health have issued a notification, under the 67th section of the Public Health Act, on the subject of cellar dwellings. The act referred to makes it unlawful to let or occupy as a dwelling any vault, cellar, or underground room, built or rebuilt after 31st of August, 1848, or not let or occupied before that date, and any person so letting or occupying is liable to indictment. The act further provides that every underground chamber that does not answer to the above description, that is to say, that is not less than four feet in height, of which three feet must be above the level of the street, that has not an open area of two feet six along its entire frontage, and is not dry and sufficiently warmed, and ventilated in the manner described, shall be inhabited, notwithstanding that such room may have been inhabited hitherto The penalty of neglecting these provisions is 20s. a day, where there is a local board of health.

FIRE IN HOLBORN.—On Monday night, shortly after ten o'clock, a fire broke out on the premises of Messrs. Malnon and Sons, French basket importers, No. 12, Holborn-hill, at the corner of Castle-street. The building was four stories high, and between fifty and fifty feet deep. The fire originated in the back part of the premises, and, owing to the inflammable nature of the contents, progressed with such rapidity that before an engine had time to reach the spot the whole of the back buildings were on fire. The front rooms being preserved, the most strenuous exertions were made to subdue the fire, but it was nearly midnight ere this could be accomplished, and not until the greater portion of the property had been reduced to ashes, and considerable damage done to the premises adjoining.

BIRTHS AND DEATHS.— The number of births registered in the week ending Saturday, March 8, was—males, 770; females, 710—total, 1480. Deaths during the same period, 982. In the ten corresponding weeks of the years 1841-50, the average was 907, but the population has increased since that period, and the average, if corrected in proportion to the increase, is 1064, consequently with which, last week's mortality shows a decrease of 82. The increase on the previous week is visible amongst the young, the middle-aged, and persons of advanced life Last week the deaths of the epidemic class rose from 156 to 161; those in the tubercular class from 156 to 171; those by asthma in the brain, spinal marrow, &c., from 78 to 115; those by diseases of the heart &c., from 33 to 40; those by diseases of the lungs and other organs of respiration, from 169 to 186; by diseases of the stomach, liver, and other digestive organs, from 54 to 63, &c. It was shown in the report for the last week of October that the mortality was considerably diminished; it now appears that, concurrently with a great fall in the temperature, it has again risen to nearly the same amount as prevailed during the early part of last month. Scarlatina and typhus predominate usually amongst epidemics, the former having increased from 50 to 59; the latter numbers 58, but does not show a disposition to become fatal. The increase in the small-pox deaths is from 12 to 24; of whom 21 were children, and 3 adults above 15 years of age: vaccination had been performed in only one of these cases. The use of foul locals in vaccination is mentioned as producing diseases. Two deaths from intemperance: 3 infants from want of maternal nourishment, in other words, starvation; 4 infants from suffocation, three of which were in bed, are recorded.

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, Greenwich, the mean reading of the barometer in the week was 29 684 in. The weather was cold during the week. The mean daily temperature on Sunday was 43.3, or 2.7 below the average corresponding days in ten years; itfell to 35 2 on Tuesday, which is 11.2 below the average; it then rose and was about 42 5 on Friday and Saturday; but on every day of the week was below the average. The mean temperature of the week was 40 degs., which is 6 3 below the average. The wind was generally in the west or north.



PORTRAIT OF REMBRANDT, JUST ADDED TO THE NATIONAL GALLERY.

FINE ARTS.

PORTRAIT OF REMBRANDT. PAINTED BY HIMSELF.

THREE pictures have recently been added to our national collection two are portrait studies, by Rembrandt and Van Eyck; the third is by Backhuysen. We this week engrave the Rembrandt; the Van Eyck will follow shortly.

The Portrait of Rembrandt, by himself, is from the collection of Lord Middleton, formerly at Peperharrow, in Surrey, and lately sold at Messrs. Christie's, where it was purchased, by order of the Trustees of the National Gallery, for the sum of 400 guineas. Of this portrait little is known. Mr. Brayley, in his "History of Surrey" (published about five years since), does not mention this picture, though he enumerates others of less note, then at Peperharrow. As far as we can ascertain, this Rembrandt has not hitherto been engraved. Executed, probably, at a more advanced period of life than most of the other portraits of Rembrandt with which as pictures or etchings we are familiar, it differs slightly from them all—yet certainly not more than each of those does from the other. It has, in common with them, the frizzled hair; fleshy, sensual features; and general coarseness of physiognomy that must have characterised the great painter Rembrandt has not flattered himself. His vanity, supposing him to have possessed his share of the universal quality, lay not in personals. The graces and amenities of life contained few charms for him; and, if no records had been left of his habits and character, who could fail to read them in this portrait? In its present position it challenges comparison with some of Reubens's choicest works, and yields nothing to them in colour or tone; while the felicitous management of light peculiar to the master gives it a roundness and projection that almost make the surrounding pictures seem mere extension of surface. Its truth and reality are, indeed, wonderful. We are fully aware that opinions unfavourable to it have been expressed, and that the propriety of the purchase has been questioned. But, while we know and feel that the qualities which this picture so eminently possesses by no means include every attribute of excellence in art, we assert them to be in themselves, as far as they go, the embodiment of some of nature's most precious and beautiful truths. Rembrandt devoted himself to the study and illustration of the effects of light—direct or reflected, natural or artificial—on the aspect of the visible world; and he achieved a success in this department of art utterly unrivalled before or since. Hence, this his favourite study became as a speculum, through which every object was viewed. This must be his apology, if even the lineaments of the human face divine were regarded simply as masses of light and shadow. In spite of the portentous ugliness which so frequently deforms his pictures, there is ever in them a mysterious and gloomy grandeur, chiefly the result of the painter's wonderful appreciation of the properties of light; while his portraits, for the same reason, are among the most magnificent the world has ever seen. Among the great in the history of art he will ever occupy a prominent place, however the tide of fashion or prejudice may flow. That a section of the public, as well as of those who follow art as a profession, are blind, or at least indifferent, to his excellence, is evident from their expressed fears of being "deluged" with his works. We have no such apprehension Certain tendencies, too apparent in recent Academy exhibitions, can have no better corrective than constant and careful study of the works of Rembrandt.

STUPENDOUS BRIDGE IN MADRAS.

THIS striking specimen of engineering skill has recently been erected across the river Cowery, near Bhowanee, Madras. It consists of twenty-six brick arches, of 47½ feet span, built on stone piers, and is nearly a quarter of a mile in length. It was begun in December, 1849, and opened to the public in May, 1851; taking two working seasons, or about twelve months, to complete the building; for in that part of India where this Bridge is built the natives can only work between the monsoons, viz. from December to the end of May. It is situated on the high road from Madras to Coimbatore (famous for its cotton) and the Neilgherry Mountains. An average of 700 people were employed daily on the work, chiefly women. Owing to the very low price of labour, the cost will be considerably under 50,000 rupees, or £5000. The average daily pay of a man is twopence, and of a woman three-halfpence.

This noble Bridge was designed and built by Lieutenant Charles Vaughan Wilkinson, Madras Engineers. Although of so unusually long an extent, it has no *dry* arches.

In the accompanying Sketch, over the centre arch, may be seen the pagoda at Bhowanee, formerly famous as a place of worship for the Thugs; and beyond is a distant view of the Neilgherry Mountains situated about eighty miles from Bhowanee.

BRIDGE RECENTLY ERECTED OVER THE RIVER COWERY NEAR BHOWANEE, MADRAS.

STEAM COMMUNICATION BETWEEN GALWAY AND NEW YORK.

An apparently feasible scheme with this object in view was submitted to public consideration on Saturday last, in Galway. The arrangements include facilities for emigration. The Galway Town and Harbour Commissioners received on that day an American gentleman, named Wagstaff, who came over to Galway with the object of establishing the much-desired line of steamers. He was accompanied by Messrs. Ennis, chairman of the Midland Great Western Railway, and Boyce Cowper and Sterling, directors. A large number of commissioners were in attendance.

Mr. Wagstaff explained that he had resolved to place a line of steamers between Galway and New York, because he was impressed with the conviction that such a project would pay. He might not succeed in the first or second or third trip; but still he would not be disheartened; his experiment should last for six months. The vessel which he had now prepared for starting, and which would leave New York—("Hear, hear," and great cheering)—for Galway, was, he had no hesitation in saying, one of the fastest and strongest steamers which had ever sailed on the ocean. In proof of this, Mr. Wagstaff read a certificate from the Mercantile Mutual Assurance Company. This vessel would be followed by others of the very strongest and swiftest build which it could be possible for wood and iron to make. It was the intention of himself and his father to bring, by means of other communication, the goods and passenger traffic of the Continent through Ireland. He sought no pecuniary assistance; he merely wanted co-operation and kindly feeling on the part of the people of Galway. With regard to the emigrant accommodation, he was determined to make such an improvement in this particular as had been never before attempted. The steerage passengers should be provided with births which would contain only two each; the sexes, except in cases of families, should be kept separate; saloons should be provided for them where they might sit; proper cooking accommodation, the best description of food, and a voyage of only eight days, at a charge of £6 each. He would come himself with the first vessel, when he expected to be able to enter more fully into details. Mr. Wagstaff, in the course of his observations, passed a high eulogium on the capabilities of the bay of Galway, and said, though he had travelled a great deal, he had never seen a harbour which possessed such natural advantages for such a project as the present one. The first vessel would sail on the 15th of December from New York, and arrive in Galway on the 23rd. (Cheers.)

The meeting was also addressed by Mr. Ennis, who promised, on the part of the railway company, every assistance and co-operation towards carrying out this great project.

On the motion of Mr Stephens, seconded by Mr. J. Ireland, it was resolved that Mr. Wagstaff's vessel should enter the port free of all dues for the space of six months.

The Chairman, on behalf of the people of Galway and the commissioners, claimed Mr. Wagstaff, his captain, and officers, as their guests upon their arrival next month.

The greatest enthusiasm pervaded the whole meeting, and Mr. Wagstaff, as well as the other gentlemen who accompanied him, received a warm and hearty welcome.

WATERING-PLACES OF ENGLAND.—SANDGATE, KENT.

SINCE Folkestone has become a station of the South-Eastern Railway, Sandgate, from which it is distant but two miles, has been materially benefited by a great influx of visitors.

There are three roads from Folkestone to Sandgate; one, called the New-road, at the base, and another on the summit of the cliff, the latter for pedestrians only; the third, being the original turnpike-road, which runs parallel with the cliff. Each of these roads has its attractions. The old road is extremely pleasant; whilst that at the foot of the cliff is rendered interesting by the number of fossils to be found in the broken rocks scattered along the shore, and from its extremely romantic scenery, the strata in various huge fantastic shapes, hanging "suspended midway between heaven and earth" in the broken cliff, which extends about this part of the coast, and which is often rendered additionally picturesque by the number of sheep dotting its green and rugged banks from base to summit. The road over the cliff affords extensive and delightful sea prospects. Dungeness stands boldly out in the distance; and you can distinctly trace the famous sea wall at Dimchurch. But not the least interesting portion of the scenery is the bird's-eye view of Sandgate, with its picturesque villas, appearing to spring up from beneath your feet.

The village of Sandgate does not boast of antiquity; and it is doubtful if any houses were built here before the close of the last century. In "Thanet and the Cinque Ports," published in 1818, Sandgate is described as a small bathing village, which has been much frequented within the last twenty years by those invalids who wish for quiet and retirement. Its note as a bathing-place, however, dates from an event the reverse of pacific. This was in the year 1794, when, in consequence of the report of an attempt at invasion by the French, fortifications were erected at intervals along the whole line of coast, and an encampment was made at Shornciff, where barracks were subsequently erected. This encampment, from its position, soon became celebrated as a military station; and it was here that the brave but unfortunate Sir John Moore trained and disciplined his troops, afterwards so greatly distinguished in the Peninsular war. The Duke of York, then Commander-in-Chief, frequently inspected the troops stationed here; and Royal visits have almost invariably proved sunshine to watering-places.

Sandgate now enjoys a fashionable repute. There are, as our Sketch shows, several detached villas; a handsomely-built episcopal chapel; besides the village along the sea-shore.

We must not, however, omit the Guardian Castle, said to have been originally built prior to the reign of Richard II. Hasted relates—"There appears to have been a castle here in the reign of King Richard II., for that Prince, in his 22nd year (1399), directed his writ to the captain of his castle at Sandgate, to admit his kinsman, Henry de Lancaster, Duke of Hereford, with his family, horses, &c., into it, to tarry there for six weeks to refresh himself." Assuming this to be a fact, it must have soon gone to decay, for Lambarde makes no allusion to any previous building here, but says "Henry VIII. did defrale £5000 and above, upon this platfourme, which lieth within the parish of Folkstone towards Hythe, and hee called it (of the sandie place where it is pitched) Sandgate Castle." Report states it to have been built about the year 1539, from the ruins of the fort on Castle-hill. There were several similar castles built at the same time by Henry VIII., both on the Kent and Sussex coasts, for the defence of the kingdom, all of which were placed under the government of the Lord Warden of the Cinque Ports. Queen Elizabeth, in one of her journeys through Kent in 1588, slept in this Castle, and the bed on which her Majesty reposed was shown as a relic in the remembrance of many persons now lying. In the years 1806-8, when the Martello towers for the defence of the coast were suggested by Mr. Pitt, then Premier of England, the Castle underwent important alterations to adapt it to the modern mode of warfare. A Martello tower was erected in the centre, and the ramparts were mounted with ten 24-pounders, whilst a platform had three 24-pounders on a travelling carriage. The tower itself is of rather larger dimensions than usual, being upwards of thirty feet in diameter within the walls, and, besides containing a large magazine for gunpowder, it provided ample lodgings for 40 men. When these alterations were effected, most of the old edifice was removed, and the only portions of it remaining are the keep, the entrance tower, and the boundary walls. Several apartments surrounding the centre (amongst which was Queen Elizabeth's room) were also entirely removed.

THE PEEL MONUMENT AT BURY.

In the ILLUSTRATED LONDON NEWS for Feb. 22, 1851, we Engraved a View of the Exhibition of the Designs for the Peel Monument, held in the Town-hall, at Bury, in Lancashire, the birthplace of the lamented statesman. Very shortly after his death a fund was subscribed for the erection of the monument, a colossal bronze statue upon a pedestal, in the centre of the town. The details of the competition will be found in our Journal of the above date. The accepted design was that by Mr E. H. Baily, R.A., which we now engrave. Mr. Baily's statue of Sir Robert Peel will be of bronze, and ten feet in height. The statesman is supposed to be addressing the House of Commons on the memorable question of Free Trade; at his feet, and forming the upper portion of the pedestal, lie emblems of the fruits of the earth, intermixed with

BRONZE STATUE OF THE LATE SIR R. PEEL, BART., BY E. H. BAILY, R.A.—THE BURY TESTIMONIAL.

WATERING-PLACES OF ENGLAND.—SANDGATE, FROM AN ORIGINAL SKETCH.

agricultural implements. Beneath this enrichment the Bury Arms form a centre decoration to the inscription stone, and leads the eye to *beast reliefs* of Commerce and Navigation on either side; which, like the statue, will be executed in metal. The base and die of the pedestal will be of granite, and when finally erected exceed 22 feet in height.

TOWN TALK AND TABLE TALK.

Bristol appears to be an unlucky port for steamers. Once, in the days of smaller ships than those which now travel the ocean, the second port in England, as the mercantile town upon the Avon aspired to be, commanded the highest reputation as the most crack outfitting place for craft of all dimensions. "Shipshape and Bristol fashion" was then the highest term of approbation which could be bestowed upon the most graceful hull and the tautest rig, and the Bristol mariners of course shared in the high character of their ships. As vessels, however, gradually increased in size, it was but natural that ports of easier access, and situated more closely upon the sea than the old west of England maritime city, should assume the pre-eminence; and accordingly Liverpool, Dundee, and Hull rose as Bristol fell. Still, however, the Britonians were not to be defeated without a struggle. They remembered the old fame of their city, not only for turtle soup and Bristol punch, but for the construction of model hulls; and, as if to show that the Avon could still be made to bear to the sea vessels of almost any size, they constructed upon its banks the two greatest steamers ever built. Both of these were sadly unfortunate. I do not allude to the Dundrum wreck of the *Great Britain*. With that, of course, Bristol had nothing to do. But all the world remembers the abortive attempts to launch the great steamer from the dock in which she was constructed, and in which she lay, like Robinson Crusoe's big boat, of the sea-going capabilities of which he had the highest opinion, but which he was totally unable to set afloat. I well remember being on board the *Great Britain* the day, as it was termed, of her "launch." Half Bristol was assembled. Cannons pealed, bells rang, flags flew, and the long flush deck of the steamer was crowded with the best of all good company. The leviathan was to be led forth from her cradle at high water, and until the event took place luncheon and champagne passed away the time as merrily as might be. Well, the tide flowed, the dock gates were hospitably open to receive the flood. Not a drop was refused admittance—the more the merrier, the higher the better. Then the measful preparations for warping were made: cables stretched, captains, pilots, and every officer at his post. Again the cannon roared, the bells rang, the flags flew, the people cheered: but, alas! the *Great Britain*, like a bashful young lady, refused to come out. And why? Simply for the reason which keeps the reel from coming out of the bottle—the neck of the receptacle in which she lay was too small! The catastrophe was a cruel one. The Bristol folks were dreadfully abashed as the tide receded and the *Great Britain* stuck where its prototype never did, in the mud. Months and months elapsed ere dock was partially pulled down, and the monster steamer floated out upon the Avon. Now, one would have thought that in all this the Bristol folks would read a lesson as to the conveying safe out of their port of the next big steamer which they build. Not a bit of it. The *Demerara*, a monster vessel, said to be the largest steamer in the world, was lately completed for the West India Mail Company, and despatched to Glasg ow to get her engines aboard. Down the Avon she went at a rattling pace; so rattling, indeed, that ere she had got past the brackish water she was run plump upon the bank. After a mighty to do she was Love off in a damaged condition and moored in another part of the river, all steamed and leaky. Here, however, it was hoped that the fatal ty would cease. Not at all. In the night she dragged her moorings, swung across the Avon, and, it is said, has become a mass of dislocated iron and wood. But this is simply laying alongside the original dock gate from which she was launched, but opinions are divided as to whether she ever can be fitted out for sea. There is really something of a fatalist complexion in these two events. Who but a foredoomed people would have built a boat in a dock not big enough to permit her exit, and who but the self same generation would have contrived to wreck a noble vessel on the mud banks of the Avon?

It is a hard fate for a journalist to be resumed to narrate the inchoate circumstances of what might have been, but which simply l

MUSIC.

M. JULLIEN'S CONCERTS.

THE opening night of the Promenade Concerts at Drury-lane Theatre has never been famed as a scene of tranquil enjoyment of the music presented in the programme; and it was not to be supposed, as this great event occurred this year on the evening of the celebration of Lord Mayor's Day, that a very attentive auditory could be collected on such a doubly exciting occasion. The assemblage, therefore, last Monday of the "fast" amateurs, was preponderated for the company, which filled the dress circle and private boxes to overflow, had but little opportunity afforded of appreciating the musical selection. One dense mass of swaying black hats was exhibited in the pit, or promenade portion, and the joke of the wearers of this waving stream, or rather tornado, of hats was to push in opposite directions, so that some unexpected person, not accustomed to such rough usage, might lose his paper, and cast out innocently for the police, as if it were possible for a glazed hat to penetrate through such a multitude, to take an offender in charge. To follow the scenes with any degree of continuous interest was a matter of impossibility. The new soloist, the wondrous contrabassist of the age, Bottesini, who made his first appearance at these concerts, looked quite astounded at the uproar, during his fantasia on the "Somnambula" themes; and, although brought back by Jullien to play the "Carnaval de Venise," he abruptly finished his second solo. Such a marvel ous player must be listened to with profound silence to comprehend the g anic character of his executive feats, and the delicate musical sensibility with which he is so eminently gifted Miss Dolby had no better fate, and the fair vocalist scarcely knew how to take it. tumult which ensued after her first air, and delayed for some time to accept the outstanding voices as a compliment to her merit. The National Anthem appeared, in fact, the only great attraction for the promenaders; it was called for the moment Jullien, who was heartily greeted, entered the orchestra, was again denounced, at intervals during the first part, and was vociferously encored at the end of the "Exhibition Quadrille," in the course of which the "Marseillaise," and the Chorus of Girondins, "Mourir pour la Patrie," found especial favour.

As regards the novelties, there was a very pretty and characteristic quadrille on themes from Auber's "Il Prodigo;" a rather commonplace valse, "Marguerite," by Koenig, who has composed better things; a clever polka by Jullien, the "Crystal Fountain;" and a grand galop, the "Amazon and Tiger," by Karl Buller, a compo er whose name is as yet unknown to fame.

In respect to the future, M. Jullien promises the "Indian Quadrille," selections from Beethoven's "Fidelio" and Mozart's "Il Flauto Magico," the "Bloomer's Quadrille," the "St. Leger Day," &c.

In addition to Bottesini Piatti and Sivori are engaged as lion soloists; Herr Koenig, Baumann Prospère, Lazarus, Sonnila, Cioffi, Jarrett, Lavigne, Delolly, T and C Harper, &c., are included in the band.

The theatre is prettily decorated with white glazed calico hangings, on which are grouped garlands, festoons, and emblematical devices; the green curtain is again suspended over the orchestra, and the reading-room is well stored with the journals of all nations.

M. Jullien's entertainments are popular, because they are lively, piquant, and amusing: no shrewd connoisseur for a moment supposes, in listening to the noisy silences, that they are intended as a serious demonstration of the higher order of orchestral music. M Jullien's aim is to amuse, and, if he throw in a movement of semi-stirring symphony of the great masters, he does it on a clever calculation to conciliate the purists. but he knows right well that classic compositions are not his staple commodity. We have never despaired of the formation of a series of concerts for the million at which the intellectual works of art may be heard conscientiously executed, and not mixed up with the eccentric cities of descriptive dance quadrilles, and certainly M Jullien amply deserves the credit of having been the pioneer to prepare the public for a more severe standard of musical taste.

MUSICAL EVENTS.

The "Réunion des Arts" commenced their season on Wednesday night, at No. 27, Queen Anne-street. The Royal Society of Musicians had their first *soirée* on Monday last. The London Sacred Harmonic Society began the season last night, at Exeter Hall, with Handel's "Belshazzar," conducted by Mr. Surman; with Misses Birch, Dolby, Messrs R. F Smith, Lockey, and Lawler, as principal vocalists; Mr Jolly is the organist, and Mr. H Blagrove leader of the band.

The first concert of the Orchestral Society will be given next Monday, at St. Martin's Hall; there will be a new overture by Mr. Macfarren, and a new septet by Mr. Lucas.

The first of Miss Dolby's *soirées* will take place next Tuesday.

Madame Tedesco, who has appeared at the Grand Opera in Paris, in Halévy's "Reine de Chypre," has created a favourable impression. Her next characters will be in Donizetti's "Favorita," and as *Ester*, in Meyerbeer's "Prophète;" and then in "Halévy's "Juif Errant," the new five-act opera, in which Mdlle. Lagrua, of Dresden, will make her *début*. Mdlle. Cruvelli had arrived in Paris, to appear at the Italiens: there was a rumour that Thalberg's "Florinda" would be produced.

It is given out in Paris that Mr. Lumley has secured Mdlle. Wagner, of Berlin, for the season 1852, at her Majesty's Theatre Herr Andrea, the Viennese tenor, has been engaged, it is stated, for the Royal Italian Opera, by Mr. Gye. Labiache has been dangerously ill, at his villa near Naples, but was better at the last accounts. Sivori and Wieniawski have been in Paris. Mr. Osborne, the pianist, and Mr. Ella, the director of the Musical Union, are in the French capital. Mr. Labiache has gone to Turin. Mr. Bunn is in treaty with her, for Easter, at Drury-lane Theatre. M. Silas, the composer, is in Paris: his new trio and sonata had produced a great sensation in musical circles Ernest, in Donizetti's "Don Pasquale di Rohan," at the Italian Opera House, in St. Petersburgh, quite electrified the auditory.

Mr Steggall, a pupil of Sterndale Bennett, at the Royal Academy of Music, has received the degree of Doctor of Music, at the Cambridge University. Madame Ourry, the pianist, has returned to Brighton, from a tour in Germany. Mrs. Anderson plays the Queen, when next with a severe accident from a fall, is recovering. Mr Costa, who was prevented from conducting the musical performance at the close of the Exhibition, owing to the letter of invitation, on the part of the Commissioners having reached him, at the late day of the 14th, only on the day of the ceremonial, has been actively engaged in preparing Haydn's "Seasons" for the opening night of the sacred Harmonic Society

Mr Henry Russell has presented his Australian entertainment, "The Far West," with great success in the City Hall, Glasgow.

A concert was given on Tuesday night, at the Nine Elms Literary Institution, in aid of the funds of the benevolent society for supplying a Christmas dinner to the necessitous poor. There was a full attendance, and the present proceeds will enable the committee to relieve 170 families. A neat address, written for the occasion by Mr B. Brough, was delivered by Mr. P. Newman. The vocalists were the Misses Jolly, Miss F. Kemble, Miss Nelson; Messrs. Tedder, Leffler, Genge, and J. W. Sharpe, whose singing gave great satisfaction.

THE THEATRES.

PUNCH'S PLAY HOUSE.

"The Fifth of November" is the title of a new piece produced on Monday—"manufactured," as the bills have it, by Augustus Mayhew and Sutherland Edwards, Esq. The hero of the piece, *Mr. Wester* (Mr. Tilbury), is a superstitious observer of old customs, and Guy Fawkes is to him a reverenced tradition. Not ing will satisfy him but the immolation of the effigy on his own grounds—a measure distasteful to the more enlightened mind of a *Mr. Sanpha* (Mr Rogers), his daughter's lover; who, however, being forbidden the house, is slain himself to take refuge in the disguise of the obnoxious figure, and scarcely escapes from the burning. The old banks, indeed, thinks that the young man has been sacrificed, and under that impression consents to his marriage, supposing that he must soon die of the injuries received; of course he does not, and the parties are united. The piece was successful.

ROCHESTER.—Miss Edith Heraud's engagement terminated on Monday, when she took her benefit, and was honoured with a full house.

CITY OF LONDON INSTITUTION.—The City Histrionic Club gave on Wednesday evening "a Drawing-room Entertainment" at the Aldermanbury Literary and Scientific Institution, consisting of dramatic selections from Tobin, Selby, Sorton, and Bernard. The honours of the occasion were divided between Mr. John Sness and Mr. Toole. The after gentlemen, in recommending a recitation describing an "Election," presented but little promise; but as he warmed into the business evinced an honest polyphonic power, and begot an opinion which was more than confirmed by his subsequent personification of *Peter the Swan*, and of *Robert Tyke*. His power to assume character parts is, we should suspect, very great; and we shall not be surprised if we hear of him in future in a more public arena. The theatre was crowded with a highly respectable audience, who seemed much delighted, and with reason, for there were in the evening's entertainment wit to amuse and talent to be admired.

NOMINATION OF SHERIFFS.—On Wednesday, being the Morrow of St Martin, the Lords of her Majesty's Privy Council assembled in the Court of Exchequer, at Westminster, for the purpose of proceeding to the nomination of the sheriffs for the ensuing year for all the counties in England and Wales, with the exception of Cornwall and Lancashire. The Lords of the Council were—the Chancellor of the Exchequer, in his state robes of office, Sir Charles Wood; the Secretary of State for the Colonies, Earl Grey; the First Commissioner of Woods and Forests, Lord Seymour; the Lord Chancellor, the Lord Chief Justice of England, the Chief Justice of the Common Pleas, the Lord Chief Baron, Mr. Baron Parke, Sir Justice Wightman, Mr. Justice Erle, Mr. Baron Platt, Mr. Justice Williams, and Mr. Justice Talfourd. Mr. C. C. Folke Greville acted as Clerk of the Council. The Queen's Remembrancer (Mr. Vincent), having read the usual proclamation in Norman French, and administered the oaths in the same language, then proceeded, assisted by Mr. C. Browne, the chief clerk, to read the list and receive the nominations

The first stone of the new hall in Vienna on the 4th instant, and a long winter is anticipated. Ce ober throughout was dry and mild, so that the crops consist as with respect to the vintage and the potato crops have not been famished. Nevertheless, the prospects of the poor are the reverse of bright, and, although the harvest cannot be said to have been a bad one, the prices of the necessaries of life are exorbitantly high. This is mainly owing to the state of existing finances and the depreciation in the currency, a paper florin being no longer able to buy a silver florin's worth.

The garri-on of the federal fortress of Mayence has been increased by Thuringen and Anhalt troops.

ASSEMBLY ROOMS, BATH.

THE GUILD OF LITERATURE AND ART.

THE seventh performance of the Amateur Company of the Guild of Literature and Art took place at these magnificent rooms on Monday night. The play was the same that was performed at Devonshire House, before her Majesty, Prince Albert, and the Court circle a few months ago, viz. Sir E. Bulwer Lytton's comedy of "Not so Bad as we Seem: or, many Sides to a Character." The costumes, of the period of George I., were under the superintendence of Mr. Augustus Egg, R.A.; the theatre, constructed by Mr. Sloman, machinist of the Lyceum, was erected by him at one end of the great room; the local arrangements were under the direction of Mr. Clinch; the post of stage-manager was ably filled, as before, by Mr. Mark Lemon; and the whole was produced under the direction of Mr. Charles Dickens The gentlemen forming the amateur company were the same as before—that is to say, Mr. Frank Stone, A.R.A., as the *Duke of Middlesex*; Mr. Dudley Costello, as the *Earl of Loftus*, Mr. Charles Dickens, as *Lord Wilmot*; Mr Douglas Jerrold, as *Mr. Shadowly Softhead*; Mr. Mark Lemon, as *Sir Geoffrey Thorowgh*; Mr. Augustus Egg, as *David Pallet*; Mr Forster, as *Mr. Hardman*; Mr. R. H. Horne, as *Colonel Plant*; Mr. Charles Knight, as *Jacob Tonson*; Mr. Robert Bell, as *Paddy O'Sullivan Bas*.

Though the prices of admission were high, being the same as at fashionable theatres of London, the room was filled at an early hour; and before the curtain rose there could not have been less than eight or nine hundred persons, the great majority, in fact, of the *élite* of the Bath circles. Even the habitually severe sectarians were there, considering, no doubt, that, as the play was not in a playhouse, all chance of contamination was avoided. We are strongly tempted to make some comment upon this circumstance; but we forbear.

But, before we speak of the acting of the play, we must mention one of those disasters so amusing to everybody except those who have to endure the distress of them. In a play of the period of George I., much of the effect as well as the correctness of the costumes, obviously depends upon the wigs. Now, it happened that the perruquier (Mr. Wilson, of the Strand) resides a few miles out of town, on the Bath road, or rail, and, wishing to dine with his family on Sunday, he carefully packed up his wig-boxes, directed them to the Assembly Rooms, Bath, and sent them off on Friday night. All care being thus off his mind, he waited quietly for the arrival of the train on Monday, when took him up as it passed. But when he was put down at Bath he did not ascertain that his wig-boxes had arrived! They were not at the Assembly Rooms; they were not at the station; he drove round the town to all the hotels, to the theatre, and other places—but no wigs! All the gentlemen of the company arrived at the York Hotel by the express train; but no wig-boxes came with them. It was said, however, they were sure to arrive by the next train, due at two o'clock. The two o'clock train arrived—but no wigs! Great consternation was now felt by all the company, while the poor perruquier ran to and fro from the railway to the Assembly Rooms, and thence to the theatre, and to every hairdresser's shop in the place. He said that Bath had always been "great" in wigs, and he might, perhaps, be able to find substitutes. This, however, would not satisfy the amateurs, as they knew very well that the new wigs would be very unlikely to fit them safely; and for a wig to tumble off in the middle of a scene would be likely to produce an effect very different from the one desired. But there was no alternative Seven o'clock arrived; doors were opened; the amateurs began to dress with woful apprehensions, mixed, of course, with a good deal of jokings. Just before the curtain drew up, however, the wig-boxes arrived, and, by rapidly dressing the heads of those who had to go on first, the perruquier managed to complete everybody in succession, so that the stage was never kept waiting.

The comedy moved rather heavily at first, "as is its wont," and we must admit that this is not so much the fault of the actors as of the author. It is a thoughtful play, rather than one of action and situation. The audience, who were very aristocratical in their notions, thought it good taste to applaud no more than they could help. They, apparent y, resisted it as long as they could. In the second act they warmed up a little; and got better in the third. Mr. Dickens and Mr. Douglas Jerrold played excellently; so did Mr. Mark Lemon, Mr. Forster, and Mr. Egg; in fact, they all took pains to play well, and succeeded. The comedy came to its close with great applause, and all the amateurs were called to the front by innumerable white kid gloves, and the waving here and there, of scented handkerchiefs.

The comedy is still too long. We notice that it has been much curtailed since it was given at the Hanover-square Rooms; but it still needs more cutting out, especially from the character of *Mr. Hardman*, which is altogether overdone and full of repetitions

The farce, written by Mr. Charles Dickens and Mr. Mark Lemon, went off capitally. It was extremely well enacted; and the "making up" of these two gentlemen, and also of Mr Egg, was in the first style of the theatrical art. Owing to the great length of the comedy, the performance did not close till half-past twelve o'clock, so that a number of the sober inhabitants (with a good sprinkling of invalids) rose and took their departure even during some of the most amusing scenes in the farce.

The amateur company, we understand, will proceed hence to Bristol, where the same performances will be repeated.

Mr. W. Lassell, of Liverpool, announces his discovery of two new satellites of the planet Uranus, interior to the innermost of the two bright satellites first discovered by Sir W. Herschel, known as the second and the fourth.

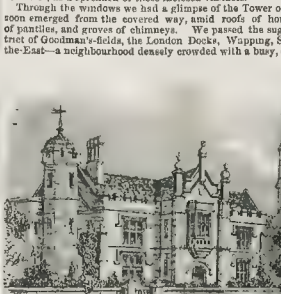
THE CAMDEN-TOWN RAILWAY.

THE prodigious extent of the suburbs of London has rendered a corresponding increase of the means of conveyance from one district to another indispensable. A few years since, Chelsea, Brompton, Kensington, and Bayswater, the beautiful western suburbs of the metropolis, were comparatively unknown to most of the inhabitants of Eastern London. Many of the parishioners of Shadwell, Limehouse, and Poplar might have heard of the Regent's-park and Primrose-hill: but had never visited either, for want of some direct communication brought, as it were, to their very doors Such a facility has just been provided by the opening of the line already known as "the Camden-town Railway," which traverses the eastern and northern suburbs of the metropolis, and enables the Londoner to make the "Oval and Journey" from Pentonville-street, City, to Primrose-hill and the Regent's-park (the latter attractive at all seasons by its "Zoological Gardens"), at a very trifling expenditure of time and money. Our Artist has made the trip, pencil and sketch-book in hand, and here are the pictorial results:—

The building shown within the above initial letter is the entrance to the terminus in Penchurch-street, where we took a sixpenny return ticket (second-class carriage), the distance from the spot where we stood, to the terminus in the Hampstead-road, being four miles and a half—the entire journey and return being, accordingly, nine miles for sixpence!

The trains start every quarter of an hour from half-past eight in the morning till ten at night. There was no puffing or snorting of the engine, but by a silent signal the train was set in motion. We proceed for a considerable distance under a covered way, lit by sash windows: this was considered necessary at the original construction of the Blackwall Railway, to prevent accidents by horses taking fright from the noise and smoke of the engines as they dart over the bridges crossing the streets of London. We have engraved the bridge crossing the Minories, as a specimen of these inclosed viaducts.

Through the windows we had a glimpse of the Tower of London; but soon emerged from the covered way, amid roofs of houses, an ocean of pantiles, and groves of chimneys. We passed the sugar-baking district of Goodman's-fields, the London Docks, Wapping, St. George's-in-the-East—a neighbourhood densely crowded with a busy, dingy, working

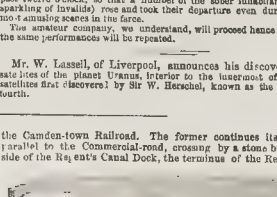


HOMERTON PARSONAGE AND CHURCH.

or sea-going population. On the left we passed new Shadwell Church, and also St. Mary's Church and Schools, recently erected. We next arrived at Stepney Station, and began to breathe more freely, for we had left behind the region of smoke and pantile chimneys. On the right is a new district church of the parish of Shadwell, built on the site of the house that was so marvellously preserved at the great fire at Ratcliff-cross, which broke out on the 23d of July, 1794, and which consumed more houses than any one conflagration since the Great Fire of 1666.

On the left, but at some distance from the railway, is seen the square tower of Stepney Church, the mother church of most of the parishes in the eastern part of London. Immediately beneath us on the left is the Commercial-road, leading from Whitechapel to Blackwall, a distance of nearly four miles. Near the junction of the Camden-town and Blackwall Railways, the Commercial-road is 80 feet in width, and is crossed by an iron viaduct, called Bow Spring Bridge, designed by L. Clare, Esq., and constructed by Messrs. Fox and Henderson, of Birmingham. The reader will perceive that, notwithstanding the great length of the viaduct, and the material of which it is constructed, it has a light and picturesque appearance,

At the Stepney Station the Blackwall Railroad forms a junction with the Camden-town Railroad. The former continues its course nearly parallel to the Commercial-road, crossing by a stone bridge the north side of the Regent's Canal Dock, the terminus of the Regent's Canal.



MINORIES VIADUCT.

Having crossed the Commercial-road by Bow Spring Bridge, we soon leave the City and Pool of London behind us, and pass through fields to Bow common, where to the right we have an extensive but distant view of the East India Docks; and, beyond them, a view of the Surrey and Kentish hills; on the left, the City of London, and Tower Hamlets Cemetery, occupying nearly thirty acres of ground, beautifully disposed, and ornamented with cypress, cedar, and other trees, and most of the graves ornamented with flowers and shrubs. This cemetery, with an adjacent field, containing nearly one hundred and forty acres of land, is about to be purchased by Government, under the Act of Parliament just passed to regulate the burial-grounds of the metropolis Beyond the cemetery is seen the extensive buildings of the City of London Union Workhouse, which from its extent and architecture has a palatial appearance.

We now passed Bow Church, and, passing under the Bow-road, arrived at the Bow Station. Here the train received passengers and soon after starting we found ourselves in an open country: on the right the newly-formed Victoria-park; on the left we had an extensive view over the Hackney marshes, terminating with a considerable portion of the well-wooded scenery of Essex.

Passing onward, through the verdant fields, we came to the retired village of Homerton, formerly a district of the parish of Hackney, but within the last six years formed into a separate parish; from the railroad is seen a new church, erected about four years ago, from the design of Mr. Ashpitel.

The church will accommodate 1800 persons, and cost less than £9000, the whole raised by subscription. The parsonage-house is a pleasing specimen of domestic architecture. We have now arrived at the Hackney Station: on the right, from the midst of roofs of houses and the thickly-planted trees in the churchyard and adjacent gardens, rises the picturesque tower of the old church; and to the right, the pyramidal tower of the new church Looking leftward, we were somewhat puzzled at the appearance of several long ditches, or rather trenches, filled with running water, nearly covered with what we took to be weeds; but, upon inquiry, we found this was one of the artificial streams for the continual growth of watercresses for the London market. Annexed is a representation of this singular species of cultivation, which affords a living to a great number of poor men, women, and children. The square building on the right side is the Hackney Railway Station; here the train halted for a few seconds, and then moved on towards Kingsland, which is in a deep cutting, passing under the Kingsland-road.

In this district, large tracts of land belonging to the Lord of the Manor, W. G. D. Tyssen, Esq., are now being laid out for building detached villas of a better class: the railway has, no doubt, greatly accelerated the profitable occupation of this very fine estate; for, although it has the advantage, from the nature of its soil, according to the Register-General's Return, of being decidedly the most healthy locality near London; yet, until the railway brought it into notice, and opened a communication for it, no measures taken for its improvement appear to have been successful.

After taking up passengers at the Kingsland Station, we proceeded through a cutting towards Islington; and, passing under the Great Northroad, we arrived at the Islington and Highbury Station, at the point where the road branches to Holloway and Highbury. In constructing the railway across the road at this place, it was necessary to take down a tavern, which the company have replaced by one of larger structure on the site of the old building, by erecting the same upon girders over the railway.

Through the high level of Islington the railway is in a cutting averaging 16 feet deep, with walls of massive brickwork to sustain the clay soil, of which the district consists. We quit this cutting near the Caledonian-

BOW SPRING BRIDGE, STEPNEY STATION.

HACKNEY STATION, AND WATERCRESS PLANTATION.

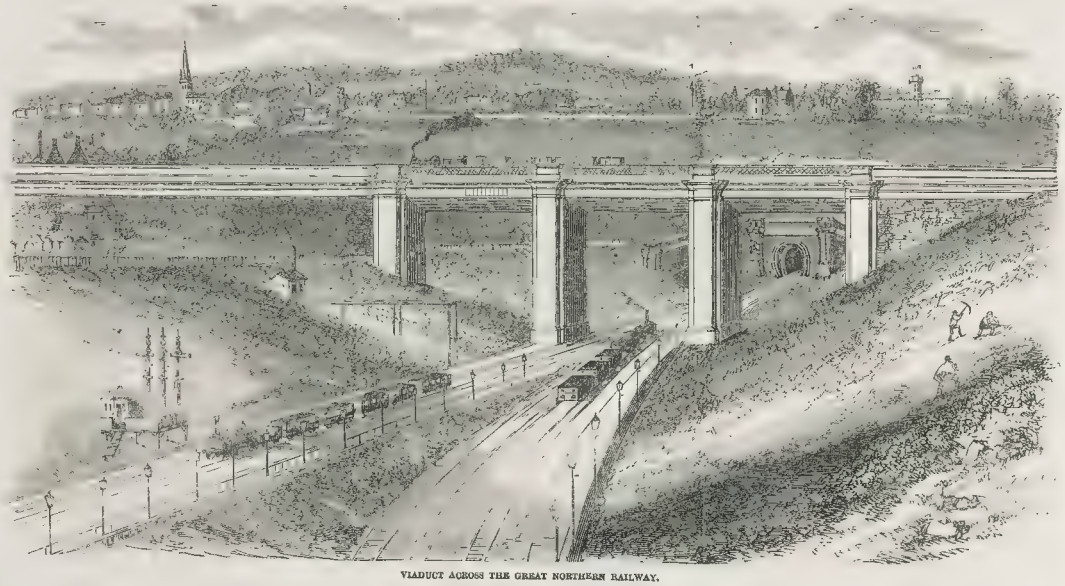
road, and cross the same by a bridge. Within the last year the site of the Roman encampment, and for a great distance around, has been entirely covered with terraces, streets, and squares. The Model prison at Pentonville, which, when it was erected a few years back, stood in the midst of the fields, is now nearly surrounded by houses. We next passed over the Great Northern Railway; and it was a curious sight to see a monster northern train, sixty feet below us, entering the tunnel running under the extensive tract of land known as Copenhagen-fields. This is, indeed, one of the most singular views through which the railroad passes. It will be best comprehended by referring to the annexed Engraving, taken from the bridge over the Direct York Railway, at the upper end of the ancient northern road to London called Maiden-lane. From this bridge, looking down the gorge of a deep valley, we observe the lines of the direct York Railway gently curving to the entrance of the tunnel, which is a massive stone arch, with thick brick walls on either side, terminated by immense octangular piers formed of brick, with stone dressings. In the centre of the Great Northern Railway, a short distance from the tunnel, are two immense piers, upwards of sixty feet in height, which support the viaduct of the Camden-town Railway.

Beyond this viaduct lie Copenhagen-fields, the proposed site of the new Smithfield Market. In the centre is the tavern called Copenhagen House, where Kossuth addressed the operatives on Monday week. The large building with the lofty tower is the new prison now in the course of erection at the expense of the Corporation of the city of London.

After passing several beautiful villas, we arrived at Camden-town, where the Railway is constructed upon a brick viaduct of good proportions. The main roads are crossed by wrought iron boiler-plate bridges of the same principle as that of the celebrated tubular bridge over the Menai Straits. Some of these bridges are of considerable span, and the details of their construction are well worthy the close examination of those who can appreciate works of this kind.

We soon enter upon ground intersected with the rails of the Great North-Western Railway, until we reach the end of our journey at the terminus of the Camden-town Railway, in the Hampstead-road.

We started by the next train upon our return. Our fellow-passengers were journeying from this extreme north-western suburb to Margate. They accompanied us as far as the Stepney Station, where we parted—they to proceed to Blackwall, to embark in a steamer for Margate; we to return to the great city, much pleased with our economical journey, and the excellence of the accommodation afforded by the Camden-town Railway Company. We are happy to hear that their spirit and liberality are appreciated by the public, since upwards of 105,000 passengers were conveyed upon this line during the previous week.



VIADUCT ACROSS THE GREAT NORTHERN RAILWAY.

THE NEW LORD MAYOR.

On Monday the ceremony of swearing in the new Lord Mayor took place in the Court of Exchequer, at Westminster, his Lordship being accompanied by the late Lord Mayor, Sheriffs Cotterell and Swift, Alderman Challis, Alderman Salomons, Alderman Lawrence, the Recorder, and other City officers.

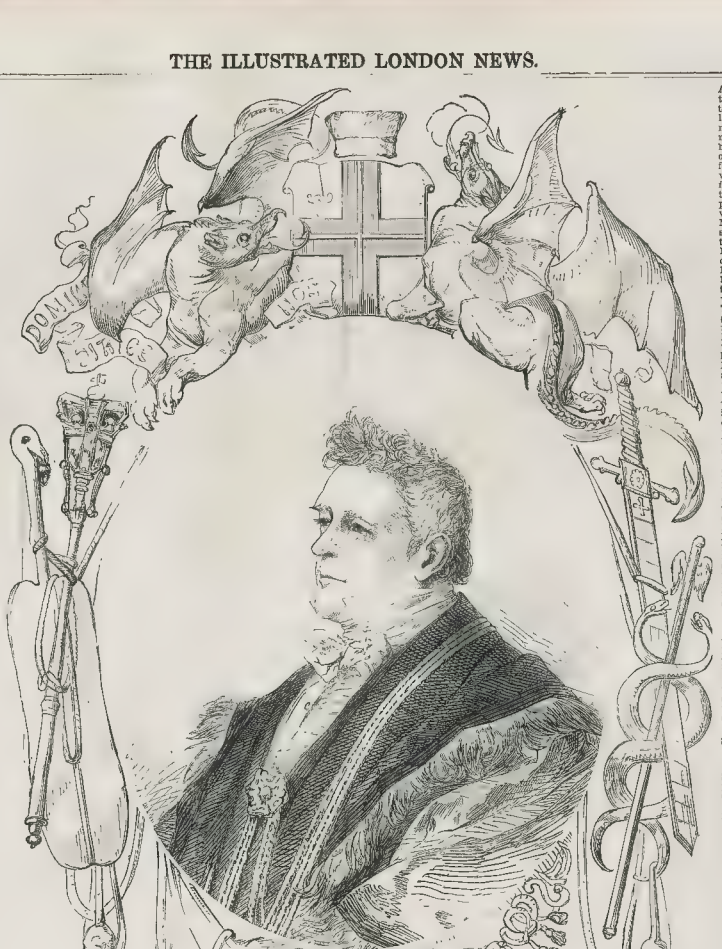
The Recorder, in presenting to the Barons of the Exchequer the gentleman selected to fill the high office of chief magistrate of the city of London for the ensuing year, thus characterised his qualifications:—

"Mr. W. Hunter, alderman and upholder, was the gentleman who had been so selected. He was a gentleman whose family had originally sprung from Scotland, and his father had in the course of time settled at Bury St. Edmund's, in the county of Suffolk, at which place Alderman Hunter had had the good fortune to receive his education from the venerable parent of one who had become one of the most distinguished prelates of the country (the Lord Bishop of London). Having in due time been initiated into business, Mr. Hunter came to London, where he settled in the year 1807, and founded that extensive and lucrative business which he had subsequently carried on with so much success. In the year 1825 Mr. Hunter was selected by his neighbours to represent them in the Court of Common Council for the Coleman-street ward, and of that court he had not been very long a member when he was chosen the chairman of many of its committees, and in that capacity he had conferred vast benefits on his fellow-citizens. Some years subsequently, upon the retirement of Mr. Alderman Heygate from that office, Mr. Hunter was selected for the vacant place of alderman of the ward; at that time it was that he had retired from all commercial pursuits, and had thenceforward devoted the whole of his energies for the advantage of his fellow-citizens. In the year 1844 Mr. Alderman Hunter served the office of Sheriff, the duties of which he would make bold to say upon that occasion had been performed, not merely with the highest credit to himself personally, but to the great benefit of his fellow-citizens. Since that year Mr. Alderman Hunter had applied himself to the onerous performance of the duties which devolved upon him as one of the magistrates of the city of London; and in the present year he had the good fortune to be called upon to fill the highest office, by having been selected by his fellow-citizens to act as the chief magistrate of the City, thus adding another name to the long list on that illustrious roll. Mr. Alderman Hunter came to the office at a time when from outward appearances it might chance that proceedings on the Continent might call upon him to adopt rigorous steps for the maintenance of quietude and peace within the range of the metropolis. Should such measures become necessary, their Lordships might rely upon the Lord Mayor, with the aids and willing assistance of his fellow-citizens, exercising such authority and taking such steps as would tend to the full maintenance of peace and quietude within his precincts, as well as the maintenance of the law of the land inviolate."

The learned Recorder then proceeded to eulogise the conduct of the late Lord Mayor throughout his year of office, with special reference to the active part taken by his Lordship in support of the Great Exhibition. He had the honour of receiving her Majesty and her amiable Consort at the Guildhall, where he had dispensed the City hospitalities in a manner which had called forth universal approval; and he had subsequently the further honour of receiving from his Sovereign the highest mark of distinction that could be conferred upon him—the honour of a baronetcy. The learned Recorder next adverted to the fact of Sir John Musgrove having been the first Lord Mayor who had received an invitation from the citizens of Paris,—that spot which had or so long a period been regarded by the people of this country as their great national or natural enemy. Having had the honour to attend Sir John Musgrove on that visit, and having witnessed the proceedings upon that occasion, he hoped he was not going too far in expressing a conviction that from that friendly meeting the most lasting benefits would arise to both countries. In conclusion, he had now the honour to present to their Lordships Mr. Alderman Hunter as the Lord Mayor selected by his fellow-citizens for the year ensuing.

The Lord Chief Baron then said that he had great pleasure in congratulating the Lord Mayor on his having obtained, by the voice of his fellow-citizens, the highest distinction it was in their power to confer; and, as he had remarked on former occasions, the pageant which took place on that day was not without great significance, and was well worthy of observance, for it was one of the great memorials, as it were, of what was due to the choice of the people. He fully concurred in all that had fallen from the eloquent Recorder as to the advantages which would accrue from the events of last year, and, with him, he anticipated the happiest results. And, although he was glad to hear that the Lord Mayor was prepared to maintain the peace of the City and the law inviolate, still he must confess that he did not entertain any apprehension of the necessity which had been adverted to by the learned Recorder arising out of the law being so exercised. He felt no anxiety as to the events to which that learned officer had referred, and therefore he doubted not that the ensuing Mayoralty would be passed peaceably and in a manner which would redound to the credit of the said Mayor. Under any rate of circumstances he had the fullest reliance on the firmness and loyalty of the Lord Mayor and citizens. There could be no doubt, in reference to the part which the late Lord Mayor had taken in that establishment—the Exhibition of the Industry of all Nations—that that Exhibition, which might be truly designated the Temple of Peace, would tend to bind together, by good feelings and one common interest, all the nations who had had the opportunity of exhibiting at and witnessing the scene; and he apprehended that whenever education should have thoroughly been carried out, and when mankind had experienced the blessings and the advantages which were consequent upon peace, wars would be no more; and that, instead of meeting, as formerly, different nations in war, they would henceforth consider them as brothers of one great family, having common and general duties to discharge the one towards the other. He had to congratulate Sir John Musgrove, the late Lord Mayor, upon his having passed through his year of office with so much distinction; and he congratulated him upon the failure of all the predictions that the Great National Exhibition, in which the City of London had taken so prominent a part, would be the means of opening the field for a display of riot and turbulence; for, on the contrary, that great canopy, under which the fruits of the industry and capital of nations had been deposited, had proved eminently successful. The predictions, then, that the contrary would be the result had proved altogether futile. The late Lord Mayor would receive, as he was entitled to do, the thanks of his fellow-citizens for the efficient and hospitable manner in which he had passed through his year of office.

The various forms were then gone through, and the civic authorities withdrew, after an invitation had been given to the learned Barons to attend a banquet at the Guildhall.



THE RIGHT HONOURABLE WILLIAM HUNTER, LORD MAYOR.

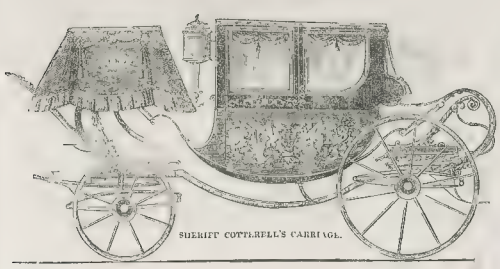
STATE CARRIAGES OF THE LORD MAYOR AND SHERIFFS.

The pageant of Monday (Lord Mayor's Show) will be found described in another page. We here engrave the new state carriages.

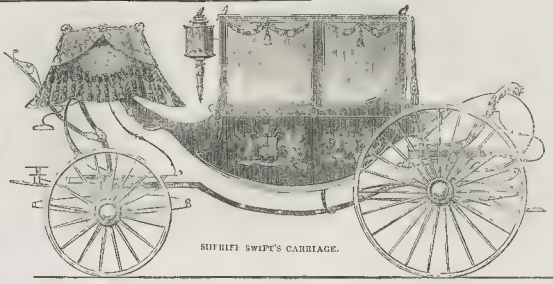
The Lord Mayor's State Coach is elegantly finished with large curved plate side-lights to the body, painted a rich lake, ornamented with handsome gilt mouldings and cornices to the framework round the roof, &c. The coach is lined with rich white satin, and lace trimmings to correspond; the roof is radiated with rich white satin, mounted in the centre with the City arms, embroidered in proper colours, finished with handsome crimson silk festoons, trimmed with gold-coloured fringe and tassels, and rich blue velvet to the glass frames. The lamps are large, and full-mounted with handsome chased work, cut glasses, &c. The body suspended on a handsome perch carriage, with C springs, and carved blocks and under springs, &c., boldly carved hind standards and standard-box; the whole painted and richly ornamented with gold, to correspond with the body; the four body loops decorated with dragons' heads and scaled ornaments. The arms of the Upholders' Company, and the private arms of the Lord Mayor, are emblazoned within handsome ornaments, on each quarter panel; the City arms, with supporters and ornaments, on the door and back panels; and the private arms and crest, with heightened ornaments, on the rail panels. The handsome hammercloth, of white cloth, ornamented with deep claret fringe and gold-colour silk bangers, the centre of rich purple Genoa plaited velvet, mounted with the City arms within a garter, &c., richly chased and gilded; and the ends of the axletrees are embossed and chased. The rich yet chaste style of decoration throughout the carriage is highly creditable to the taste of its builders, Messrs. Laurie and Marner, 3, Oxford-street.

Mr. Sheriff Cotterell's State Chariot, built by Messrs. Davies, of Wigmore-street, displays beauty of outline combined with elegance of finish. The springs and wheels are tastefully gilt; the body is of maroon colour, relieved with gold; the Civic arms, the arms of the Cordwainers' Company, and Mr. Sheriff Cotterell's, with the motto "Ostendo non Ostenta," are emblazoned on the side panels, richly ornamented with banners, scroll work, and the rose, shamrock, and thistle. The interior is lined with white figured silk and amber silk lace. The hammercloth is of claret cloth, decorated with yellow and claret silk bullion bangers, cords, &c.; the Civic arms richly chased and water gilt on a centre of claret velvet. The mouldings, nave, hoops, and lamps are handsomely chased.

THE LORD MAYOR'S STATE CARRIAGE.



SHERIFF COTTERELL'S CARRIAGE.



SHERIFF SWIFT'S CARRIAGE.

Mr. Sheriff Swift's State Carriage is remarkable for its lightness of effect, without loss of stateliness. The double window is exceedingly elegant; the colours are arranged with heraldic truth, and the staple of the body being a fine ultramarine blue, throws up with great effect the heraldic ornamentation of the City arms and supporters on the centre and back panels; those of the Spectacle Makers' Company on the side panel, and the private armorial bearings of the worthy sheriff himself emblazoned on the upper panels: his family motto, 'Dei dono sum quod sum' (by the gift of God I am what I am), fitly betokening at once the modesty and the dignity of the bearer. The body is supported on the heads of dragons emblematical of the city authority. The under carriage is carved in bold relief, and painted of a deep orange colour, picked out with blue, gold, and crimson The panneer-cloth is of a rich, original design, the City arms gorgeously embroidered, and encircled with a collar of gold richly chased, stand forth prominent from a centre of deep blue Genoa velvet; while the effect of a rich heraldic canopy is given in the fringe and tassels of gold, and the rich velvet drapery, finished off with deep crimson fringe and gold-coloured pendants. The superb *four-in-hand* of this equipage is worthy the high character of the makers, Messrs. Laurie and Marner, of Oxford-street.

LORD MAYOR'S DAY.

On Monday the annual ceremony, so interesting to the sight seekers of the metropolis—that of inaugurating the new Lord Mayor—took place. The weather was favourable, although the street's were very muddy. A vast crowd filled all the City thoroughfares, and the approaches to, and the bridges themselves were completely blocked up. The usual barriers were erected, to prevent accidents and facilitate the passage of the procession.

After the Lord Mayor, Sheriffs, Aldermen, and other City functionaries, had partaken of a sumptuous dejeuner in the Council Chamber, preparations were made for forming the procession, which was of the usual character, with the addition of "twenty-three Knights in armour;" the companies assisting in the ceremony being the Goldsmiths, the Upholders, the Clockmakers, and the Cordwainers.

About twelve o'clock the procession was completely formed, when it moved from Guildhall, and passed through Gresham str. et, Coleman-street, Fore-street, the Pavement, West-street, the north and east side of Finsbury-circus, Circus-place, London-wall, Moorgate-street, Princes-street, King William-street, and Adelaide-place, to London-bridge. Here the Lord Mayor embarked in the City state barge and proceeded by water to Westminster, where they landed and proceeded to the Court of Exchequer.

At two o'clock the civic procession entered the court. The Lord Mayor was sworn in after the usual form. His Lordship then entered the other courts; and, after inviting the Judges to the civic banquet, he returned to Westminster-bridge, and, having again embarked, he proceeded to Lambeth-bridge, where he landed. The procession was then formed in the same order in which it had set out, and returned to Guildhall by way of Bridge-street, Ludgate-hill, St. Paul's Churchyard, and Cheapside.

THE BANQUET.

In the evening the usual inauguration banquet was given in Guildhall, in which covers were laid for about 1200 guests. The hall was decorated very much in the same style as on the occasion of the Exhibition ball. The Court of Exchequer and its various appurtenants were laid out as reception and retiring rooms, and the way from thence to the hall was hung with draperies and relieved by mirrors. The hall itself was brilliantly illuminated. From the roof were suspended the magnificent colonnade of gas chandeliers which have for some year past been a prominent attraction on similar occasions. At the upper end he Prince of Wales's plume in spun glass, with the words "Ich dien," surrounded by various flags, several suits of armour, shield, weapons, pikes, halberds, and military colours, formed a picturesque and characteristic *trophæum*, the whole resting upon a crimson base bearing the motto, "God save the Queen." At the opposite end was the illuminated glass star, with the initials of the Lord Mayor in coloured glass, grouped in a panel, with shields bearing the arms of America, France, Prussia, Turkey, Austria, Russia, Belgium, and other foreign states, surmounted by a canopy of crimson. The banners of the various City companies were suspended from the walls, and the galleries were hung with crimson draperies. On the steps leading to the Council Chamber, and at the several entrances, figures of men in armour were placed. The Gothic features of the building, as windows, panels, doors &c., were marked out by lines of gas jets, which, with the chandeliers from the centre, effected a brilliant illumination. The tables were decorated with a profusion of gold and silver plate, épergnes, and vases filled with fruit and rare flowers.

Amongst the company we observed the ex-Lord Mayor, Lord John Russell, the Chancellor of the Exchequer, the Marquis of Salisbury, the Lord Chief Baron, Lord Cranworth, Mr. Justice Williams, Mr. Justice Erle, Mr. Justice Cresswell, Mr. Baron Martin, Mr. Baron Platt, Admiral Stuart, Gen. Sir George Pollock, Sheriffs Carden and Swift, Mr. Alderman Humphery, M.P., Mr. Childers, M.P.; Mr. Wyld, M.P., the Rev. Dr. Mortimer, the Rev. Dr. Price, the Rev. T. Binney, Hon. Thomas and Mrs. Fitzroy, Mr. Bellew, M.P., Earl Jermyn, M.P., Captain Lawrence (of the United States Navy), Mr. Worsley, M.P. (Recorder), Mr. Phillip Bennet, M.P., Mr. Hayter, M.P., Mr. Wealthead, M.P., the Solicitor-General, Mr. Sergeant Channell, Mr. B. Osborne, M.P., Mr. Alderman Salomons, M.P., Mr. P. Howard, M.P.

It formed a subject for considerable gossip in the course of the evening that no representatives of foreign powers at the Court of St. James's had honoured the festival with their presence.

The band of the Life Guards was in attendance, besides a company of waiters.

Grace having been chanted, and the loving cup passed,

The Lord Mayor proposed "The health of her Majesty," who, he rejoiced to say, reigned over the hearts and affections of a loyal and contented people

The toast was drunk with the honours, and was followed by the National Anthem

The Lord Mayor next gave "The healths of their Royal Highnesses the Prince Albert, Prince of Wales, and the rest of the Royal family."—With regard to Prince Albert, he observed that his Royal Highness deserved the universal gratitude of the country for the deep and active interest he took in its welfare, and especially for the part he had taken in reference to the Great Exhibition, from which he (the Lord Mayor) anticipated the greatest and most lasting benefits, not to England only, but to the whole of the civilised world. (Hear, hear.)

The next toast was "The Navy and Army," in proposing which his Lordship said he could not, as a citizen, but feel a deep interest in those services, which in periods of peril and difficulty defended the interests and upheld the honour of the country.

Admiral Stuart returned thanks for the Navy, and General Sir G. Pollock for the Army.

After the toast of "Prosperity to the City of London," and "The health of the late Lord Mayor, Sir J. Musgrove," had been drunk, the Lord Mayor gave "Lord John Russell and her Majesty's Ministers," which was received with the usual honours.

Lord J. Russell, when the applause had subsided, rose and said: My Lord Mayor, ladies, and gentlemen,—I have to return you my most grateful thanks for the manner in which the health of her Majesty's Ministers has been proposed by my right hon. friend the Lord Mayor, and responded to by this distinguished company. I can assure you, on behalf of myself and my colleagues in office, that nothing is more gratifying to us than to receive the approbation of a company like the present, considering as we do to merit that approbation by following in the strict line of our duty to our country. (Cheers.) My Lord Mayor, I never can visit this great corporation without a deep feeling of respect towards that body which for many centuries has maintained and preserved the confidence and attachment of their fellow-citizens. (Hear.) It is impossible to regard without reverence a corporation which has withstood all the shocks of time.—(Cheers)—which has withstood all the attacks which have been made upon it, whether by arms under the Plantagenets, or by judicial tyranny under the Stuarts—(More cheering)—and which has in every crisis evinced its attachment to the constitution and the liberties of the country.—(Loud cheers)—and likewise, let me say, which has, even in the most perilous times, always known how to separate liberty from licence; and which in the person of an early Lord Mayor struck down the disturber of social order. (Cheers.) And let me add further, that it is impossible, even with reference to the element of time, not to look with respect on a body which saw the timbers of the roof of Westminster Hall put fresh, and has survived to behold and encourage the erection of the Crystal Palace. (Loud cheering.) For these reasons, therefore, I look always with feelings of regard and veneration to the city of London and its corporation, and am disposed to say, in the concluding words of Sir William Blackstone, in his Commentaries on the Constitution of England, "Esto perpetua." (More cheering.) And now, my Lord Mayor, ladies and gentlemen, I would saw a few words—and they shall be but a few words— as to what I conceive should be the main object of the policy of this country at the present time—I believe that that main object should be peace. (Loud cheers.) My opinion is, that there is nothing in the present aspect of affairs which should induce this country to depart a single hair's breadth from the pacific line it has adopted—(Much cheering)—and that, not only for its own welfare, but for the welfare of the world, the maintenance and the preservation of peace is the first duty, the first and the policy of this empire. (Hear, hear.) And let me add, that I trust the nations together, will have come to a definite and a fallery result before one time great prevalence—that it was the interest and wish of England to embroil other nations and provoke dissensions among them. I think all nations will now be convinced that, supposing we had no regard for justice—no duty—supposing we were not animated by sentiments of humanity and benevolence—yet that it is our interest as a nation to see other countries prosper, and that in their prosperity and their advancement in arts and civilisation we find the source of our own wealth and our own prosperity. (Cheers.) I would, therefore, even on the score of interest, say, that, while we maintain peace, we are most anxious that all other nations should make advances in material prosperity —that we may all flourish together, convinced that the more they advance and flourish, the more happy and prosperous shall we be, and the more likely to continue in the relations of peace and concord. (Cheers.) In these words, thanking your Lordship for the kind manner in which you have proposed our healths, I have now to ask indulgence while I propose to this company to drink the health of the Lord Mayor. His Lordship has undertaken a most arduous duty; he has succeeded to a mayoralty which has comprised a period of great prosperity, and he will have, therefore, a most difficult task to perform; but, knowing his ability and his devotion to what he thinks right, I have no doubt that he will, at the end of the year, leave the chair with increased reputation, and be rewarded with the approbation and the gratitude of his fellow-citizens. (Cheers.)

The toast was drunk with three times three, and

The Lord Mayor returned thanks.

"The House of Lords, coupled with the health of the Marquis of Salisbury," was next drunk; which was replied to by the noble Marquis "

The Lord Mayor then proposed "Her Majesty's Judges, coupling with the toast the health of the Chief Baron."

Lord Chief Baron Pollock returned thanks

The Lord Mayor next proposed "Sir Charles Wood and the House of Commons," and the right honourable gentleman acknowledged the compliment, observed that no persons were more able to pass a correct judgment upon the conduct of that honourable assembly than the enlightened and intelligent community whom he had then the honour of addressing. The right honourable gentleman concluded by giving "The health of the Lady Mayoress."

The Lord Mayor returned thanks.

The following toasts were subsequently given and responded to:—"The Sheriffs of London and Middlesex," "The Attorney and Solicitor Generals and the Bar of England," "The Representatives of the City of London in Parliament," "The Aldermen of the City of London and the Recorder."

BANQUET TO KOSSUTH AT BIRMINGHAM.

The grand demonstration of the people of the manufacturing districts in honour of Kossuth was brought to a close on Wednesday night by a magnificent banquet in the Music-hall, Birmingham.

It is necessary to mention, in continuation of the report of the proceedings at Manchester, given at page 590, that on Wednesday morning about two hundred of the principal manufacturers and merchants of Manchester met Kossuth at a *dejeuner* at Mr. Henry's residence, Woodlands, when the Hungarian chief took occasion to explain his views with respect to the Socialist and Communist doctrines prevalent in some parts of the Continent, and which it had been in some quarters stated that he maintained and upheld as a portion of his political creed. M. Kossuth emphatically rejected and repudiated for himself all or any participation in the opinions of Socialists or Communists. He did not understand Socialism, for every one differed in his definition. He ridiculed the peculiar dogmata of the modern social and political quacks, and in a much-applauded speech reiterated those political sentiments which have been rendered familiar to the public in the reports of his previous orations.

On the termination of the *dejeuner*, Kossuth and his immediate friends set out on their return to Birmingham, where they arrived at four o'clock. Amongst the party were Mr. Massingberd, Lord D. Stuart, M. Pulszki, M. Hajnick, &c.

At the various stations along the line flags floated, *feux de joie* were fired, and the most enthusiastic crowds assembled to give him a hearty welcome, in which they were joined by the servants of the company.

M. Kossuth travelled in an ordinary private carriage of the train, having courteously declined one of the Royal railway carriages which the company wished to place at his disposal. He was received at the Birmingham station by Mr. Geach, M.P., who accompanied him to the Queen's Hotel, where, after partaking of some refreshment, Kossuth entered his carriage and drove to the Hall, greeted by the enthusiastic plaudits of the populace who lined the streets through his entire route. An immense number of banners were again suspended from the windows of the inhabitants, and the bells of the old church rung out merry peals.

When M. Kossuth reached the Hall an immense crowd had congregated to receive him; descending from his carriage, and leaning on the arm of Mr. Geach, M.P., he was led into the committee room, where the mayors and deputations from the various towns in the district had assembled for the purpose of presenting the addresses; by these Mr. Thomas Kenrick was received with three rounds of hearty cheering.

The chair was immediately taken by Mr. Geach, who briefly explained that, in consequence of their illustrious guest having been detained by the great banquets at Manchester—the promotion of the cause they all had at heart it would be necessary, the hour of the banquet being so near, to shorten the proceedings of the evening as much as possible. He therefore suggested that the reading of the various addresses should be dispensed with; and, in consideration of the circumstances which had retained their illustrious guest, he hoped that the slight apology he had made for the curtailment would be deemed sufficient. (Applause.)

The presentation of the addresses was then proceeded with.

BIRMINGHAM.—Mr. Thomas Kenrick, M.P., chairman of the Hungarian committee. This, which was signed by many thousand persons, was as follows:—

"Illustrious Sir, We, the undersigned inhabitants of Birmingham, have no fitting words within us to express our pride and pleasure at having as our guest the leader of one of Europe's noblest races, the representative of a nation and country you have more than once congratulated our nation on the vigour and intensity of its local life. Your visit to this town gives us occasion to hope that the recognition, in the future, may have a part in the political destinies of Ireland and the world, the existence here of that great principle; and it may be within your knowledge that on one memorable occasion we were first to give evidence of its active power, when the voice of the people which we are most proud of is, that we anticipated every other English town in rendering homage to the cause of which you were the illustrious champion, and in expressing sympathy with the nation of which you were the honoured representative. We would fain believe that you will not be sorry to tread the very ground where even were kindled the earliest sparks of that holy fire of sympathy for sympathy which now glows in every heart this day, while your presence on its your presence so long desired and earnestly looked for, will be a day precious in our memory. It is our hearty wish and earnest prayer that your visit to our town may not only be to us a source of honour and delight, but may yield the noble fruits of encouragement to oppressed humanity, to nobly personified in yourself, nor remain without avail to that glorious cause, and that beyond the nation, to whose service you have consecrated your life and genius."

This address, which had been beautifully engrossed on vellum by Mr. Preston, had the arms of Hungary emblazoned upon it in magnificent style.

By the French residents an address was also presented. Covering the Rev Mr. Lyly; Derby, by Mr. Alderman Moss; Northampton, by the Mayor, who wore his gold chain of office; Worcester, from the Town Council, by the Mayor; Warwick, by the Mayor; Kidderminster, from the inhabitants, by the Rev. Mr. Gibson

WAKEFIELD.—This address was presented by members of the Town Council; their names did not transpire.

I. ASTRONOMICAL OBSERVATORY.

M. Kossuth rose and said: It is a most agreeable duty to me to receive those generous sentiments which have been so feelingly expressed in these addresses which have just been read, and which, I am sure, will always be considered as to be regarded by me as one of the most gratifying events of my life. I find that amongst those addresses some of them contain the spontaneous expression of opinion of all the men of the district from which they are sent; I am happy, too, to find that not only from individuals but from corporations addresses are presented to me to day, because I consider that municipal institutions are the best bulwark of the liberty of the people, not only of those of this, but of every country in the world. (Applause.) I pray you to accept my warm thanks; I am but a plain honest man, but, by virtue of the principle I represent, I return to you the sentiments of gratitude, not for myself alone, but for my entire nation. The sympathies you have expressed on behalf of my country are not altogether unconnected with the maintenance of liberty here. I thank you most fully for your expression of good will; I shall have an opportunity (besides my written answer) to present my views at the dinner, and to speak my sentiments more fully; you have my lasting gratitude for your attention, and your sympathy will. I have no doubt, operate as a lasting benefit to humanity. (Immense cheering.)

The deputation then withdrew.

THE MUSIC HALL.

The banquet in the Music-hall, which was given, not by the corporation, but by the inhabitants associated for that purpose, was a gorgeous *fête*. The decorations of the hall were remarkable for their splendour and good taste. Suspended from the walls were a number of Hungarian flags. The fronts of the galleries were tastefully decorated with evergreens and flowers, and on a score of banners, wreathed round with laurels, the greatest names in Hungarian history were duly honoured. Amongst them were the immortal Bem, Percsel, Klapka, Gorgey, Count Louis Batthyani, Lazrovski, Baron Jesseenk, Dembinski, Major Mirman, Wysveke, Veiter, and others. Over the banners devoted to the memory of the great departed crape was thrown, in tribute of respect for the noble dead which they had achieved in life.

The single galleries were filled with ladies in full dress, all of them displaying the Hungarian colours. Such had been the anxiety of the fair sex to be present, that the tickets at first issued at 5s. rose ultimately as high as 15s., at which they were disposed of on the day preceding the banquet. The organ and great gallaries were densely crowded.

The body of the hall was thronged to excess; nearly 900 persons sat down to dinner—a larger number than ever before sat in the hall on such an occasion. The company was composed of the magistracy, the majority of the members of the corporation, and the representatives of all the great manufacturing establishments in the town. There were also a large number of gentlemen from Wolverhampton, Coventry, Worcester, Leicester, Derby, and other towns of the district.

Kossuth entered at half-past five o'clock, amidst prolonged and deafening applause. He was conducted to the principal table by Mr. Geach, M.P. There were also at this table, which was decorated with rich candelabra and plate, Lord D. Stuart, M.P.; Mr. Munts, M.P.; Mr. G. Dawson, M. Pulszki, General Vitter, M. Henig, Mr. Messingberd, and some few other gentlemen. The chair was occupied by Mr. Scholefield, M.P.

Grace before dinner was said by the Rev. Mr. Vaughan, and this over, "God save the Queen" was sung by the first choir in the kingdom, Messrs. Hargreaves, playing on the cornet. After dinner grace was said by the Rev. James Gordon.

The Chairman read letters from several noblemen and gentlemen expressive of regret at their inability to be present. Amongst these was one from the newly-elected mayor, who, deploring his unavoidable absence, said that in the spirit of the object of the meeting he entirely concurred. From Mr. Walter Savage Landor, who said: "It would be easy for me to sit or stand in the presence of the only statesman whom I revere or respect." From Mr. M. D. Hill, Q.C., expressing sorrow at his sympathy for Kossuth's noble struggle to preserve the cause of freedom throughout the world. From Lord Hatherton and Lord Leigh; from Messrs. Villiers, M.P.; Thornely, M.P.; Foley, M.P.; Benbow, M.P.; Sidney, M.P.; and Collins, M.P., all of a similar character.

The Chairman, in proposing "The Queen," said: Long may we cling to that system of monarchical government which has made this the freest country in Europe.

The toast was drunk with three times three vociferous cheers

The toasts of "Prince Albert," the "Sultan of Turkey," and "President of the United States" followed, and were duly honoured and responded to.

The Chairman then, with a few brief prefatory remarks, gave the toast of the evening, "Our illustrious guest, Louis Kossuth"

The toast was received with an outburst of enthusiastic cheering, waving of handkerchiefs, &c., from all parts of the Hall, which lasted some minutes, the whole company standing. On this demonstration of fervour subsiding the vocalists sang the following appropriate verses, which had been composed by Mr. Walter Savage Landor, and were now given to the public for the first time:—

ON KOSSUTH'S VOYAGE TO AMERICA

Rave ever other lands and other seas,	The hopes of millions and rest there alone
Ill-omen'd black-wing'd Bravest	Perplex'y severe throne
That spies the dead, and waft away	Could use the credulous; none else that he
Him, who was drest d the grey	Can raise and set them free
Of deepest dark as this, or sending forth	O bear him on in safety and in health
The fortuners of the North.	Your guest a freight of wealth
Ye fly from his Caucasus, once more,	Such as no vessel yet hath ever borne;
The eagle who bore	Athen' with banner torn
To sad Humanity heaven's fire and Fight,	He urges thro' tempestuous waves his way;
Where by should re-ounce	Yet shall a brighter day
In happier bonds the nations of the earth;	Shine on him in his own reconquered field;
Bewailing Eve shall yield	Bewailing Eve shall yield
To that high wisdom, whence all blessings	To constant Virtue Hungary! no more
flow	Thy saddest lute deplore;
On mortals here below.	Look to the star crown'd Genius of the West,
Rest on, O Boreal Breeze, that labouring	Hole guardian of the opposite,
breast	O! that one on y nation fared to save
On which, ba'f dead, yet rest	Kossuth, the true and brave

M. Kossuth rose, and was received with reiterated cheering. After silence was restored, M. Kossuth proceeded: Three years ago yonder house of Austria, which had chiefly me to thank for not having been swept away by the revolution of Vienna in March, 1848, having in return commenced by the most foul, most sacrilegious conspiracy against the chartered rights, freedom, and national existence of my country, it was my share, being then a member of the ministry, with undisguised truth, to lay before the Parliament of Hungary the immense danger of our bleeding fatherland. Having made the sketch, which, however dreadful, could be but a faithful shadow of the horrible reality, I proceeded to explain the terrible alternative which our destiny left to us, after the failure of all our attempts to avert the evil. Reluctant to allow our nation to avert callously the stroke aimed at its very life, and anxious to bear up against the horrors of fate, and manfully to fight the battle of legitimate defence, scarcely had I spoken the word, scarcely had I uttered the words that the Diet of Pesth would require 200,000 men and 80,000 florins, when the spirit of freedom moved through the land, and nearly 400 representatives rose as one man, and, lifting the right hand towards God, solemnly said, "We grant it; freedom or death!" This they spoke, and there they stood, in calm and silent majesty, awaiting for what further words might fall from my lips. It was my duty to speak; but the gravity of the moment and the rushing wave of sentiment sealed my tongue. A burning tear fell from my eyes—a sigh of adoration from my humility God flustered on my lips, and bowing low before the majesty of my people, as I bow now before you, gentlemen—(Cheers)—left the tribune silent and speechless. M. Kossuth proceeded to express his acknowledgment for the kind reception he had met with. To me (he said) it casts a ray of hope on the night of my country's fate. I would thank you where my heart feels, and as becomes the dignity of your glorious land, but words fail me, not my thoughts, only awaiting for what further words might fall from my lips. It was my duty to speak; but the gravity of the moment and the rushing wave of sentiment sealed my tongue. A burning tear fell from my eyes—a sigh of adoration from my humility God flustered on my lips, and bowing low before the majesty of my people, as I bow now before you, gentlemen—(Cheers)—left the tribune silent and speechless. M. Kossuth proceeded to express his acknowledgment for the kind reception he had met with. To me (he said) it casts a ray of hope on the night of my country's fate. I would thank you where my heart feels, and as becomes the dignity of your glorious land, but words fail me, not my thoughts only,

I cannot forget my fatherland—and I feel that I stand amongst you a poor homeless exile. (Cries of "No, no.") I am an exile from my sufferings, a home, which I know to be worthy of a better fate, and therefore it is that I appeal to you for sympathy and support. (Cheers.) In all the misfortunes of my country, however, I feel that God is just, and that he will not allow our country to be destroyed. (Cheers.) All the empires that have yet fallen have perished in consequence of their crimes—or he is sacrificed to their pride. That, however, is not the case with Hungary, and she must not die. She must not be sacrificed. (Cheers.) At present Hungary is suffering and oppressed, through the unfortunate sins of an amb tious woman. She knew that God was not with her, but the Czar was with her, and what cared she for God when the Czar was with her? (Cheers.) The Czar has put his foot upon Hungary, but God in his justice is not long allow it to suffer under his tyranny. (Loud cheers.) For the restoration of my country I have faith in the destiny of humanity. The organisation of every state that was based on a system of oppression has doomed to perish. The truth was exemplified in the case of Germany, Austria, Hungary, and in Rome and Naples. The horrors perpetrated in Naples had been most generously exposed and denounced by Mr. Gladstone. The part of the nation was dreadful, too, where the fairest fruits of political freedom should have been enjoyed, had not yet been tested. When the manner is considered in which despots had rewarded the people who had contributed to their power, the conclusion is irresistible that we are on the eve of the day when the oppressed nations will hold the greatest court that was ever held; and the verdict which will then go forth will for certain be merited into effect. I also derive hope from the history of my own country. My country had seen many a storm, and yet the Magyars are alive. (Loud cheers.) The house of Hapsburg had done its utmost to subjugate my country, but had never succeeded. In fact Austria had lost her future, and her present legitimacy retains hers. Austria is on the point of bankruptcy—Hungary has no debt. It was alleged, in favour of Austria, that her existence was necessary as a barrier against the inroads of Russia, but the fact of the Czar having come to the aid of Russia had thrown that pretence to the winds (Cheers.) And for that most unjustifiable interference on the part of Russia she also has to thank you. (Cheers.) From all these facts it is perfectly clear that the existence of Austria is not needed to prevent the inroads of Russia. The Austrian armies are filled with races who hate the power whom they serve, and that also must be regarded as an element of great weakness. My country has also the sympathy not only of every nation on the continent, but of every free nation. You all know the great interest which the United States and England took in procuring my liberation. (Cheers.) This is symptomatic of the feeling of the Anglo-Saxon race towards the cause of liberty, and that sympathy will grow; and my earnest hope is, that the Czar will no longer be allowed to rule the destinies of continental Europe. I have mentioned on other occasions that my sympathies are in favour of a federative union as regards Hungary; for such has been the treachery of the house of Hapsburg, that my people have lost all confidence in that principle. Still, let me not be misunderstood in saying to them what the Government in which they stand prefer. Austria, like a spoiled child, has nailed my name to the gallows by the hands of the common executioner. (Laughter.) I do not feel offended in the least at that act. My honour does not depend upon the good opinion of such men. (Cheers.) I represent a principle, in favour of which England has pronounced. The act of the house of Hapsburg, however, in nailing my name to the gallows is not intended so much to annoy me as to destroy the sympathy which England had expressed towards me. It is an act of defiance, a challenge to the public opinion of the civilised world. It was a challenge to English sympathy. He felt that he could not be contradicted in the assertion that the sympathy of this country would prove to be a more practical thing than a mere passing emotion. (Cheers.) Let the house of Austria, relying proudly upon its bayonets and the Czar, trample the oppressed nations under its feet—the hearts of to-day are not the *condottiers* of old. I know that fight has spread—that Czar and Austria put into the hand of God, and hope and believe that Hungary will yet be free. (Cheers.) You, gentlemen, have to judge whether from what I say there are not grounds for that hope. But still I have to add, that it is to your sympathy—to the sympathy of every free nation—of the mighty English race, called to be the pillar and support of oppressed humanity—the younger brother of that which glorious race is the mighty republic of the United States has put under the ban of the power that has the oppressors of Hungary—that we look to raise and assist us to independence. (Cheers.) I do not fear contradiction when I say that it were almost a want of gratitude on my part to take offence to England—if I were to think this expression of sympathy a mere passing emotion of noble hearts. Gentlemen, I know full well that the sympathy of the people of England is no idle thing, for England has never sent its mind to anything that it has not carried out in a practical result. (Cheers.) This firmness of character, this noble perseverance, is the true key to your country's greatness. (Cheers.) I have the honour to represent a principle which the English nation have expressed themselves in sympathy—the house of Hapsburg nail it to a gallows. (Hear, hear.) What is it that I would dare to look to as the practical result of the sympathy of the people of any native land? That is a matter which, coming into it as a stranger, would scarcely dare to touch—but, if I am not troubling you too much (No, no)—I would, by ease, briefly state a few particulars of the past for the sake of the future. I say, then, that, in the first place, I insist upon it that the taking a view of the Hungarian revolution, as though any one had a hand in causing it, is entirely false. Can the words Hungarian revolution be used with any truth, when it is a fact that we made no revolution? (Cheers.) Take a man who, relying on the protection of the law, rests quietly in his house, and the night watch, instead of protecting his property, gives the incendiary a lodge, and pretends him to burn down the entire house and murder the occupant. Supposing that man rushes out to protect his life and property, and calls upon the watch for assistance—and suppose that watch brings with him a party hired to destroy that man, calling him a traitor, and a conspirator, for daring to oppose the incendiary, and that man, calling aloud to his friends and neighbours, beat off the watch, the guards, and the incendiary—would any honest man accuse him of assailing the watch? (Hear, hear.) If not, then no man has a right to say that Hungary made a revolution, as I have not yet in this popular sketch the history of the Hungarian war. (Hear, hear.) Though the reign of the house of Hapsburg continued over Hungary for three centuries, it was only one continuous system of perjury and encroachment upon our rights (Hear, hear) Still we enjoyed some portion of constitutional rights We had no freedom of the press—the chief guarantee of constitutional rights—but we still had our municipal institutions giving us some degree of self-government. With regard to those institutions, we were restricted to the use of words; but for those we were persecuted, and it became almost treason to have our own thoughts and express them. (Hear, hear.) Such was the state of Austria ere ed the Hungarian struggle a Polish conspiracy, and charged us with plotting against the security of his empire. Well, he raved at the idea that it was a Polish conspiracy. Long before the Polish war broke out, I had put down his bands in Transylvania. He wanted a pretence to set his hideous foot on Europe's neck; and, not finding a pretence, he took it. So was that Hungary, gentlemen, which the house of Austria and Russia, and their minions denounced, calumniated as the focus of disorder and anarchy. (Hear.) But why was I telling of these particulars? The reason is, that I have to attribute to these calumnies and misrepresentations, that, during our struggles, we were not happy enough to meet that assistance in England which I candidly confess I hope to meet; and considering the interests as well as the possession which your commerce possesses in the east, I think the most public spirit of the people, I dare say, I was entitled to hope for. Unhappily, the people as well as the Government of England have not been well info med about the true nature of the Hungarian war—its high importance to Europe—to that holy act, which, in many respects, enters into the sacred rights of humanity. I ought to be near y as Ac ilics here. The people of England and public opinion here were not in connection with foreign affairs till now. There might have been sufficient reasons for that. The people of England were busy with their affairs, but it has fully grown up already. The empire has no more to fear any danger from within. Your fate is not depending on any motive springs. Here you are firm as a rock. But in respect of foreign affairs somewhat different is the case. The question has its own conditions—every time has its own wants. I confidently affirm it there is not a single question in your internal relations which outweighs in importance those regarding your external relations. The Czar is not so persuaded that as your great internal questions are dep ident upon your foreign relations. There you can gather over England only to our Arctic Ocean, Scotland, Ireland, Ailan, in its insular position, and with the aid of your excellent knowledge of its immense power, does not laugh at the ambition of all the emperors of the earth. I know that Britannia, with the mighty trident in her powerful hand, wielded even more than of old the material problem, is its greatest one combined with the shores of these isles? Are not freedom, civilisation in your Parliament, your influence on the condition of Europe, your Indian and other colonies, so many brilliant facts? But one of these is cut, and Britannia will not only not be what she now is, but these foreign powers will upon you powerfully act upon her internal affairs. (Hear, hear.) The destruction of freedom and civilisation cannot fail to produce concussions in this country which may endanger your own tranquillity, your own happiness, your own property. (Cheers.) To destroy Britannia it is not necessary to conquer those glorious isles. The very moment that Britannia does not weigh as much in the balances of the world as it must now weigh, Britannia will be no more—and the sovereignty of the body, the more vulnerable points has it. (Hear, hear.) However, you can trust to the vigilance of your Government and your Parliament. I know from history that the most efficient part of your existence depends upon the fact that your Government and Parliament take their direction from public opinion—and I feel assured, gentlemen, that your gracious Queen can be but that England she is no longer glorious or free. There is a solidarity in freedom now-a-days, because the struggle will not turn up on any scanty or particular points. The question will be, what principle shall prevail in Europe—liberty or despotism. (Hear, hear.) I know that England, in the struggle, will side with liberty, but I wish her to declare her determination at once, in order that it may not be supposed that she is influenced by fear or irresolution. (Cheers.) With regard to non-intervention, I approve of the principle, but I wish England so far to carry it out as to prevent Russia interfering with us. (Hear, hear.) Should the Czar once more threaten oppressed humanity, and be willing to violate the sovereign independence of nations, and take a pretence to put his foot on any people in the world, and throw the liberty of Europe in blood, humanity expects that England would wield her strident, and shout out, "Stop! like Popilieus of old. Be sure, gentlemen, this single word would suffice, and will cost you neither money nor blood. (Cries of "Hear, hear," and cheers.) Yes, by that word, pronounced in time, you would save myriads of lives, never more to shed blood, and restore liberty to the world (Cheers.) The short moral of my speech then is this—the Russian intervention in Hungary has put the foot of the Czar on Europe. So long as Hungary is not restored to its liberty and independence, Europe cannot be free, and that foot will rest on Europe's neck; nay, it will step from the neck to the head; and there will be neither liberty nor tranquility in Europe. Indeed, Europe will be only a gres. tarrack—a real blood field (Hear, hear.) The cause of Hungary is the cause of civil and religious liberty. By liberty I mean no exclusion of religion. I am a Protestant by birth and by conviction, yet I will struggle equally for the liberty of all sects. Catholic as well as Protestant. (Cheers.) I maintain that the Church ought not to meddle with justice, nor government with the Church. (Cheers.) I would, therefore, give the election of their bishops and clergy to the people; but I would respect the rights of the Church property, as I hold all property sacred, and leave the Church to appropriate it as it thought proper. (Che rs.) I find that, with every downfall of a nation, one ramparts of liberty is destroyed. I therefore rely upon you, in the name of all who suffer from oppression and long for freedom, like my own people, whatever name they bear, whatever their blood, for support. I ask you to take your part in the battle of life. Noble hearts address to you out of my own desolation—to look upon it as the cry of oppressed humanity, as expressed through me. People of England I do not forget in your happiness your distress, and in your freedom our oppression. Mind, in your proud supremacy, the indignities we endure—remember that those wounds out of which our nation bleeds are but wounds inflicted on the principles of liberty which makes your glory and happiness. (Cheers.) Remember that there is a tie in mankind's destiny. We are thankful for the tear of compassion for those we honoured in the past; but we ask you to give something more than a tear—to give a brother's hand to our future. (Loud and long-cont nued cheering, and waving of hats and handkerchiefs.)

M. Pulszki responded to the toast of "The Future of Hungary," and refuted the charges brought against Kossuth in some of the public journals.

"The Martyrs of the Brazes who fell in Hungary," and several other toasts and sentiments, followed.

Mr. Mundy, M P., in responding to the toast of "The Borough Members," took occasion to denounce the conduct of the *Times*, in its hostility to Kossuth, as "money-grubbing bestiality."

The proceedings did not terminate until midnight.

In the course of the evening a medal, which has been struck at Birmingham, was presented to Kossuth. On the obverse are the arms of Turkey, Hungary, and England, and a shield, bearing the inscription, "Liberty, Equality, Fraternity." On the reverse is the inscription, "Kossuth a free Hungary has hope."

METROPOLITAN ADDRESSES TO KOSSUTH.

On Thursday a meeting was held in the Hanover square Rooms, to afford opportunity to various deputations from most of the metropolitan districts who had agreed to and wished to present addresses to the illustrious exile. Finsbury, Lambeth, Marylebone, Southwark, and Westminster, were severally represented by deputations, who took up their position in the front ranks of the meeting, and made a most imposing display, between the union jack of old England and the star-spangled banner of America.

Madame Kossuth, attended by Madame Pulszki, and other ladies, arrived shortly before one o'clock, and immediately afterwards Kossuth himself, surrounded by the members of the man aging committee ascended the platform. His appearance was the signal for tremendous cheering and enthusiastic waving of hats, which was renewed on every fresh arrival. Lindley Murray was elevated to the chair, and the ceremonial of presenting the addresses was proceeded with. They were of the usual tenor of those already published.

M. Kossuth returned the appropriate response to the complimentary addresses to him, and retired amidst the repeated acclamations of the assembly.

GRAND DRESS AND FANCY BALL AND CONCERT AT GUILDHALL.

The grand dress and fancy ball and concert in aid of the funds of the Literary Association of the Friends of Poland and of the Hungarian Committee was given on Thursday night, in Guildhall, which had been liberally placed at the disposal of the Committee by the City Corporation. Additional interest was attached to this annual demonstration on behalf of the unfortunate refugees who find an asylum in the country by the announcement that the illustrious Magyar chief, Kossuth, would honour the civic hall with his presence. The exterior of the edifice as well as the interior afforded evidence of the force of the attraction. The streets leading to Guildhall were crowded with spectators, anxious to catch a glimpse of the Hungarian patriot; and the assemblage extended as far as Ludgate-hill and St. Paul's Cathedral.

The arrivals were earlier than expected, at the Hall itself; and, owing to the admirable police arrangements, the facilities for ingress and egress were unexceptionable. Both the exterior and interior of Guildhall presented profusion of the usual decorations, embellishments, devices, and illuminations at the Lord Mayor's Banquet. The concert began shortly after nine o'clock, in the Council Chamber, which was crowded to excess; dancing reling on at the same time in the Hall, to Adams's band. Mr. Lindsay Sloper, the pianist and composer, conducted the concert. In the first part Mr. Sloper's new and rapturously encored in Rode's air, with variations Mdlle. Therese Magn r sang an air by Kreutzer; Miss Amelia Edwards gave Barker's ballad, "Friends of my youth;" Mr. Weiss rendered Schubert's "Wanderer;" Miss Rainforth warbled Phillips's air, "The Summer Night;" Mr. Harrison sang the popular serenade from "Don Pasquale;" Mr. and Mrs. Weiss delivered one of Goulden's duos, and Mr. Benson sang a ballad by Mr. C. Glover. Mr. Oscar, the Hungarian pianist, played cleverly a warlike march, dedicated to Kossuth and Hungarian melodies. Shortly after the termination of the first part of the concert, a flourish of trumpets from Mr. Harper and his son, Mr. T. Harper, with a flourish of kettle-drums, announced the arrival of the illustrious exile; and shortly after eleven o'clock Kossuth entered the Hall, and was greatly cheered. He was dressed in his national costume, and looked well, though pale and in health. Madame Kossuth was on Lord Dudley Stuart's arm. The visitors to the ball having formed a double line, Kossuth proceeded through, conducted by the Reverends and the Committee, with wands, all wearing Hungarian rosettes. The Lord Mayor, the sheriffs, and many of the Aldermen, joined in this promenade round the Hall. Kossuth's task of handshaking commenced, and he seemed very much pleased at being delighted with his reception. After remaining half an hour in the Hall, Kossuth entered the Council Chamber, and the concert proceeded, Miss Dolby, and M. Rüneyli, the violinist, appearing in the second part. Dancing was kept up till two o'clock. There were few fancy dresses, and those chiefly uniforms—military and naval; but a Bloomer costume attracted market attention. The Mayor of Southampton was present, and other provincial dignitaries.

MONETARY TRANSACTIONS FOR THE WEEK.

(From our City Correspondent.)

Consols have again been animated, the closing prices of the preceding week being firmly maintained on Monday, and improving towards the close of the day's business to 98¼ ⅞. The market, on Tuesday, remained firm at this improvement, although the principal occupation of the jobbers was "comparing" the late settlement with the account. The adjustment of differences rather strengthened the market, money being plentiful; and the failure of a party who had been "bearing" Consols during the account, assisted to support the prices. The quotations on Wednesday (Bank Holiday) were 98¼ ⅞ for Consols, and 98¼ ⅞ for India Bonds, £10000, 60 p.; ditto, under £1000, 59 p.; South Sea Stock, Old Annuities, 97½; Consols for Account, 98½; Exchequer Bills, £1000, 55 p.; ditto, £500, 55 p.; ditto, Small, 55 p.

In the Foreign Market a slight improvement in Mexican may be noted, the price having ranged from 25½ ⅝ to 24½, the last figure. The Spanish Five per Cents. have ranged from 20 to 20½, the market being quiet. In Venezuelas the speculation has somewhat sub ided, prices ranging only from 26½ to 26, the last (nominal price) being 25½. Russian and Dutch steadily maintain their high quotations. At the close of transactions the market was flat at the following prices:—Mexican, Five per Cents., ex Jan. Coupn, 24½; Portuguese, Four per Cent., 33½; Russian Bonds, Four-and-a-Half per Cent., 102½; Sardinian Bonds, Five per Cent., 81½; Ditto, Scrip, 3⅞ dis.; Spanish, Five per Cent., account, 20½; Ditto, Passive, 5½; Dutch, Two-and-a-Half per Cent., 71 ⅜ ⅝; Ditto, Four per Cent., Certificates, 96¾.

Railway stocks have been firmer, but the attention of the market has been principally directed to a considerable amount of gambling in the shares of new companies for working gold mines in California. At present the public have not been tempted to interfere, and it may be well to inform the uninitiated that mining shares of all descriptions are much more readily bought than sold. There is no settled market for dealings; brokers consequently have to seek purchasers, who make their "market," by always giving a price very much below the value at which the nominal quotation stands, unless under some very peculiar circumstances. A company called the *Nouveau Monde* came out on Monday, and was forced up to 2⅞ premium: the last (nominal) quotation is 2⅝ ¾. No better example is needed to inspire caution. Railway stocks close firmly, the preparations for the settlement going on favourably, and "continuations" being at an easy rate. Closing figures are:—

ORDINARY SHARES AND STOCKS.—Ambergate, Nottingham, Boston, and Eastern Junction, 4½; East Anglian (£25 paid), 3; Ditto (£25 paid), 2½; Eastern Counties, A, 4; Ditto B and C, 2½; East Lincolnshire, 13½; Great Northern, 15½; Ditto Halves A, 8; Great Western, 83; Lancashire and Yorkshire, 86⅝; London and North Western, 114⅝; ditto, Quarters, 2⅝, London and South Western, 84½; Manchester, Sheffield, and Lincolnshire, 20; Midland, 50⅝; North British, 8½; North Staffordshire, 9⅜; Shropshire Union, 3; south Eastern, 19⅛; York, Newcastle, and Berwick, 19⅛; York and North Midland, 20.

LEASES AND FIXED RENTALS.—Hull and Selby, Quarters, 94; Leeds and Bradford, 100¼, Wilts and Somerset, 91⅛.

PREFERENCE SHARES.—Chester and Holyhead, 13⅛; Eastern Counties (Extension, No. 1), 4 pm; Manchester, Sheffield, and Lincolnshire, £6 shares, 9⅛.

THE MARKETS.

CORN EXCHANGE.—Since our last report very moderate supplies of English wheat have been received up to our market, coastwise as well as by land carriage and sample For all kinds of the demand has ruled steady, at fully, but at nothing quotable beyond, previous currencies. The imports of foreign wheat continue very moderate. Fine dry qualities have sold at full former rates; but extreme prices have been somewhat contracted very little attention. The barley trade has ruled firm, but we have no further improvement on to no le to prise. Malt has changed hands freely at late rates, but new Irish malt have given way 6d per quarter both beans and peas, as well as flour, have ruled firm. Indian corn, oatmeal, has been firmer, at late rates.

Arrivals.—English—Wheat, 3,000 qrs.; barley, 1,000 qrs.; oats, 1,000 qrs.; beans, 1,000 qrs.; flour, 1,000 sacks. Foreign—Wheat, 12,000 qrs.; barley, 1,000 qrs.; oats, 1,000 qrs.; beans, 1,000 qrs.; flour, 1,000 sacks.

English Wheat.—Essex and Kent, red, 38s to 39s; ditto, white, 36s to 45s; Norfolk and Suffolk, red, 34s to 37s; ditto, white, 38s to 42s; rye, 26s to 28s; grinding barley, 22s to 23s; distilling ditto, 25s to 26s; malting ditto, 30s to 32s; Lincoln and Norfolk, 30s to 32s; ditto, Chevalier, 32s to 34s; Kingston and Ware, 33s to 35s; Chevalier, 36s to 37s; Yorkshire and Lincolnshire feed oats, 17s to 20s; potato ditto, 19s to 23s; Yorkshire and Cork, black, 16s to 17s; ditto, white, 17s to 18s; tick beans, new, 25s to 27s; ditto, old, 27s to 30s; grey peas, 30s to 32s; maple ditto, 32s to 34s; white ditto, 30s to 32s; boilers, 32s to 35s per quarter. Town-tried flour, 37s to 37s per sack.

Foreign.—Wheat, 36s to 44s per quarter. Barley, 20s to 24s per quarter. Town-tried flour, 37s to 37s per sack.

The Seed Market.—The demand for linseed, both English and foreign, continues steady, at full prices. Arrivals, as quoted at 40s; and East India, of fine quality, 44s per quarter. Linseed cakes are in request, at 6l 5s per ton.

Linseed, English, sowing, 40s to 45s; Baltic, crushing, 44s to 47s; Mediterranean and Odessa, 45s to 48s; Bombay, 38s to 42s per quarter. Linseed cakes, English, 6l 5s to 6l 10s; Foreign, 6l 5s to 6l 10s per ton. Rapeseed, 42s to 44s per last. Canary, 52s to 54s per quarter. English clover-seed, 30s to 40s; ditto, new, 24s to 28s; foreign ditto, 20s to 30s; white ditto, 6d to 7s 6d. Tares, 3s 6d to 4s 6d per bushel. English trefoil, 16s to 18s per cwt. Coriander, last of ten quarters. Linseed cakes, English, £7 17s; ditto, foreign, £6 5s to £6 5s per 1000. Rapeseed cakes, £4 5s to £4 5s per ton. Canary, 52s to 54s per quarter. English clover-seed, 30s to 40s; ditto, new, 24s to 28s; foreign ditto, 20s to 30s; white ditto, 6d to 7s 6d. Tares, 3s 6d to 4s 6d per bushel. English trefoil, 16s to 18s per cwt. Coriander, 10s to 12s per cwt. Flax-seed, 52s to 54s per quarter

TERRIER (LIFE-SIZE), IN THE GREAT EXHIBITION.

"TINY" TERRIER IN THE GREAT EXHIBITION.

AMONG the curiosities of taxidermy in the Great Exhibition was a terrier, which we here engrave of life size. It was exhibited by Lady Maclaine, the accomplished wife of Lieutenant-General Sir Archibald Maclaine. It bore the very appropriate name of "Tiny;" its length being little more than three inches; and it has been described as "the smallest dog in the world." The mother is a thoroughbred English terrier, a little picture in herself.

BEET-ROOT SUGAR IN IRELAND.—The practicability of a profitable manufacture of beet-root sugar in Ireland is likely soon to be brought to a test. It appears that about 500 statute acres of beet-root have been grown this season in the Queen's county, the whole of which has been contracted for at 15s. a ton, to be delivered at a sugar factory now in course of erection at Mountmellick, and which commences work in the course of the next month. Hitherto the sugar-beet has not been much grown in Ireland, but the result of the present season's experience is, that it yields fully as large a crop as the common cattle-beet, and that it will be a profitable cultivation at from 10s. to 12s. a ton. The return, as regards quantity, is more favourable than on the Continent, and the relative portion of saccharine matter in the root is also said to be greater.

MIDLAND UNION, BURTON-UPON-TRENT, AND LEICESTER RAILWAY.—Mr. Harding, the official manager of this company, the liabilities of which are estimated at some £80,000, has just lodged the list of contributories with the Master in Chancery Tinney, who will proceed to settle it at the end of this month.

GREAT WESTERN AND BIRKENHEAD RAILWAY.—This company, it is said, in conjunction with the Shrewsbury and Chester and Lancashire and Cheshire Railway Companies, intend negotiating a loan for the completion of the docks at Birkenhead, so as to establish for themselves a commercial position on the Cheshire shore of the Mersey.

PREVENTION OF CRIB-BITING.

FEW of our readers are ignorant of the hitherto incurable defect of crib-biting in a horse—a practice so injurious in its effects to the constitution of the animal as to constitute legal "unsoundness." A crib-biter derives its name from seizing the manger or some other fixture with his teeth, arching his neck, and sucking in a quantity of air with a peculiar noise. This habit, which is common in young horses, and those over-fed and underworked, is very infectious, and, unless the offender is secluded, all his companions in a short time, curiously enough, become crib-biters. Patent muzzles, neck irons, neck straps, and various ingenious contrivances have been tried, but have been attended with very moderate success. Feeling the importance of some remedy for such an evil, our attention has been drawn to a very simple but efficacious cure, which has been discovered by Sir Peter Laurie, represented in our Engraving, as now in use at Sir Peter's stables. Some months since Sir Peter bought a valuable horse through a highly respectable dealer, Mr. Sherward, of Green-street, which was sold by his owner solely on account of being an inveterate crib-biter, and who, for a time, set all means and appliances at defiance; but, in order to arrive at some cure for so serious a defect in an otherwise valuable horse, Sir Peter directed the space between the bottom of the hay-rack and the outer edge of the manger to be boarded over, forming a steep inclined plane, leaving in th s way no edge or point on which the horse can fix his bite. Attached is a flap or slide, opened only on feeding times, so that the manger is then used as formerly. Mr. Field, the eminent veterinary surgeon, Captain Hall, the riding-master, and many other competent judges, have pronounced it a perfect cure, as, indeed, it has been proved after a trial of some months. The expense of alteration is only a few shillings, and its adoption in other stables will lead to similar cures in many an invaluable hunter or hack. Sir Peter Laurie kindly allows any one to see this most useful arrangement any day, at his stables, Park-square Mews, Regent's-park.

THE CONYERS TESTIMONIAL.

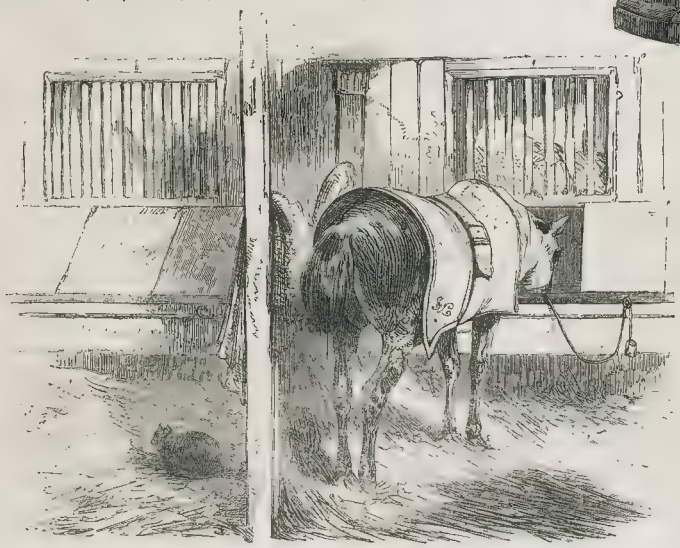
MR. JOHN CONYERS, of Copthall, Essex, is one of the few now left of that fine old race of English squires who, eschewing the follies and vanities of a city residence, have been content through a long life to maintain a hospitable house in the heart of their own rural property, to live and move in the midst of their own tenantry, and to devote a handsome portion of their income to promote the health and pleasure, not only of their immediate friends and neighbours, but of all the country round. Mr. Conyers has been a master of fox-hounds upwards of five-and-forty years; and there is not a copse nor a wood within a day's ride of Copthall that has not echoed again and again to the cheery ring of his huntsman's horn, nor a blade of grass over many and many a thousand broad acres that has not been swept by the swift feet of his staunch and dashing pack. Belonging to the good old school of country gentlemen, Squire Conyers has never been selfish in his enjoyments. A lively recollection of the sport derived in the course of so many years from his well-appointed hunting establishment of late induced the fox-hunting gentlemen of Essex, and, indeed, of England pretty generally, to enter into a subscription for the purpose of presenting him with a solid token of their regard; and a considerable fund was subscribed for that object.

The managers of the fund, resolving that the testimonial should be at once acceptable to Mr. Conyers and worthy of the donors, accordingly commissioned Mr. Cotterill to design a group illustrative of some incident in the chase, with a view of its being wrought in silver by the Messrs. Garrard.

Mr. Cotterill most judiciously selected the death and "freeing" of the fox as his subject, and formed a composition which adds even to his high reputation. The huntsman, dismounted, has climed the lower branches of an oak, and is sounding the death-note from his horn, preliminary to throwing the dead fox to the baying and expecting pack below. One of the whips checks the impetuosity of the eager hounds, and looks to his own and the huntsman's horse; whilst the old squire, whose features and characteristic seat on horseback are admirably and most felicitously portrayed, surveys the scene, and completes the composition of the group.

This splendid work has been executed by the Messrs. Garrard in their highest manner, and it will be remembered among the fine specimens of silver work at the Great Exhibition.

THE CONYERS TESTIMONIAL.



PREVENTION OF CRIB-BITING.

PLATE PRESENTED TO MAJOR C. BULKELEY.

THE Royal Western Yacht Club of England have just presented their Vice-Commodore, Major Charles Bulkeley, with a richly chased Silver Bowl, in acknowledgment of his long services. The Bowl (supplied from the establishment of Lambert and Rawlings), which surmounts an

PLATE PRESENTED TO MAJOR BULKELEY.

ebony pedestal, is capable of holding two gallons, and bears the following inscription:—

The Royal Western Yacht Club of England, to Major Charles Bulkeley, for many years Vice-Commodore, in gratitude for his unceasing and successful exertions to promote the social enjoyment and best interests of the Club.

LONDON: Printed and published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE, 198, Strand Aforesaid.—SATURDAY, NOVEMBER 15, 1851.

THE GREAT EXHIBITION.

TOYS.

(SECOND NOTICE.)

GULLIVER Secured by the Lilliputians."—This is unquestionably the best thing of its kind in the Exhibition; we doubt, indeed, whether there is aught known, even out its doors, equal to it. To give anything like an adequate description of it, would require us to quote the whole account from Swift. The subject is treated with a quiet humour beyond the reach of the pen. The figures are by Fleischmann, of Sonneberg; and he has evidently made it a labour of love. And how he must have roared with laughter over its every step, as bit after bit of fun developed itself, and became stamped into form. Just look at that fellow with a cracked skull coming out from under the nape of Gulliver's neck—he has been helping to secure his queue with a couple of pebbles. And that one that has tumbled head foremost into his waistcoat pocket. And he who struggles to surmount the turn of the cravat. And that daring fellow, who, having reached the top of their captive's toe, is crowing like a cock on his own dunghill, although the next moment will find him five hundred of his own feet into the air. Some of them see Gulliver yawning—and how the little pigmies scamper! He in the distance with the telescope, what does he behold—a field of bean-stubble? No—'tis the monster's beard. And the artist (how artistic his attitude!) taking a sketch of the huge human mass. And the two that are looking over the drawing. How often we have seen that same two looking over every artist who has had the courage to take a view in a public place. See the cavalry coming down upon the scene of action, with all the bounce of bigger men on bigger horses, and the group tugging for their lives at the rope to secure a leg; and he with the ladder, who has scaled a knee; and that fellow astride upon a button; and that man who is *safe* to break his neck, slipping down *à posteriori*, from the smooth court-plaster-like pantaloons of Gulliver. Well, this is fun, and yet there is twenty times as much as this. See how beautifully the figures are modelled. Look at the expression of each of their faces, the costume of the period, of the military, of the trappings of their horses, of the *sesame* of that day, the village boors, too—how well and faithfully given. For excellent delineation of character, masterly grouping and development of incident, we repeat, we know of nothing of its kind to compare with it, or with the "finished sketchiness" and ideality (however comparatively trifling in subject) of these little figures. Any one who cannot surrender himself to the rich fund of amusement they afford, may be assured that the period of his youthful feelings is passed and gone. These graphic little figures are nothing more than they pretend to be; but what they pretend to be, they are to perfection. They are the champagne bubbles of the artist's mind, reflecting a droll and pigmy world; and it is likewise commendable, that while so much skill has been displayed by the modeller, and while the greatest breadth and humour has been secured, there exists not the slightest approach to, or taint of, vulgarity. They are, indeed, perfectly original in their way, and if they remind us of anything which has gone before, it is the little figures which our great Phiz delights, when unrestricted by type or text, to pour from his etching point over the surface of steel or copper-plate. Bravo for Fleischmann, and Mr. Spurin, of New Bond-street, its contributor Mr. Spurin likewise exhibits a model farm, which, with our notions of the picturesque, we should prefer to Tiptree, although it does not come up to that *beau ideal* of a farm, Sir John Conroy's, at Aborfield. In this farm the figures can be set to work and to some extent perform the respective rustic duties assigned them. The flour-mill is set in motion, and the whole affair becomes instinct with movement. Mr. Spurin's brewers' drays, omnibuses, carriages, &c., are solid well-made toys, in which the English decidedly beat all others.

Mr. Gilbert, of Rugby, contributes the model of a goal for foot-ball and two of the actual foot-balls used at Rugby. Foot-ball, besides being a favourite game at our public schools, is much practised by rustics, who blow out a bladder, and put peas or horse-beans therein, which causes a rattle as the ball is kicked about. Shrove Tuesday is the great day for this sport, and Kingston-upon-Thames is one of the towns in which it is still kept up with its wonted spirit. Here the inhabitants close all their shutters, for the game is played in the streets; and we ourselves, when a youngster, had the honour of beginning the game, by kicking the ball from the balcony of the market-house, near the leaden statue of Queen Bess, to the mob below: the ball is locked up there by the authorities after the fun is over, until the next Shrovetide arrives. An attempt was made to put down this practice some time ago, but the Judges of Assize backed the right of the inhabitants; and the Judges but barely escaped being chaired through the town, so delighted were the mob at this confirmation of their favourite sport. Who does not recollect the poem of Sir Walter Scott upon the occasion of the great foot-ball match in December, 1815, which took place in Ettrick Forest, between the men of that district and those of Yarrow, backed respectively by the Earl of Home and Sir Walter Scott, Sheriff of the Forest, one verse of which must suffice:—

> Then strip, lads, and to it, though sharp be the weather,
> And if, by mischance, you should happen to fall,
> There are worse things in life than a tumble on heather,
> And life is itself but a game of foot-ball.

In class 29, E. and W. Page exhibit cricket bats and balls, gloves, &c.: Duke and Sons, of Penshurst, Robert Dark, and other well-known makers, likewise contribute largely in this department. We have no means of judging of the qualities of any of these groups, further than that there appears to have been great care bestowed upon them. Cricket has so altered since we were boys, that, if we had not attended each celebrated game at Lord's, we could scarcely have recognised it as the same. The ball is now delivered with a strength and swiftness equal to a cannon-shot, and the players are compelled to clothe in a description of armour to protect themselves from its blows. Leggings of cork some half-inch thick, armlets of the same, and gloves encased with india-rubber, testify to the dangers of the field, as it is now constituted. So much importance, indeed, is attached to these encasements, that the great Lilly-white himself has employed his mind mechanical in the invention of a horsehair leg-guard; and elbow and knee-guards are numberless in class 29. If the game goes on at this rate, we shall have Mr. Samuel Pratt supplying *these Lords* with armour wherein to wield the bat-on. In confirmation of the swiftness with which the ball is now delivered to the batter (no longer soft), Mr. A. Disck, M.A., has invented "a catapulta to serve in the absence of a first-rate bowler, where practice is required." This catapulta is much after the fashion of those used by the Romans in their sieges to hurl stones, &c. It may be seen in the same class, No. 199.

Mr. Medway, of Northampton, has invented and placed in the same class a set of cricket stumps constructed on a novel and simple process The three upright pieces move upon a rule joint, which is, in its turn, firmly fixed in the earth. The slightest blow from the ball, in whatever direction the stumps may be struck, causes one or more of the stumps to fall, and one or both of the bails. We think that an addition might be made to it, so that the stumps should return to their place without the aid of the hand—the fall of the bails being a sufficient indication of the success of the bowler.

Mr. J. F. Trebeck, of Bishopsgate, has an assortment of cheap toys imperatively calling for notice, from the ostentatious display of a slate or tablet, on which is engraven or printed "The Exibition Slate." Could the foreign visitor have any better proof that all connexion with the letter h as an aspirate has been dropped in the city of London, or that the caterers for its youth desire not its scions to resume an acquaintance with so troublesome a customer.

Emily and Clara Bursill, York-terrace, Hornsey-road, show a selection of compressible toys. We know not whether they possess the same objection as such toys in general, which have a cold, clammy touch, and appear as if they were never dry and never would be.

There is a good deal of juvenile fishing-tackle scattered about the department devoted to that class of implements; and we would especially point out the beautiful rod made for the Prince of Wales by Mr. Little of Fetter-lane, to the attention of our young readers.

There is a strong muster of archery implements: amongst the best of these are those shown by Ainge and Aldred, of Oxford-street; Buchanan, of Piccadilly; and Peter Muir, of Edinburgh. Those from G. Jacobs, of Cockspur-street, have a tawdry, catchy character; the wood, however, may be as good, if not better than the others—of this we know nothing, but there is a want of taste

CENTAUR."—BY COUNT D'ORSAY.—(SEE NEXT PAGE.)

in their general appearance. Scattered about the Building will be found hoops, tops, slings, ball-bats, pea-shooters, bandolors, water-cutters, battledores, and shuttlecocks, cross-bows (some of a very formidable nature), kites, &c., and a boomerang. The "boomerang," says that complete encyclopædia of all diversions, Bogue's "Boy's own Book," "is an importation from New South Wales, where it is used by the natives for killing ducks and other wild fowl that abound in the lagoons of the extensive continent of Australia. The toy, which is formed of a thin curved piece of wood, flat on one side, and slightly rounded on the other, possesses several curious properties. If held horizontally, and then thrown forwards toward any object, it will rise on the wind with a kind of rotatory motion, and, after a considerable flight, return again to within a yard or two of the thrower; or, if skilfully thrown, it can be made to touch the ground, and rebound several times after the manner of an oyster-shell, when it makes 'ducks and drakes' on the water. It can also be made to strike an object behind a tree." In fact, it will shoot round a corner.

There are a few optical toys in the Exhibition delightful to the eye and instructive to the mind :—camera obscuras, camera lucidas, kaleidoscopes, magic lanterns, phantasmagorias, distorted landscapes, Chinese shadows, anamorphosis, illusions, instruments for seeing through Flanders bricks and mill-stones, &c ; then there are aërostatic apparatus, balloons, &c. ; acoustic and pneumatic toys, musical glasses, and scientific toys, chess and draught boards.

To teach his grandson draughts,
His leisure he'd employ,
Until at last the old man
Was beaten by the boy.

H. Lucas, Broad-court, Long-acre, has an elegantly-finished child's horse, with handle for servant, intended for park exercise.

Isaac Jefferies, of Cambridge, appears to have the best collection of fives, benchers, bouncers, and tennis balls. These balls are admirably made ; and it is surprising to what an immense distance one of them, although generally but an ounce in weight, may be sent by a blow from a racket. Some years ago, John Pittman, a celebrated racket-player, undertook, for a wager, to "drive" a ball higher than the cross of St. Paul's, which is 404 feet perpendicular height. He stood outside the railings in the church-yard, and persons were stationed under the cross, who, to their astonishment, saw the ball rise many feet above it; so that, taking the angle of distance from the place where he stood, he must have sent a ball of this light weight full 500 feet, or nearly 170 yards.

M. Bouches, 74, Baker-street, has a few mechanical toys, which remind us of those running mice, one of which, if set going in a ball-room, causes the ladies to take refuge in gentlemen's arms, or to jump incontinently from the "horrid wretch" upon route chairs, gathering together their dress in the most reckless thoughtlessness of their toilet, or the exhibition of those dear little feet, which have themselves been poetically compared to "little mice peeping in and out."

Mr. Farley, of Fleet-street, exhibits a collection of models of vessels "warranted to beat all Margate." The minature ships are very highly finished and correctly rigged. In that respect they differ widely from the apologies for nautical toys of but a few years back. Mr. Farley's shop, webelieve, is the oldest repository for toys in London : our grandfathers' nurseries have often been made glad by a guinea well laid out there.

In the American department there are several first-rate toys, made of Indian-rubber, under Goodyear's patent. The heads of dolls will bear any treatment. You may "pitch into" them, and knock them about in any way ; and although they assume all sorts of odd appearances, they return with the greatest complacency to their former shape. In this they remind us of the old Eton anecdote of the son of a peer, who commenced squaring and hitting out at a coalheaver for some fancied offence. The coalheaver took no heed of the youngster, but went on shelling an onion and bread. A bystander urged the man to "give it him again." "Vy," remarked he, "vy should I hit the young gemmen? he seems to be pleased with what he's arter, and it don't hurt me." These Indian-rubber toys are all cast in dies, and the children's rattles and a few of the animals are the best. The dolls' heads have, however, one and all, a very impudent look, and those of some soldiers do not appear to have their *eyes right*. It may be that these eyes are not of the best description, there being many sorts. It somewhat astonished a committee of the House of Commons, some years ago, upon hearing, by a glass manufacturer, of Birmingham, that he had received, at one time, an order for £900 worth of dolls' eyes. Dolls' eyes may, for distinction, be divided into two sorts, the cheap and the expensive. The first are small, thin, hollow glass beads or spheres, made of white enamel, and colored either black or blue, without any attempt at shading. The others are called natural eyes, in which an attempt is made to represent the iris. Dolls' eyes are largely exported. In Spanish America, *black* eyes only will find a market, while in our own country and Germany blue eyes are the favourites. Here are, likewise, several portable globes, made of sheet India-rubber, upon which the map is engraved. When required for use, these globes can be inflated and hung by a thread or string from the ceiling or elsewhere. This is assuredly an invention of great utility, and, to "out-door" preceptors, who have to travel, must prove of great value, while they will at once afford a cheap and accessible means of instruction to very many schools which have hitherto been without a geographical sphere by reason of the expense. In the same department are some toys of soap ! doubtless to encourage an early love for cleanliness. There are several strong well-made swings, to be "hung 'tween sister pear-trees," and at the same time afford to youth a practical lesson of the singular properties of the pendulum. Indeed, despite the jeers of the thoughtless at the apparent meagreness of display of the Americans, there is much that can be looked at with considerable profit by the young as well as the matured.

In concluding this slight notice of the toys in the Exhibition, it would be very unfair to draw any comparison between the relative claims of the two countries for supremacy in their manufacture ; as even those that have contributed have evidently done so under some impression that they might, in all probability, be rejected by the Executive ; while there are others, Switzerland for instance, that have not sent a single article of this sort. The common impression, however, is, that English toys, in solidity, finish, and educational purposes, are far superior to those of any other country ; and if we, to some extent, except the Chinese (who, by the by, have likewise nothing of the kind in the Crystal Palace), there is more ingenuity, and a greater philosophical tendency, in the toys made in England, than in those the production of any other place.

The Chinese have not even a "lively spider" in their department ; a toy which has rapidly popularised itself amongst us. A facetous contemporary appears to question its instructive qualities. Surely if a future generation of young ladies are familiarised sufficiently to the sight of these harmless creatures to the extent of suppressing a shriek, the deprivation of hysterics, or even the feigning of a faint, they will not have been made by the aid of a thread, to dance fantastic horpipes upon the London pavement in vain.

It may, perhaps, be observed, that we have passed over several contrivances, which we will not raise to the dignity of toys, for the infliction of wanton cruelty upon animals and insects. Were we to notice them, it would be to censure with our utmost ability those persons, who, by their manufacture, encourage so debasing a feeling in youth. Nor should we exempt the builders of pigeon traps, a few of which are here and there exhibited ; these traps being openly and avowedly made for the decoying of tame pigeons. We consider that many parents give too heedless an encouragement, or are too slow to suppress the dangerous fondness for "pigeon fancying," the pursuit of which often takes an otherwise amiable-minded and conscientious boy into the lowest and most depraved of society, from whom he learns that to lure and to detain a neighbour's property is as fair as though he had caught a sparrow or entrapped a mouse. The losing the defined line of demarcation between *mine* and *thine* thus early, cannot fail but of having its baneful influence in after life. If philosophy is to be easily learned from the toys of youth, how much more readily may the seeds of vice be engendered from amusements which are grafted upon and inseparable from the lowest associations.

CENTAUR, BY COUNT D'ORSAY.

We have often had the pleasure of making honourable mention of Count D'Orsay's talent in art, in which he enjoys a wide range, comprehending alike the efforts of the pencil and the chisel. His productions are so numerous and varied in character, so admirable in execution, and so full of spirit, that we almost regret that the Count's position in society should have made him an amateur instead of a professional artist. The noble Centaur, an Engraving of which we give, we recollect very well seeing at Gore House (at least the model), when amongst its admirers we remarked the Duke of Wellington. We believe it has since been produced in silver ; if not it ought to be, for it would make a handsome work of first-class merit.

THE GREAT EXHIBITION AWARDS.

THIRD NOTICE.

Those who in after years may turn to the record of the honours lately distributed amongst the Exhibitors of All Nations, in the expectation that it will present a fair reflex of the position of industry and the attainments of science in 1851, will be grievously disappointed. The very reading of the list, indeed, would convince them that there was something wanting, and that the commercial greatness of an age like the present could not have been dependent, to any great extent, upon trivialities such as those to which the juries have awarded prizes. The reports of the juries, which we are promised shortly, will, perhaps, throw light upon the intentions with which many of these awards were made, and which, without such explanation, appear to be capricious and altogether inconsistent with any practically useful purpose. In the meantime we pursue our comments upon the decisions as they stand, which clear upon their face circumstances of a suspicious or questionable character.

Passing over Classes I. and II., which we may attend to another time, we come to Class III., that of "Substances used as Food," in which we find two council medals, and no less than ten prize medals, awarded to different individuals for beet-root sugars. The two council medals go to France, and the prize medals are thus distributed :—France, 3 ; Austria, 5 ; Prussia, 1 ; Russia, 1. Now, considering the history and circumstances of this manufacture, considering that it is purely factitious in origin, and only supported in the countries where it is carried on by high protective duties ; considering that the declared object with which this manufacture was first established in France by Napoleon was to injure the British colonial trade, and that the undisguised object with which it is still encouraged in Austria, in Prussia, in Russia, is to render the people of those nations as independent as possible of British supplies, and, in short, to exclude us from commercial relations ; considering that all this is at variance with the true and enlightened principles of commerce, which are a distinguishing feature of the present age, we are justified in regarding these awards as extremely unfortunate in themselves, and can only account for their being made by referring to the fact of that combination of foreign "interests" which the commissioners went out of their way to introduce into their jury scheme, and which we denounced in our last as impolitic and unjust.

As the introduction of the manufacture of beet-root sugar into this country, and more particularly into Ireland, is a question which has been much discussed lately, and as the awarding of no less than twelve prizes to the producers of this article is likely to have some influence in promoting projects of this sort, we think it right to direct the attention of our readers to a paper read by Professor Hancock, at the last meeting of the British Association, on the "Prospects of the Beet Sugar Manufacture in England" (reprinted in another column), from which it appears that, in a commercial point of view, the profitable result of such a speculation is very questionable, the case of France, with a protected and exclusive trade, not applying here. From these calculations it would seem probable that, taking into account the cost of the raw material, and the price of the refined sugar, in France and the United Kingdom respectively, "the result was varied as to turn a profit of £35,000, at the French prices, on a capital of £78,000, into a loss of £4000 at the Irish prices, and a loss of £16,000 at the Essex prices ;" being only one instance out of many "showing how fallacious it must be to reason from the success of the manufacture in France to its success in the United Kingdom, without taking into account the difference in economic conditions (including fiscal arrangements) between the two countries ; being alone sufficient to make that which was profitable in France unprofitable here."

Dismissing the subject of beet sugar for the present, we cannot help expressing a confident hope that the introduction of this fabricated production as a substitute for the genuine article may be rendered still more unnecessary by the removal of the absurd restrictions now imposed upon the refiners of cane sugar.

In Class IV., whilst we cordially approve of the justness of the award of a council medal to the Belfast Flax Improvement Society, for "the persevering and successful efforts to improve the quality of the fibre of flax," we cannot but regret that a similar honour has been denied the same honour for the ingenious and truly scientific process of preparing the raw flax cotton, whereby the value of that staple will be greatly enhanced. Details of this process have been already explained at some length in the columns of this Journal ; it may be sufficient, therefore, to state that its principal feature, whereby, as will appear, that not only a new process is applied to an old previously attained by other processes, but new and valuable characteristics are given to the article itself which it was before considered not to be capable of. We should observe that the principal process is purely a chemical one—the flax being first saturated with a solution of soda, by which the gluten is removed ; it is then soaked in acid, whereupon the chemical combination, resulting in effervescence, separates the fibre, and converts it into a cotton-like substance. One important advantage resulting from this alteration in the character of the material is, that, instead of the hardness and coolness generally observable in linens, it will possess the warmth of woollens, the softness of cotton, and the glossiness of silk ; and another and still more important advantage is, that it becomes, which it was not before, amenable to the ordinary processes of manufacture, and by the very same machinery as that applied to cotton itself. Such are the main features of this important invention ; and, after considering them, we feel satisfied that our readers will agree with us that it was a mockery of justice to withhold from the ingenious originator the "council medal," and to add the insult of tendering a second-class prize medal. Yet such has been done ; and, in common with many others similarly treated, but who have not half his grounds of complaint, the Chevalier Claussen has very properly rejected the proffered distinction

In the Machinery department we find a council medal awarded to Appold's rotary pump, whose voluminous cascade must of our readers recollect gazing on with admiration. But surely there is nothing very new in the rotary principle applied to pumping up water, and nothing so remarkably superior in this machinery of Appold (amongst many others exhibited) to entitle it to the distinction here intended. There is, indeed, considerable doubt whether Appold's is, after all, the best of the day ; and this is a question which we may yet have to discuss. But, if the application of the rotary principle to water was neither new nor very important, the application to machinery has long been an acknowledged desideratum, but one involving the problem of the greatest difficulty. This desideratum, however, has been accomplished in connexion with one very valuable field of mechanical appliance—namely, that of the printing press, by Mr. Applegath, in his vertical printing-machine, a machine by which the limits of production have been extended half a dozen fold beyond what they had previously reached under the most skilful manifestations of reciprocating machinery ; the contrivances by which this was attained were in the highest degree complicated, but withal unerringly accurate ; and all that Mr. Applegath was awarded for his invention is a common prize medal. Thousands of eager spectators who daily crowded about this machine, when in operation at the Crystal Palace, will form an estimate of the profound and dispassionate judgment brought to bear by the jurors from this single award alone

If we were to judge of the amount of enterprise bestowed upon "civil engineering, architectural and building contrivances," or the amount of interest taken by the community in such subjects, by the awards in Class VII., we should not arrive at a conclusion very complimentary to the genius of the age. There are in all only three council medals and twenty-three prize medals earned by the whole body of exhibitors to this comprehensive department ; and these are chiefly for models of works long since accomplished, as the Plymouth Breakwater, the Strasburg Cathedral, the cast iron bridge over the Wye, &c., or for topographical models of various districts, as the Isle of Wight, &c. As for our architects, they appear to have been completely disheartened or paralysed by the brilliant success of the Crystal Palace style of building, for they have not sent in a single suggestion considered worthy of reward ; and of the three council medals, Sir Joseph Paxton earns two, and these are awarded for "the design of the great Building," the other "for the execution." The third is very justly awarded to Prince Albert, for his successful labours in the cause of humanity, which have resulted in the production of his model lodging-house, one of the very few contributions tending to the improvement of the social and economic relations of the masses, which the Great Exhibition has been the means of bringing before the world.

The preceding observations have chiefly been directed to general considerations involved in the scheme of awards in certain classes, or in particular instances ; and we wish we could continue to argue in the same spirit, and to stand aloof from mere questions of individual merit and private interests, affected by these decisions. But it is impossible to do so ; the complaints of injustice and the charges of favouritism and incompetence against, not one, but various juries and groups are so loud and circumstantial that we feel bound to give them a hearing. Of course, in all this outcry are mingled the small shrill voices of many a little pretender, who, but for this confessed and wholesale blundering of the jurors, would never have been heard of, and who has won the proud privilege of being "an ill-used man," in company with such names as those of Broadwood, Collards, Broughton and Stanns, Chubsen, Potts, Copeland, &c. At the same time, even these were entitled to a hearing on the ground of that fancied merits ; and it is very hard that, being personally excluded from the Building by the niggardly parsimony of the Executive, they should have been prevented the only direct method of securing such hearing. In this dilemma many of the "ill-used" entrusted the keys of the cases which inclosed their several treasures to the policemen in attendance, in the confident hope that some plodding juryman, attracted by the outward promise of the imprisoned exhibit, would be sure it with closer inspection, and reveal its merit to his fellows on the jury. Vain delusion ! In very numerous instances which have come well authenticated to our knowledge, the keys remained very snugly in the pockets of the police. "Hope deferred" had at last begun to wear itself out, and as the Exhibition drew towards its close many of the men examined were fain to look to the "chapter of accidents" for their chance of sharing in the honours of the day, or at least comforted themselves with the reflection that others, rivals in their trade, might be wholly overlooked as well as themselves. When, however, it appeared that non-inspection of the goods was no bar to an award, and that the rival producer carried off the palm in competition with others whose goods only were seen, but bitter, and, what is more, was just ; and these complaints remaining uncontradicted and unexplained involves a serious and damaging imputation against all engaged in making such awards.

PROTEST OF THE MUSICAL JURORS.

TO HIS ROYAL HIGHNESS PRINCE ALBERT, K.G., PRESIDENT, AND TO THE ROYAL COMMISSIONERS OF THE GREAT EXHIBITION.

May it please your Royal Highness, my Lords and Gentlemen,

With reference to the memorial which the undersigned members of the Musical Jury, Class 10A, had the honour of addressing to your Royal Highness and the Royal Commissioners on the subject of the reversal or non-confirmation of their awards of the council medals for pianofortes at the Great Exhibition, they beg most respectfully to state that the eminent firm of Messrs. Collard and Collard was alone returned, by the unanimous decision of the Musical Jury, as entitled to the council medal for their various improvements in pianoforte-making, and for the general excellence of their instruments. The memorialists would respectfully beg leave to impress upon your Royal Highness and the Royal Commissioners that the arguments already adduced by them in the memorial, referred to apply with equal force to the house of Collard, which, from an early period, has been most honourably distinguished in connexion with the manufacture of the pianoforte, and whose important improvements have had a beneficial and lasting influence on this branch of our manufacture : in confirmation of which and of their own awards the undersigned would respectfully refer your Royal Highness and the Royal Commissioners to the accompanying list of patent inventions which have been introduced by the house of Collard and by the opinion of numerous eminent professors, fully entitle them to the award of the council medal. They view the less hesitation in thus again addressing your Royal Highness and the Royal Commissioners, as they find that public opinion has already called into question both the justice and the competence of the awards for this section of the Exhibition, recently published under the authority of the Royal Commissioners ; and that the musical public in particular attach to the memorialists the responsibility of such decisions.

While the memorialists will be ever ready to defend the integrity and soundness of their own decisions, they cannot but protest against being held responsible for those of other bodies—from whose opinions they unequivocally differ, and who, however competent on other subjects, have not evinced on this the requisite knowledge to justify the reversal of the decrees of those better qualified, both by professional experience and scientific acquirements, for the more effective discharge of such duties.

HENRY R. BISHOP, Knight (Chairman and Reporter), the Professor of Music at the University of Oxford.
DR. SCHAFHÄUTL,
Commissioner from Bavaria in Honour, Member of the Royal Academie, and Professor and Head Librarian in the University of Munich.
LE CHEVALIER SIGISMOND NEUKOMM,
WILLIAM STERNDALE BENNETT,
Professor in the Royal Academy of Music and Queen's College.
CIPRIANI POTTER,
Principal of the Royal Academy of Music, London.
GEORGE J. SMART, Knight,
Organist and Composer of her Majesty's Chapel Royal.

THE GREAT EXHIBITION.—REPORT OF THE ROYAL COMMISSIONERS TO THE QUEEN.

On Thursday, November 6, a very important meeting of the Royal Commissioners was held in the Crystal Palace, at which the following report to her Majesty was agreed to :—

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

May it please your Majesty,—We, the Commissioners appointed by your Majesty's Royal warrant of the 3rd of January, 1850, for the promotion of the Exhibition of the Works of Industry of All Nations, and subsequently incorporated by your Majesty's Royal charter of the 15th of August, 1850, humbly beg to submit to your Majesty the following report :—

The Exhibition, for the promotion of which we were appointed by your Majesty, was finally closed on the 15th of October of this year, and we humbly beg to report to your Majesty that the medals and prizes have been awarded to the successful exhibitors by the juries appointed to judge of the merits of their productions, and are in course of distribution. The full reports of the juries will be laid before your Majesty when they together with the list of the successful competitors. We are now engaged in bringing to a close all the business connected with the Exhibition, and in defraying the various expenses incurred during its progress. Most of the claims are already discharged, and, after all shall have been satisfied, a considerable surplus will remain, the precise amount of which cannot be ascertained until the accounts are finally wound up. When they will be duly laid before your Majesty, but which surplus we have reason to believe will not be less than £150,000.

This surplus will consist of the balance that may remain in our hands, after deducting all expenditure from the receipt (in round numbers) £505,000, which has been derived from the following sources :—

Subscriptions	£67,400
Entrance fees	424,400
Casual receipts	13,000
	£505,000

Of the entrance fees, a portion has been paid by foreign visitors, and it was owing to the fact that the contributions of all nations were there displayed, that the number of visits made by persons attracted to the Exhibition amounted to upwards of 6,000,000

The subscriptions were derived, with few exceptions, solely from your Majesty's subjects, and were made chiefly on the announcement that they must be "absolute and definite," but that should any surplus remain it was the intention of your Majesty's Commissioners "to apply the same to purposes strictly in connexion with the ends of the Exhibition, or for the establishment of similar Exhibitions for the future."

We humbly beg to represent to your Majesty that we are of opinion that it is not advisable to apply the surplus to any one object or to any one-named purpose. Considering that the Exhibition which has just closed has afforded ample proof that an undertaking of this kind can be made self-supporting, and that it may safely be left to the public spirit to provide, when required, the means of meeting the preliminary expenses—considering also the impossibility of fixing long beforehand any definite period for the repetition of such an Exhibition, which requires for its success so many complex circumstances—we are of opinion that greater benefit may be derived by the public from a judicious application in the interval of the means at our disposal to the furtherance of the general objects for which the Exhibition was founded, in such a manner that the advantages which may be obtained should not be confined solely to your Majesty's subjects, but should be shared, as far as it may be possible, by other countries.

We regard your Majesty's Commissioners as conceive to have been the furtherance of every branch of human industry, by the comparison of the processes employed and of the results obtained by all the nations of the earth, and the promotion of kindly international feelings by the practical illustration of the advantages which may be derived by each country from what has been done by others. Your Majesty's Commissioners have the satisfaction to be able to express to your Majesty their conviction that the Exhibition has, to a great extent, attained these objects, and that in its consequences the most beneficial results may yet be expected.

Already many requirements on the part of the public have become apparent during the course of the Exhibition, and have found expression in various suggestions made to us for the application of the surplus ; many of them, however,

were for objects quite inconsistent with the pledges above alluded to, while others, though for purposes in accordance with them, were of a limited, partial, or local character.

Your Majesty's Commissioners are of opinion that no measures could be so strictly in accordance with the ends of the Exhibition as those which may increase the means of industrial education, and extend the influence of science and art upon productive industry. We are fully aware of the difficulty of devising a comprehensive plan to meet these objects; should the view, however, which we have taken as to the meaning of fulfilling our pledges meet with your Majesty's approbation, we beg to assure your Majesty that we shall give our fullest and most careful consideration to this important subject, and we would suggest that full time should be afforded us to consult and receive the opinion of the public, and feel warranted in laying before your Majesty; the more so as, from the disproportion between the end proposed and the means at present applicable to it, much will depend on the extent of co-operation we may receive from the country.

We are advised, however, that our powers under your Majesty's Royal charter will cease when all the expenses incidental to the Exhibition shall have been discharged, and notice thereof given to your Majesty's Secretary of State, and that we have not the power of dealing with or the disposal of the surplus.

If, therefore, it be your Majesty's pleasure that we should act further in this matter, it will be necessary, before we can take even any preliminary step, that your Majesty should grant to us by Royal charter such further powers as your Majesty may deem necessary, to enable us to lay before your Majesty a scheme for the application of the surplus in accordance with the expectations held out to the public, and, with the sanction and approval of your Majesty, to adopt such measures as may be necessary for such purpose

All which we humbly take leave to report to your Majesty.

Given under our corporate seal this 6th day of November, in the year of our Lord, 1851.

(Signed) ALBERT, President of the Commissioners for the Exhibition of 1851.

GREAT EXHIBITION—THE LOCAL SECRETARIES.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

SIR,—In the retrospect of the errors which have occurred in the management of the Exhibition in your paper a week or two ago, since which I have not found time to remark on it, you made use of some such expression as this:—"We know that in many cases it was not until the last moment that the local committees could induce exhibitors to send in their goods, and then it was often almost as a favour to the energetic agent." This will serve me as a *text* for the few remarks I would offer in connection with your excellent article on the aforesaid errors. Why the honour or even attention which common decency would have dictated as due to these "energetic agents," the organs of the local committees, whose exertions you so freely and justly acknowledge, have been so strangely neglected? Throughout they were most strangely neglected. At the opening, when it might have been supposed that they would have had a special place assigned them, they were utterly ignored; and at the closing ceremonial, when the Executive might have been expected to have had time to see their fault and to have done their best to repair it, the neglect was as great, but if possible more aggravating, an announcement being made that the local secretaries and chairmen of committees were to enter at certain doors, thereby seeming to imply that reserved seats would be appointed for them, when they were, in fact, left to scramble for places among the mass of exhibitors and others who were outside the privileged place. And for whom, instead of those who should of right have been there, was this spot devoted? Besides ambassadors, representatives of the press, and lady-exhibitors and others, to whom the privilege was reasonably accorded, the friends of those in authority, and not merely a few of these, of which no one would probably have complained, but enough to nearly fill up the enormous space thus enclosed, which one of the papers computes as capable of containing a thousand persons. I say *nearly*, for although all this apparent effort to fill up the place with people who had no claim from their exertions in the great work to be there, some of the space was actually left vacant, while those, some of whom had probably a greater right to enjoy it than even some of the Executive, if exertion could earn such a right, were excluded. Pray give this correction of the omission in your list of omissions a corner in your columns; it will not be too long after the fact for the appearance, and those gentlemen upon whom this blame should rest may, now that they have a little breathing space, after the various labours which followed the close of the Exhibition, and the reception of those honours which I believe they duly earned, have time to reflect on the wrong inflicted upon them on their unacknowledged companions who were not even allowed, though many must have travelled a long distance to be present to hear the recognition of their services by the Royal founder of the undertaking. Trusting you will accord insertion to this exposure of the unworthy treatment of those who, of all men who have laboured in the great work, must be allowed to have done so from the purest and disinterested motives, or will allude to the subject yourself as you did to other errors in the management of the Exhibition, a very useful task, if only for the prevention of similar blunders on any future occasion, I beg to confess myself one of the neglected.

A LOCAL SECRETARY.

Nov. 1st, 1851.

BEET-ROOT SUGAR.

At the last meeting of the British Association, Professor Hancock read a paper "On the Prospects of the Best Sugar Manufacture of the United Kingdom," of which the following is an abstract:—Public attention had been directed to this manufacture by the effort to establish a public company in Ireland for the manufacture by the effort to establish a public company; but this attempt led to failure in a short time. A manufactory had been recently established at Chelmsford, and contracts had been entered into with the farmers in that neighbourhood. The success of the manufacture depended on the answers to three questions:—1st. What was the price of beet-root likely to be for a series of years? 2nd. What was the price of refined best-sugar likely to be after 1854? and 3rd. What was the cost to carry on the manufacture? The prices of the raw produce and manufactured article? As to the price of beet-root, its price varied in France from an average of 13s. 1d. per ton in the north-east of France, to 18s. 8d. per ton in the north-west of France. The average for the whole of France was 15s. 1d. per ton. In Ireland the price stated to be contracted for the Sugar Beet Company was 18s. 6d. per ton, and the price at Essex was from 18s. to 20s. per ton. Thus it appeared that the present price in Ireland was higher than the average of France, and the present price in Ireland was higher than the average of the highest-priced districts of France. What the future price in Ireland and England was likely to be was a difficult question, and had not been as yet fully investigated. As to the second question the price of refined beet-sugar after 1854—it was necessary to take the year 1854, because after then was a differential duty in favour of home grown beet-sugar, which would diminish each year, and cease after July, 1854. After that time the short price of refined beet-sugar would most probably not exceed 40s. 4d. per cwt., and the long price would most probably not exceed 40s. 4d. to 42s. 4d. per cwt. Indeed, a fall below those prices might be anticipated from three causes;—1st. From the diminished cost of production of refined cane-sugar, consequent on the increased production produced by the high but fluctuating price from 42s. 4d. to 42s. 4d. per cwt. on the equalisation of the duties. 2nd. From the removal of the absurd restrictions now imposed on cane-sugar refiners. 3rd. From the competition of present cane-sugar and beet-sugar of the latter were to any extent.—As to the third question, would it be profitable to manufacture from beet-root at the Irish price of 18s. 6d. per ton, or the Essex price of 19s. per ton, refined sugar to sell at 28s. per cwt.? The calculations on this point which had been most relied on were two in number—that of Mr. W. K. Sullivan, chemist to the Museum of Irish Industry in Dublin, and that of M. Paul Hamoir, of the firm of Serres, Hamoir, Dupuoare, and Co., the largest manufacturers of beet-sugar at Valenciennes, dated 18th of April, 1850. Those estimates were as follows:—

Mr. Sullivan's Estimate for Ireland.

60,000 tons of beet, at 18s per ton	£43,200
Cost of manufacture, at 9s per ton of beet	27,000
Total outlay	73 000
Produce, 5 per cent of sugar, at 28s per cwt	93 000
Estimated profit	£20 000
Same Estimate applied to Essex.	
60,000 tons of beet, at 19s per ton	£57 000
Cost of manufacture, at 9s per ton of beet	27 000
Total outlay	84,000
Produce, 5 per cent of sugar, at 28s per cwt	93 000
Estimated profit only	£9,000

M. Paul Hamoir's Estimate for France.

61,607 tons of beet, at 13s 1d per ton	£38,400
Cost of manufacture, nearly 13s per ton of beet	39 900
Total outlay	78 300
Produce, 4½ per cent of sugar, at 36s per cwt	114,000
Estimated profit in France	£35,700
Same Estimate applied to Ireland.	
61,607 tons of beet, at 18s 6d per ton	£46,080
Cost of manufacture, nearly 13s per ton of beet	39,900
Total outlay	85,980
Produce, 4½ per cent. of sugar, at 28s per cwt	81,420
Estimated loss in Ireland	£4,560
Same Estimate applied to Essex.	
61 607 tons of beet, at 19s per ton	£58,487
Cost of manufacture, nearly 13s per ton of beet	39,900
Total outlay	98 417
Produce, 4½ per cent of sugar, at 28s per cwt.	81,420
Estimated loss in Essex	£16,997

From these simple calculations it appeared at once that, by only introducing into the estimates the Irish and English prices of beet-root and of refined beet-sugar, the result was so varied as to turn a profit of £35,000 at the French prices, on a capital of £78,000, into a loss of £4000 at the Irish prices, and a loss of £16,000 at the Essex prices. It followed, therefore, that the French estimate did not, as had been alleged, corroborate Mr. Sullivan's estimate: on the contrary, it showed how fallacious it was to reason from the success of the manufacture in France to its success in the United Kingdom, without taking into account the difference of the prices of beet-root and refined beet-sugar in both countries —the difference in economic conditions between the two countries being alone sufficient to make that which was profitable in France unprofitable here. The manufacture of beet-sugar had been first commenced in France when the continental system of Napoleon and the retaliation of England had almost excluded cane-sugar from France. From that time to the present, beet-sugar had always had the protection of an artificial price—the present price being 38s. per cwt. in France as compared with 28s. per cwt. in this country). In every other country in the world where beet-sugar had been produced, it had been produced of an artificial high price. The conclusion was manifest, therefore, that, from any calculations yet submitted to the public, it appeared that the manufacture of beet-sugar could not be profitably carried on in the United Kingdom.

THE "AMERICA" AND "TITANIA."

WHY HAS THE "AMERICA" BEATEN THE ENGLISH YACHT

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

SIR,—I beg to refer you to a letter writtenby me, and published in the *Daily News* of the 30th of October. The subject is one of considerable interest with the public, if I may judge by the numberless articles which have appeared on it in the daily and weekly journals.

I have stated in my letter in the *Daily News* of the 30th of October, that grave errors have, in my opinion, been made in many, if not all, of the public journals, in respect to the ratio or proportion the length of this vessel bears to her breadth; the breadth even I conceive will be found too great. It is her peculiar form which has, I have little doubt, led to this error, she having the wedge formbetween the perpendiculars.

In one journal I see 90 feet of length to 22 feet 6 inches of breadth;—in another 94 feet over all, 82 feet of keel, extreme breadth 22 feet 6 inches, breadth moulded 22 feet.

Now, if I take the greatest length, even that over all, and the least beam, I find the ratio of breadth to length to be immense; and yet the proportion that the length bears to the breadth will without a doubt explain, more than any other cause, her advantage over other yachts, in that part of the trial which relates to more speed.

I wish your readers to direct their attention to that part of my letter which points to this fact, and they will observe, since the repeal of the Navigation Laws has brought an American competition into this field, that our English builders have made an enormous increase in the proportion that the length bears to the breadth, in all ships built or building, be they sailing vessels or steamers.

Out of many examples contained in my pocket-book, I extract from the daily journals, I shall take but four to illustrate my reasoning: first, the *Benares* steamer just launched for the Royal West India Mail Company—length of keel, 276 feet; length over all, 316 feet; breadth of beam, 40 feet 6 inches. The *Reefer* American sailing clipper—length of keel, 200 feet; breadth of beam, 42 feet 6 inches. General Screw Steam Navigation Company's steamer *Queen of the South*—length between perpendiculars, 240 feet; keel for tonnage, 218 feet; breadth for tonnage, 39 feet; tonnage, 1763

And last, but not least, the beautiful clipper *Stornoway*, built by Messrs Hall, of Aberdeen, and sailed by Captain John Robertson, which vessel has made some remarkable passages—length of keel for tonnage, 130 feet; length of upper part of sternpost aleft, 157 feet; breadth amidships, 25 feet; tonnage, 527. I am sorry I cannot give the keel for tonnage.

Now, here we have four vessels—a paddle-wheel steamer, a screw steamer, an American and an English clipper—built by different parties, but having one feature in common—great length to breadth. This, I believe, will be found the true secret of the speed, which has nothing to do with the wave or any other lines. I do not pretend to say that one sort of lines *may* not be *found* to be better than another, but at present we have no positive proof of that; but we have most positive proof that a considerable increase of the proportion of the length to breadth has produced most remarkable results.

I think the error with respect to the dimensions of the *America* will be found either in having taken for the breadth the breadth of the deck you walk on, or at some wrong point of the immersion; it ought to be that breadth that is driven through the water: the area of the greatest immersed section that is what we want given to us: but this is difficult to obtain correctly when the vessel is built of a wedge form.

I have stated in my letter of the 30th ult., that I do not believe there is much difference in the speed between the *America* and *Titania*, in fact, no difference of any importance, any slight advantage of cut, or set of sails, position of masts, or even steerage, might give *all* the superiority displayed.

But nothing in the world will compensate for the advantage gained by the set of the sails, which admits of the one vessel lying so much nearer to the wind than the other. As soon as the *America* hauled to the wind, it was all up with the *Titania*; the race was won with ease

It is a curious fact that no drawings that I have seen but those of the ILLUSTRATED LONDON NEWS give correctly the arrangements for the set of the sails; or at least, as I think, they will be found to set.

Ackermann's last drawings differ with the ILLUSTRATED LONDON NEWS, by omitting a short boom to which the foresail is laced, and by not taking the foresheet to a bolt in the deck, nearly midway between the bulwark and the main hatchway, and the hauling part well in amidships; this is an important omission in those drawings (should your journal be right), for this, in my opinion, is the cause of the beautiful set of the foresail as well as the other standing sails on a wind; the spread of the foresail being near great on the bolt. I think it impossible to praise too highly the position in which the artist has placed the observer to enable him to see at a glance how the sails stand on a wind.

It is highly important to a vessel whose course lies on a wind, to angle with the direction of the wind that the sails shall not act in any way as back sails; the wind will, I conceive, act on the surface of the sails, in obedience to the law of projectiles, or as a billiard ball will rebound from the side of a billiard-table; therefore the angle of incidence will equal the angle of deflection; only, however, if the surfaces are true, or as a plane, the wind to produce a forward movement must get away freely, and the velocity of the vessel will be proportionate to the smallness of the direct resistance.

Now, Sir, these performances of the *America*, or the advantage shown by her over fore and aft rigged vessels, is exactly similar to that which I witnessed in her Majesty's brig *Pantaloon* display over the square-rigged vessels in the experimental squadron, under Admiral Sir Edward Codrington, in 1830 or 1831; and again, with the squadron under Admiral Sir William Parker, in 1831 or 1832, off the Tagus.

It was astonishing to perceive how the *Pantaloon* went to windward of all the square-rigged competitors, and hers was a wedge form; but I conceive it was in the manner of setting her sails that gave this superiority; they setting as much as possible like boards, and the yards bracing much sharper up than in any other vessel of the squadron; to effect this, Sir William Symonds altered the position of the lower rigging, placing the lower shrouds much farther aft than was customary, the foremast shroud well abaft the centre of the lower masts; the mainstay went forward to the forecastle, to increase the angle, so that the thrust of the forestay-sail should not be too much taken aback by the mainstay. There were two places for the main tack to come to—the one, in accordance to the old custom, to the mess-trees; and when dead on a wind, or when racing, to a bolt in the deck, more fore and aft, or nearly midway between the mess-trees and the keel.

The bowsprin to which the fore tack went formed a smaller angle with the keel than that of any other vessel I had seen previous to that period; and, as all the sails hoisted taut up, they were by these means made but to form a small angle with the keel, and to set like boards.

As many thousands of seamen witnessed the performances of the *Pantaloon*, under Sir Edward Codrington, I will say no more than that her superiority was not much displayed while running before the wind, the same as in the *America*'s case, but none had a chance with her on a wind.

But I will relate a circumstance that the *Pantaloon* had with the old *Briton* frigate while off Lisbon, when belonging to the squadron under the command of Sir William Parker, in, I believe, the year 1832, for I write from memory. The *Pantaloon* and *Briton* were some miles to windward of the squadron of six sail of the line, when they were ordered to bear up dead before the wind, and make all sail. When they passed the *Asia*'s stern they were the mainsail. Never did I see a race so equally run before, and some three thousand seamen witnessed the sight.

When they had run some miles to leeward, the Admiral made a signal to shorten all sail and to haul dead on a wind, and to close with the flag-ship. What I then witnessed will ever be fresh in my memory: the little *Pantaloon* fetched under the stern of the *Asia* in a single tack, the *Briton* was no where in the race, she requiring to make three tacks to get the same position. I think Sir William Parker has the times of that race, and, if produced, I feel assured that the results will show a superiority equal to that displayed by the *America* over the *Titania*.

Your obedient servant,

J. C. HOSKASON, Commander, R.N.

SUBMARINE TELEGRAPH.—The engineers have just presented a report to the directors of the Submarine Telegraph Company, from which we extract the following passages:—"Four protracted wires have been laid down between the South Foreland, on the English coast, and the village of Sangatte, about four miles from Calais, on the French coast. The sea-communication on each side of the channel connecting Sangatte with Calais on the one hand, and the South Foreland with Dover on the other, will be completed on Tuesday next, the 11th inst. (Tuesday last.) Some delay has necessarily occurred in constructing the works on the English coast, arising from the question of arrangement and compensation with the different proprietors through whose lands the wires have been carried. These arrangements were made upon fair and equitable terms, and the telegraph will be brought into a station on the east side of the town of Dover. Since the telegraphic wires were submerged in the channel last month they have been tested by daily experiments, and, notwithstanding the prevalence of equinoctial gales, and the unusual strength of the tides, nothing has occurred to disturb either their insulation or position on the two shores. We can, therefore, with confidence recommend that the telegraph be opened for the public transmission of messages on Thursday, the 13th inst."

AUTHENTIC LIFE OF KOSSUTH.

MANUSCRIPT NEWSPAPER.—IMPRISONMENT.—ELECTION FOR PESTH.

LOUIS KOSSUTH, Governor of Hungary, only son of Andreas Kossuth, by his wife, Caroline Weber, was born on the 27th of April, 1802, at Monok, in the county of Zemplin. At an early age he was sent to the Calvinist College of Patak, and there educated. In 1819 he commenced the ordinary course of study for the law, and attended the district court of Eperies and the Royal court at Pesth. Having completed his studies he returned to Monok in 1822, and was appointed honorary attorney to the county. He was fond of field sports, and at this period gave far more of his time to them than to law; but even thus early he took some part in politics in opposition to the efforts of Austria to imperialise Hungary.

In 1831 the cholera broke out in Hungary: the disease was new—its ravages terrible—the idea seized upon the Slovack peasants that the upper classes had poisoned the water, and they rose and murdered the clergy, Jews, and landlords: all were terror-stricken. Then first Kossuth became publicly known. Wherever the pestilence was most fierce or the fear greatest he came, urged measures of relief, addressed the people, and by his plain and earnest eloquence dispelled their delusion, and calmed the excitement. Thus distinguished, he was named by several peeresses to attend the Diet of 1832 as their proxy, which gave the right to speak but not to vote. He spoke but once in the Diet; and his attention was given to a far more important object than making speeches. Except to those who heard them, either as members or in the galleries, the doings of the Diet were known only by a miserable parliamentary committee report, onesided and lifeless. Kossuth laboriously wrote reports, and sent them in manuscript to a number of subscribers. The interest excited by his able summary of important documents and speeches so increased that, in 1834, his subscribers amounted to 80. To diminish the cost and to extend the circulation and usefulness of the paper, he set up a lithographic press. Against this move the Austrian Government took measures. The great question then before the Diet was the abolition of serfdom: against this a diversion was the thing of all others most desired by Austria; a procession with the liberty of the press would have entirely absorbed attention, and Kossuth, therefore, followed the advice of the friends with whom he acted, gave up the press, and resumed the manuscript. The privilege little newspaper was read at the club of every one of the fifty-two Hungarian counties, and served to awaken an interest in practical measures, and to expose the systematic aggression of Austria.

The settings of the Diet ended in 1836. It had shown too much the spirit of reform to please the Court of Vienna; and, to stop the progress of its measures, the old hackneyed story of a conspiracy was trumped up, and several young men of note were arrested; their trials were pretty much of the same order as those of late (so well exposed by Mr. Gladstone) at Naples; Kossuth urged the unconstitutionalism of the proceedings, but in vain: the influence of the men was dangerous to Austrian encroachment, and they were found guilty and imprisoned.

Kossuth diligently continued his paper. The county meetings—the same as the old English shirmotes—were then of great importance; they discussed every project of reform, and resolved upon the course the representatives of the counties should adopt in the Diet; they were, in short, local Parliaments in preparation for the Diet or great Parliament. Hitherto, however, the several counties had been isolated. The news-letter reported the proceedings, and the counties understood each other and became united. The paper, thus, though then but in manuscript, became a new power—the people felt it, the Imperial Court took fright, and in 1837 Kossuth was thrown into gaol, was kept for a year without a trial, and was sentenced to four years' imprisonment. For the success of such tyranny there had, however, been too much written, too much spoken in the counties: the excitement became great. The Diet again met in 1839, and, despite the prosecutions by the Austrian Government, was held illegal. The supplies were refused, and only granted in May, 1840, on the condition of the immediate liberation of Kossuth and a complete amnesty for all political offenders. The supplies were granted on the 31st of May, and next day the prisoners were liberated

Three years had passed over Kossuth in solitary confinement, without books, without writing materials, when on that day he came forth from prison, pale, worn, broken in all but hope for Hungary, an immense concourse of people assembled to welcome his liberation. He was escorted through the town that night by a procession with some hundred torch-bearers—the mode in Hungary of giving a triumph with the highest honour.

Kossuth returned with renewed energy to the press; the Ministry and a majority of the Diet were liberal, and on New Year's Day, 1841, with Kossuth for editor, appeared the first number of the *Pesti Hirlap* (Pesth Journal). At first it was published four times a week, but soon became a daily paper. Its circulation rose rapidly to 5, 6, 8, and 10 thousand; and at one period reached even to 13,000. Its influence was immense. Opinion throughout Hungary was fast gathering to the full strength of union. But Austria was not idle; and, in 1844, succeeded in changing the Ministry.

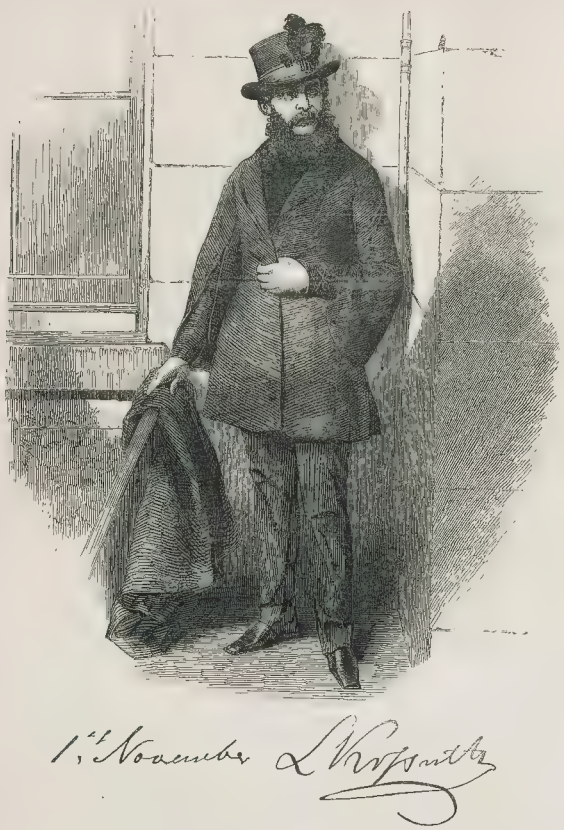
The liberals of 1838 were displaced by Imperialists, and the editorship of the *Hirlap* was taken from Kossuth. He had become convinced that to make the progress of Reform safe it must be begun by reform of the counties, and must enlist the people. He therefore devoted himself to the emancipation of the serfs, and the enfranchisement of the trade of Hungary from the prohibition to import only Austrian manufactures, and export no manufactured goods of Hungary to Austria, and for this purpose formed the bedetygie, an association pledged to consume no Austrian goods until the tariff was reformed.

The effect was felt. Austrian manufacturers, to preserve their trade, had to transplant their factories to Hungary. To repress this new-born spirit the Court at Vienna fell upon the device of appointing paid Imperial commissioners at the head of the counties, instead of the Lord-Lieutenants, who were the old constitutional heads. This the more stirred agitation. The reform leaders from every quarter of the kingdom met at Pesth, and during the quarterly fairs of 1846 and 1847, to which the people from all parts came, the needful measures of reform were publicly discussed one by one, and in every detail determined. At the head of this movement, as chairman of the meetings, was the late Count Louis Batthyani Kossuth made able speeches, and rose in popularity; he was not merely eloquent, but practical. Batthyani felt his importance, and was himself too the utmost to secure his election to the Diet for the county of Pesth. The Diet met in November, 1847. Previously, the project of reform of the Liberals had been published, and, immediately the Diet met, the law abolishing the feudal service of the tenants and the immunity of the nobles from taxation passed the Lower House.

THE HUNGARIAN CONSTITUTION.—AUSTRIAN INTRIGUE.—TREASON OF JELLACHICH.—SERVIAN AND CROATIAN WAR.

Kossuth, as representative of the county of Pesth, became, by his eloquence, the most popular man of the Diet, and, in the commencement of 1848, made his great speech on the liberties of Hungary. He argued that, as the Government was constituted, progress was impossible. Hungary was ruled by a Monarch who served two parts of his dominions in different capacities: at Vienna he was Emperor, and absolute; at Presburg a King, and limited by the constitution. The result must be constant encroachment and distrust. It was not possible to be at the same time an Imperial tyrant and the ruler of a free people. Formerly every state of the Austrian dominions had a constitution. The 300 years' rule of the house of Hapsburg and the Diet must have had wrested them from all but Hungary, and now either the constitutions must be restored to all, or Hungary must follow them into slavery. The sole safeguard, therefore, of Hungarian liberty was in the restoration of their ancient rights and liberties to every state of the Austrian empire.

In the Diet the speech was heard with profound wonder and respect; out of doors its idea of security to Hungary by the enfranchisement of the whole Austrian people was caught up with enthusiasm. The popularity of Kossuth increased. It was felt that the proposal originating in the Diet could be truly put as that of the whole Hungarian people. Never was eloquence followed more quickly by practical results. It was determined that a project for the restoration of the constitutions should be prepared and carried by deputation to the Emperor. The report of the speech and account of the proceedings reached Vienna on the same day with the news of the revolution at Paris and the flight of Louis Philippe. Forthwith the people were in commotion, and the storm of excitement rose, until, on the 13th of March, it burst into revolution: the soldiers refused to fire on the populace, the Court was



M. KOSSUTH.—FROM A DAGUERREOTYPE BY CLAUDET.

terror-stricken, Metternich fled, and the Hungarian deputation, with Kossuth at its head, arrived at Vienna.

The Emperor at once received them, was complacence itself, accepted the project of the constitution, and at the same time entreated Kossuth to restore the peace of Vienna, "which he alone could do, and, doing which, he would prove himself the best friend of the Hapsburg dynasty." Kossuth consented, and, with the theme of remixing to its former glory the Austriam empire by the restoration of the ancient rights of self-government, he gave direction to the disturbed ferment of ideas amongst the people, fixed their thoughts upon law and order, restored faith in the Emperor, and made peace.

Just a month after these events, the Emperor, accompanied by his whole family, came in state to Presburg, to swear to the constitution, give his sanction to the reformed laws, and affirm the Cabinet of Count Batthyani. In this Ministry Kossuth was, on the 11th of April, appointed Minister of Finance, and Francis Pulszki Under Secretary of State in the same department. The Diet had resolved that in future the nobility or freeholders, in common with the rest of the people, should pay taxes from which they had hitherto been exempt, and these appointments were made, avowedly, because no less popular men could dare to carry the measure, but at bottom with the secret hope that Austria could stir up such opposition to this equality of taxation that the popularity would be lost in the attempt, and the men become so hated that in all probability the bullet of some assassin or the waters of the Danube might close their career.

Whilst the Hungarian Ministry were trustfully engaged in laborious preparation of the needful measures of reform to be brought before the Diet, the Court of Vienna was deep buried in intrigues—their prime mover the Archduchess Sophia, sister of the Queens of Prussia, Saxony, and the King of Bavaria, and mother of the present Emperor, a woman of boundless ambition, and who, from her ability and resolution, has earned the name of being the only man in the family of Hapsburg. Her object was not only the maintenance of imperialism as it stood, but its extension over the whole of Hungary—her means, the awaking of the race hatred between the Croats, Servians, and Wallachs, her man for the work Jellachich. Her scheme being unfolded to him, he at first refused to enter upon it, for the simple reason that it would be unconstitutional, or, in plainer words, an Imperial treason. The Archduchess burst into tears, caught him in her arms, declared that without him they were all lost. He gave way, and became a traitor. But two or three days were over since the Emperor had sworn to the constitution at Presburg, when Jellachich was sent for, to be named Ban of Croatia and go forth to create, as the last prop of Imperialism, civil war amongst a people then one in their enthusiasm for reform of the constitution and the laws. Jellachich was not long in entering upon his treason and iniquity On the 14th of May the Servians declared war against the Hungarians and rose, and, without quarter, put to death all the Hungarians they could find. Troops were sent against them, but, notwithstanding the most positive instructions of the Hungarian Minister of War, they continually acted, under secret instructions from the Court at Vienna, solely on the defensive, and so gave the Servians opportunity to gather strength. The Croats at the same time refused to acknowledge the Hungarian Ministry or the laws of the Diet, although their own representatives had helped to pass them. The open instructions sent to Jellachich, although several were autograph letters of the Emperor himself, to obey the Hungarian Ministry were perseveringly disregarded; he began to assemble an army on the frontier, and was declared, on the 10th of June, a traitor by the Emperor. Still the Hungarian Diet, unwilling to declare war against the Croats, proposed that the Archduke John should be appointed mediator. His mission failed Jellachich, in his own paper, boasted that he had authority for all his acts, and that in everything contrary to them the Emperor acted by compulsion.

EFFORTS FOR PEACE.—DEATH OF LAMBERG.—KOSSUTH PREACHES THE WAR.—THE BATTLE OF PAKORD.

On the 1st of September the Croatian army crossed the frontier Still the Diet of Hungary were resolved, if it were possible, to avert war, and a deputation, consisting of several members of the Ministry, the House of Peers and Commons—in all, sixty persons—was sent to Vienna, and had an audience, for the purpose of explanation, on the 9th of September, with the Emperor, at the Palace at Schoubrunn. His answer was evasive; and, whilst the deputies were still hearing him, there was found in the ante-room the official paper declaring that the Emperor approved of every act of Jellachich. The deputation departed in silence; every man placed the red war feather in his hat, and they returned to Presburg.

There was little room left for doubt as to the future; but they resolved as one further effort for peace to send a deputation to the Austrian Diet at Vienna. It arrived on the 10th of September, was refused admittance, and the Hungarian Ministry resigned. On the 12th the Minister of the Interior occupied alone the ministerial place in the Hungarian Diet. The Diet called upon Kossuth for the time to resume his position: he obeyed, and, taking again his official seat, was welcomed with enthusiasm. The Diet authorised him to carry into effect his financial plan, and to create a Government debt by the issue of paper money. Volunteers flocked in for the defence of the town and Diet; but still another attempt was made to avert the war.

Both by law and autograph letters of the Emperor, the Archduke Stephen stood at the head of the Government; and the party, still clinging to the hope of peace, urged him to direct the formation of a new Cabinet, which was undertaken by Louis Batthyani.

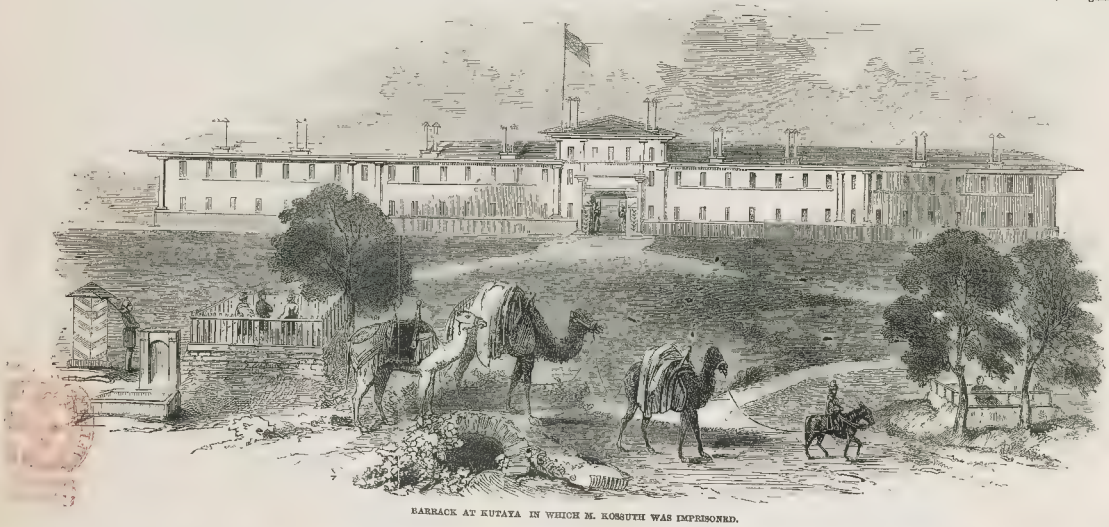
Jellachich, to avert hostilities, was slowly advancing upon Pesth. He issued orders to all the Hungarian cavalry regiments to join his army, and to offer no opposition to the Croats. With the exception of a single regiment of cuirassiers, the Hungarian officers refused obedience to the general, and followed the instructions of the Ministry. They sent, however, a deputation of officers to Jellachich, with the request that they might be shown the Imperial order for the invasion of Hungary. Jellachich admitted that he had no such order; but declared that he was acting under a direct understanding with the Emperor.

Batthyani at once demanded that the Archduke, who, as Palatine, was constitutionally captain general of the kingdom, should take command of the Hungarian army. The Duke obeyed, and, as a last effort for peace, sought an interview with Jellachich, on a steamer on the Lake Balaton. On one side were gathered the Hungarian, on the other the Croatian, forces. It was arranged that each general should come with three attendants. Jellachich did not appear, offering as his reason that the Archduke had raised the Hungarian, and not the Austrian, colours, which were those of his family. Finding thus no chance of peace, the Duke on the 24th set off for Vienna.

On the 26th Count Lamberg came with the appointment of Commander-in-Chief of both Hungarian and Croatian armies, and to dissolve the Diet, and take possession of the fortress of Bude. The appointment and order were not countersigned by any Minister, and were, therefore, illegal and not acknowledged: the Diet declared him a traitor, and he was warned by Francis Pulszki not to show himself at Pesth. He, however, came, and on the 9th, crossing the bridge of boats, on his way to summon the fortress of Bude, was recognised by the people and murdered.

When the Archduke fled, the leading men of the Ministry were thrown into dismay; Count Szchenyi went mad. Thus every effort to preserve peace had failed, and the Hungarian Government were compelled to war for the constitution (to which the Emperor had sworn) against a general whom the Emperor himself had declared a traitor, and who had stirred up civil war in obedience to instructions from the Imperial Court, which at the time he himself declared them treason, yet vowed he would follow though they should lead him to the scaffold. Kossuth issued a proclamation to the Hungarian people, with faith, that if resolved they had sufficient strength to overthrow the Croatian army, and calling upon all to arm.

With the imminence of the fate of Hungarian liberty the spirit of Kossuth rose; the perils of the moment waked at once his strength and eloquence, and reliance upon the people. He went down to the plain of Hungary, and there preached the war for the constitution, and against



BARRACK AT KUTAYA IN WHICH M. KOSSUTH WAS IMPRISONED.

MADAME KOSSUTH AND HER CHILDREN.—FROM A DAGUERREOTYPE BY CLAUDET.

the Imperial treason, as a holy war. Never before had such speech been heard. The enthusiasm spread; the people flocked by thousands to the standard; volunteers set out even from Vienna, and were not prevented; the entire people of Pesth swarmed to Vetzprém; mere lads came, and old men of 60 came—came with knives, scythes, hatchets; for ten days they gathered to the battle-field; no one knew the number—they were undrilled, unofficered, untaught in war; a force so ill equipped scarce ever stood in face of an enemy; but they were earnest, fearless, and, inspired by the eloquence of Kossuth, were impatient for battle.

There was no time to mend their condition; the Croats, 40,000 strong, and in every thing well appointed, were in view. The Hungarians had some cannon, manned by lawyers and engineers of Pesth who had practised under the Bohemian artilleryman; but to this part of the force the victory was not to belong. The news that Batthyani had left the country, and that General Lamberg had been murdered, was soon known in both armies. Lamberg had been a favourite with the Hungarian soldiers, Batthyani with the people; and, relying on the depressing effect of the news on the disciplined portion of the forces, Jellachich, on the morning of the 29th, gave orders for an attack. A cannonade, with little effect, lasted for some hours. Charge on charge Jellachich's cuirassiers came upon the Hungarian infantry, and were repulsed. The battle had lasted until even ng, when there was a rush forward of the Hungarians; the rough, selfdevoted multitude tried its strength against the disciplined force. The Croats broke and fled in confusion. Jellachich sent a flag of truce, asking a three days' armistice it was granted; and the same night he broke up his camp and fled. Of his force, 5000 were beaten on the 3rd by the National Guards of the south-western counties; and of the 5th the raw levies which Kossuth had gathered overtook and captured 12,000 men, with twelve pieces of cannon and two general officers. Such was the battle of Pakord, and so ended Jellachich's dream of an unfought-for victory to treason.

REVOLUTION AND SIEGE OF VIENNA.—KOSSUTH PROCLAIMED GOVERNOR OF HUNGARY.

The news of the defeat of Jellachich reached Vienna about the 3d of October. On the 4th he was appointed civil and military governor of Hungary, the Hungarian Diet to be dissolved, and a portion of the garrison of Vienna was ordered to march to Pesth. It refused. On the 6th there was a battle in the streets: the people and refusing force were victorious; the Minister of War was hanged by the people; and on the night of the 7th the Emperor left Vienna, and the war became a war between Hungary and Austria. The Hungarians offered their help to Vienna, but Kossuth refused to march unless invited by the proper authorities, who had not the courage to give the invitation. Vienna was besieged and taken by the Austrians; the Hungarian army retreated; and the Austrians advanced into Hungary. On the 15th of November there was so intense a frost that the Danube and all the streams and swamps were frozen. Kossuth named Görgey commander-in-chief of the army: he offered but small resistance to the invaders, and they came to the gates of Pesth on the 5th of January, 1849. Kossuth then advised to retire into the centre of Hungary and organise the army; others advised an effort to make terms with Austria; in accordance with this advice Count Louis Batthyani was sent with a flag of truce, he was seized, imprisoned, and seven months afterwards shot. Meanwhile Kossuth had gone to Debretzin, and there again his eloquence won volunteers by thousands, so that it was said "that wherever he stamped his foot there sprung up a soldier." But not only had he to find men, there were no arms, he established foundries and forges. There was no powder, no sulphur in the kingdom: he had it made from the black jack of the copper mines, and so set powder-mills to work. Battalion after battalion was drilled, and in these preparations the time was spent until the middle of March. Meanwhile several battles were fought, some of which were defeats, some doubtful for the Hungarians, and Transylvania fell entirely into the hands of the Austrians. Kossuth appointed Klapka to the command of the northern army, Bem to that of Transylvania.

On the 24th of March the Hungarian army began to act upon the offensive. For the first and most important part of the campaign Kossuth was with the main army. In the April he returned to Debretzin, and on the 14th proposed in the Protestant Church the deposition from the throne of Hungary of the house of Hapsburg. The proposition was carried, both by the Commons and Peers, the independence of Hungary proclaimed, and Kossuth appointed Governor. In ten great battles the Austrians were defeated and driven to the very frontiers of Hungary.

RUSSIAN INTERVENTION. TREASON OF GÖRGEY.—ABDICATION OF KOSSUTH.

Before the news of these events reached Vienna, the Russian intervention had been resolved upon, and Count Stadion, the Prime Minister, unable to resist, and terrified at contemplation of the effects, went mad. The Russian army marched slowly towards Hungary, and Görgey made but little effort to oppose them. Several battles were fought with various success. Görgey, instead of joining the armies of Klapka and Bem, made a sort of tour through Hungary, as if for the purpose of sparing the forces of the enemy the loss from any battles. The Russian and Austrian armies effected a junction; and on the 4th of May Buda was stormed. Kossuth and the Government retired from Pesth to Szegedhn, and thence to Arad. Here Görgey arrived on the 7th of August, 1849, with his army disputed and demoralised by long retreat and lax discipline. During the whole of his retreat Görgey had been in constant communication with the Russians, and, arriving at Arad, he immediately went to Kossuth, and told him the Russians had promised to guarantee the laws of 1848, on condition that Kossuth should cease to be at the head of the Government, and appealed to him, therefore, as a patriot, to abdicate. On the 9th Dembinski's army, who had given up his command to Bem, was defeated at Temesvar. Kossuth called a council of Ministers; and as the majority were for accepting the Russian terms, and Görgey was in possession of the fortress, he, on condition that Görgey would ensure to Hungary the laws of the previous March, signed his abdication. Görgey made no effort to fulfil his pledge, but, on the contrary, on the 13th, surrendered at Villagos his entire army. The news spread fast, and, with little exception, all the other forces dispersed.

Kossuth, with about 5000 men, crossed the frontier at Orsova on the 18th of August, after having received from the Pacha of Viddim assurance that he should be treated as the guest of the Sultan. This known at Constantinople, the Ambassadors of Russia and Austria once demanded that they should be given up. A message was at once sent to the Hungarians that their only safety lay in their becoming Mahomedans and subjects of the Turkish empire. Bem and Kemetty adopted the condition. Kossuth answered he would prefer death to the abjuration of his faith. On the 1st of October the Sultan declared that he would not on any condition give up the refugees, and violate the laws of hospitality, until he knew how far England and France would support him; but that in the interim he would consent to their being kept as prisoners in some distant part of the empire. At the end of October the fleet of Admiral Parker entered the Dardanelles, and there was an end at once of the threats of Russia and Austria. Kossuth and his followers were sent first to Shumla, thence to Bunda on Nov. 19, where they arrived on the 19th of April, 1850. Kossuth occupied the apartments over the barrack gate; and, with his companions in exile, occupied his time in laying out as a garden the ground allowed them for exercise. There his hours were spent in study, and, with Johnson's Dictionary and Shakspeare for guides, he taught himself such English as the people have heard from him at Southampton, Winchester, Ipswich, London, Birmingham, and Manchester.

In the October of 1850 Kossuth was visited, at Kutaya, by Mr. David Urquhart, M.P. for Stafford; Mr. Algernon Massingberd; Rigaldi, whom Lamartine calls the greatest improvisatore that has ever appeared; and the author of the "Revelations of Russia," in whose yacht they went. They remained at Kutaya a month, and it was on that occasion that Mr. Massingberd requested that, on Kossuth visiting England, he would honour him by becoming his guest

There were threats from Austria of occupying the Moldavian provinces of Turkey if the Hungarians were liberated; but, on the 22nd of August, Suliman Bey came to Kossuth, announced his freedom, kissed his hand, and said, "Go; you will find friends everywhere now; do not forget those who were friends when you had but few." On the 1st of September, Kossuth left Kutaya, by way of Spetzia, Marseilles, and Lisbon, and reached England on the 28th of October.

The sympathy of the English people became enlisted, and memorials were signed calling upon the Government to interfere for their liberation. The United States sent their steamer *Mississippi* to convey him to America.

IMPRISONMENT OF KOSSUTH'S CHILDREN.—ESCAPE OF MADAME KOSSUTH.

On the 10th of January, 1841, Kossuth married Teresa Meszleyi, who, during his imprisonment, had come with her mother to reside at Pesth, and had become intimate with his sisters through the custom, then universal, of all strangers calling to pay their respects to the family of the imprisoned patriot.

The escape of Madame Kossuth and her children is a story full of interest. Her constant wish was for the quiet retirement of home. She had no higher ambition than to enjoy the society of her husband in their social circle; but, determined that he should not be alone in the dangers and risks of war, she resolved to accompany him from Pesth to Arad; but, to spare the children the privations to which, were they with the army, they must inevitably be exposed, they were entrusted to the care of a female cousin, by whom they were to be conveyed to another relative When Kossuth had, trusting to the promises of Görgey, signed his abdication at Arad, one of his most faithful followers was sent for the children; Madame Kossuth remained to accompany them; and, on their way, they were all taken prisoners in the county of Veszprém, and conveyed to prison at Presburg. At this time Madame Kossuth was taken dangerously ill. In prison the children were far from being kindly cared for; in the garden they were closely guarded by soldiers, their food was no better than that of grown-up prisoners, and but for the kindness of persons in the town they would often have been on short allowance. Their tutor, the gentleman who had been taken with them, and whom they begged to be allowed to see, was not permitted to come to them; but when they had been a couple of months in confinement Haynau came, that he might enjoy the pleasure of seeing Kossuth's children in a cell; and having satisfied his curiosity with sight of them, and impressed their memory with his fierce look and long moustache, he went away, promising, however, that they should be better fed. A proclamation was issued declaring that whoever should house Madame Kossuth would place himself under martial law. The children were in prison, there was no hope of her being enabled to join them, and she therefore, as the only hope of safety, set out alone for Shumla. It would be impossible to give a detailed account of her journey without even now compromising many parties. In various poor disguises she wandered about—was conveyed from place to place in peasants' carts—was frequently whole days without food—and, after four months of toil, anxiety, and hardship, she reached Shumla on the 16th of January. The children had been six months in prison, when, on application of Madame Meszlenyi, Kossuth's sister, they were given to her and their grandmother at Pesth, but were kept constantly under the eye of the police. Here they excited the greatest enthusiasm. When they went out the people flocked round them; shoemakers must make their shoes for nothing, tailors their clothes—the country people brought them bread, flour, fowls, all sorts of provisions; many a poor peasant who had but a couple of eggs brought them. The children were looked upon as giving assurance of Kossuth's return. "He never left his children," said they; "he will come back; we shall have Kossuth again." These demonstrations determined the Government to let the children be sent to Kutaya. They left Pesth in May, 1850, and on the occasion were the subject of quite a demonstration; thousands flocked to see them off, and parted from them with regret.

PRESENTATION OF ADDRESSES.

On Saturday last Mr. Massingberd's house, in Eaton-place, was besieged at an early hour by deputations from various metropolitan districts and from provincial towns. The street was crowded with carriages and cabs, and a large crowd assembled round the house. The general enthusiasm extended to the fair sex, as several young ladies, and one very persevering old lady, were amongst the visitors, and had the honour of an introduction. The following addresses were presented to Kossuth:—From Bridgwater, by Mr. Reuben Payne, a member of the Society of Friends; from Clerkenwell, from St. Pancras, St. Leonard, Shoreditch, from the Financial Reform Association, presented by Mr. W. J. Fox, M.P.; from the working builders of Pimlico, from two discussion societies, from the young Polish refugees, from 130 young men of London, from Islington from Woolwich, from the corporation of Canterbury, from Newcastle-upon-Tyne Taunton, Nottingham, Paisley, and from North and South Shields, presented b Lord Dudley Stuart; from Dover, and from Huddersfield. A gentleman name Richards requested permission, on behalf of his lady, who accompanied him, t present three copies of the Bible for Kossuth's children. A large German Bible elegantly bound in crimson morocco gold, with Kossuth's initials at the back, was also presented to him by Mr. Charles Reed, from a number of British ladies. In accepting the sacred volume, Kossuth replied:—

"I suppose you present this book to me because you think me a religious man—not for any merit, because it is a necessity to every honest and thinking man, and because it is the most rich and fruitful source of those sentiments and those feelings which lead to happiness in this world and bliss in the world to come. I said—and it is because I take religion to be the most rich source of consolation, which I wanted so often. Being a religious man, and because religious, as well an enemy to superstition, intolerance, and fanaticism, as, on the other hand, the friend of freedom, I readily confess that it is from this great book that I have learned the principle of loving my neighbour as myself, and strength and courage to act in the great cause which has always been the guide of my life. Judge from this how I prize this gift to me, presented on the Act of some families, and of which a copy was also presented by an honourable working man to my wife at Winchester. This, sir, will remain as the choicest gift I have received."

Reference having been made to the Haynau reception in this country in one of the addresses, Kossuth remarked:—

"There is a great difference, indeed, between the reception of Haynau and myself. Let me, without a sentiment of pride, make the remark, that there is also a mighty difference between the man who is but the tool of a despotic master, and a freeman who is honoured by the confidence of his people, and by this confidence, he has the honour to be, in some sort, the representative of those principles; and therefore, of course, I believe I and Haynau can never be placed in comparison. Our positions are quite different. As to the pronunciation of public feeling in this country towards a man who can only be regarded as an instrument of his master, for I myself have no master but the will of my people—as to the pronunciation of public feeling in the reception given to Haynau, it is the first time allusion has been made to it in an address to me; therefore I consider it not inconvenient to say so much."

The Southampton Town Council have re-elected Richard Andrews, Esq., for the third time, Mayor of the town, as a mark of gratitude for his genera. services, and more particularly for the hospitality with which he welcomed Kossuth. The Mayor was at the Polish Ball on Thursday night, and was to give Kossuth a public breakfast yesterday (Friday), prior to his embarkation for America, and will then accompany him down Southampton Water, and through the Solent, and there, at its junction with the British Channel, he will wish the Magyar leader God speed on his voyage across the Atlantic.

The committee of the Peace Society have issued an address, signed by Joseph Sturge, chairman, and Henry Richard, secretary, calling upon the.r friends and supporters not always to yield to the gratification of indulging a momentary impulse of generous emotion for Kossuth, but to adhere strictly to their principles, to oppose despotism by ideas, and not by physical force. In this document we find the following passage:—

"A distinguished foreigner, whose name is associated with the aspirations and struggles of a brave and ancient people for the maintenance of their liberty and independence, has recently appeared amongst us, and stirred the heart of the nation to its depths by his thrilling and eloquent appeals on behalf of his oppressed countrymen. Few can resist the contagion of that enthusiasm which glows in this lofty and earnest soul. But, amid all this tumult of excited feeling, it does not become the friends of peace to forget, whatever admiration they may feel for his character, and whatever sympathy for the cause he advocates, that the means by which this illustrious patriot sought in the past, and proposes for the future, to effect the liberation of his country, are such as they cannot approve or sanction, without implicitly surrendering the fundamental principle of their faith. If we needed any practical illustrations of the soundness of our principle, are they not abundantly furnished by the recent history and present aspect of Europe? After the revolutions of 1847 and 1848, the friends of liberty everywhere committed the decisions of their cause to the wager of battle. And with what results? In every case they have been worsted and crushed. Germany has seen her charters of constitutional freedom snatched back from her grasp with insult and contempt. Italy lies writhing in deeper and more degraded thraldom than before the strife Hungary betrayed into the hands of her enemies by the military champion to whose sword she had trusted for deliverance. All experiences prove that the most probable issue of political emancipation effected by physical force is not guaranteed freedom, but a mitigated despotism. The history of England's past intervention by force of arms in the affairs of Continental nations, whether for the defence of legitimacy or constitutional freedom, is so much only a record of vain conquests, bloody and costly, and of shameful or abortive issues, as ought surely to deter us from a repetition of this experiment. There is scarcely a country in Europe on which we have not at one time or another inflicted our martial protection, and there is scarcely a country in Europe where that intervention has not eventually failed in the accomplishment of its professed objects, or where its memory is not regarded with bitterness and resentment by the very people whom it was meant to serve, while of the consequences to ourselves a melancholy monument still remains in our crushing and enormous national debt."

KOSSUTH'S MOVEMENTS.

BIRMINGHAM.

Kossuth left the Euston Station for Birmingham on Monday, at nine o'clock, accompanied by M. Pulszki, Mr. Toulmin Smith, &c. Captain Hulsh, manager, and Mr. Stuart, secretary, received the Magyar Chief. The directors had attended the carriage up to the express train especially built for the late Queen Dowager. Kossuth alighted at Wolverton, and with difficulty made his way to the refreshment-room, so great was the crowd. At Coventry there was still greater excitement: the Hungarian colours were seen in every direction, and

he was tremendously cheered. His reception in Birmingham was a complete triumph. Mr. Geach, M.P. for the county, met him at the station, as also the two town members, Messrs. Scholefield and Muntz, and Mr. Wright, deputy chairman of the Preston Committee. After a *déjeuner* at the Queen's Hotel the procession was formed, Kossuth taking his place in an open barouche, accompanied by Messrs. T. Smith and Geach, drawn by four greys, the postilions in the scarlet jackets, and wearing the Hungarian colours; and the remainder of the party were accommodated in carriages of a similar description. As they drove at a smart pace down the Great Lames, every moment added to the length of the *cortège*, until by the time it had reached Small Heath all resemblance to a procession had disappeared, and the whole of the road, the hedges, the trees, and the houses, appeared swarming with people, densely blocked up with vehicles of every description. All the working people of the busy hive of skilled industry had obtained a general holiday. Bands of music played Hungarian airs, and at every corner where the dense of the crowd occasioned momentary stoppage a deafening cheer arose as the people caught a glimpse of the distinguished stranger. At this point the mass of the people had been gradually congregating for eight in the morning, and about eleven o'clock the crowd appeared to have reached its limits, inasmuch as at that time there were about six miles of space—from the village of Yardley to the Bull-ring—one mass of human beings. At one o'clock the line of procession was completed in the following order

Six men bearing the banners of England, Hungary, America, Turkey, Italy, and Poland. The [illegible] and of the Birmingham Political Union. Glass-blowers and cutters, with band. Brassfounders and finishers, [illegible] and tailors, [illegible]. Saddlers, harness and whip makers. Wire-workers, wire-drawers, and pinmakers. The plate workers. Screwmakers and bedstead makers. Pearl inlayers and hand-screwmakers. Gunmakers, brass-cockfounders, moulders. Japanners. Odd Fellows with regalia. Leicester brass band. Private carriages and horsemen. Four carriages. Deputations from the Towns. Large banner—"Eljen Kossuth." Band. Body guard on horseback. First carriage and four, Kossuth, G. F. Muntz, M.P., W. Scholefield, M.P., Charles Geach, M.P., and Alderman—M. Tomkins Smith, and M. Kossuth's side-de-camp. Carriages with committee. Body guard on horseback. Gunmakers. Shoemakers. Joiners and carpenters. Band. Carriages, horsemen, &c.

The neighbouring towns, Coventry, Wolverhampton, and throughout the district far away into the Potteries, had all poured forth their thousands, most of them displaying handsome banners.

At a quarter to two o'clock the carriage and four containing M. Kossuth hove in sight. This was the signal for one burst of cheering. Rising in his carriage, he bowed to the assembled thousands, whose shouts rent the air for many minutes. The carriage having taken its place in the line was immediately surrounded by a body guard of 150 gentlemen on horseback, and followed by many carriages and four, hundreds of other carriages, pedestrians, and public, and vehicles of every description. In this state Kossuth entered Birmingham. To describe his progress would be to describe one continued ovation. In the Bull-ring the first copy of the *Times* was burnt, and at intervals the ceremony was repeated until the procession terminated at the Five Ways. Many copies of the paper, with the words "Lying *Times*" in large characters upon them, were elevated on poles, and were to and fro over the heads of the crowd amid volleys of derisive cheers and groaning. The Town-hall, the theatre, and all the public buildings along the line were made use of to serve the purpose of spectators. The bells of the various churches rung cheerful peals.

One hundred Frenchmen who had formed a band marched near to Kossuth's carriage, which was preceded by a splendid banner, with the words "Eljen Kossuth," emblazoned upon it. There were thousands of other banners with appropriate mottoes and devices upon them, as also many triumphal arches. Mr. Muntz, used to large meetings in the days of the Political Union, appeared lost in astonishment at the overwhelming assemblage. It was computed by persons used to estimate large crowds

interfered with. I look for the protection of your reform societies, and of the Free-trade societies, of the association of the Friends of Italy—for the cause of Hungary and of Italy is identical. (Cheers.) I openly declare that to none of these societies do I look with more hope than to the Peace Association, and the eloquent speech delivered by your member shows that I have not looked for that support that association in vain. (Cheers.) After eulogising the principles of the Peace Society, M. Kossuth went on to say that he had not come to England to ask the interference of this country. He had not come to England to ask this country to take any steps for the restoration of Europe. He only entreated England to respect and make others respect the spot the right of each country to regulate its own domestic concerns. (Cheers.) Public opinion was almighty where it could act and could make itself respected. This belief gave force to public opinion, and therefore nothing could withstand it. He declared for himself that he would have peace, and that all the nations of the world would have peace. But peace was not prism. Where there was peace there would be freedom, but peace there could not be so long as the welfare and moral dignity of nations continued to be sacrificed to the ambition of a few families.—(Cheers)—peace could not be so long as the entire system of the Government of the greatest part of Europe could be crammed up in these words, "People pay, because we want spies and soldiers to keep you in servitude." God has not created this fair world to be the prison of humanity. Peace could only be founded on confidence of the nations, and it was only in the garden of liberty that contentment would grow. It was a calumny, it was perjury, to charge the people with being lovers of disorder, and discord, and mischief. Where there was freedom there was order. He had never seen greater order than amongst the thousands now assembled. There was an nation that liked discord. But there were many nations that hated oppression, and his nation was one of those. (Cheers.) In the name of the welfare and moral dignity of nations continued to be sacrificed to the ambition of a few families.—(Cheers)—peace could not be so long as the entire system of the Government of the greatest part of Europe could be crammed up in these words, "People pay, because we want spies and soldiers to keep you in servitude." God has not created this fair world to be the prison of humanity. Peace could only be founded on confidence of the nations, and it was only in the garden of liberty that contentment would grow. It was a calumny, it was perjury, to charge the people with being lovers of disorder, and discord, and mischief. Where there was freedom there was order. He had never seen greater order than amongst the thousands now assembled. There was an nation that liked discord. But there were many nations that hated oppression, and his nation was one of those. (Cheers.) In the name of the welfare and moral dignity of humanity he would entreat the practical and glorious people of Manchester to give their generous sympathy towards his cause. Never in his life had he asked anything for himself, and therefore he humbly entreated in the name of his poor country and of humanity he would be ashamed to go begging from door to door. (Loud cheers.) He confidently declared that he believed every interior question of great importance had been examined on the foreign affair. The principles of Free Trade was there resumed. It depended entirely upon our foreign relations whether the English should have Free Trade in Europe. The principles of reform depended on the liberties of nations, and therefore he humbly entreated the people of England to bestow more attention and sympathy on our foreign relations. If diplomacy was properly carried out, it would give the public opinion of England such a weight that it would be irresistible. But in the cause of the liberty of his poor country he should not

NEW BOOKS, &c.

THE NATIONAL ILLUSTRATED LIBRARY.

BOSWELL'S LIFE of JOHNSON, 4vols., profusely illustrated with Wood-cuts, and handsomely bound in cloth, and gilt, at 2s 6d per volume.

BLACK'S GENERAL ATLAS of the WORLD, new Edition, revised and corrected throughout, with numerous additional Maps, and an Index of 60,000 Names

The work is in every way calculated to the present advanced state of geographical research; and, whether on the ground of accuracy, beauty of execution, or cheapness, the Publishers invite a comparison with any work of its class.

"We are now in possession of an 'Atlas' which comprehends every discovery of which the present century can boast. It ought at once to supersede all other works of the kind, and no one, either in pursuit of truth on his own account, or attempting to direct the inquiries of others, will hereafter have any excuse for going astray."—United Service Gazette, Feb. 22, 1851.

A. and C. BLACK, Edinburgh; and all Booksellers.

A BIBLE-DICTIONARY FOR THE PEOPLE.

By JOHN KITTO, D D, F S A, &c, Editor of the "Pictorial Bible." In a beautifully printed volume, 8vo, price 10s 6d, illustrated by 316 Engravings on Wood, and 2 Maps,

A CYCLOPÆDIA of BIBLICAL LITERATURE for the PEOPLE. By JOHN KITTO, D D, F S A, &c, Editor of the "Pictorial Bible."

This work is studiously accommodated to the wants of the great body of the religious public. It forms a popular digest of the contents of the two-volume work, and possesses the same superiority over popular dictionaries of its class as the original work confessedly does over those which aspire to higher erudition. To parents, to Sunday-school teachers, to the young, and to all enquiry, either stately or occasionally, in the important business of Biblical allusion, the volume is confidently commended as one the most valuable and the cheapest compendium of Bible knowledge for the people which has ever appeared in this country.

ADAM and CHARLES BLACK, Edinburgh; and sold by all Booksellers.

New Edition, containing the Gorilla, Polka, Mazourka.

Price 1s; post-free, 1s 4d,

NEW BOOKS, &c.

PARABLES OF OUR LORD.

On the 1st December. 1851, will be published in imperial quarto, handsomely bound, price two guineas,

PARABLES OF OUR LORD, Illustrated, in Twelve Designs, by JOHN FRANKLIN, and Engraved in Line by P. Lightfoot, W. H. Watt, A. Blanchard, F. Joubert, S. Cousell, and E. Nusser, of Dusseldorf. The Words of the Parables and the Titlepage engraved in Ancient Church Text, by Secker.

* * Fifty First-proof Copies, upon ballé-laid imperial India paper, in a Portfolio, five guineas

LONDON: J. STANFIELD, Bookseller and Publisher to the Queen, Royal Library, 23, Old Bond-street.

NEW NOVEL.

Just published, in 3 volumes, and to be had at all the Libraries,

FLORENCE SACKVILLE; or, Self-Dependence. By Mrs BURBURY.

"This is a first novel—we hope it will not be the last by its authoress, who possesses a clear appreciation of humour and of pathos, and can lend interest to even the salient features of character, and a constancy to the leading purpose of her story. There is nothing untrue to real life and suffering in the position of Florence Sackville. Her self-dependent heroine and narrator. The story of poor Milly Tregoff—the pathos of which is fearfully enhanced by exaggeration—is an episode that alone would justify us in placing Mrs Burbury high among modern novelists."—Athenæum

"There is much promise of talent in this first work of a writer who possesses a flowing and racy style, an observant eye for character, a ready faculty of invention, and earnestness of design."—Atlas.

"Florence Sackville, the self-dependent heroine, is a clever creation, and possesses charms enough to entice us through three volumes. Mrs Burbury is very happy in the mode in which she calls the self-dependent heroine into action; and she writes with ease and elegance."—Literary Gazette.

SAUNDERS, OTLEY, and ELDER, and Co., 65, Cornhill.

ONE HUNDRED ENGRAVINGS from the ANNUALS for 5s, or 200 for 8s 6d. A different and perfect impression of them every-second and every third illustrations and adapted for Scrap-books, &c. Sent free by return on receipt of Post-office order.—JAMES HEYWOOD, Printseller, 171, Strand. Early orders will secure the best plates.

THE SEA.—WANTED, YOUNG GENTLEMEN to be enlisted as MIDSHIPMEN aboard a fine First Class Ship, about to sail for SOUTH AUSTRALIA. They will mess and sleep with the officers, and have every opportunity of acquiring a thorough knowledge of the profession. The amount of premium and other particulars apply to W. SUTHERLAND, Shipchandler, 55, Galinford-street, Horsley-down

KNELLER HALL TRAINING SCHOOL.

Twenty one Exhibitions and four Queen's Scholarships are now open to competition at the School. Eleven of these exhibitions cover the expenses of a year's training, and the rest reduce those expenses to £5. Students who do not obtain exhibitions are entitled to recover the whole of the sum deposited on their admission as the fee for training. If they obtain a place in the Annual Class-list of Certificates of Merit, and a recommendation for granting the Exhibitions and Queen's Scholarships, and for admitting other students, will commence at Kneller Hall on the 15th of December. For the requisite forms, and for any further information, candidates should apply, by letter, to the Rev. P. TEMPLE, Kneller Hall, Hounslow, Middlesex.

MONEY.—£30,000 ready to be immediately advanced upon Freehold and good Leasehold Property, Reversions to Money in the Funds, Annuities Life Interests, &c.; also upon good Personal Security.—Apply, personally or by letter, to Mr C J ALLEN, 26, great size 1 Waterloo-place

BEAUTIES of CAMBRIA. By BRINLEY RICHARDS.

No 1. THE LOVE-LONG NIGHT.
2. MARGARET'S DAUGHTER.
3. THE ART GROVE.
4. SWEET BI RALD.
5. LADY OWEN'S DELIGHT
6. MARCH of the MEN of HARLECH.

Price 2s. each. All Illustrated.

THE PRINCE of CAMBRIA'S BAND MARCH

The "Beauties of Cambria," Brinley Richards, were first performed by an Amateur Band at the Festival of the Cambrian Society of Ancient Britons, on St. David's Day, at St. James's Hall. The delight and enthusiasm with which these beautiful native Melodies produced on the company were unbounded. The "Prince of Cambria's Band March," an original composition, by the same Composer of "Beauties of Cambria" threw the company into a state amounting to delirium. These Melodies of Wales were dedicated by permission to H.R.H. the Duke of Newcastle, by whose kind patronage this talented Cambrian Artist became a student of the Royal Academy of Music, where client Britton became a student of the Royal Academy of Music, where he gained the honour of being elected a Scholar.

LEE and COCKBAND, 63, Holywell-street.

PIANOFORTE STUDIES.—CZERNY'S 101 EXERCISES (the first edition extant), only 3s; Czerny's Velocité Stud. ea. 2s; Schmidt's 20 Studies 2s; Beethoven's Symphony in E, 3s; Mercadante's Opera of Le Prophète, 4s; Rigoletto, 4s; Lucia, 4s; Fidelio, 2s; 1 Elisir d'Amore (just ready), 3s; and 40 other Operas 2s each.—Pianista Corner, 201, Regent-street, and 104, Bishopsgate-street, Regent-street.—N.B. Any Three Nos., post free, 72 stamps

Spectacles and Eye-glasses, to suit the sight, and to Sportsmen, Gentlemen, and Gamekeepers. TELESCOPES, possessing the most extraordinary power, that some 4½ inches, with extra eye-piece, will show distinctly Jupiter's Moons, Saturn's Ring, and the Double Stars. They supersede every other Glass, and are in all sizes in the Windsor, Opera, Stanhope, Military purpose, &c. Open and ... same Glasses, with wonderful powers; a minute object can be seen at the distance of 2 miles, and objects distant ... Invaluable newly-invented Spy-cotches; Invisible and all kinds of Acoustic Instruments for the Deaf.—Mr. HOMOCLE, Optician, 63 and 64, Cornhill, and 123, Regent-street.

INDISPENSABLE to EVERY FAMILY.—MARKWICK'S PATENT VEGETABLE METAL SPRING-ELASTIC Boot Hooks, Corset Clasps, Knee Caps, Anti-Corn Stocks, Knee Caps, Anti-Corn Stocks, Lunchan Bands, Shoe Socks, Warm Gloves, &c., and Elastic Fabrics for Ladies' Dresses, Gentlemen's Trousers, &c. &c. Each article is sure to surpass any one article used by him during the last 30 years; they are of extraordinary cures, and give universal satisfaction. Sold by chemists. Wholesale at A. MARKWICK and Co's 33, King William-street, City. Lists forwarded on applica

ELEGANT TOILET REQUISITES.—ROWLANDS' MACASSAR OIL is highly and universally appreciated for creating and sustaining luxuriant tresses ROWLANDS' KALYDOR is an unparalleled Eastern Balsam for improving and beautifying the skin and complexion; and ROWLANDS' ODONTO, or Pearl Dentifrice, is invaluable for its beautifying and preservative effects on the teeth and gums. The patronage of Royalty throughout Europe, and the numerous testimonials constantly received of their efficacy, afford the best and surest proof of their merits. Beware of spurious imitations. The only genuine of each bears the name of ROWLAND upon the wrapping of the article on the wrapper or label. Sold by them at 20, Hatton-garden, London, and by chemists and perfumers.

Recognised by the Royal College of Surgeons of England, the University of London, and the Apothecaries' Hall of London and Ireland,

COLLEGE OF CHEMISTRY, LIVERPOOL. Tuesday, October 14th, 1851.

Messrs. W. and S. KENNEDY, Dispensing Chemists, Upton-on-Severn

"Your Eau de Cologne, the cask of French wine vinegar came safely to hand. I have submitted it to analysis, and find it to be perfectly pure; in fact, I believe it surpasses those matters which are in all foreign grape juice. In a very much liked in my house, for it a most agreeable acid. The essence of my mother's cologne vinegar was an excellent test of the deodorizing power sold here under that name; some of the sample I exposed contained sugar, oil of vitriol, and creasote."—Yours truly

MERIDAN NICHOLAS, F.R.S., &c. &c. &c.

NO MEDICINE for the CURE of ASTHMA, Consumption, and Coughs, was ever attended with such speedy and unfailing success as Dr LOCOCK'S PULMONIC WAFERS. To singers and public speakers they are invaluable for clearing and strengthening the voice. They have a pleasant taste. Dr. Locock's FEMALE WAFERS, the best medicine for females. Price in 1½d, 2s 9d, and 11s per box.

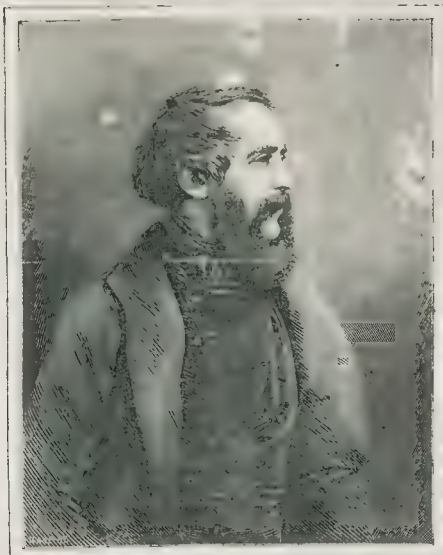
THE ILLUSTRATED LONDON NEWS

No. 530.—VOL. XIX.] SATURDAY, NOVEMBER 22, 1851. [SIXPENCE { WITH SUPPLEMENT, GRATIS.

THE BALANCE OF POWER.

THE "balance of power in Europe" is a comparatively modern phrase, and signifies a system and a necessity of comparatively modern growth. The gigantic robbery committed by the three powers that divided Poland among them first awakened the attention of statesmen and publicists to the dangers that might result, if, in a community of kingdoms and empires such as the map of Europe then presented, one state were allowed to round off its territories, and otherwise extend itself, at the expense of its neighbours. In the derangement of the then existing balance of power, it was not only the two most ambitious and most unscrupulous potentates of Europe that profited most, but it was the two youngest members of the great commonwealth—the merest juveniles and *parvenus* of Europe—that obtained the most solid advantages. Russia and Prussia, two states of which the very names were unknown a century previously, and which were scarcely heard of even under their ancient titles of the Kingdom of Muscovy and the Electorate of Brandenburg, loomed at that date into new and ominous importance. The third state, which the clever and crafty Catherine, and the long-headed and hard-fisted grenadier of Prussia, condescended to admit into their iniquitous partnership, profited but little or nothing by the bargain. All the positive advantages, as well as the greater portion of the odium, remained with Russia and Prussia. It was in reality against the further growth and aggrandisement of these states by similarly nefarious means that it was found necessary to express the idea of a balance of power, and to maintain that idea as a fact by treaties and stipulations. Circumstances soon afterwards occurred which compelled these offending states to enter the lists in defence of that very balance of power of which they had hitherto been the most mischievous disturbers. France, under the auspices of the Emperor Napoleon, improved upon the lesson which those states had taught,



M. KOSSUTH.—FROM A DAGUERREOTYPE BY CLAUDET.

and cut up Europe as if it had been "a Perigord pie," reserving to herself the largest share of the good things and giving her allies only the bones and portions of the crust. By the final pacification of Europe and the treaty of Vienna, the balance of power was once more solemnly re-established. But it had one fatal omission. The parties to that treaty were, with the exception of Great Britain, the parties who had reaped advantage from the first great disturbance of that balance, by the joint intrigues of Catherine and Frederick. The *status quo*, as against France, was re-established, but the perpetrators of wrong were in the position of law-makers, and never dreamed of the desirability or possibility of re-establishing it against themselves.

Since that period the only serious attempts to disturb the balance of power have proceeded from the two original delinquents. Neither of them has ever lost sight of its modern origin or its rapid growth, or ceased to aspire for further development at the expense of other states. The history of Russia is one unbroken series of attempts to extend and consolidate her power in Europe, and to vault into the seat of universal empire. Prussia, with an ambition less lofty, but still sufficiently daring to be splendid, has aimed at assimilating to and incorporating with herself all Germany, at the expense of the freedom and independence of every minor state of the confederation, as well as of those of her former ally in spoliation, the effete and crumbling empire of Austria. The ascendancy in arts and arms, and in all the glories of civilization which has been attained by the western nations of Europe, and especially by Great Britain and France, has no greater enemies than those aggressive states. Prussia is rendered comparatively harmless by the growth of an intelligent public spirit among her people, which will not permit these dynastic projects to crush for ever the liberty and rights of the people; but semi-barbarous Russia has no such impediments. The will of the Emperor is untrammelled by the fears and responsibilities which follow and overshadow the ambition

... BUDA AND KETAYA.—(SEE NEXT PAGE.)

of the King of Prussia. The policy of Catherine is the policy of Nicholas. To be not simply the largest but the most powerful state of Europe—to rule the East by overriding the West—to take by brute force that high place among the nations which Great Britain, with a territory not a twentieth part so large, holds by the industry, the intelligence, and the indomitable spirit and perseverance of her sons, is the object, seldom or never avowed, but always acted upon, by successive Emperors of Russia. It was that policy which induced the partition of Poland, which prompted the humiliation of Turkey, which extended Russian influence over the Danubian provinces of the Sultan, which tries either to monopolise the Danube or to silt up its mouth, in order that no other state may turn it to the advantageous purposes of commerce, and which dictates the law by land as well as by sea in the south and east of Europe. The same policy has prompted the friendship of Russia towards Austria—a friendship, or, more properly speaking, an alliance—which is humiliating to meet and perilous to accept, and which, though it destroyed Kossuth, destroyed what was of far more real importance to Austria—the independence of the Empire.

In spite, therefore, of treaties, the balance of power in Eastern Europe will always be exposed to perturbations as long as the policy and traditions of the Russian empire remain what they are. There is but one check to this power, which diplomacy has not very clearly foreseen, and which, when it has been pointed out, the statesmen of Western Europe have not hitherto regarded with the benevolence and favour which it demands. The people of the western and central states of Europe are advancing in education, industrial as well as political. Italy, Germany, and Hungary, in proportion as civilisation extends among them, in proportion as the printing press does its duty in the dissemination of knowledge, demand to be considered as existent for themselves. They look beyond those merely personal and dynastic considerations which have been too long held of paramount importance in the settlement of Europe. Prussia, as we have already remarked, is crippled by the powerlessness of the King, as well as by the intelligence of Germany. The power that may be expected to cripple Russia, or, if not to cripple her, to act as a check upon her, and prevent her from extending her power to the injury of Great Britain and France, is the force that resides in the discontented populations of the divided and mutilated realm of Poland, and in the people of Germany, Italy, and Hungary. If Great Britain desires to retain her place in the world—to hold India without molestation—to be for the future what she is now, the greatest trading nation on the globe, and the principal ocean carrier of all other states, nations, and communities—she will see that the balance of power, as established by the treaty of Vienna, is a balance to the advantage of her greatest rival and enemy, and that the true balance would be one similar to that which existed before Poland was blotted out of the map. To attempt to restore the independence of Poland by force of arms would be a Quixotic as well as a disastrous enterprise; but a similar result is working itself out by other means, and the least that public opinion in England can do is to wish it "God speed." Hungary, which acted as the bulwark of Western Europe against barbarous Turkey, at a time when Turkey was a power whose arms were to be dreaded by Christian nations, is an ally which England has never sought, which works for its own purposes and not for those of England or any other nation, but of which the aid is not the less valuable on that account. Many persons, with that proverbial ignorance of foreign politics, which has long been a reproach to our national intelligence, condemn the Hungarians as they would condemn the Chartists of Kennington-common, or the Red Republicans of the Faubourg St. Antoine. They consider them in the light of rebels against constituted authority, and summon against them all the instincts and sympathies of conservatism. But the Hungarian question rests upon a broader basis, and has a European and general, as well as a local and private, importance. Austria, in proportion as she is Russian, upon which so much stress is laid, is but a delusion and a mockery, and at some day not very far distant it may prove to be a snare. The rottenness of the Austrian empire is the immediately disturbing cause, which, by extending the unwholesome influence of Russia over Germany, tends more and more to overthrow the balance, to the disadvantage of Great Britain and France, and to the advantage of the Emperor Nicholas. Had Russia not interfered against Kossuth, it might possibly have fared ill with the House of Hapsburg, but it could not possibly have fared ill with Austria as a free nation, or with the several states of which Austria is composed; and long ere this time the foundations might have been securely laid for the reconstruction of that venerable empire on a system which would have given satisfaction alike to Germans, Hungarians, and Italians, and which would have constituted her the best barrier against Russian encroachment. The price of the Czar's intervention in Hungary has yet to be paid; and, unless wiser heads than those which have heretofore guided the conduct of the young Emperor be called to the rescue, it may prove as disastrous to Austria as menacing to the repose of the rest of Europe.

KOSSUTH.

Since our last week's record of the movements of the illustrious exile, Kossuth remained at Eaton-place, at Mr. Massingberd's hospitable residence, giving audiences to Hungarians, and making his final arrangements prior to his departure on Thursday for America. His three children have been placed at school and will remain in this country. Kossuth has been occupied day and night in clearing off an enormous mass of correspondence, from abroad as well as at home, and in organising the distribution of the funds raised and now raising for his fellow-countrymen in exile. It is also believed that the distinguished chief has been busily engaged in preparing a statement for publication as to the origin and progress of the Hungarian struggle; but whether such declaration will assume the form of a detailed work or of a manifesto, has not yet transpired. In the meanwhile a controversy has sprung up on a charge brought against Kossuth of having lent himself to the Imperial Cabinet to obtain from the Hungarian Diet money and men (40,000) for the war in Lombardy. Mr. Urquhart, and the author of "Revolutions in Russia," have written letters to prove the worthlessness of the accusation; but the following official statement, dated November 18, issued by the Society of the Friends of Italy, completely settles the question, and we give the document, not only as clearing Kossuth's name from reproach, but as an interesting historical record

The Hungarian constitution was based on the pragmatic sanction, according to which the Sovereign of Austria, as King of Hungary, was bound to send troops to the aid of that country, if threatened by a foreign enemy. Austria, on the other hand, was bound to furnish men and money to maintain the integrity of the House of Austria, if any of its possessions were menaced by a foreign enemy. The cabinet of Vienna, having incited the rebellion of the Serbs, took the opportunity of the war with Sardinia, and the disasters of the Austrian arms in Italy, to embarrass the Hungarian ministry, presided over by Count Louis Batthyany, and in which Kossuth held office as finance minister. [illegible], and known to be the opinion of Count Batthyany then, that Hungary was not yet in a condition to resist Austria. Even at a subsequent period, when Jellachich invaded Hungary, Count Batthyany still believed resistance impossible; and later, it is well known, when the army of Windischgrätz (after cards defeated and driven out of Hungary by Kossuth) invaded the country, he became the victim of that opinion. Now, the Emperor of Austria, in the month of June, 1848, required, as King of Hungary, that his Hungarian ministry should demand a levy of men, which, in fact, was not intended to exercise an immediate influence on the affairs of Italy—as these affairs must have [illegible] some solution before the levy, if granted, could ever have [illegible]. But it was supposed that if, on the one hand, Batthyany unconstitutionally refused to make that demand, it might [illegible] and without danger have been dismissed; and that so Hungary, at a critical juncture (and, in fact, while the Austrian cabinet, as the event proved, was plotting with Jellachich), would have been left without a ministry. On the other hand, if Batthyany's ministry had made the proposition, it was thought that they would have forfeited all popularity in Hungary. From this seemingly inextricable dilemma, which was fully understood upon both sides, that ministry was extricated in the following manner by Kossuth, who, as finance minister, had to make the proposition. After noticing, on behalf of the crown, that a rebellion rage! in the lower parts of Hungary, and that the king of Hungary was still engaged in a foreign war in Italy, he asked for a levy of 80,000 men, and then added that, after having made this demand as minister, as a Hungarian he recommended that the grant should be accompanied by the express stipulation that none of these men should, under any pretext, be employed beyond the Hungarian frontier till the Serbian war was over. In this manner the employment of Hungarian troops in Italy was practically stopped; but the same evening a cabinet council was held, and Batthyany argued that it was impossible, constitutionally, not to concede the principle that the King of Hungary had a right to demand, and to obtain, Hungarian troops for the defence of Italy. Kossuth, for instance, the Serbian rebellion to have been quelled, which had afforded the legitimate, but accidental and temporary, pretext for refusing them to Austria. This consideration was inconvertible; but it was agreed to meet the difficulty by discussing the question as a matter of principle, and annexing the further stipulation to the eventual employment of the Hungarian troops in the defence of the Austrian possessions in Italy, that the Serbian army should be defeated and be quelled, that these troops should only be so employed after reasonable attempts at reconciliation had been made by the King of Sardinia, and on the condition that the Italian provinces should receive a separate administration and free constitution in all respects similar to that enjoyed by the Hungarian. These conditions were proposed by Kossuth, and passed in the Diet on the following day.

Every possible mode of calumniating Kossuth has been resorted to. The Paris *Constitutionnel* of the 15th having published two letters—one public, the other private—of the late General Bem, dated Hermanstadt, June 8th and 6th, 1849, to Kossuth, complaining strongly of cruelties committed during the campaign in Transylvania by district courts-martial, and other excesses, unfortunately too incidental to civil war, this correspondence has been eagerly seized upon here, to be turned against Kossuth; but the journals have not endeavoured to procure his replies to Bem's complaints against functionaries over whom Kossuth had no immediate control; and General Bem himself thus bears testimony, in this very letter, in favour of the Governor; and, despite of some personal complaint, real or imaginary, against Kossuth, of his fitness to occupy his elevated position:—

Although I have reason to complain of you, Mr. Governor, I am too much attached to Hungary, and I care too much for her fortunes, not to place myself, in case of peril, in the foremost rank of her defenders. I have always had the conviction that you are the only person who can at this moment conduct the helm of affairs. I put aside all personal susceptibility, and I will support you, when need is, with all the force of my arm, against whomsoever may have the pretence to carry on the government. * * * Leave me alone, and rely on me.

Mr. Joseph Hume, M.P., has addressed a letter to the Mayor of Southampton, dated November 14, Burnley Hall, Great Yarmouth, regretting that illness had prevented him from paying his respects to Kossuth. We extract the following passages from the letter:—

I thank you for the reception you gave to the "man of the people" of Hungary, and am confident that the proceedings at Southampton, and everywhere else that L. Kossuth has visited, will be productive of great good to the cause of popular and responsible government in this and in every other country. His cause is our cause, and I admire the talent manifested by him in several answers to addresses and at public meetings. It would be a difficult task for any man claiming to be an Englishman to deny the truth of his statements, and I hope his advice may receive more attention from the aristocracy of this country than they have shown to his person. I have to suggest, some person connected with the press should collect all the discourses to Kossuth, and see how best reports of his answers, verbal and written, and have them printed in a good type, and at the lowest possible price, as I anticipate for them circulation in this and other countries, and more benefit to the popular cause (the cause of responsible government) than from any other publication. You will ask Lord Palmerston to send copies of the collection to all the courts in Europe, as he did of Mr. Gladstone's letter. 2nd. To apply to the Attorney-General, to whom I have written, to give us his best assistance to have the word "Stamp-office v. Dickens" decided; and, further, to secure his co-operation and aid to remove the shackles on knowledge which the stamps impose.

Mr. Douglas Jerrold has written a letter, containing the suggestion, that a penny subscription among the people is needed to present Kossuth with a copy of Shakspeare. Mr. Jerrold remarks:—

It is written in the brief history made known to us of Kossuth, that in an Austrian prison he was taught English by the words of the teacher Shakspeare. An Englishman's blood glows with the thought that, from the quiver of the immortal Saxon, Kossuth has furnished himself with those sorcery words that kindle as they fly words that are weapons, as Austria will know.

There are hundreds of thousands of English men who would rejoice thus to endeavour to manifest their regard to Kossuth, for the glorious words he has uttered among us, words that have been as pulses to the nation.

LORD PALMERSTON AND THE HUNGARIAN CAUSE.

A most important declaration has emanated from Lord Palmerston. Mr. D. Harris, Secretary to the Kossuth Committee for the borough of Finsbury, having written a letter to Lord Palmerston, asking whether it would be convenient for him to receive a deputation for the purpose of presenting the addresses agreed to at public meetings held at Finsbury and Islington, a reply was sent on the part of his Lordship, fixing Tuesday to receive the deputation at the Foreign Office, and on that day the following delegates waited on Lord Palmerston:—

Mr. William Shaen, Mr. P. Barnes (barrister), Messrs. Thomas Lewis, D. Harris, Green, James Beale, Moore, Weston, Medley, Ett, George Browne Rogers, M'Claren, J. H. Parry (barrister), Pike, and C. H. Williams.

The deputation, who were introduced by Mr. Shaen, were received by the noble Lord with the greatest courtesy. Mr. Daniel Harris then read the two addresses, which his Lordship had come up from Windsor expressly to receive, expressive of the thanks of the inhabitants of Finsbury and Islington for Lord Palmerston's humane, patriotic, and spirited conduct in assisting in the demand for Kossuth's release.

Lord Palmerston, who had listened with profound attention to the reading of the addresses, then said he felt extremely flattered and highly gratified by this expression of opinion on the part of so large a number of his fellow-countrymen for his exertions in endeavouring to promote the cause of national freedom in those nations who stood in need of it. The Government were fully aware of the sympathies of the British nation in favour of the cause of Hungary; but, of course, as the organ of her Majesty's Government, who were in friendly alliance with great foreign powers which had been referred to, it could not be expected that he (the noble Viscount) should concur in some of the expressions which had been used in the addresses. He felt, however, that it was highly gratifying to have been instrumental in aiding the cause of the patriotic Hungarians and Poles, who, without British intervention, would no doubt have been doomed to perpetual imprisonment, and perhaps to their freedom, if not even their lives, in the cause of their country's independence. (hear.) They never could have been rescued from the fate which awaited them, even by the aid which the Government of this country was enabled to afford, had not the Government been backed by public opinion here. There was no [illegible] of the great moral power which the Government of this country had at [illegible] affairs, or which the Government were enabled to exercise in that power by the public opinion of the people. No doubt the moral power of the British Government was immense, more than people generally imagined, but it would only be effective so long as the people and the Government went together. (Hear, hear.) There could be no doubt with regard to his Hungarian policy the Government had been backed by the people, as was instanced by the fact of the appeals that had been made from all quarters, and from all the large towns and cities in the kingdom, urging on the Government the duty of intervention in that unfortunate question. It was not necessary that England should exercise power with its armies, with its bayonets, or with its cannons. The moral power, when the Government was backed by the people, was more than a match for all. Moral power was greater than anything else; but even that could not be made effective unless the Government and people acted in unison. The Government, more especially the foreign department, had at one time seemed with having too much secrecy with regard to their transactions with foreign powers. It was said there ought not to be so much secrecy in diplomacy; but, upon the same ground that men in the ordinary business transactions of life did not make public all the details of such transactions until the bargains in which they might be engaged were completed, so also was it necessary that the publication of the proceedings of the foreign department of the Government should not prejudice the department of the Government, in order properly to transact the business of the nation. The noble Lord again said, the reception of these addresses just read, and the generous sympathy which they expressed on the part of his countrymen, afforded him unfeigned pleasure and gratification.

Mr. Shaen observed that he felt that the people of England had been hitherto somewhat lukewarm in their manifestations of the feelings which made public questions; but recent events, coupled with the circumstance that encouragement was held out to them by the Government that they should do so, would have the effect for the future of making them equally alive to foreign as to domestic sub ects.

Lord Palmerston remarked that one of the difficulties in foreign affairs which was felt was from the fact of the great bulk of the people caring general y but little about them. The Government had no desire to be urged on [illegible] war although they were desirous of upholding the nationality of foreign countries. At the time when Hungarian affairs were agitating the world—he did not allude to recent demonstrations here, but those which led to the step on the part of the Government were the great dem.nstrations held in Glasgow, Edinburgh, Birmingham, and all the great towns, as well as the metropolis—when forty or fifty addresses had reached him from all the great towns, he (the noble Viscount) forwarded them to Sir Stratford Canning, to show him that it was not merely the wish of the Government but the wish of the people that he should interfere and prevent that, if possible, which other powers were demanding; and that it was only that circumstance which rendered the Government in a position to grant aid if were needed. But the Sultan, to do him justice, was most willing to lend his aid and co-operate with this country in carrying out the wishes of the British Government. (Hear, hear.) At the same time, however, a great deal of good generality and judgment were required, and during the pending struggle a good deal of judicious battle-holding was obliged to be brought into play. (Hear, hear.) His Lordship having again expressed his gratification at these marks of confidence and approbation on the part of the people, the deputation withdrew, highly gratified with the warm reception they had received from the noble Viscount.

THE ADDRESSES TO KOSSUTH

We subjoin an accurate list of the places from the corporation or body of the inhabitants of which addresses have been presented to Kossuth. Should it be found that any place from the corporation or inhabitants of which any address had been sent is not in this list, it must be understood that it has never reached its destination, and information as to the fact is requested to be communicated immediately to J. Toulmin Smith, Esq., Highgate, near London:—

Aberdeen, Ayr, Ayton-Lyne, Barnsley, Bath, Bedford, Bingley, Birmingham, Boston, Bradford, Bridgwater, Brighton, Bristol, Burnley, Burslem (Potteries), Bury, Canterbury, Cambridge, Clerkenwell, Cork, Coventry, Croydon, Cupar-Fife, Derby, Deal, Dover, Dundee, Dunfermline, Finsbury, Glasgow, Halifax, Huddersfield, Ilkeston, Islington, Kidderminster, Lambeth, Leeds, Leicester, St Leonard's (Shoreditch), Liverpool, Llandilas, London, Manchester, Marylebone, Northampton, Nottingham, Oldham, Paisley, Penrose, Preston [illegible] Sheffield, Stockport, Sunderland, Southwark, Staffordshire Potteries, Tewkesbury, Taunton, Wakefield, Warwick, West Hackney, Westminster, Wick, Woolwich, Worcester, Wrexham.

In the reply of Kossuth to the Bristol address, dated Eaton-place, Nov. 13, there is the following passage:—

For the future of my country, it is certain, and it cannot be distant. A nation of freemen, whose fathers have won its arms for its sons of freemen, and who have so well known the value of free institutions, that they have sought [illegible] strengthen them by extending their benefits, through peaceable and lawful means, to every man within its pale, and such a nation can never be crushed out. The inherent elements of inextinguishable vitality exist within it. Its future is written in the heart of every one of its sons. The warmly expressed sympathy of that English nation, which has so often defied, like us, to struggle for and maintain by arms its liberties, and the dearest inheritance of its fathers, will assuredly bring that future nearer.

DEPARTURE OF KOSSUTH

The Mayor of Southampton received on Tuesday a telegraphic message from the Peninsular and Oriental Company in London, stating that the Royal Peninsular mail-packet *Jupiter* was at his service on Thursday next, for the purpose of conveying Kossuth from Southampton to America, to embark on board the *Humboldt*. A special meeting of the town council of Southampton was held on Tuesday. The following is the official record of the proceedings:—

BOROUGH OF SOUTHAMPTON,—Tuesday, Nov. 18.—At a meeting of the council of the borough of Southampton, held this day at the Audit-house, or Council-chamber, Southampton—Richard Andrews, Esq., mayor, in the chair—it was moved by Mr. Alderman Lashley, seconded by Mr. Alderman Falk, and resolved unanimously, "That the council having received from the worshipful the Mayor a communication as to the intended departure of the illustrious Hungarian patriot, Louis Kossuth, from this port to the United States of America, on the 20th instant, the members of this council cannot refrain from thus manifesting their admiration of those patriotic and strictly constitutional sentiments which he has everywhere, and on all occasions, enunciated to the people of this country, and of those prompt and unqualified denials which he has given to the misrepresentations of the abettors of despotism and tyranny, whether resident in this or in other countries, as well as of the surpassing eloquence and irresistible truthfulness with which he has placed before the British public the causes which led to and the crushing oppressions of his beloved country, and the claims which it has on the sympathy and moral and energetic influence of all lovers of freedom throughout the world. Most gratifying it has been to the inhabitants of this town day to day to witness the arrival of that great and distinguished man in our port, on the 23rd of October last, that the ardent admiration of his public conduct and private worth, and of his vast sacrifice for those great and undying principles of liberty which he so ably and worthily represents, that principle expressed by the Mayor on the said evening of exportation of his person and the rights of freedom, and trusting that, by the blessing of Providence, he will ere long be restored to his country and home, and there realise in the emancipation of his beloved nation the most ardent wishes of his noble and generous heart, and the complete and enduring consummation of his transcendant exertions and labours."

It was moved by Mr. Councillor Borrett, seconded by Mr. Councillor Payne, and resolved unanimously, "That the foregoing resolution be engrossed on vellum and presented to his Excellency Louis Kossuth."

The Mayor of Southampton is *ex officio* Admiral of the port, the boundaries of which extend to Hurst Castle, at the termination of the Solent, and where it joins the British Channel. The corporation of Southampton have not traversed so much of their marine territories as they passed over last Thursday, to pay homage to the Hungarian patriot.

Kossuth and Madame Kossuth left town on Thursday morning, by the seven o'clock train for Southampton. The following is the correct list of the persons accompanying the Chief:—M. and Madame Pulszki, Colonel Count Bethlen, Lieut.-Colonel Thaer, Captain Tarcik, Peter Nagy, secretary (late Secretary of Legation in Italy), Adriano Lemmo, Paul Hajnik, late Chief of the Police, and Kossuth's faithful servant Cooks (Joseph).

On Thursday morning Kossuth arrived at twenty minutes past eleven o'clock at Southampton; the train being over time, owing to the snow. He was received at the station by the Mayor and corporation; when he went in procession to the house of the American Consul. At half-past two Kossuth embarked on board the *Jupiter*, with a large party. A *déjeuner* was given; at which, after his health had been proposed, Kossuth addressed the company for an hour in a powerful and eloquent speech, which was much cheered. Lord Dudley Stuart, the Mayor, and the American Consul also addressed the company. The *Jupiter* reached Cowes Roads shortly after four o'clock; but, as at half-past five the *Humboldt* steamer from Havre was not in sight, the *Jupiter* returned with the visitors to Southampton, Kossuth, Madame Kossuth, and their suite going on board the *Humboldt* to await the arrival of their steamer. At eight o'clock P.M. the *Humboldt* had not arrived, but was expected every moment, having left Havre at seven A.M. The reception of Kossuth during the whole day, from his departure from town down to Cowes, was most enthusiastic. When Kossuth went on board, the *Jupiter* hoisted the Hungarian flag, which was saluted from the battery with 21 guns.

Shortly before nine o'clock, the *Humboldt* arrived in Cowes Roads; and after receiving M. Kossuth and party on board, steamed out.

ORIGIN OF THE MAGYARS.—At a time when the people of Hungary, their struggles and their prospects, excite so much public interest, the following notice of their origin may be acceptable to our readers. About twenty years ago, Cosmo Von Körös (otherwise known by the name of Körösi), who had been travelling in Asia for several years, partly supported by English funds, with the object of discovering the original seat or country of the Hungarian race, wrote an account of his researches from the East Indies, and addressed to M. Neumann, the then Secretary to the Austrian Legation in London. The letter was in Latin, and to this effect; viz.:—That on studying the Tibetan language, and comparing it and analysing with his native tongue, he had found the most striking affinity between them. In the Sanscrit works to which he had referred for obtaining this knowledge he had discovered many words of Hungarian origin, which would now be sought in vain in the former seat of the nation, which he considered to be, doubtless, in the interior of Chinese Tartary. But in the lapse of time, throughout all this country, as well as Mongolia, the Tibetan language had become predominant, and consequently the original dialects had been partially superseded and mingled with the Tibetan. Pursuing his inquiry, he made himself master of the Tibetan grammar, from his Grammar and Dictionary, with English explanations), and came to the conclusion that the Hungarian was closely allied to the Turkish, Mongol, Tibetan, and Sanscrit; thus confirming the fact that Hungary was inhabited by a wandering tribe from the heart of Asia, as he had been led to suppose. M. Körösi sent us proofs corroborative of his opinion to Europe, and they are probably deposited in the Archives of History and Geography at Vienna; but we think there is some confirmation of it to be gathered from the physiognomy, costume, and mental character of Kossuth and other Hungarian exiles, of whom we have of late seen such remarkable examples. Though intermixed with other races since their migration, it is obvious to discern a good deal of the Tartar origin in the countenances of these individuals, of whom their leader may be deemed a present type; and, not to mention the remains of Asiatic costume in parts of the country, the impulsive temperament, and impetuous eloquence of this extraordinary person, and, indeed, his whole appearance, bearing, and conduct, far more nearly resemble Asia than Europe, in every condition of their development,

KOSSUTH'S ELOQUENCE AND POLITICAL CHARACTER.

(From the Introduction to the "Authentic Life," &c., published by Bradbury and Evans.

THE intense love of country and of liberty took captive the affections of Kossuth's countrymen. "That is the key," he said at Birmingham, "of the faith and truth my people have in me, their plain unpretending brother—a faith neither troubled by a calumnies nor broke by adversity. It is that very people which takes a still for the incarnation of their wishes, their affections, and their hopes." The same love of freedom and fatherland now recommends him to the admirers of freedom of all description throughout Europe, who were cantoning under various names, but all under the impulse of "present necessities and the ex gences of modern times" against the "stubbornness of past ages," still embodied in the ancient tenacity of despotism.

He is actually, as he described himself, the incarnation of a great principle—and in him all things are subservient to that. It is the master passion of his soul. It is not surprising, therefore, to those who are aware that any strong emotion takes possession of its own aliment, that Kossuth should have addressed in their own language many of the political sects and classes who under different names are battling in that twilight which in all branches of knowledge—politics as well as geology—precedes the full day of science, "for the exigences of modern times" against the "stubbornness of past ages." It is common to all men of genius to have very vivid as well as clear conceptions, every one of which, while it lasts, is overpoweringly convincing. Within the sphere of their attributes, and to serve the great end for which they are endowed with genius, "they are all things to all men." Hence Kossuth, in pleading the noble cause with men animated by the same desire as himself, though they take different and adverse means to conquer "the stubbornness of past ages" appears to some persons, perhaps, of superficial minds to be inconsistent, but he is undeviatingly constant—the needle is not more constant—to the great and mating passion of his soul. Accordingly, whatever may be the apparently verbal inconsistencies detected in his different speeches by Socialists when he is speaking to the middle classes of England, and by the middle classes of England when he is communicating with Socialists (both like him struggling to reconcile the stubbornness of the past with the exigences of the present), there are certain great points to which he remains inviolably true.

He is a very religious man, and his spirit is essentially religious. In every discourse a lively sense of his and all man's dependence on Providence is always apparent. It is nothing simulated for gain, it is plainly in his heart. The foundation of all his hopes is a fervent faith. Some of his expressions, as when he spoke of the "inspiration of the Holy Ghost of freedom," may possibly be offensive to some minds, but all his speeches display a constant reliance on the Power which rules the thoughts and heart of man; and he contends for freedom as a duty, because "God has not created this fair world to be a prison to humanity. Peace can only be founded upon the contentment of nations; and that contentment is a fruit which in no other garden than liberty grows."

He fights against despotism, as he has repeated over and over again, because it is immoral; because it invades life and destroys property; because, as he shows by the different rate of mortality in free England and despotic Russia, it kills more human beings than any war, and has sacrificed in a year more lives than have fallen in five centuries in battling for freedom. As a religious man, he feels deeply the obligations of morality, and his policy is founded on its imperious laws in opposition to the tortuous and dark diplomacy of despotism. His love of fatherland and humanity alike dictate a hatred of the Czar; of the Emperor of Austria; and he never swerves from honesty and openly expresses what he will not. At the same time, his one great object precludes him from making himself exclusively a partisan of any of the political sects and political faiths that are found in Europe. He boldly avows himself, as far as Hungary is concerned, a republican. "Here I take the opportunity," he said at Manchester, "of declaring that it is true I, for my own country, I for myself, have republican convictions. I have a conviction that, in Hungary, after what has happened, though it has been the most monarchical country in Europe, it would be impossible, because the treachery of the House of Hapsburg has driven out every faith of the people in the principle, to restore its allegiance to monarchy. But you see it came to my mind to have the profession that I will go on all through the world to preach government forms. I consider," he added, "the forms of government may be different, according to circumstances. There is freedom in monarchical states, and freedom in the United States under a republic; but I never gave myself out as a knight-errant against whatever form of government exists." He is convinced of the necessity of a republic for Hungary, and he knows his own country better than we know it; but, like a true apostle of genuine freedom, he finds it in men's own will, and admits its possible existence in France, and its actual existence in America, under a republic, while he honours, praises, and almost worships the freedom and its consequences he has beheld in monarchical England. As a religious man, and a moral man, he cannot be the patron of anarchy or disorders of any kind, but he recognises, consistently with the history of mankind, the possibility of freedom of order and of property existing under various forms of government. Most beautifully and logically did he show the immorality under some circumstances of peace, and justify war by the very highest principles of religion.

On such evidence, we affirm M. Kossuth's speeches to be fervently religious, and to inculcate the most noble principles. They are based on a respect for those sacred laws which hold society together, and which are the source of all that is valuable in man's nature. His arguments are all in favour of the inviolability of life, of the protection of property, of national independence, of the necessity of order, and of the prosperity and happiness of freedom; and he has nothing to retract or to regret as wrong done to Hungary. That the circumstances of the times turned the constitutional resistance into an attempt at complete revolution, and the deposition of the old tyranny, is not to be reckoned to him as blame, unless he was the cause of the French Revolution, which excited commotion in all the ill-governed countries of Europe. Nor can he be censured for the failure at present, unless it be supposed that he is endowed with power to control events; and that, having meant well, and struggled nobly, he is to be judged by a different standard from all the other statesmen and heroes who have ever appeared in the world.

FOREIGN AND COLONIAL NEWS.

PARISIANA.

(From our own Correspondent.)

THURSDAY, NOV. 20.

You are aware of the projected marriage between General Cavaignac and Mdlle Odier, the niece of the rich banker of that name, who formerly occupied the post of Governor of the Bank of France. It is said that a few days before the signing of the contract which took place last Wednesday, the match was very near being broken off. The publicity given to this union of military fame with the banking house, called forth, it would appear, from the friends of the General some strong observations on the disproportion between *fifty* and *nineteen*; but the young lady's family, very earnestly desire the alliance, and overcame this delicate scruple, and the marriage is to take place early in January. It is remarked that the bride's fortune (800,000 francs, or £32,000) is not in proportion with the immense wealth of her uncle. Still, £32,000 is a handsome dowery for a soldier whose only fortune is his character and his sword, though both are of sterling proof.

Every lover of the fine arts who visits Par's henceforward will find reason to be grateful to the Government of the Republic for the manner in which it has used the treasures in the galleries of the Louvre to be arranged. The pictures, instead of being, as formerly, placed in confused and discordant masses, which rendered all comparisons of styles and periods impossible, except to the experienced *connoisseur*, are now conveniently and judiciously arranged for schools and chronology. A visit to this glorious collection is at present a real luxury to all true admirers of the grand and beautiful in art. The last of the new galleries have lately been thrown open to the public, having been all repaired or rather reconstructed, and completely restored to the splendour of their original designs; and all this in the midst of a thousand difficulties, oppositions, and want of funds, through the zeal, indomitable perseverance, and love of art of M. Jeanron, the late Director of the Louvre. His indefatigable exertions during the whole period of his administration are indeed worthy of all praise; those of which are now shown by the new galleries thrown open, by the new treasures in painting and sculpture he has unexpectedly brought to view, which have been for years hidden in the lumber in the garrets and cellars of the palace, and more especially by one wise and judicious step which above all others must lay every foreign visitor as well as artist under a lasting debt of gratitude towards him, namely, for having finally put an end to that abominable barbarism of holding the annual exposition of modern paintings in the same galleries that contained the works of the old masters; the paintings being covered up, and the new works *hung over them!* This execrable management was complained of year after year, both by artists and foreigners. The first were deprived for two months of all opportunity of copying the *chefs-d'œuvres* of the collection; and the second, from viewing them—often the object of a pilgrimage from distant countries. M. Jeanron was nominated to his post at a dreadful moment, when the mobs of February, 1848, were masters of the capital, and the lawless populace who had sacked the Tuileries, and indeed forcible possession of the palace for many weeks, were divided from the picture galleries of the Louvre by the frail barrier of a single door. At this crisis, when the delay of an hour might have consigned them to destruction, M. Ledru Rollin—who, whatever may be thought of his politics, has always shown himself a genu ne lover of the arts—bethought himself of the perilled treasures left to the mercy of the multitude; he knew M. Jeanron, a thorough Republican, a man of energy, himself a painter, and an enthusiastic worshipper of his art. As a leading member of the Provisional Government, M. Ledru Rollin at once placed the galleries under his guardianship, giving him full authority to take all measures to ensure their safety, a duty which M. Jeanron nobly performed; and to this prompt act of decision we are probably indebted for their existence at the present moment. The new galleries, and the improved arrangement of their contents, demand a more detailed description than I have space to attempt in my present epistle; but I may briefly note that the impression of some of the finest *chefs-d'œuvres* is considerably damaged by the overpowering richness of the decorations. The inestimable services of M. Jeanron have met a return which would, at that time of fury and folly, be at least, not more grateful to its faithful servitors than that of a Monarchy; for, after all his laborious exertions, when he had succeeded in carrying his designs into execution, just before the opening of the renovated galleries, he was removed from his place, his successor receiving the decoration of Commander of the Legion of Honour; for improvements and embellishments which he had scarcely had time to glance at! *Sic vos non nobis.*

M. Léon Faucher's scheme of devoting 16,000 francs a year for theatrical places, intended to woo the public of Paris into the paths of virtue and morality, is very heartily laughed at. In fact, it looks a little like Sheridan's celebrated plan in "The Critic," of reforming the vices of mankind by the stage, and suppressing crime by dramatising the penal laws into "sharing the corpses" out at the evil doers. The plan of the ex-Minister is, however, chiefly disliked because the Government here are too fond of meddling with theatrical matters, as, by their nominations of directors, commissioners, inspectors, &c., they contrive to extract from the theatres a number of pretty little ministerial places for their friends and supporters; these appointments being made from that colossal job the Grand Opera, with its *six hundred thousand francs a year*, down to the lowest theatre in the capital, without the least reference to suitable qualifications for the post to be occupied.

Theatricals are decidedly looking up. We are promised a new ballet to-morrow at the Académie, in which Mdlle. Priora is to make her *début*. On the night following, Félicien David's opera, "La Perle du Brésil," is, if managers' words be not "false as dicers' oaths," positively to be produced at the Opéra National. Balfe's opera of the "Bohemian Girl" is also accepted at this theatre, and is in course of translation; it is to be brought out early in January. Limnander's new version of "La Barbe Bleue" is expected early next week at the Opéra Comique.

The Italian opera is flourishing; the brilliant success of Mdlle. Cruvelli in "Norma" has been followed by Rossini's "Semiramide," in which Mdme. Barbieri-Nini shone out with a lustre scarcely conceivable to those who had only heard her in "Lucrezia." Her style, perfectly Rossinian, gave a splendid effect to the "Bel raggio," and the other vocal gems with which this noble opera is filled. The applause was tremendous, and this great singer is said by the critics only now to have made her *début*. M. Beletti, whose twelve months of comparative repose—for occasional concert-singing in the United States with Mdlle. Lind is very different from the wear and tear of an opera season—seems to have given not only additional power to his voice, but to have imparted a grace and flexibility to his style which now enables him to enter the lists with any baryton on the stage, sang the part of *Assur* very finely, and played it with great spirit; he shared the honours with the great *prima donna*. Mdlle. Ida Bertrand sang [illegible] cleverly; and the orchestra and choruses, under M. Hiller, were truly admirable. The *ballabile* again took in crowds at their wonted quarters, and the season promises to be everything that Mr. Lumley can desire. "Luisa Miller" is talked of for Mdlle. Cruvelli and Beletti. There are whispers, also, of a new German opera, of the beauty of which extraordinary accounts are given.

FRANCE.

The National Assembly—or, rather, that section of its members who formerly constituted the Conservative majority, and assumed to themselves the title, *par excellence*, of "men of order"—have again tried their strength in a contest with the President of the Republic, and have been worsted, as they usually are when they yield to the dictates of unworthy resentments and mean jealousies in their legislative conduct, and in their official relations with the President.

We noticed last week the proposition of the Questors of the Assembly to place at the disposal of the officers of that body a large military force, nominally for the purpose of its defence from aggression, but, in reality, to enable the Assembly to act with more means of power than the President. The proposition, in its original form, was so opposed to common sense, except in reference to a contemplated civil war, that it was withdrawn, and the following modified version of it substituted; viz.:—

Article 6 of the decree of the 11th May, 1849, shall be issued as an order of the day to the army, and placarded in all barracks.

The following are its terms:—

"The President of the National Assembly is charged to watch over its exterior and interior safety.

"For the purpose, he has the right of summoning the armed force and all military authorities whose aid may be deemed necessary.

"His requisitions may be directly addressed to all commanding officers or functionaries, who are required immediately to obey him, under penalties provided by law."

The debate took place on Monday, and was of that extremely animated, passionate, and personal tone which characterises the discussions of the Legislative Assembly of the Republic when any topic of particular interest engages the attention of that very heterogeneous body. On a division the proposition was rejected by a majority of 108, the numbers being 408 against it, and 300 in its favour. Amongst the minority were seven general officers of the army, three of whom were General Cavaignac, General Changarnier, and General Lamoricière. These were more than counterbalanced, however, by twenty-four generals in the majority, amongst whom we find the equally celebrated names (in a military point of view at least) of Baraguay d'Hilliers, d'Hautpoul, Gourgaud, Subervie, Oudinot, &c.

The general effect of the whole affair has been to put Louis Napoleon in a better position in the public estimation, and to lower the character of what was formerly the majority, but is now the minority, of the Assembly, presenting them in their true light as a set of unscrupulous politicians, who only regard, in the discharge of their responsible duties, their own private predilections, prejudices, and pigues, and not the public weal of the community, which now especially demands that public men should proceed in a spirit of self-sacrifice to the conduct of affairs.

The increased popularity of Louis Napoleon was shown in public next day (Tuesday), when, on proceeding to the Elysée from the Champ de Mars, he was loudly cheered by the people, with repeated cries of "*Vive Napoleon!*" "*Vive le Président!*" "*Vive le Suffrage Universel!*" The same evening there was a grand reception at the Elysée, at which the attendance of military officers and members of the Assembly was very crowded.

The only other important feature in the legislative business of the week was the Municipal Franchise Bill, which is still under discussion. It is expected that it will form the basis of a modification of the present Parliamentary electoral law.

The protection of the Roman Catholics, of whatever nation, in the East has for many years past been claimed by France as "the eldest daughter of the Church," and has been generally accorded to her—a matter of diplomatic etiquette by the other powers of Europe. Russia, on the other hand, which assumes to be the protectress of the followers of the Greek Church, seems at present inclined to dispute that attitude of France and its consequences. At least, we learn from the *Journal des Débats*, that M. de Titoff, the Russian Minister at Constantinople, has, with reference to Jerusalem, taken up a menacing position, protesting that the Greeks had rights prior to the treaties of 1690 and 1740 with France, and that the Emperor, as protector of the Greek church, would maintain his own rights, which, if slighted, would oblige his Ambassador to quit the Turkish territory. The French Minister at Constantinople has entered a protest against this course on the part of Russia.

The *Constitutionnel* having charged Count Molé with taking part in 1847 48 in organising banquets to overthrow Louis Philippe's government, the Count has written to that journal to deny such statement, adding that "no one in France blamed those banquets more than he did, or more loudly predicted the consequences of them." The *Constitutionnel* expresses its regret at the mistake it had fallen into.

Marshal Soult is lying dangerously ill at St. Amans de la Bastide (Tarn), without the least hope of recovery.

Circulars have been sent, by order of the Government, to the various Procureurs-Général throughout the country, counselling strict execution of the laws, and giving special instructions regarding all secret societies.

SPAIN.

Accounts received this week, viâ Paris, from Madrid, state, that at the urgent request of Lord Howden, her Majesty had granted a pardon to twenty-three Englishmen who had formed part of the expedition against Cuba.

UNITED STATES AND CENTRAL AMERICA.

The advices this week from New York are to the 8th inst.

At Washington it was understood that a treaty from his Majesty Kamehameha III., King of the Sandwich Islands, proposing the annexation of these islands to the United States, had been transmitted to the American Government, and was now among the files of the State Department.

Another serious gale had taken place on Lake Erie, by which several vessels were lost.

At New York the elections had terminated in favour of the Democrats. During the proceedings there was much rioting, in the course of which the ballot-boxes were destroyed.

A decision has been given by the Postmaster-General, to the effect that a frank by any officers of the United States Government entitled to the privilege will carry a letter, &c., free by any United States mail steamer to Europe.

The British residents in New York had given a complimentary dinner to Mr. Henry Grinnell and the officers of the expedition sent by him in search of Sir John Franklin, at which Mr. Grinnell's son stated that his father had offered his vessels for a further search.

Father Mathew, who has returned to England by the *Pacific* steamship, had delivered a farewell address, before his departure, to the citizens of New York, who treated him with the utmost respect on the occasion.

From Central America we learn under date the 23d ult., that at Chagres a dreadful riot had taken place between the native and the American or foreign boatmen, and that upwards of twenty persons had been killed. The quarrel arose out of an attempt on the part of foreign boatmen to prevent the natives from carrying passengers and from the steamers in the harbour, landing them at Chagres, as reported them at a less price than the tariff fixed by the [illegible] club. At San Juan there had also been some disturbance, caused by the turbulence of the Americans. The affair took place on board the steam-ship *Prometheus*, in consequence of the captain's refusing to land until the passengers by the *Independence* had arrived. The [illegible] mutinied, put the captain in irons, and compelled the mate to get up steam and proceed

From the Pacific the advices are to the 23d ult. In the northern provinces the revolutionary party had gained possession of the entire western portion of Matamoras; many of the United States troops had deserted, and joined the revolutionary party. The Mexicans had obtained severe losses in the different engagements. General Avalos had been wounded.

In the capital (Mexico city) it was stated that the British Minister had had an official interview with President Arista, and had demanded a final answer to Lord Palmerston's despatches relative to the debts of Mexico. It is also reported, that unless the answer is satisfactory, all the Mexican ports will be blockaded.

The news from California is to the 2nd of October. It was accompanied by a large consignment of gold dust, viz. upwards of 200,000 dollars in value. The city of San Francisco is rapidly spreading, and now presents that massive appearance which always distinguishes a city from a village. Many large and elegant brick and stone buildings have been erected since the fires of May and June. The burnt districts may be said to have been built up again. Trade is reviving, and the prospects are good.

The accounts from the gold mines are of the most encouraging kind. Some of the quartz mining companies had met with extraordinary success, and a tenth share in one company had sold for 6000 dollars in the Oregon territory it had become known that a discovery had been made there of rich quartz diggings between Shasta and Scott's river. Miners were crowding to the locality in great numbers. A party had gone to Sacramento for the purpose of procuring machines to break and grind the rock. The yield is said to be greater than that of the richest quartz mines in California.

INDIA.

Despatches in anticipation of the overland mail, bearing date Calcutta, October 7, and Bombay, October 17, were received during the week, but they are almost totally devoid of news, political or otherwise. The Punjaub and Scinde territories have been undisturbed in the Sulegoye country. It was said that a wing of her Majesty's 61st, a squadron of the 7th Light Cavalry, and the Guide Corps, with a few light field-pieces, were to proceed to the disturbed districts immediately.

There was a general belief present that the Punjab and Scinde, together with the north-western provinces west of Allahabad, were to be speedily constituted a separate presidency under the title of the Presidency of Lahore, the remaining portion of the Agra presidency being annexed to Bengal.

From Persia we learn that the Maharajah Gholab Singh, notwithstanding the bad state of his health, has taken advantage of the recent disturbances on his frontier to enlarge his dominions at the expense of some of the adjacent petty chiefs. It is generally believed that the disease from which he suffers—diabetes—is one that is usually incurable in India.

From India beyond the Ganges we learn through the Singapore papers that the new King of Siam has given orders for a large addition to be forthwith made to his capital, the city of Bangkok. He has also established a printing-press, at which works are to be produced in Siamese and English, for the enlightenment of his subjects. His Majesty has also directed a general revision of the laws of the kingdom, so that they may be made as equitable as possible, and we understand he has expressed his firm intention that equal justice shall be dealt out to all alike, high and low, rich and poor.

From China there is no intelligence of interest.

THE WAR IN KAFFIRLAND.

EXTRACT OF A LETTER FROM AN OFFICER SERVING IN KAFFIRLAND.

"FORT BEAUFORT, September 15, 1851.

"Since my last letter, I grieve to say that some of my worst anticipations have been realised. On the arrival of the 2nd, or Queen's, an additional force of 600 rank and file being at the Commander-in-Chief's disposal, a series of strong patrols were undertaken to scour the entire range of the Kat River bush, from near its mouth to the Kroom Ridge bush. On the 9th inst. a strong force of 2000 men, including native levies, under the command of Col. Mackinnon, attacked [illegible] Kaffirs in the bush, between the old fort, Wiltshire, [illegible] River. Two companies of the 2nd, under the command of Captain Oldham, who, with a party of native levies under Commandant Davies, were in front, while the main body, having by some accident become separated from the native levees, were attacked in a narrow defile or bridle path (barely wide enough for three files to march abreast), on front, flanks, and rear, by an overwhelming force of Kaffirs; and, melancholy to relate, sixty-nine of our brave men were killed, wounded, and missing. The latter, no doubt, fallen a prey to the unrelenting hatred of our [illegible] enemies. Captain Oldham exhibited the greatest coolness and presence of mind. He succeeded in rallying the survivors of his party, [illegible] ing them into comparative safety, when he fell pierced by the [illegible] bullet. Had it not been for the opportune arrival of a company of the 6th, under Colonel Michell, not a man of the Queen's would have survived to tell the tale. By a singular coincidence, each regiment that has arrived from Europe has lost an officer in their first rencontre with the enemy.

"Every farmhouse for miles round has been burned. The once happy and pleasant one, called 'Blakeway's Farm,' about thirteen miles from Fort Beaufort, and which was the scene of the disaster shown Skeich, is now a heap of ruins. [illegible] to every house [illegible] the valleys are not so stanch as was supposed: that [illegible] old soldiers among them, is certain; for, when the men of the [illegible] seen to fall, the derisive words, 'Bring a stretcher, bring a [illegible] were distinctly heard to proceed from the ranks of the enemy. One [illegible] most horrible in this episode of war, was the fact that the Kaffir [illegible] numbers of ferocious wolf dogs, three of which are a match for a [illegible] which they hallooed upon the troops: they flew at our men's throats and pulled them down, when they fell an easy prey to the clubs and assagais of the enemy. Some of the wounded, too, when carried off, were found to have been hit by spherical balls, which proves that the Kaffirs have by some means or other been able to obtain Government or other European ammunition. I have but little, if any, faith in the friendly tribes (?), for I am positive that their only reason for remaining neutral is to be able to furnish intelligence to the enemy. Not a patrol can move, the number and destination of which is not known to the hostile chiefs, who take up their positions at leisure, and fight or [illegible] suits them.

"On Wednesday, the 18th, the 74th, under Lieut.-Col. Fordyce, suffered a reverse, owing to the misconduct of the Fingoe levy, who, losing their

THE WAR IN KAFFRARIA.—THE ATTACK ON BLAKEWAY'S FARM, NEAR FORT BEAUFORT

presence of mind, rushed madly through the ranks of the 74th, and, before the Highlanders could extricate themselves from the confusion caused by the mass of Fingoes rushing back upon them, they suffered considerably. Amongst the killed was Mr. Hartong, the master of the band. The Highlanders, however, were not idle, and Colonel Fordyce himself knocked over not less than eight Kaffirs. So close was the conflict, that a Kaffir seized the havresac of one of the soldiers: the sling gave way, affording Jock time to draw back a pace, when he put the muzzle of his firelock slick into Blackey's face, and literally blew his head clean off his shoulders. Here again a noble trait of the British soldier was exhibited. One of the pipers was badly wounded; the column was in full retreat down an almost perpendicular kloof, when Captain Bruce, seeing the poor fellow about being abandoned, rushed to the rear, seized him round the waist, and, lifting him upon his back, carried him under a shower of bullets to the bottom of the descent where he rejoined the main column unhurt. The cheer which he received was glorious; and, when officers act thus, no wonder their men should feel a pride in obeying them.

"The bane of our service is the miserable manner in which we receive reinforcements by driblets. Imagine a cavalry regiment being sent out in slow-sailing transports, and this to a place where every hour is of vital importance; for, had we received supplies three months since, we should have been able to destroy the Kaffirs' crops of corn, which they have since saved, and buried; and while our poor fellows are living upon mutton, without bread or biscuit to it, the Kaffirs fare sumptuously. Troops, a much larger amount than we have yet at command, must be given us, if this war is to be brought to a satisfactory conclusion; it is now too late to retreat; and, as to patching up an absurd peace with the Kaffirs, it is out of the question.

"The Fort Beaufort people are on the alert, as they are in hourly apprehension of an attack from 5000 Kaffirs and 'strange tribes.' I hope that by the next mail I shall be able to give you better tidings than this conveys to you."

SUBMARINE RAILWAY BETWEEN ENGLAND AND FRANCE.

THE communication between England and France, which is daily becoming a more and more important object, has just received a most valuable acquisition in the laying of the Submarine Electric Telegraph Thus far the transmission of intelligence from one country to the other is instantaneous and complete. To consummate the international union however, means of the conveyance between the opposite shores, so as to avoid the perils and uncertainties of passage by sea, remain to be provided; for, with all our scientific appliances, we have yet occasionally to read in our morning journals such a paragraph as—"At the time of our going to press the French mail had not arrived at Dover."

The communication has long been a favourite scheme with projectors. Bridges have been proposed by some; by others it has been suggested to tunnel the earth beneath the sea, which the works now executed for mining purposes seemed to render possible; but the difficulties would be insurmountable, and the cost enormous. Another projector, M. Hector Horeau (27, Queen Anne-street, Cavendish-square), has, however, just appeared in the field, with what he allows to be a bold plan, but which appears to him to hold out the requisite guarantee for so important an undertaking.

M. Horeau's project consists in crossing the English Channel, 21 miles in extent, by means of a tube, or tubular tunnel, made of strong plate iron, or cast iron, lined and prepared for that purpose; and which, placed at the bottom

SUBMARINE RAILWAY BETWEEN FRANCE AND ENGLAND, PROJECTED BY HECTOR HOREAU.

the sea, should, besides the path for the surveyors, contain the two lines for the trains which would run within this tube.

The slope given to the submarine railway, M. Horeau considers, would admit of a motion sufficiently powerful to enable the carriages to cross the Channel without a steam-engine. The greatest depth of the sea in the middle of the Channel will admit of the construction of inclined planes, by means of which the train would be enabled to reach a point where a stationary engine or atmospheric pressure might be employed in propelling the train to the level of the land railways of France and England.

These tunnels beneath the sea would not prevent navigation: two light-houses might be erected at the entrance of the tubes; also several smaller ones between the lighthouses of France and England. These beacons, which may bear the names of the different nations of the earth, should be lighted up at night, and would indicate outwardly the position of the submarine railway, so that mariners should not cast anchor near it, as the tube might be damaged.

The day and night lights of the lighthouses should be transmitted through the tube (covered internally with coating of enamel or lead) by means of reflecting metal plates. The upper part of the tube should have some strong glass windows placed at equal distances, and gas, which would complete the lighting between the beacons: the carriages might also be open, or have glazed roofs, to enable the passengers to profit by the various lights. According to an estimate made, the cost might amount to about £87,400,000.

The submarine telegraph lately completed so successfully has inspired M. Horeau with confidence in his new railway; and he invites the co-operation of men of science, by instituting experiments to test the practicability of what must be considered a plan as ingenious as it is novel.

THE DRAINAGE OF WHITTLESEA MERE.

Those who visited the Machinery department of the Crystal Palace will remember that one of its many objects of attraction was Appold's Centrifugal Pump, which poured forth a voluminous cascade, to the great delight of a constant throng of spectators. But, though the performance of the pump thus afforded amusement, there was a strong opinion expressed by many of our most eminent engineers that its practical capabilities were worthless, and that it would prove to be nothing more than an ingenious toy. Not so, however, thought all who saw it; and Mr. Wells, of Holme Wood, Hunts, and Rodleaf, Kent, felt so confident of its merits, that he determined to have one of these pumps erected on a large scale on that part of his property over which, little more than a twelvemonth since, flowed the waters of Whittlesea Mere; and, by means of Appold's invention, complete and keep up the drainage of 3000 acres of fen land. The works were accordingly erected, and proceeded so rapidly, that on the 19th instant a large party were assembled to witness the formal opening of the undertaking. It was not until then that the full powers of the Centrifugal Pump were understood; for that which Mr. Appold exhibited in the Crystal Palace was a mere model of, and 20½ times smaller than, the one erected on Whittlesea Mere. The opening of the latter was therefore looked forward to very anxiously, as the success of the experiments then made would determine whether the prejudices that had been raised against the pump were groundless or not. Among those present were Mr. Wells; Mr. Appold, the inventor; Mr. Amos, the engineer, Mr. Fryer, the chairman of the Bedford Level; with other of the commissioners, and many practical men, and those who, from their long connexion with the fens and the peculiar system of drainage which it requires, would be able to form a decisive judgment on the merits of the invention before them. The Centrifugal Pump was then put through a series of experiments, all of which were eminently successful, and fully satisfied those who had come full of doubts and prejudices, that a new era had opened in our great drainage works. The wheel from which the pump derives its name is four feet six inches in diameter; and after a few revolutions the troubled water rose to the top of the sluice, and was hurled over the gauge boards in a roaring torrent that fell with a discharge of 16,931 gallons of water per minute. When the machine was working under a five-feet lift, the quantity of water discharged was about 7¼ tons per minute; and by removing some of the gauge boards, and diminishing the lift to between two and three feet, the volume of water discharged was 101 tons per minute; a quantity which would cover the area of an acre of land to the depth of an inch. Some idea may therefore be formed of the effective power of the machine. The pump is connected, by a simple wheel gearing, to an elegant steam-engine of 25-horse power, working on the high-pressure expansive and condensing principle, with two cylinders. The boiler is of a very simple construction, affording an immense amount of heating surface, thus economising fuel; while at the same time it possesses the form of the greatest strength, having none of its parts of large diameter, and presenting no flat surfaces. Its pressure is 3500 tons, being about 35 pounds per square inch. Although the steam-engine has been extensively used in the Fen districts of this country for drainage purposes, yet this Woolf's engine has been but little employed, although its consumption of fuel is only one-half of those generally used for drainage and the driving of machinery. Although Woolf's patent engines have met with much opposition, and come but slowly into use in this country, our French neighbours have not been so tardy in discovering and appreciating its merits; and most of their steam-engines for factory purposes are of this description. These engines have been rendered more simple and effective by modifications introduced into them by Messrs. Easton and Amos, of the Grove, Southwark, the engineers, who have designed and constructed the engine and pumping machinery on Whittlesea Mere. At the conclusion of the experiments, which completely satisfied those present of the capability and superiority of the invention, the company partook of an elegant champagne luncheon which had been provided by Mr. Wells to celebrate the occasion. The repast was laid in a room within the engine-house suitably decorated for the occasion with wreaths of evergreen and flowers, and trophies of the reed, the past produce of the Mere shoals. Banners with poetical inscriptions were also displayed; conspicuous among which was the following happy quotation from Byron, in allusion to the different work now presented by the country to when it was lately covered with water:—

We see, we recognise, and almost deem
The present fabulous, or the past a dream.

Our Illustration represents the engine-house, a description of building in which architectural beauty has to give way to usefulness, but the most of which has been made by the architect, Mr. Human. To the left of this, down in the sluice, is the centrifugal pump, which receives the water from the main drain, called the "Holme Lode," and passes it on under a bridge to one of the main drains of the Bedford Level, called the "New Cut," which is, in fact, a navigable river. This is seen in the foreground, and far above its banks the waters of last winter floods have risen, throwing down the projecting dykes, on which so many thousands have been spent, and spreading the work of destruction far and wide. To prevent a repetition of these evils will be one of the principal duties of the Centrifugal Pump, and its erection by Mr. Wells is justly regarded as an immense boon to the whole district; while its success will doubtless give to Appold's invention a celebrity which it justly deserves, but which, perhaps (although a Council Medal had been assigned to it by the Great Exhibition jurors), it would have been slow to acquire, had it not been for its connexion with such an important undertaking as the drainage of Whittlesea Mere.

DRAINAGE OF WHITTLESEA MERE.—APPOLD'S PUMP.

We illustrated the process of the drainage of Whittlesea Mere in four views in the ILLUSTRATED LONDON NEWS for April 26th; and have at other times given representations of the various objects of interest found in the clearing away of the waters.

IRON BALL-ROOM FOR BALMORAL.

MESSRS. E. T. Bellhouse and Co., of the Eagle Foundry, Hunt-street, Manchester, have just finished and are about to send to the Highlands a spacious structure of corrugated iron plates, by the command of his Royal Highness Prince Albert, destined to supply to the Royal residence at Balmoral an additional room for various purposes of a social and festal character, as ball-room, dining-room, private theatre, &c. The idea was suggested to his Royal Highness in one of his morning visits to the Great Exhibition, on examining a model belonging to Messrs. Bellhouse. The dimensions of the structure are as follows:—Length, 60 ft.; breadth, 24 ft.; height to the eaves, 10 ft.; to the central ridge, 17 ft. The foundation consists of a framework of timber, the section of which is 8 in. by 6 in.—laid perfectly level and true—and running beneath the sides and ends of the erection. Upon this framework are bolted the base plates of cast-iron upright pilasters, at intervals of about 8 ft. The pilasters at the sides are prepared at the top to receive the feet of wrought-iron principals, for the roof, which extend from the pilasters at the front to those at the back, forming a strong and complete tie across the building. A series of angle-iron ribs running lengthwise along the erection connect the principals together, and receive the sheets of the roof, which are of corrugated iron, in sheets of about 7 ft. by 2 ft. 2 in., the corrugations running vertically from the ridge to the gutter of the eaves. The ends of these sheets meeting at the angle of the ridge, are connected together by a cast-iron ridge capping, to which they are bolted. The upper line of the ridge is ornamented by iron castings of the fleur-de-lis pattern, which gives a neat effect to the roof. The lower ends of the roof sheets are bolted to the inner edge of the gutter, which is prepared to fit the corrugations and make a joint. The sheets forming the front, back, and ends of the erection are placed in the contrary direction to those of the roof, that is to say, the direction of the corrugation is from pilaster to pilaster, horizontal. The sides of the pilasters are prepared in such a way as to receive the ends of the corrugated sheets. The lower edges of the side sheets are bolted to moulded base-plates, which are fastened down upon the upper surface of the wooden framework, and which also serve to divert the wet from the centre of the wood frame. The upper edge of the wall sheets are bolted to a flange cast along the under side of the gutter. Moulded capitals of a foliated design, and a panel in the body of the pilaster, with the projecting moulded front of the cast-iron gutter running along the eaves, give a good effect to the design. At the gable the roof projects boldly over the face of the building; and a barge of cast-iron, surmounted by a pointed finial, the angle pilasters and two intermediate ones, and the returns of the corners of the moulded gutters, afford relief to the gables. The front is divided by the pilasters into seven bays; in the centre bay is the entrance door, and in those adjoining on each side are windows; in those next to the ends are also windows, and the two intermediate and otherwise blank bays are relieved by the downpipes which descend from the gutters. The back is similarly arranged, save that there is no door, but only the four windows. At one of the ends, to the right of the central or side door, there is another door; the other end has no opening. The doors are of wood, handsomely paneled and moulded, 3 ft. 6 in. wide, and are hung in wooden frames, which are fitted to the corrugated sheets. The window rames and sashes are also of wood, and are hinged in the manner of French casements. The doors are each surmounted outside by iron castings of the royal arms—which form an appropriate ornament. In the centre of the roof is fixed an iron ventilator, with a tipped cover; a wooden valve, worked from the interior by a rope running over pulleys, enables the aperture to be opened or closed at pleasure. The whole of the several parts of the structure are fastened together by small bolts, and are designed with a view to the attainment of the greatest possible convenience in erection and removal, and to the exclusion of moisture. As seen from a little distance, the structure, especially if tastefully painted, will have the appearance of a large cottage *orné*, with two doors and eight windows, the ventilator resembling an ornamental chimney; but there is no intention to have fire or artificial light within the building. It is to be floored at Balmoral, so as to save the cost of the transit of timber; and the dimensions having been furnished some time since, the flooring is all prepared, so that no delay will arise on that score, the floor being laid during the erection of the house. Its cost, we understand, will be about £300.

The iron corrugated plates are a form of sheet iron which is found to have a very great resistance to weight and pressure, and therefore to be admirably calculated for use, either as walls or as roofs. The thickness of the plates used for the Balmoral ball-room is what is termed No. 18, wire-gauge, which is less than the sixteenth of an inch in thickness.

IRON BALL-ROOM CONSTRUCTED FOR BALMORAL.

CALENDAR FOR THE WEEK.

SUNDAY, Nov. 23 Twenty-third Sunday after Trinity. Old Martinmas Day
MONDAY, 24 ... Book closed, 1672.
TUESDAY, 25 ... New Russian style ends.
WEDNESDAY, 26 ... St Siffrid. Dr. Watts died, 1748.
THURSDAY, 27 ... Sun rises 7h. 38m.; sets 3h. 56m.
FRIDAY, 28 ... Prince Albert born, 1819. Goldsmith born, 1713.
SATURDAY, 29 ... St Philip's Day born, 1554.

TIMES OF HIGH WATER AT LONDON BRIDGE, FOR THE WEEK ENDING NOV. 29, 1851.

THE NATIONAL ILLUSTRATED LIBRARY. Post 8vo., ... handsomely bound in cloth, edges gilt, and copiously illustrated with Wood Engravings, ... of volume.

BOSWELL'S LIFE of DR. JOHNSON, 4 vols.
... entirely new, and carefully corrected copy of an invaluable literary treasure.

The following volumes of the Series have already been published: price 2s 6d each, handsomely bound, and copiously illustrated with Wood Engravings, by the most eminent artists:

THE MORMONS: a Contemporary History.
"One of the most painfully interesting volumes that ever issued from the press."—Edinburgh Weekly Chronicle.

THE BOOK of ENGLISH SONGS. "The Book of English Songs is a most ... to the collection in the most complete ... Examiner.

... HELAVENS; or, the Planetary and Stellar Worlds. By D. O. Mitchell.
... and, is a theme for eloquence. Like other works of the kind, Mr. Mitchell's ... to invite extended popularity."—The Economist.

PICTURES of TRAVEL in the SOUTH of FRANCE, translated from the ... of ALEXANDRE DUMAS.
... charm of keen impressions, however, is their off-hand cleverness; and the lively ... every form."—Atlas.

Nearly Ready,
HUC'S TRAVELS in CHINA, TARTARY, and THIBET, in 1845-46.
A ... JOURNEY ROUND the WORLD, translated from the German of Miss PFEIFFER. In 1 Vol. price 5s 6d, copiously Illustrated.

NARRATIVE of a RESIDENCE at the CAPITAL of the KINGDOM of SIAM; with a description of the Manners and Customs of the modern Siamese. By Sir ARTHUR NEALE, formerly in the service of his Siamese Majesty, and Author of ... Japan, Interior and Java Head.

SIX WAYS to MORTIFY a NEIGHBOURING POPULAR DELUSIONS.

THE BOOK of SCOTTISH SONGS.

SIR WALTER SCOTT'S POEMS 2 vols.
In the Press, and will shortly appear,
THE LIFE of GENERAL WASHINGTON. Edited by the Rev. C. H. UPHAM.
... Steel Engravings (Portraits of Washington and Franklin, with Vignettes). Cloth gilt, price 7s.

LADY FELICIA: a Novel. By H. COCKTON, Author of "Valentine Vox," "Sylvester Sound," &c.

THE ILLUSTRATED LONDON COOKERY BOOK, &c.
London: Office of the NATIONAL ILLUSTRATED LIBRARY, 227, Strand; and to be had of all Booksellers, and at the Rail way stations.

ROYAL PRINCESS' THEATRE, OXFORD-STREET.—... MONDAY, NOV 24, Shakspeare's Historical Play of HENRY IV (First Part), with a ... Cast, and the Scenery, Dresses, and Decorations entirely New. On TUESDAY, ... 25 Twelfth Night, and a Comedy; on WEDNESDAY, Much Ado About Nothing, and a Comedy; THURSDAY, Merry Wives of Windsor, and a Comedy; FRIDAY, Merry Wives of Windsor, and a Comedy; SATURDAY, Merry Wives of Windsor, and a Comedy.

ASTLEY'S ROYAL AMPHITHEATRE.—Proprietor and Manager, Mr W. BATTY.—Astley's still continues the Star of Attraction in the Theatrical World, and is produced Nightly at this hugely-popular and unique Place of Amusement. ... MONDAY, NOVEMBER 24, and during the week, will be presented, for the 24th time, a ... Historic Melodrama of AZAEL; with all its original effects and gorgeous scenery. ... the most remarkable SCENES in the CIRCLE. The whole concluding with the ... of THE DAY AFTER THE FAIR.—Tickets may be had at the Box-office, from ...

COVE'S ENTERTAINMENTS.—OXFORD and BATH ... ENTERTAINMENTS will be given on MONDAY NOVEMBER 24, at the STAR ROOMS, OXFORD; on ... November 27, at Thame; on Friday, November 28, at Wallingford; on Thursday, ... December 4, and Saturday (Morning), December 6, at the Assembly ... Monday, December 29, and Tuesday, December 30, at the Music Hall, ... Stalls, 2s; Reserved Seats, 3s; Tickets, 2s.

MR. CALDWELL'S BALL will take place on TUESDAY, NOVEMBER 25th. Tickets 2s each.—SUPPERS DANSANTES every Evening from Eight to Twelve. Admission 6d per quarter. At 1s. Splendid new ... to the arrangements complete. Musical Director, Mr J Bray. Leader of the ... Conductor, Mr Caldwell, guarantees to teach any lady or gentleman ... Dancing in a few lessons, with the routine of the Polka, Mazurka, Varsovienne, Schottische, and take part in the inexhaustible amusement, in six private lessons for £1 1s.—Days of Study, ...

BURFORD'S PANORAMA OF THE HOLY CITY OF JERUSALEM, and PALACE of KING HEROD.—NOW open at BURFORD'S PANORAMA, 20, Leicester-square, the above astounding and interesting views. Admission, 1s to Boxes, 2s; Stalls, 3s; Private Boxes, 10s 6d; Second Seats, 6d. The view of the CITY of JERUSALEM and PALACE OF HEROD is now open. Admission, 1s; to each circle, or 2s 6d the whole. Open from 10 till 5 daily.

GALLERY of ILLUSTRATION, 14, REGENT-STREET.—... CRYSTAL PALACE as a WINTER GARDEN is exhibited immediately preceding the Diorama of the Overland Mail to India, showing Southampton Docks, Cintra, the Tagus, Tarifa, Gibraltar, Algiers, Malta, Alexandria, Cairo, Suez, the Red Sea, Aden, Ceylon, Madras, Calcutta, and the magnificent mausoleum, the "Taj Mehal" (the ... fairy, by sound, the beautiful gateway, and the gorgeous interior), daily at 3 and 8 o'clock. Admission, 1s; 2s 6d; and 3s. Doors open half an hour before each representation.

LINWOOD GALLERY, LEICESTER-SQUARE. — ON MONDAY, NOV. 24, will be produced the greatest novelty ever brought before the public, consisting of a PANORAMIC PARLEY of eight persons, who, while their ... are ... and consecutive, illustrate in every particular the manners, habits and ... of the country. The whole in an illustration of Old ... Admission, 1s; Stalls, 2s; Private Boxes, 10s 6d. Daily at 3 and 8 o'clock.

ROYAL GALLERY of WALES'S BAZAAR, or the CRYSTAL PALACE of LEICESTER-STREET 297 to 299, and COSMORAMA. This beautiful ... is now in full view of the public, and more beautiful than ever; ... ... from 10 to 5 and includes every useful and fancy article in endless variety, together with a GALLERY of NATIVE and FOREIGN BIRDS, and the whole as the GALLERY of LAST NOVELTIES for SALE by the old and modern masters.—Admission 6d.

LANGHAM BAZAAR, Langham-place, Regent-street.—These spacious GALLERIES, comprising an area of 12,000 superficial feet, situated in ... most fashionable locality, are OPEN for the reception of Paintings, Models, Statuary, ... Works of Fine Arts, and Manufactures of high order, for sale on C ... ... are strictly regarded, and may be considered nearly free of ... ... only ... ...

NOTICE.—TWENTY-ONE and a QUARTER per ... SHARE may now be received by the Members of the SECOND ... BUILDING SOCIETY, together with the whole amount of their Shares ... ... having terminated), upon their sending a notice to the Secretary ... ... Signed by direction of the Board.

... ... wishing to take shares in the Fifth Improved Building Society must apply to ... ...rthwith

TO BORROWERS. TWO THOUSAND POUNDS will be ... ... for SALE at the First Meeting of the FIFTH IMPROVED BUILDING ... on TUESDAY next, the 2nd of DECEMBER next, at the Offices, 26, Southampton street, Strand, ... o'clock in the Evening. Fixed to close in ten years. The whole amount ... ...

COURT AND HAUT TON.

THE COURT AT WINDSOR CASTLE.

The Queen and his Royal Highness Prince Albert on Thursday received intelligence of the demise of her Majesty's augnst uncle, the King of Hanover. In consequence of this event the Court will remain in comparative retirement for a short period. The hospitality of the Royal circle during the week, probably owing to the alarming intelligence reaching England respecting the King of Hanover's health, has been confined to her Royal Highness the Duchess of Kent, and a select circle, among whom we may mention the Speaker and Mrs. Shaw Lefevre, and Mr. Frederick Peel, M.P.

His Excellency General Prince Castelcicala, Envoy Extraordinary and Minister Plenipotentiary from his Majesty the King of the Two Sicilies, had an audience of the Queen, at the Castle, on his departure on leave of absence. His Excellency is to be commander in chief at Lisbon, the Brazilian Minister, had also an audience of her Majesty, to present his letters of recal; and M. Macedo had an audience to present his credentials as Envoy Extraordinary and Minister Plenipotentiary from the Emperor of the Brazils. The three Ministers were respectively introduced by Viscount Palmerston, G.C.B., her Majesty's principal Secretary of State for Foreign Affairs

The Duchess of Orleans visited her Majesty at the Castle on Saturday, from Claremont, and partook of luncheon.

The Queen has taken her accustomed walking and riding exercise almost daily, and the Prince Consort has enjoyed the sport of shooting over the Royal preserves several times during the week.

The youthful members of the Royal family continue in excellent health.

His Highness Prince Geo. Gagarini has arrived at Long's Hotel, New Bond-street, from St. Petersburg.

The Duke and Duchess of Northumberland are at present staying at Sion House, but they intend shortly departing for the north.

The Marquis and Marchioness of Westminster returned to Eaton Hall, near Chester, last Monday, from Halkin Hall, Pantshire. The noble Lord Steward and family are expected to pass through town in a fortnight, *en route* to Motcombe House, Dorset.

The Marquis and Marchioness of Abercorn and family, *en route* to Nice, visited Brussels, and they are not expected to return to this country until April next.

The Earl and Countess of Derby and Lady Emma Stanley have arrived in St. James's square, from Knowsley

The Earl and Countess of Beesborough have arrived at their residence in Char ss-street, Berkeley-square, from Bessborough Park, Ireland.

The Earl Granville left Bruton-street on Tuesday on a visit to Lord and Lady Rivers, at Rushmore Lodge, Dorset. The Countess Granville has left town to pass a few days with Mrs. Henry Baring at Cromer Hall, Norfolk

The Baron Brunnow (Russian Minister) is daily expected to arrive at Ashburnham House, from the Continent. The Baroness is staying in town.

Lady and Miss Peel have arrived in Whitehall-gardens from Clifton, near Bristol.

Lord and Lady Cosmo Russell have arrived at the Duchess Dowager of Bedford's villa at Campden-hill, from a tour.

Viscount and Viscountess Palmerston entertained his Excellency the Spanish Minister and a select circle at dinner on Saturday, at their mansion in Cadogan-place. The noble Viscountess received a few friends in the evening.

His Excellency Sir Henry Bulwer, accompanied by Lady Bulwer, is expected to embark at the beginning of next week for New York, *en route* to resume his diplomatic functions at the seat of the American Government.

Lord and Lady Lyndhurst and the Hon. Misses Copley have arrived in George-street, Hanover-square, from Turvill Park, Henley-upon-Thames. The noble and learned Baron, we are happy to state, is in the enjoyment of good health. The family have come to town in consequence of the indisposition of his Lordship's youngest daughter.

A matrimonial alliance will shortly take place between the Lady Adelaide Paget, youngest daughter of the Marquis of Anglesey, and the Hon. Frederick Cadogan, youngest son of the Earl Cadogan, and brother of Viscount Chelsea.

The marriage of his Serene Highness Prince Edward of Saxe Weimar with the Lady Augusta Gordon Lennox, daughter of the Duke of Richmond, is definitively fixed to take place on Thursday, the 27th inst.

The Marquis and Marchioness of Anglesey, and the Lady Adelaide Paget have arrived at Uxbridge House, from Beaudesert.

The Marquis and Marchioness of Londonderry, Lady Adelaide and the youthful Lord Ernest Vane, have arrived at Wynyard-park, from their marine villa, Garden Tower, Seaham Harbrin. Her Ladyship has quite recovered from the effects of her recent accident.

Mr. Nugent, says an Irish contemporary, will not assume the title of Lord Riverston, which has so often perplexed, as he will succeed to the earldom of Dublin, on the demise of the present Marquis of Westmeath.

Lord Gardner has left Dover-street for his hunting seat at Melton Mowbray, where the Earl and Countess of Wilton, the Earl of Cardigan, Viscount and Viscountess Jocelyn, Colonel and Mrs. Anson, the Hon. Henry C. Coventry, and other fashionables are expected to pass the winter months.

DEATH OF LADY WARD.—With deep regret we announce the death of Lady Ward, which took place on the evening of the 6th inst. at a late hour. The melancholy event is stated to have occurred very suddenly from paralysis of the lungs, after a long and painful illness of eleven weeks. Only a few short months ago we had to announce the marriage of this beautiful and accomplished lady.

NAVAL AND MILITARY INTELLIGENCE.

THE RECENT BREVET.—By the brevet published last week, promotions among the following heads were effected, viz.:—Promoted to be Generals

21 line and 1 engineer, Lieutenant-generals; Lieutenant-Generals—46 line, 6 artillery, 6 engineer, and 1 marine, major-generals; Major-Generals—57 line, 2 artillery, 3 engineer, and 2 marines, colonels. Colonels 57 line, 5 artillery, 11 guards, 19 infantry, and 66 half-pay), 15 artillery, 12 engineer, and 1 marine, lieut.-colonels; Lieut.-Colonels—84 line (3 cavalry and 81 infantry), and 2engineers. Majors—79 line (5 cavalry, 3 guards, 71 infantry), 21 artillery, 17 artillery, 17 engineer, and 13 marine, captains. On the brevet of 1846, the new appointments (viz. to district commands, and staff appointments) took effect from the January following, and the same precedent will probably be followed on this occasion. The only ranks which obtain increase of pay on brevet promotion are the officers who become thereby Major-Generals and Majors.

COMMAND OF THE FORCES AT MALTA.—It is generally reported, and believed, at Malta, that Lieutenant-General Elliot, who has held the command of the forces since the end of 1847, will shortly vacate this appointment

There are now in the 38th no less than 9 regimental officers holding superior army (or brevet) rank; and in the 39th regiment, 7—two remarkable instances of the slowness of regimental promotion.

The King's, or Royal Irish Hussars, stationed at Hounslow, are, it is said, to hold themselves in readiness for foreign service at the Cape

LORD FREDERICK FITZCLARENCE.—The inhabitants of Portsmouth have determined to erect a statue, column, or fountain in honour of Lord Frederick Fitzclarence, as a mark of gratitude for his efforts in improving the town

STAFF OFFICERS IN INDIA.—Recent accounts from Simlah intimate that staff-officers are henceforth to be allowed one year's furlough at the expiration of every seven years, without detriment to their staff appointments.

Captain Fagan, formerly paymaster at Benares, dismissed the service by general court-martial, for his share in some transactions connected with the Benares Bank, has been restored to the service by the unanimous decision of the Court of Directors, heartily concurred in by the Marquis of Dalhousie. Captain Fagan is the son of one of the most distinguished and exemplary officers who ever held high staff employment under the Indian Government

GENERAL ORDER.—HORSE GUARDS, Nov. 8, 1851.—The Commander-in-Chief begs to announce to the officers of the army that it appears by a communication received from the Director of the Museum of Practical Geology in Jermyn-street, London, that they, as well as officers of the navy, and of the Honourable East India Company's Service, are entitled by the regulations to admission to the course of lectures about to commence at the Government School of Mines and of Science applied to the Arts, in connexion with that institution, at one-half the usual charges. By command of Field-Marshal the Duke of Wellington, Commander-in-Chief, G. BROWN, Adjutant-General.

Lieutenant-Colonel Griffiths is appointed Lieutenant-Colonel of the 10th Royal Hussars, with a view to his being nominated to command the cavalry depôt at Maidstone. Colonel Griffiths has for a long time officiated as Assistant-Commandant under the orders of Major-General Middleton, who is removed upon his promotion.

DEATH OF LIEUTENANT-COLONEL PAYNTER, C.B.—Lieutenant-Colonel Paynter, who lately retired from the command of the 24th regiment, died at Bath on the 13th instant, in the 40th year of his age. He was dangerously wounded at the memorable battle of Chillianwala, in January, 1849, when, it will be remembered, the 24th suffered great loss of life, particularly among the officers: the wound which he received on that occasion was, in fact, so severe that he never recovered entirely from its effects, and to it is ascribed his death.

WEATHER-BOUND SHIPS IN THE BRITISH CHANNEL.—In consequence of the prevailing strong winds from the N.N.E. and N.W. during the last week, a great number of vessels, from nearly every part of the globe, are now weather-bound in the Channel. Government has sent off supplies of water and provisions to those that may require them.

The *Guernsey Star* states, as if upon authority, that Government have no idea of constituting a Channel Islands bishopric.

COUNTRY NEWS.

THE LIVERPOOL COUNTY COURT JUDGE—CLOSE OF THE INQUIRY.—On Saturday last the proceedings in this case were brought to a close, the last of the witnesses called for the defence of Mr Ramshay having been examined. The following is a summary of the day's proceedings:—Mr. George Stone was examined, and said that he was high bailiff of the Liverpool County Court, and had been appointed by the late Mr. Lowndes. He considered the demeanour of Mr. Ramshay as calm, collected, and dignified. He had improved the mode of conducting business. He had a peculiar mode of shutting his teeth, and people who did not know him thought it was from bad temper. Mr Ramshay here rose and said, that, although he did not wish to volunteer as a witness in his own cause, he was ready to answer any question put to him. This closed the case for the defence. Mr. Cook then spoke on the part of the memorialists. He commenced by deprecating the violent attacks which had been made by Serjeant Wilkins on everybody, high and low. He was certainly surprised that the learned serjeant had so virulently attacked men, who were generally considered peaceful and useful duty, and who could not make any answer. He had, however, made use of their testimony when it suited his purpose. He denied that the press of Liverpool had prevented Mr. Ramshay from performing his duties. The learned counsel then censured the selection of the county court for the dinner, and said he did not think Serjeant Wilkins had justified the introduction by Mr. Ramshay of the biographical account of his family.—Mr. Whitty, after some length the scene in court when Mr. Whitty was present, he contended that there ought to have been some warrant, writing, or authority for his arrest. The attempt to arrest Mr. Whitty, under the circumstances, was utterly unauthorised, and the bailiffs might have been treated as trespassers, or even as Sir George Stephen had advised. The court here adjourned for a short time, after which Mr. Maule proceeded to defend the witnesses on the part of the memorialists from the observations and attacks of Mr. Serjeant Wilkins. On the conclusion of the learned gentleman's address, Mr Fowler expressed his thanks, and that of Mr. Serjeant Wilkins, to his Lordship. The Earl of Carlisle said he should give his decision with as little delay as the importance of the subject warrants. The inquiry terminated at four o'clock. Mr. Ramshay resumed his sittings in the County Court at Liverpool on Monday.

THE REFORM CONFERENCE AND MEETING.—The conference and meeting of the leading Reformers of Lancashire and Yorkshire has been fixed for Wednesday, Dec. 3 The object of the gathering is "to consider what steps shall be taken with reference to the declaration of the Prime Minister, that it is the intention of the Government to introduce a measure of reform in the next session of Parliament." The conference will commence at half-past eleven o'clock in the morning; and in the evening there will be a meeting in the Free-trade Hall

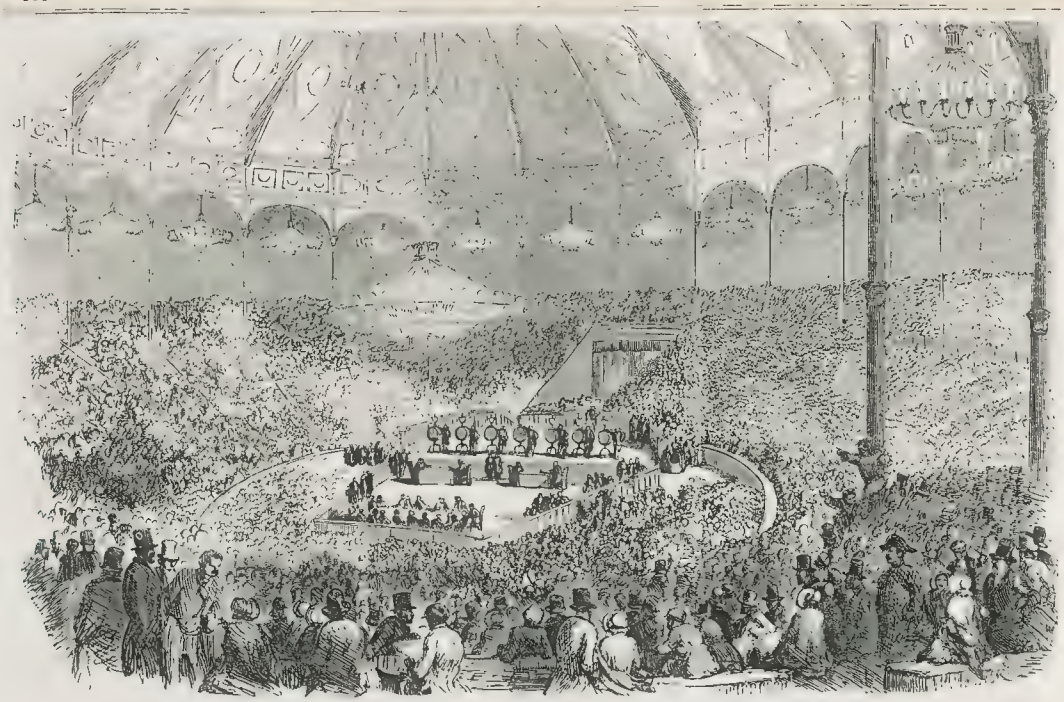
EASTERN COUNTIES, GREAT NORTHERN, &c., RAILWAYS.—The Great Northern, in conjunction with the Eastern Union and East Anglian Companies, proposes to form a company and make a line from the southern terminus of the East Anglian Railway at Dereham to the Eastern Union near Norwich. This line, if made, will open up the Norwich traffic to the Great Northern, and will also provide a new line for the Wisbech and Lynn traffic to London, independent of the Ely and Cambridge route

ARTESIAN WELL.—An artesian well of very great depth has been admirably and successfully executed at South Marsbus, near Arundel, under the direction of Mr. Charles Penfold, ironmonger. The boring was extremely interesting, from the variety of solis it passed through, and from its great depth. An oak tree was perforated by the auger at 80 feet below the surface, and various fossils and curious deposits were encountered. The entire depth is about 1150 feet, and a fine pure and inexhaustible spring of water has been obtained from the chalk.

THE COMMERCE OF LIVERPOOL.—From a return recently made, by order of Parliament, it appears that Liverpool is now the greatest port in the British empire in the value of its exports and the extent of its foreign commerce. Being the first port in the British empire, it is the first port in the world. The value of the exports, in the year 1850, amounted to nearly thirty-five millions sterling (£34,891,847), or considerably more than one-half of the total value of the exports of the three kingdoms for that year. The wonderful export trade is partly the result of the great mineral riches of Lancashire, Cheshire, Staffordshire, Warwickshire, and the West Riding of Yorkshire; partly of the matchless ingenuity and untiring industry of the populations of those counties; partly of a multitude of canals and railways spreading from Liverpool to all parts of England and the richest parts of Wales. During the last five years the increase of the exports of Liverpool has been from twenty-six millions to nearly thirty-five millions, whilst that of London has been from little less than eleven millions to rather more than fourteen millions. The exports of Hull—which is, undoubtedly, the third port of the United Kingdom still retain their hats, have considerably declined, having been £10,875,870 in 1846, and not more than £10,366,610 in 1850. The exports of Glasgow, now the fourth port of the empire, show a fair increase, from £3,024,343 to £3,706,195. The other ports now sends out exports of the value of two millions a year, though Southampton comes near to two millions, and Cork passes one million.

THE CAB-DRIVERS' STRIKE AT LIVERPOOL has terminated. Above one-half of the employers have consented to the terms proposed by the men, whilst, in one or two instances, 3s. a day has been given. Some of the larger cab-owners, however, firmly refused any alteration, and the men, finding there was no probability of obtaining the advance of wages and the rest from Sabbath labour, have returned to their work.

FALSELY-PACKED COTTON.—A meeting has taken place between representatives of the Manchester Chamber of Commerce, the Manchester Commercial Association, and the Liverpool American Chamber of Commerce, at which they agreed to the following regulations (suggested by the last-named body) in reference to falsely-packed cotton:—1st. That cotton wrongfully packed be declared forfeited to the parties on the prices the cotton, if regularly packed, would be worth on the day on which it would be received back at Liverpool." "And That no allowances for expenses of transit beyond the limits of Great Britain be allowed to the planter



DRAWING OF THE LOTTERY OF THE GOLDEN INGOTS, IN THE CIRCUS OF THE CHAMPS ELYSEES, AT PARIS.

and it was estimated that nearly 4000 persons were present. Precisely at ten o'clock the beating of a drum announced the arrival of the commissioners of the Lottery, who immediately took their seats, and the President, M. Monin Japy, read aloud the decree authorising the drawing of the Lottery. This was followed by the reading of the regulations for the drawing. The nature of the wheels is thus explained: -Seven wheels, each distinct, but connected with a rod by which they were made to revolve simultaneously, so as to mix up the balls that they contained, having been put in motion, were stopped at the same time, and an opening in each being effected by a spring, the boy placed before it could put in his hand and take out a number. There were thus seven boys; but it was so arranged, that, after the drawing of each lot, one boy should leave the wheels and be replaced by another, the other six boys shifting their places at the same time. Six of the wheels contained each ten balls numbered from 0 to 9. The seventh, which contained the balls which were to indicate the millions, had only seven, marked from 0 to 6. The seven balls, when drawn simultaneously, represented the number of the lot according to its succession; and, to complete the combination, it was arranged that, if the seven zeros should come out at the same time, they should form the number 7,000,000. In the regulations which were read it was distinctly stated, in order to remove an erroneous statement that had been made, that there would be no second drawing for any prize that might fall to the unsold tickets; but, at the same time, that there would be no reduction in the amount or value of the lots in consequence of a portion of the tickets being unsold. The most profound silence having been procured, the drawing commenced according to the programme. The first numbers drawn by the seven children at the wheels were 2,858,115, which was the prize of 400,000 fr. the holder of the ticket representing these figures in the same succession is, therefore, the winner of the grand prize. The drawing continued in the same order, and the whole operation was concluded at three o'clock in the afternoon. The crowd assembled in the Champs Elysées on this occasion was large, but not so immense as had been expected, and, with few exceptions, the greatest order was observed.

We subjoin a complete list of the whole of the prizes. Various reports, but none upon which reliance could be placed, were current as to the winners of the great prizes.

EXTERIOR OF THE CIRCUS OF THE CHAMPS ELYSEES

A Vienna letter states that considerable indignation had been excited by the rudeness of the Emperor of Austria, on a late visit to the Burg Theatre. The audience applauded most loyally on his appearance; the Emperor contented himself with a short and ungracious nod, sat down in his *fauteuil*, and all the while of his grandmother, who wishes to see her son popular, could not induce him to thank his people in a more gracious manner.

Signor Trebbi, the Roman Commissioner at the Great Exhibition, arrived at Rome on the 4th inst., after a disastrous journey; the French steamer *Courrier de Marseilles*, in which he embarked at that port on the 28th October, having been disabled about fifty miles from Marseilles by the bursting of her boiler. The steamer was three days at sea before getting back to port. Fortunately none of the passengers were injured, and most of them continued their route by land, and Nice.

Military and civil executions continue in the Roman northern provinces. Domenico Mancini was shot at Ancona on the 24th October, for homicide, by the Austrians; and Eugenio Lucchini and Giuseppe Antolini were beheaded at Forli by the Papal authorities, on the 27th, for murdering, through party spirit, the Rev. Don Thomas Legri, archpriest of Cola Co [illegible].

Very favourable reports have been received by the Government of the expedition to Central Africa. The letters of Dr. Barth and Dr Overweg are filled with interesting details as to the whole geography of Central Africa. Dr. Barth, who had been forced to return from Adamawa by the Governor, states that the two most important results of his journey to Yola were, first, the evidence that there is no idea of a continued chain of mountains running W.N.W from Mount Mendif; and, secondly, [illegible] as to the connexion of the Niger with the Shary, by means of the river Adamawa or the Tshadda, as it has been called, in its lower course, is now altogether settled, Dr. Barth having crossed the Benue and the Faro at the very point where they unite, the former coming from the east, a distance of about ten days, while the Faro has its sources in a mountain called Rosere (the rock) Labul, at a distance of some days' journey south. Adamawa is stated to be a fine and fertile country. On the 8th of August, Dr. Overweg returned to Kuka, after a successful exploration of Lake Tsad. The despatches of the German travellers were sent from Kuka on the 10th of August, and reached Tripoli October 8th, in 56 days.

SKETCHES IN HAINAULT FOREST.

HUT IN THE MIDDLE OF THE FOREST.

It is a pleasure but to hear
The bridles ringing sharp and clear
Amid the forest green;
To hear the rattle of the sheaves,
And coursers rustling in the leaves,
With many blasts between.
Stewart Rose's "Red Kung."

THE bare announcement that in a short time the Forests of Epping and Hainault will be enclosed, and lose all their picturesque features of a wild expanse of woodlands, heath, and mosses; of oceans of umbrageous tree-tops, and little patches of cultivation—here and there a little town, sending up its fleecy smoke amidst the forest boughs—must excite concern among those who take a lively interest in "the amusements of the people." How truthfully has the picture of forest life been drawn:—

From age to age no tumult did arouse
The peaceful dwellers; there they lived and died,
Passing a dreamy life, diversified
By nought of novelty, save now and then
A horn, resounding through the neighbouring glen,
Woke them as from a trance, and led them out
To catch a brief glimpse of the hunt's wild rout
The music of the hounds; the tramp and rush
Of steeds and men;—and then a sudden hush
Left round the eager listeners; the deep mood
Of awful, dead, and twilight solitude,
Fallen again upon that forest vast.

Our Artist has taken a parting glance of the olden glory of Essex, before describing which it may be interesting to sketch its outline. Epping gives title to Epping Forest, a considerable tract of waste land

THE FAIRLOP OAK IN HAINAULT FOREST SIXTY YEARS SINCE.

n the south-west part of the county. This forest was formerly called the Forest of Essex, being the only forest in that county, the whole of which was anciently comprehended in it. By a charter of King John, dated March 25, in the fifth year of his reign, and confirmed in the eighth of Edward IV., all that part of the forest which lay to the north of the highway from Stortford to Colchester (very distant from the present boundaries) was disafforested. The forest was further reduced by a perambulation made in the 29th of Edward I., in pursuance of the Charta de Foresta; but the metes and bounds of it were finally determined by an inquisition and perambulation taken on the 8th of September, 1640, by virtue of a commission under the Great Seal of England, in pursuance of an Act of the 16th of Charles I., for settling the bounds of the forest.

It is not material for our present purpose to enumerate the parishes included in these boundaries. The extent of the forest is estimated at 60,000 acres, of which 48,000 are believed to be inclosed and private property; the remaining 12,000 acres being the uninclosed wastes and woods. What is called Hainhault, or Hainhault, Forest is a part of the waste. The office of Chief Forester for Essex was deemed highly honorary, and generally bestowed on some illustrious person. The stewardship was also an office of great consequence, and usually enjoyed by some of the nobility. It continued in the De Veres, Earls of Oxford, for many generations; but was taken from them by Edward IV., for their adherence to the Lancastrian party. On the accession of Henry VII. it was restored by grant to John Earl of Oxford. The steward had power to substitute a lieutenant, one riding-forester, and three yeomen-foresters, in the three bailiwicks of the forest. He also had many lucrative privileges, and was keeper of Havering-atte-Bower, and

HOG HILL HOUSE, AND VIEW OVER THE FOREST, TOWARDS CHIGWELL.

of the house and park there. To show how these offices are held at the present day, it will suffice to state that at the meeting of the Commissioners of the Royal New and Waltham Forest Commission, held Jan. 31, 1860, the hereditary Lord Warden of the latter forest, by his agent or deputy, the steward of the forest, delivered in the following claim:—

The Right Honourable William Earl of Mornington is seised of and entitled to the bailwick, lieutenantship, and custody of all the Forest of Essex, otherwise called the Forest of Waltham, Epping, and Hainault, in the county of Essex, and the office is of Lord Warden and Bailiff of the same forest, and all fees, profits, perquisites, rights, and privileges to the same belonging or appertaining.

The Earl of Mornington, as lord of several manors in the county of Essex, is also entitled to various rights and privileges in, over, and upon the Forest of Essex, distinct from those above mentioned.

(Signed) JOHN CHARLES WILLIAMS, Steward of Essex Forest.

Hainault Forest is the exclusive property of the Crown, and is styled the "Queen's Forest." It possesses more beautiful scenery than, perhaps, any other forest in England; and what renders its preservation the more desirable is, the access to Hainault is very convenient, both by railway and by road.

The imphology of breaking up this beautiful pleasure-ground of the people is well illustrated by the evidence given by Mr. Williams Cotton's before a select Committee of the House of Commons, July 17, 1848:

In your opinion, would it be desirable in future that those who advise the Crown should be rather cautious in giving their consent to any further encroachment in Waltham Forest?—I consider it of very great importance; it is of importance to those who have property in the neighbourhood of the forest; and I consider it also of very great importance to the inhabitants of this large metropolis, who are in the constant habit of going into the forest for recreation and amusement. I do not know anything which tends more to the health, or even to the moral improvement, of the large mass of the population in this metropolis, than an opportunity thereby afforded of having a day's amusement and recreation.

Viscount Morpeth: And the more the town extends, the more cogent that reason becomes?—I am clearly of that opinion; and this very day I saw large parties going out to have a day's pleasure in the forest.

Mr. Cotton further states, that the value of the neighbourhood for a residence to those engaged in business in the City would be materially interfered with by inclosing the forest, as it has already in some degree been prejudiced by encroachments and inclosure.

Another witness states, that Epping Forest, from its vicinity to London, is a great source of enjoyment and recreation to the inhabitants of the metropolis: a vast number of persons come down in vans; they bring beer to clubs, and in winter they subscribe a penny or twopence a week, to meet the expenses of these excursions.

The Crown possesses the whole of the rights over Hainault Forest; and the distinction in this respect between Epping and Hainault is thus explained by one of the witnesses, Mr. W. DAVIS

To various manors of Epping Forest, as I have understood, there have been particular grants made and privileges given; but in another forest, Hainault, I have understood that the whole of the property in the soil and the wood, the whole fee, belongs to the Crown; but in Epping Forest there are a great many privileges attached to some of the manors for instance, the power of lopping trees, and the power of cutting down trees. In the neighbourhood where I reside, Lord Mornington and that family have always held that they possess the power of cutting all the timber.

The great extent of pollard trees is likewise explained by the right claimed by lords of manors to pollard, commencing, probably, with the permission to cut timber for the repairs of houses and for fuel, which has gradually grown into a claim on their part of the whole of the trees in the forest: the Crown, however, cut down wood in Hainault, but not in any other part. The encroachments are not nearly so numerous here as in Epping Forest, where the Crown has only certain rights—the right of vert and venison

The accompanying Views represent two of the most interesting localities in Hainault. First is a Hut in the middle of the forest, where the oaks are remarkably fine.

The second View shows the Keeper's Lodge, Hog-hill House, about a mile from the preceding locality. This lodge is a building of some two centuries since, and has a finely wainscoted room or two of that period. Hereas there is a delightful view over the forest towards Chigwell, whose spire may be discovered in the horizon. The Forest road near this point is known as Hog-hill, and extends from the railway station at Romford to Chigwell-row

The small illustration shows the famed "Fairlop Oak," one of the forest giants, as it appeared some sixty years since. Originally a double old tree, about sixty-five years since, an archery meeting was held by the gentry of the district, with pic-nics in tents, bands of music, &c. and then, to protect the old oak, it was enclosed with a spiked paling, having on it a board inscribed as follows:—"All good foresters are requested not to hurt this old tree, as a plaster has been put to its wounds." About thirty years ago, however, the tree fell; some gipsies having fifteen years previously burnt out the inside. "When a boy," says a correspondent, "I have driven a cart, and a load of hay, with my brother, three horses, and sometimes four or five cows." The pulpits of Wanstead and new St. Pancras Churches are, in part, made of the beautiful wood of the old demizen of Fairlop.

LAW INTELLIGENCE.

In the Court of Queen's Bench, on Thursday, in the case of *The Queen on the prosecution of Dr. Achilli* v. *Dr. Newman*, Sir F. Thesiger appeared to oppose a conditional rule which had been obtained by the defendant, calling upon the prosecutor to show cause why the rule for a criminal information should not be enlarged and a commission granted for examining witnesses abroad. Sir F. Thesiger contended that it would be unjust to make this rule absolute, because Dr. Newman had not filed in his affidavits that he should be able to substantiate his charges against Dr Achilli; nor would Dr. Achilli have an opportunity of bringing an indictment for perjury against any foreign witness who might make a false oath for the purpose of defeating the criminal information. If the charges made against Dr. Achilli were true, Dr. Newman must have evidence of their accuracy in his possession without going to Italy for it. The Attorney-General appeared in support of the rule, and insisted that it was only right that Dr. Newman should have an opportunity afforded him for collecting evidence in support of his charges. Nothing would be lost by the delay; it would not injure the case of the prosecutor, nor could any possible injustice be done to any one by an examination of witnesses abroad. Lord Campbell: It would be better to have them examined in the witness-box. The Attorney-General said that might follow afterwards. Lord Campbell was of opinion that the rule ought to be discharged. Before a man indicted in such cases as those contained in the defendant's affidavits, upon the faith of common rumour, he ought to satisfy him elf that there was some foundation for the rumour, which, it would seem, the defendant had not done here; and, having the charges, he was not able to come now for a commission to obtain evidence in support of them. He had, however, less reluctance in refusing this application, because, according to the law which the Legislature had adopted, there would be an opportunity for vindicating the charges after the rule for the criminal information had been disposed of, and untimately a perfect justice would be done to both sides. The other Judges concurred in this judgment, and the rule for a commission was ordered to be discharged without costs.

On Saturday last Mr. Sheriff Abson was re-elected Lord Rector of Glasgow University for another year. The re-election was made without any excitement.

There were 102 deaths and 132 births registered in Manchester during the week ending 24th instant.

EXTRAORDINARY DAY'S SPORT AT ENVILLE, STAFFORDSHIRE.—The Earl of Stamford and Warrington, H. C. Taylor, Esq., Thomas Hollyoake, Esq., Rev. C. Jessop, and H. W. Foley, Esq., killed on the 6th inst., on Lord Stamford's estate, 202 partridges, 24 hares, and 10 rabbits.

FORGERY OF COUNTRY NOTES.—Information has been received by the Commissioners of Police that a very extensive issue of forged Aylesbury bank notes had been discovered. In order that the public may be prevented from taking them, the bank have stamped with a distinctive mark all that they have since issued.

RAILROAD ON THE ISTHMUS OF PANAMA.—On last Saturday the first train of cars passed from Navy Bay to Gatune, under steam. We were over learn from a gentleman who walked over a great portion of it, that, with the exception of one small space, the road is completed, or very nearly so, from Gatune to Miller's station, on the banks of the Chagres river, within a few Palanquella, and that the work is being pushed forward with the greatest energy. The opening of the dry season, early in December, will see the road in working order to Bluler's, which presents the greatest difficulty and enormous part of the whole route. By July it will be completed to Gorgona, and then hurrah for a daily communication between Panama and Navy Bay.—*Panama Star*, Oct. 17.

Last week, at a dinner given for the purpose by the directors of the Midland Great Western Railway (Ireland), a piece of plate was presented by the chairman, in the name of the company, to Mr. W. G. Hemans, their chief engineer. It consisted of a large and beautiful cup, designed after the grace cup presented in the olden time by Sir Hugh de Burgo to the University of Oxford. The cup stands upon a massive silver salver, the whole valued at 125 guineas Upon the salver is the following inscription:—"Presented by the chairman and directors of the Midland Great Western Railway to George Willoughby Hemans, Esq., C.E., in testimony of their just appreciation of the talents, energy, and judgment displayed by him in conducting the engineering works of the company to a speedy and most efficient completion."

DEATH OF THE KING OF HANOVER.

THE KING of Hanover, the last of the sons of George III., departed this life on the 17th inst. ERNEST AUGUSTUS, King of Hanover, Duke of Brunswick Luneburg; Duke of Cumberland and Teviotdale, in Great Britain; Earl of Armagh, in Ireland, a Knight of the Garter, a Knight of St. Patrick, Knight of Sovereign and Grand Master of the Hanoverian Guelphic Order, was the fifth son of the King George III. He was born at Kew, on the 6th of June, 1771. His early days were spent in his native country, and his first preceptors were Mr. Cookson and Dr. Hughes. After receiving the rudiments of his education from them, the Prince was sent to the University of Gottingen, and, with his Royal brothers, Augustus and Adolphus, afterwards Dukes of Sussex and Cambridge, he was entered there the 6th July, 1786, on the youths being accompanied by a governor and a pre ceptor. In this seminary, he remained two years, during which time he took out degrees, each of which had for his attention an appointment of 1000 crowns per annum At Gottingen, also, Prince Ernest studied the military art under General Melorine, a famous teacher of the science.

The Prince, in 1790, entered the army, and served in the 9th Hanoverian Light Dragoons from that period until 1793, when he obtained the command of the regiment. During the whole of the following year he took part in the war which then raged on the European continent. In the command of the 1st brigade of Cavalry, in charge of the outposts of Marshal Walmoden's army, his Royal Highness gave several proofs of his valour in the field: and in a rencontre near Tourney, he lost an eye and was wounded in the arm. Notwithstanding this, he was at the sortie from Nimegnen, and afterwards commanded the rear-guard of the British forces in the retreat through Holland a post of great importance and difficulty. The year 1796 the Prince returned to England, where he remained until April, 1799, when he was created Duke of Cumberland and Teviotdale, and Earl of Armagh, with a Parliamentary grant of £19,000 per annum. He was also at the time appointed to command the British cavalry in the unfortunate Helder expedition; but, in consequence of its early failure, his branch of the force sent out did not disembark.

In 1801 the Prince was made Colonel of the 15th Light Dragoons, and invested with the command of the Severn district, from which he subsequently removed to the South-Western district, residing at Winchester until 1807. In the latter end of that year he went abroad and joined the Prussian army, then engaged in the great struggle against Napoleon. On the subsequent defeat of the French by the allied forces, the Duke proceeded to Hanover, and took possession of that kingdom on behalf of the British Government. In 1813 his Royal Highness raised to the rank of Lieutenant-General; in 1830 to that of General; and on the 29th of March, 1813, to that of Field-Marshal in the British army. The last English regiment which he held was the "Royal Blues," to which, on the 3rd of January, 1827, he was appointed in succession to the Duke of Wellington: but when, upon the accession of William IV., all the Horse Guards were placed under the immediate authority of the Commander-in-Chief, the Duke of Cumberland resigned his colonelcy, and was succeeded in the command of the Blues by the late Lord Hill.

Prior to 1810, the Duke occasionally took part in politics; in that year, when the Regency question formed the subject of much public excitement, he entered into its discussion with energy, and opposed the Government of the day on every point at issue. His opposition to the recognition of the claims of the Roman Catholics for Parliamentary emancipation is also matter of history.

On the night of the 31st May, 1810, there happened to the Duke of Cumberland an event very painful to him, both in his immediate and most subsequent life and its subsequent results. The facts were these:—While the Duke lay asleep, during the night mentioned, he was furiously attacked by a man armed with a sabre, who inflicted upon him several wounds in the head. The Duke, not being able to form the least conjecture as to whence the blows proceeded, sprang out of bed to give an alarm; but he was followed in the dark by his assailant, and cut across the thighs. Upon assistance arriving, Sellis, an Italian valet, in the service of his Royal Highness, who had thus attacked the Duke, was found locked in his own room with his throat cut; and spots of blood were observed upon the floor of the passage leading to the apartment which Sellis occupied. On the next day a coroner's inquest sat upon the body of Sellis, which, after sitting four hours to hear evidence, deliberated about one hour, and then returned a verdict of *felo de se*. The Duke of Cumberland soon recovered from the effect of the wounds he had received, and was fiercely opposed to his Royal Highness and his politics chose to find matter for scandal in this affair, and it became a fashion with them to continually libel the Duke about it. Whereupon the Duke of Cumberland, in the year 1813, brought an action for libel against Colonel Sellis, and the result was that the Duke received £200 [illegible] the publication of the libel [illegible] this extraordinary system of attempting to [illegible] was the [illegible] fullest extent, even [illegible] the Duke of Cumberland [illegible] Conviction of his innocence increased with time and the cessation of party strife, and the consequence of this prudence and conduct subsequently cruel and unjust imputation, had latterly almost faded away. Yet it becomes even those who would not screen the memory of this Prince of the blood Royal of England from the foul stain, when they tell his history, to mention that a slander so boldly met, and triumphantly refuted by the Duke in life, ought not in the hour of death, when the subject of it can resist no more, to come up again in execration and be made, and probate decreed of the will, bearing date 8th Jan., 1846, and of six codicils. The bequests are numerous and liberal, and many annuitants appear in her lifetime to have been pensioned. A fund has been created on behalf of the horse "Black Prince," who, for many years, was ridden by the husband of the deceased, the late Lord Arden, and has since been given to two of her nieces, to whom she had by her will left a home in Bond-street, and that "Black Prince" may be buried, and not become the food of dogs. The Dowager Baroness leaves her jewels to the Earl of Egmont; and the MSS. to be heirlooms to the English baron and title of Arden, for the nephew, Sir Thomas Wilson, Bart., £300, towards erecting a church at Hampstead. After satisfying the annuities and legacies, the residue is to be given to her children and their issue. The personal and funded property liable to duty was valued at £100,000. Her Ladyship was the widow of the late Lord Arden, who for many years held the lucrative sinecure of principal registrar of the High Court of Admiralty, at the time Lord Stowel was judge, and during the war which ended in 1815. His Lordship acquired a large amount of property, and died possessed of half a million.

CHARITABLE BEQUESTS.—The will of the late Miss Walton, of Marsden Hall, near Colne, was proved in the Prerogative Court of York on the 8th inst., by Edward Parker and Edward Every Clayton, Esqrs., the executors, by which the following charitable legacies, free from duty, are bequeathed:—To the Church Missionary Society, £500; Church Pastoral Aid Society, £500; Church National Society for Educating the Poor, £300; Bible Society, £300; Society for Promoting Christianity among the Jews, £300; also 27 annuities to various poor widows and persons in very indigent circumstances, and legacies to 25 servants and labourers from £100 to £30. By the death of this lady, the full, wing legacies to charities, bequeathed by her late sister, Mrs. Maw, of Marsden Hall, become payable, free from duty: To the Church Pastoral Aid Society, £500; Church Missionary Society, £500; Church National Society for Educating the Poor, £500; Protestant Association Society, £500; Society for Promoting Christianity among the Jews, £500; the Bible Society, £500; Irish Scripture Readers' Society, £100; Achill Mission, £100; Religious Instruction Society of Dingle Colony, £100.—Charles Kanlc, Esq., late Keeper of the Mineral Department, Britis Museum, has left £1000 for charitable purposes he was nearly 80 years of age.—Charles Sayer, Esq., formerly of the Admiralty, has left to the Church Missionary Society, £100; Prayer-book and Homily Society, and Religious Tract Society, £50 each.—Mr. Charles Swain Wright, of York, has left to ten charitable institutions, £20 to each.—Mrs. Elizabeth Phillips, of Painswick, has bequeathed £100 to the Gloucester Infirmary; £100 to the Casualty Hospital, Stroud; £100 to the church at Slad; and £50 for a year for the singers; also £100 towards support of the Sunday Schools. Miss Harriet Crawley, lately deceased, has left £100 to the Incorporated Society for Building Churches; and £100 to the Society for the Propagation of the Gospel.

THE FUNERAL OF THE LATE MATTHIAS ATTWOOD, Esq.—The remains of this lamented gentleman were on Tuesday interred in the family vault at the Norwood Cemetery. In accordance with the wish of the deceased the proceedings were strictly private, the attendance being confined to the immediate relatives and most intimate connexions, and the only carriages were those of the Earl of Lonsdale, Mr. Wilkin, and Mr. Pearce. It is understood that Mr. Attwood has left the whole of his property to his only son, Mr. Wolverley Attwood, and that to him reverts also the interest of the deceased in the firm of Spooner, Attwood, and Co.

We regret to announce the demise of Mr. George Maule, the Solicitor to the Treasury, which took place last week at his residence in Wilton-crescent, after a short illness, in his 76th year. Mr. Maule had for many years filled the above responsible situation.

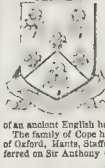
The *Kassard Khier*, or, in English, the "Good Omen," a fine schooner-rigged steam yacht, constructed of iron and fitted with engines of 80-horse power, and a screw propeller, by Messrs. William Joyce and Co., Greenwich, went down the river on Tuesday on trial. The yacht is 240 tons burthen, 150 feet long, with 18 feet breadth of beam, and an average of 6 feet 6 inches draught of water. The *Kassard Khier* is fitted up in the interior in the most splendid Oriental style. She is supplied with Porter's anchors, and several of the best modern improvements connected with sea-going vessels. The trial was most satisfactory.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED

LORD DE BLAQUIERE

WILLIAM LORD DE BLAQUIERE died at Beulah-hill, Norwood, last week. He was a general in the army, and had served, with distinction and gallantry, in Flanders, at the Cape of Good Hope, and in India. His Lordship's father, the first Peer, having been appointed principal secretary to the Lord Lieutenant of Ireland, and invested with the Order of the Bath, was created a Baronet in 1784, appointed Great Almoner of Ireland, and made a Baron of the United Kingdom. The nobleman just deceased was born the 27th of January, 1778, and married, 16th of September, 1811, Lady Harriet Townshend, daughter of George, the first Marquess Townshend, by whom (who died the 9th of Nov., 1843) he had issue, John, the present Peer, William Barnaby, Lieut. R.N., and Rose, who died young

SIR JOHN COPE, BART.



THIS venerable Baronet, whose famous fox-hounds have been so long celebrated, died at Bramshill House, on the 18th inst. Bequeathing to the ancient name of country squires of high degree, he sustained his hereditary position with dignity and popularity. His fine old house at Bramshill deserves a passing word. It is not the largest, or the grandest, or the showiest, of the best planished of our stone mansions, but it is still rare, and as it was in olden time. It stands as it stood two hundred years ago. Little more weather dyed perhaps, but still to some and its picturesque park, to all its most features as it was half a century after it was reclaimed from the heath around it. In our own times Bramsnil was honoured by a Royal visit. Queen Victoria, with the Prince Consort, went over the mansion on the 21st July, 1845 (the Court being then at Strathfieldsaye), and expressed herself much pleased with this fine specimen of an ancient English hall, still kept in the olden English state.

The family of Cope has enjoyed at various periods large estates in the county of Oxford, Mants, Stafford, and Gloucester. The dignity of Baronet was conferred on Sir Anthony Cope, of Hanwell, M.P., in 16[illegible]. From that gentleman the Baronet whose death we record was sixth in descent. Sir John, having died without issue, is succeeded in the title, we believe, by his kinsman, the Rev. W. Henry Cope, who is married to Marianne, daughter of Henry Garnett, Esq.

THE BARONESS WARD

A FEW short months since we announced the nuptials of this accomplished Lady: it is now our painful duty to record her early death, which occurred on the 14th inst., at Schwalbach, in Germany. Her Ladyship was the daughter of Hubert De Burgh, Esq., of West Drayton, in Middlesex, by Marianne his wife, daughter of Admiral and Lady Elizabeth Tollemache. She married the present Lord Ward on the 21st of last April.

WILLS OF EMINENT PERSONS RECENTLY DECEASED.

The will of the late Earl of Liverpool, G.C.B., P.C., and Baron of Hawkesbury, has been administered to, and probates granted to his sons-in-law, Colonel Francis Vernon Harcourt, and John Cotes, Esq. The personal estate was estimated for stamp duty at £60,000; the property, together with his freehold and real estate, is to be equally divided among his three daughters. He has left no male issue, and the title becomes extinct. The will bears date 8th February, 1841, and a codicil 14th May, 1845. His Lordship's death occurred on the 4th inst., in his 87th year. He was the son of the first Earl, who was raised to the Peerage in 1796, for long civil services; he succeeded his half brother, Robert Banks, second Earl, the lamented Prime Minister in 1812.

The late Rev. Spencer Madan, M.A., Canon Residentiary of Lichfield, Vicar of Bathealton and Tworton, Somerset, has left personal property amounting to £20,000.

The will of the Countess Dowager of Buckinghamshire, who died on the 13th inst., has been proved by the Earl of Ripon, one of the executors. The will was made in May, 1850. There are many liberal bequests. Her Ladyship has bequeathed her shares in the Witham Navigation to the Earl of Buckinghamshire; and the residue of her property between her sister, the Hon. Emily Eden, and her brother, the Bishop of Sodor and Man. The personalty was valued at £45,000.

Probate of the will of the Dowager Baroness Arden has been granted to her son, the Earl of Egmont, and her nephew, Spencer Horatio Walpole, Esq., M.P., the acting executors: her son, the Hon. and Rev. C. G. Perceval, having a power reserved to him. Her Ladyship had written, in her own hand, many testamentary papers, but, owing to the informality of the state in which they were left, it was necessary to sustain their validity by affidavits, and others executed in her own name, to make a special appointation and bequest, and probate decreed of the will, bearing date 8th Jan., 1846, and of six codicils. The bequests are numerous and liberal, and many annuitants appear in her lifetime to have been pensioned. A fund has been created on behalf of the horse "Black Prince," who, for many years, was ridden by the husband of the deceased, the late Lord Arden, and has since been given to two of her nieces, to whom she had by her will left a home in Bond-street, and that "Black Prince" may be buried, and not become the food of dogs. The Dowager Baroness leaves her jewels to the Earl of Egmont; and the MSS. to be heirlooms to the English baron and title of Arden, for the nephew, Sir Thomas Wilson, Bart., £300, towards erecting a church at Hampstead. After satisfying the annuities and legacies, the residue is to be given to her children and their issue. The personal and funded property liable to duty was valued at £100,000. Her Ladyship was the widow of the late Lord Arden, who for many years held the lucrative sinecure of principal registrar of the High Court of Admiralty, at the time Lord Stowel was judge, and during the war which ended in 1815. His Lordship acquired a large amount of property, and died possessed of half a million.

CHURCH, UNIVERSITIES &c.

OXFORD.

THE ASHMOLEAN SOCIETY.—On Monday evening the second meeting of the season of this society was held at the museum, the president (Dr. Jenne) in the chair. On the table were placed some beautiful specimens of African birds, presented to the society some time since, and now stuffed and prepared for inspection in the museum. The Rev. R. H. Wood, of Queen's College, was balloted for, and elected a member of the society. Dr. Daubeny produced some very interesting specimens of fossil grapes, vine leaves, and seeds, found in the brown coal of the Wealden between Frankfort and Cassel, and made some observations on the age of the deposit. Mr. Walker exhibited one of the art ... recently manufactured by Mr. Pratt, of Hanover, which he said were received, of a very powerful nature, as to the amount of weight it would lift; and as an example in point, he stated that he was awakened by the sudden disruption of the keeper from the magnet, a quality not found in other magnets. Mr. Elias has obtained great celebrity by his magnets. It is stated that, the steel, after being bent into the form of the letter U, or horse-shoe, is passed through a coil of covered copper wire, one end of which wire is connected with the positive pole of a voltaic battery, and the other end with the negative pole, when in action, thus rendering it an electro-magnet, by the current of electricity passing through the wire. The magnet is moved backwards and forwards within the coil, and it is to be observed that the connexion must be broken when the centre of the magnet is in the coil. The magnet exhibited by Mr. Walker was composed of three horseshoe magnets, forming a compound one: its weight was about 10 or ... ozs., and its power was to support ... lbs. weight from it. Mr. ... exhibited a new ... barometer, which he considered ... observations, and presented the society with a table of corrections with the aid of which barometer, to reduce the readings to the true height, at 32 deg. Fahrenheit. The society adjourned to the 1st December.

THE ROYAL SUPREMACY.—The following declaration, to be presented to the Primate, is stated to have received the signature of above three thousand one hundred of the clergy, including seven deans, eleven archdeacons, and a large number of the dignitaries of the Church. It is entitled a declaration of the undersigned clergy of the Church of England in support of the Royal supremacy in things ecclesiastical, and of the wisdom and authority of the judgment emanating from its recent exercise:—"We, the undersigned clergy of the Church of England, viewing with surprise and concern the attempts made by parties holding office in the Church to invalidate and nullify the judgment recently delivered by the Sovereign, as 'supreme governor of this realm, as well in all spiritual or ecclesiastical things or causes as temporal,' by the advice of the Privy Council, and the Primates of the Church, in the case of 'Gorham v. the Bishop of Exeter,' hereby testify our thankfulness for the judgment so delivered; and feel ourselves called upon, under present circumstances (whether holding, or not, the view which called forth the judgment), humbly to state our conviction, that it was a wise and just sentence, in accordance with the principles of the Church of England. And we respectfully, but firmly, protest against any attempt, from whatever quarter it may proceed, to treat with contempt a judgment so issued; and to charge with false teaching, and discredit with their flocks, those whose doctrine has been pronounced by that judgment to be not contrary or repugnant to the declared doctrine of the Church of England." Such attempts we hold to be equivalent to the enforcement of a standard of doctrine in our Church, by unauthorised individuals, opposed to that established by its supreme authority, and consequently to the irreconcilable with the first principles of all Church polity, and necessarily to lead to a state of disorder, strife, and confusion in the Church."

ST. MARY'S, LAMBETH.—The restoration, or rather the rebuilding, of this ancient parish church—for all of it is now new except the tower—is making most satisfactory progress towards completion. The galleries, and the arrangements for warming the building by hot water, are in an advanced state; a very beautiful font of stone, with a tall and elegant cover in carved oak, has been presented by Dr James Forbes Young, a brother of Sir Charles Young, Garter King of Arms. A stained glass window, the gift of the young men of the parish, of full upper dimensions, are already up; one of the same size as the latter will be up during the present week; and two others, memorials from widows to their husbands, are in course of preparation. A pulpit and reading-desk are still among the unsatisfied requirements of the church. If we may judge from the good spirit that has been excited in the parish by the sessions and untiring exertions of the rector, we feel confident that those important objects will soon be supplied. Of the building itself we say nothing, for it cannot be spoken of in terms of praise in favour of the taste and skill of Mr. Hardwicke, the architect, the church is graceful and correct in design, and offers every guarantee for permanence of duration.

NEW CHURCH IN ST. MARY, NEWINGTON, SURREY.—The Loraine estate, the property of the Dean and Chapter of Canterbury, situate in the rear of the Surrey Zoological Gardens, and abutting on Kennington-common, has for some years remained chiefly as a market garden ground; but during the past and present summers upwards of 1600 new houses have been erected thereon, and have for the most part become inhabited. Nearly 2000 houses more are about being built, and as the necessity seems resolved, in order to provide for the spiritual wants of this comparatively new town, to erect a new district church, and in the course of the last week workmen have commenced excavating the foundation.

NEW APPOINTMENTS AND APPOINTMENTS.—The following preferments and appointments have been made: *Denbury Rural:* The Rev. Francis Lear to Chelsea, diocese of Salisbury. *Restories:* The Rev. William Price to Darwen, Denbighshire. The Rev. W. Browne to Binegr, Norfolk; the Rev. Mr. Lee to Llanthewy Skirrid, Monmouthshire; the Rev. James Thompson to Lincoln College, Oxford; the Rev. Charles Dunne to Earl's Croome, Worcestershire.

TESTIMONIALS.—The following clergymen have recently received testimonials of esteem and regard:—The Rev. H. Fisher, from the congregation of St. Paul's, Broughton, on his leaving Chester; the Rev. T. R. Medwin, from the pupils of the Grammar School at Stratford-on-Avon; the Rev. J. Bell, from members of Avebury and Monkton, Wilts, from his parishioners; the Rev. Edwin Sidney, M.A., Rector of Cornad Parva, from the congregation of the churches of St. Gregory and St. Peter, Sudbury, Suffolk; the Rev. R. Morgan, from the congregation of St. John's, Swansea; the Rev. W. Pennefather, of Walton, Aylesbury, from the children belonging to the school, the Rev. Thomas Kearsey Phillips, from the parishioners of Weybread, Suffolk, on his departure; the Rev. S. Hastings, of St. Mary's, Scitsamption, and a second from the teachers in the school; the Rev. H. Ayling, from the inhabitants of the united parishes of St. Mary and Holy Trinity, Guildford, Surrey.

The Rev. J. Mason Cox, M.A., late scholar of Lincoln College, Oxford, B.A., has been appointed vice-principal of the St Mary Church College of Pastoral Theology. Visitor, the Right Rev. the Lord Bishop of Exeter.

The Lincolnshire Chronicle mentions the following specimen of church restoration:—"about to be pursued at Boston:—"The north and south windows in the chancel are about to be painted with a composition of white lead and turpentine, in imitation of ground glass, occasionally varied by a bright blue colour, similar to the windows in the splendid spirit establishments of the metropolis."

DISSENT IN ENGLAND.—The committee which was appointed by the House of Commons last session to consider the law of church rates prepared a document according to a report. In the evidence of Mr. Edward Baines, of Leeds, one of the leaders of the English dissenters, we find the following estimate of the number of nonconformist chapels in England and Wales, said to be drawn up with great pains to obtain accuracy:—

Denominations.	Number of Chapels.
Wesleyan	4450
Independent	2572
Baptist	1981
Primitive Methodist	1562
Roman Catholic	597

THE NOCTORAMA.—Under this title a miniature species of panorama is exhibited at Portland Hall, Great Portland-street, by a Signor Jacobi, and this one, also, notwithstanding its *petite* scale, of considerable interest. The scenes are presented in an illuminated oval, and accompanied not only by lectoral descriptions, but illustrated by vocal and instrumental music. They are painted admirably, and the general tone of the colouring is remarkably pleasing. The places represented are Naples, Castle D'Uova, Theatre San Carlo, the Santa Lucia, the Bay, with the sites of Portici, Resina, Herculaneum, Pompeii, Vesuvius, and Castellamare. Views of the open Mediterranean, the Villa Reale, with dioramic effects of the eruption of Vesuvius, succeed; and the whole closes with the illumination of St. Peter's at Rome. That seems so fair should yet be subject to tyranny and superstition, fills the mind with melancholy reflections.

THE BOA CONSTRICTOR AND THE BLANKET.—Some six weeks since, the boa presented to the Zoological Society by an officer, a few months ago, swallowed a blanket or railroad wrapper, placed in its cage for warmth. It is supposed that the boa, after having seized a live rabbit, must have taken hold of a portion of the blanket and swallowed it, as a continuity of the rabbit. Great apprehensions were entertained that the boa would be unable to digest the wrapper, and would die, but, after being in its body five weeks and one day, the blanket was disgorged, and much diminished in size. The boa is rather thin from this indigestible food, and drinks frequently, probably from the great absorption in its battery of the blanket. It can scarce so fair should yet be subject to tyranny and superstition, fills the mind with melancholy reflections.

CHESS.

TO CORRESPONDENTS.

S B, Wandsford.—The King can Castle under the circumstances mentioned
G S Gough.—It terminated as a drawn battle
HONORARY SECRETARY.—You cannot do better than avail yourself of Mr Lowenthal's services
CHESTER.—The game shall not escape, but another be played in its stead
R B W, Jersey shall have very attention
GRAD.—We send game for certainly a remarkable instance of juvenile aptitude for Chess. Upon again examining it, you will observe that Black may readily win by moving his Rook to K 8th at move 40. We are curious to see the announcement. Was it recorded?
R R, of Ash and.—The two last are impossible
DELTA, Sidmouth.—What does our fair correspondent mean by "check to the Queen?" It is the King only that is warned of danger by the cry of "check"
T J ... Glasgow.—Salterne knew a drawing game
C W ... Bath.—I can ... have ... Bath Post, 2 Advtsse, 21, King William-street, Strand-cross
S A ... Ramsgate.—Undoubtedly: it is what players call "a double check;" and as the King has no piece to move to out of both checks he is checkmated
H W H.—See the note above to P 7. 2. You may take it after your King has been checked
AN INQUIRER.—White is right. The King cannot move within the range of an adverse piece
R R, of Ashford.—Ideas fine; and some underground combination
M. T. A. CORRESPONDENT IN SCOTLAND, and others.—We are too much driven for space this week, but we hope to give them next
J H ... You will find a Chess Club attached to the Mechanics' Institution, Devonport
W.—We cannot tell you the exact number of Chess Clubs in England; but there are, we believe, upwards of a hundred

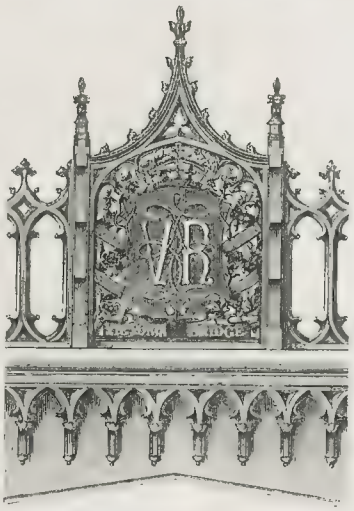
VICTORIA BRIDGE, WINDSOR.

WINDSOR IMPROVEMENTS.—VICTORIA AND ALBERT BRIDGES.

FROM the village of Datchet, a bridge across the Thames (built, curiously enough, on one side of iron, on the other of wood, the opposite parishes originally not having been able to agree as to material, and so each taking its own) led to a path across the park to Windsor. The way was the most direct, but the path being in a cutting divided the park, and interfered with her Majesty's private grounds. It was therefore resolved to take down the old bridge, and build instead two new ones one higher up, the other farther down, the river; and to give two public carriage-ways, instead of the old Datchet footpath. There was added, at the upper bridge, from the private to the public portion of the park between sixty and seventy acres; and some land was gained along the margin of the river. Our Engraving shows the upper, or Victoria Bridge—with which the lower, or Albert Bridge, except the ornaments in the spandrils and centre arms, is identical.

The Bridge is a single pointed arch, 120 feet span and 19 feet 6 inches rise from the springings, which correspond with the ordinary water-line. It consists of five ribs, reduced gradually from 24 inches at the springings to 76 inches at the crown. Each rib consists of seven castings bolted together with flanges. The interior ribs are H shaped, 4 feet deep at springing, 3 feet at crown. The weight of each rib is about 26 tons. They are fastened together by seven cross stays—the girders to carry the roadway, and which form the horizontal line. Of the spandrils, the internal ones are T shaped, 12 inches deep and 12 inches broad, and ¼ inch thick. The exterior girders are 2 feet 10 inches deep; and of the form seen in our Engraving. The roadway is made by 9-inch brick arches, 6 feet span, thrown across from girder to girder throughout the entire length of the bridge. Upon these, as foundation for the gravel, and tied together by iron bars, is laid a layer of concrete 9 inches in thickness. The spandrils, weighing each 4½ tons, are highly ornamental. They are of open-work, and displaying in the upper bridge the Royal arms; in the lower, those of Prince Albert. The cornice and railings are Gothic in design, and exceedingly rich in effect. The centre ornament of the railings consists of a panel bordered by a wreath, and bearing the Royal initials in gold. The entire weight of the metal work is about 250 tons

The land arches are of stone, 24 ft. 6 in. span, 11 ft. 3 in. rise, and 15 ft. 2 in. from the ground to the crown. The bridges were commenced in the March of 1848, and opened to the public in the summer of the present year. They are from designs by Mr. Thomas Page, engineer to the Commissioners of Woods and Forests, and were constructed, under his direction, by Messrs. Rigbys. The open spandrils, which are the same throughout, the corales and railings, and the entire bridge being painted bronze, give an air of extreme elegance and lightness, and make these bridges, which are about a mile and a half apart, an ornament to the river, and a real improvement to the neighbourhood.



DECORATIVE PANEL OF THE VICTORIA BRIDGE.

LANDSCOVE CHURCH.

THIS neat little Church, situated in the parish of Staverton, about two miles from Ashburton, Devon, was consecrated on Saturday, the 27th of September, by the Bishop of Exeter, in the presence of a numerous assemblage of people, and the principal of the clergy of the neighbouring parishes. Divine service was performed by the Rev. H. F. Atherly, assisted by the curate of the new church, the Rev. Mr. Hutton.

LANDSCOVE NEW CHURCH.

The Church is dedicated to St. Mathew, and is built with dunstone raised near the building; and Bath-stone dressings. The style is early English; the plan consists of a nave, south aisle, chancel, and south porch; with a tower and spire about 100 feet in height at the eastern end of the aisle. The seats, pulpit, desk, &c., are of oak, and of neat design; the open roof is stained, to imitate oak. Adjacent to the Church is the Parsonage-house, a very convenient building, harmonising with the character of the Church. The erection of this neat ecclesiastical structure has already proved a great accommodation to the villages of Landscove and Wolston Green, situated a considerable distance from the parish church. The principal part of the expense incurred in the buildings has been generously defrayed by Miss Champernowne, of Darlington. Mr. Pearson, of Westminster, is the architect, and Mr. J. Mason, of Exeter, the builder. The site of the Church has an extensive prospect over the picturesque vales of South Devon, and the spire is a conspicuous object for a considerable distance.

THE GOLD DISCOVERY IN AUSTRALIA.

We have accounts of the progress made at "the diggins," which show that Australia is likely to surpass California in the wonderful productiveness of its gold fields. We learn, for instance, by the present advices that in one hole lumps of gold weighing altogether 109 lb. were picked up by an individual: they were sold to Messrs. Thacker and Daniel, of Sydney, for £4160. With regard to the details of the state of business and of mining operations, the following extracts of letters will furnish the best information. The first is from Messrs. Young and Co., dated the 16th of August:—

Every day brings forth new treasures. The winter being nearly at an end, the western road is crowded again with thousands of pilgrims to Ophir and Tofola, attracted by the riches laid open to the world. At Ophir the diggers have been greatly hindered in their operations by the rise of the waters; but at the Turon the general success far exceeds all credit. I received a letter from Macquoid the other day, in which he says, "These diggings are far richer, I think, than you or the people in Sydney are at present aware of. I walked up and down the river yesterday for several hours, and every one I conversed with appeared to be doing well. I stood by and saw a great deal of gold collected from the different cradles; one party (Hall's) within the last three weeks has collected upwards of £1600; and when I yesterday, at three p.m., was talking to Mr. Hall, I asked him what had been his luck during the day, he took out of his pocket a bag containing 2 lb. of gold, which he had procured before dinner. In thus instancing Mr. Hall's luck, I do not mean you to understand that it is common, because, so far from this being the case, I believe he has been the most fortunate individual as yet upon the river. Nevertheless, all the others who are working alongside of him are doing well, and have plenty of gold. On the other parts of the river people are likewise doing well. One man of a party of three had made £80 in a fortnight for his own share; and instances of luck similar to this are by no means uncommon." My cook has a brother-in-law working at Oakey Creek, a tributary of the Turon, and he and his party of 11 have for some time been raising their 7 oz. per man per day, or nearly £24 sterling in value. This is the Arabian Nights over again. The Government send down an armed escort with the mail once a week, and the last few weeks they have had over £10,000 worth weekly, besides which a great deal has come through the Post-office and by private opportunities; so that probably the quantity at present received weekly is not far short of £20,000. The last ship, the *Boadicea*, which sailed this day week for London, had £30,000 worth of freight. This must convince the most sceptical that there is no exaggeration in what has been promulgated. Sydney, meanwhile, is becoming deserted, and there is little or no business doing privately. At auction prices have been very low, and forced sales do not realise cost and charges."

The writer of another letter, dated August 8, says:—

The famous hundredweight of gold is sent to England by this vessel, consigned to Matheson and Co. This, I believe, is the largest mass of gold that the world has ever seen. Unfortunately, the aboriginal native by whom it was found smashed it up, to separate it from the quartz. It is still, however, in its present state deserving of your inspection.

The subjoined, also, is to a leading London firm:—

Sydney, Aug. 15.

Though I wrote to you not further back than the 5th, I cannot allow a ship to go without a line upon the present gold prospects. Really, day by day the thing is growing more astounding. A piece of 80 lb. weight is just picked up, and plenty of 4 lb., 5 lb., 6 lb., and 7 lb. each. Sydney is rapidly becoming depopulated; the men are off from every house. My carpenter, gardener, labourers, and groom go next week. My mason is gone. Happily, my buildings are finished, or I suppose they would not have been. The attorneys' clerks are all gone or going; and, indeed, from every trade as well as profession men are away You neither hear of nor see anything but gold, or golden equipments. The shops are doing little or nothing, and the offices less. Meanwhile new goldfields are, day by day, added to the old. Men are leaving good diggings, of 20s. a day each, to fall upon richer ground, and from £100 to £300 per month per man is not looked upon as anything out of the common. The newspapers do not tell half.

The total shipments of gold to England as yet advanced from the colony sum up nearly £75,000, comprising the following; viz. by the *Sir Thomas Arbuthnot* (arrived here), £6000; by the *Mary Ramsdyne*, £11,648; by the *Boadicea*, £28,730 (these two vessels having sailed in July; and by the *Mount Stuart Elphinstone*, which left in August, between £20,000 and £30,000.

The following extract from the *Bathurst Free Press* describes the finding of the 106 lb. of gold above referred to:—

A few days previous to the finding, an educated aboriginal, formerly attached to the Wellington Mission, and who has been in the service of W. Kerr, Esq., of Wallawa, about seven years, returned home to his employer with the intelligence that he had discovered a large mass of gold amongst a heap of quartz upon the run, whilst tending the sheep. Gold being the universal theme of conversation, this noble son of the forest was excited, and provided with a tomahawk he had amused himself by exploring the country adjacent to his employer's land. His attention was first called to the spot by observing a spot of some glittering yellow substance upon the surface of a block of the quartz, upon which he applied his tomahawk and broke off a portion. He then started home and described the discovery to his master, who was soon on the spot, and in a very short time the three blocks of quartz containing the hundredweight of gold were released from the bed where they had rested for ages. The largest of the blocks was about a foot in diameter, and weighed 75 lb. gross Out of this piece 60 lb. of pure gold was taken. Before separation it was beautifully greased in quartz. The other two were something smaller. The auriferous mass weighed, as near as could be guessed, from two to three hundredweight Not being able to move it conveniently, Dr. Kerr broke the pieces into small fragments, and herein committed a very great error. As specimens, the glittering block would have been invaluable. From the description given by him, as seen in the original state, the world has seen nothing like them yet. The heaviest of the two large pieces presented an appearance not unlike a honeycomb or sponge, and consisted of particles of a crystalline form, as did nearly the whole of the gold. The second larger piece was smoother and the particles more condensed, and seemed as if it had been acted upon by water. The remainder was broken into lumps of 2 lb. to 3 lb. and downwards, and were remarkably free from quartz or earthy matter. The locality where the gold was found is the commencement of an undulating table land, very fertile, and is contiguous to a never-failing supply of water in the Macquo Creek. It is distant about 53 miles from Bathurst, 18 from Mudgee, 30 from Wellington, and is to the nearest point of the Macquarie River, and is within eight miles of Dr. Kerr's head station. The neighbouring country has been explored since the discovery, but, with the exception of that no further indications have been found.

NOOKS AND CORNERS OF OLD ENGLAND.

LAMB'S CONDUIT, AND ITS FOUNDER.

WILLIAM LAMB was born at Sutton Valens, in Kent, and became one of the Gentlemen of the Chapel to Henry VIII. He was a free brother of the Company of Clothworkers of London. He was thrice married, and was buried in the Church of St. Faith, under St. Paul's.

With the exception of these particulars, which were recorded in an inscription upon a pillar of the old church, the history of this bountiful citizen, as has been observed, "is involved in that of his charities." These included benefactions to his native town, to Maidstone in the same county, to the poor clothiers in the county of Suffolk, and in the towns of Bridgnorth and Ludlow. In London he was likewise a benefactor to the parish church of St. Giles's, Cripplegate; to the Stationers' Company, to the poor of the parish of St. Faith, to Christ's Hospital, to the Hospital of the Savoy, to the poor prisoners in the City Compters, and the prisons of Newgate, Ludgate, the Marshalsea, and the King's Bench. He bequeathed £20 to be divided among forty poor maidens for marriage portions; legacies to his servants, and 108 friars' gowns to as many poor men and women attending at his funeral. But his name is chiefly preserved by his association with the Clothworkers' charity, and more especially the Conduit which he constructed for the supply of water to the city. The former was situated in an angle of the city wall, on the south-east side of Cripplegate Churchyard, where the base of a circular watch-tower and other remains of the old wall still exist. The site

EFFIGIES OF WILLIAM LAMB.

of Lamb's Chapel, in which the monument represented in the accompanying Engraving is placed, was originally a small monastic establishment, called the "Hermitage of St. Jamess" in the wall. It was a cell to the Abbey of Genrendon, in Leicestershire. A well near at hand was the property of the monks of this establishment, and hence the neighbouring Monkwell-street had its name. This hermitage is stated to have been founded by Henry III.; but, from existing evidence, the spot appears to have been occupied by a religious edifice upwards of a century earlier. This consists of a crypt, under the chapel, of Norman architecture, in a remarkably pure and finished style. The vaulted roof has been supported by nine short columns, six still remaining, the capitals of which equal the most ornate remains of Norman ornamentation. The intersecting ribs, which form the groining, are decorated with zigzag moulding and a spiral ornament. The carved work is of Caen stone. The chapel is twenty-six feet from east to west, by twenty feet in breadth.

In 1275 this chapel was committed to the protection of the Mayor of London, and afterwards placed under the superintendence of the Constable of the Tower, on account, as it is stated, of the "rents, chalices, books, vestments, images, bells, relics, charters, Royal grants, apostolical privileges, utensils, and other goods of the said hermitage without Cripplegate, being divested or carried away unless placed under some certain custody."

A chantry was here founded for the souls of Aymer de Valence, Earl of Pembroke, and the Lady Mary his wife, which was endowed with ten tenements in Foot-street, and two Cistertian monks from the establishment at Gerendon were deputed for the service of the chantry.

This chapel, with its appurtenances, appears to have been granted by Henry VIII. to William Lamb, whose musical skill or other merits had probably rendered him a favourite, and he made the place his residence, bequeathing and endowing it at his death for the benefit of the Company of Clothworkers as aforesaid.

Of the Conduit Stow says, "Neere unto Holborn he (Lamb) founded a faire conduit and a standard, with a cocke, at Holborn Bridge, to convey thence the waste. These were begun the six and twentieth day of March, 1577." The first of these conduits is understood to have been situated somewhere near the end of Red Lion-street, but, its exact site being a matter of question, the following observations are appended with a view of establishing the locality.

STONE LAMB, FROM "LAMB'S CONDUIT."

The public-house called the sign of the "Lamb," at the north-east end of Lamb's Conduit-street, formerly known as the "Lamb and Flag," is distinguished by the appropriate effigy of a lamb cut in stone, the right fore leg being bent so as to have sustained the banner charged with a red cross, which typifies the *Agnus Dei*. A near examination of this sign served to satisfy the writer that it was of no recent workmanship, and this peculiarity of style, together with the circumstance of its being carved in stone, with the appearance of a large screw-head for the original purpose of securing it in its place, made it evident that it could be no less than one of those figures of a lamb (a rebus on the name of the founder) which are said to have stood upon each of the conduits, and as a relic of some interest he made a drawing of it, whereof the accompanying Engraving is a copy. This discovery suggesting further examination, he entered the yard belonging to the public-house, and, with the assistance of mine host of the "Lamb," lifted a trap-door in the pavement, and descended by a short flight of steps into a brick vault. Here, with a stout cane for lack of a divining-rod, he probed the soil until a hollow sound revealed at no great depth the wooden cover of the well, the same being laid bare by means of a spade supplied by a good-natured groom, who, however, declined the gratuity of a libation from the celebrated spring, preferring in lieu thereof the more sophisticated beverage of the neighbouring tap. The "New View of London" (1707), compiled, it is believed, by Hatton, describes the fountain-head of Lamb's Conduit as being in the vacant ground a little to the east of Ormond-street. When the Foundling Hospital was erected, the conduit was taken down and the water conveyed to the east side of Red Lion-street, at the end, and gives the name of Lamb's Conduit-street to the half thereof, he says, adding that access to the water was obtained by means of steps descending to the pipe whence it issued. An inscription was set up to record this change, in which the following seems to point to the identical vaulted building above described, viz.:—"The waters thereof (Lamb's Conduit) are still preserved, and contained for the public emolument by building an *arch* over the same," &c.

On the north wall in the next yard southward, the following inscription, cut in wood, appears over a recess now bricked up:—

Lamb's Conduit the Property of City o. London:
This Pump is Erected for the benefit of the Publick.

The water is perfectly clear and slightly astringent, and the Mansion House is said still to derive a supply from this source

EPIPHYLLUM IN FLOWER AT SOUTH LAMBETH.

THIS magnificent plant is now in flower at Mawbey House, South Lambeth, the residence of James Thorne, Esq. It is a noble specimen of the *Epiphyllum truncatum*, its native country Brazil, and the year of its introduction into England 1818. It is grafted upon the *Reresikia aculeata*, or Barbadoes gooseberry. The height of the plant is 3 feet 6 inches from the pot to the crown, and its circumference is just 9 feet. It is kept in a temperature of 55 deg. Fahr. during the winter months; and in from 70 deg. to 75 deg. in the summer months. The stock upon which it is grafted will not endure, without danger, a lower temperature than the first named above; but when the plant is on its own roots, or grafted upon the *Cactus speciosissimus*, it will bear the winter temperature of an ordinary greenhouse very well. The soil in which it grows best is a mixture of light rich loam, a small quantity of decayed manure, a liberal portion of silver sand, and plenty of potsherds for drainage. The number of flowers on this beautiful plant is upwards of 800. The gardener's name, E. A. Hamp, deserves mention.

EPIPHYLLUM IN FLOWER AT SOUTH LAMBETH.

NATIONAL SCHOOL AT SPROUGHTON.

THIS new edifice has just been opened in the parish of Sproughton, near Ipswich. The first stone of the building was laid on the 10th of July, by the Lord Bishop of Norwich, after having administered the rite of confirmation in the church of that town. The site of the School is within fifty yards of the church, and the ground was given for the purpose by the Rev. H. T. Hasted, the rector. Immediately after Divine service, the Bishop, followed by his chaplain, the Rev. R. Eden, the rector, and many of the clergy from the adjoining parishes, walked in procession to the site, and there performed the ceremony of laying the stone.

The building, in the Tudor style, which has been much admired, and designed by Mr. F. Barnes, architect, Ipswich, was opened on Wednesday, Nov. 12. Divine service commenced at two o'clock. The church was, as usual, filled by a large and attentive congregation, the school children, to the number of 80, all sitting in the chancel. Prayers were read by the rev. the Rector, the "Cantate Domino," and "Nunc dimittis," and the "Gloria Patri" being chanted, the new organ, lately erected by Messrs. Gray and Davison, sending forth its solemn peal; after which a very impressive sermon was preached by the Hon. and Rev. Lord Arthur Hervey—Prov. i. 7. The service having been concluded, the children walked two and two, headed by the rector and churchwardens, to the School, which had been tastefully decorated with flowers and evergreens, and where an ample supply of good old English fare was provided, to which justice was fully done.

The School, with the master's house, fittings-up, and all other expenses, have cost nearly £300; out of which £55 have been granted from different societies, the remainder having been subscribed by the landowners and occupiers, who have most liberally come forward on the occasion.

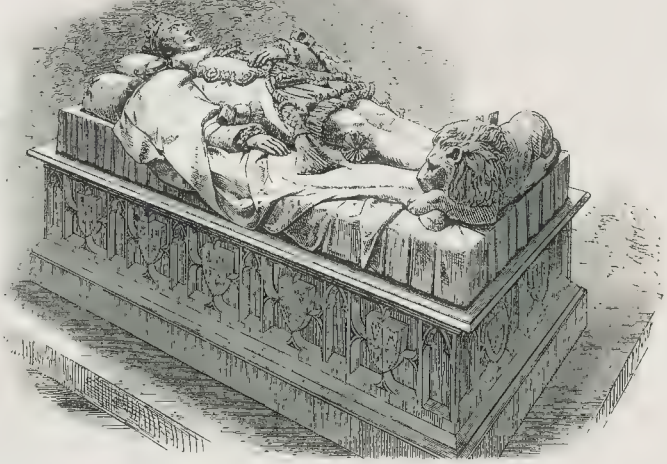
NATIONAL SCHOOL, AT SPROUGHTON, NEAR IPSWICH.

MONUMENT TO THE LATE DUKE OF NORTHUMBERLAND.

THIS finely executed and impressive Monument, by Mr. Carew, the sculptor, has lately been placed in the north-eastern transept of St Paul's Church, Alnwick, to the memory of the late Duke of Northumberland. The design consists of an altar tomb, of polished Caen stone 9 feet long by 4 feet 9 inches in breadth, and forming a pedestal 2½ fee high, on the top of which, in a recumbent position, is placed a full-length figure of the late Duke, robed as a Knight of the Garter, with the ducal coronet on his head. He wears the collar with the George suspended in full and beautiful relief. On the left breast is placed the star and badge, and on the left knee the garter and motto of the order. His feet rest on a lion couchant.

Round the pedestal, divided into Gothic compartments, are placed shields, setting forth the arms and achievements of the House of Percy and its alliances. The bearings are chiselled in relief. The whole is surrounded by a bronze railing of Gothic design.

The Monument is erected at the expense of the present Dowager Duchess of Northumberland. St Paul's Church was, a few years since erected by the late Duke, from designs by Mr. Salvin, in the Gothic style of architecture.



MONUMENT TO THE LATE DUKE OF NORTHUMBERLAND, IN ST. PAUL'S CHURCH, ALNWICK.

MUSIC.

LONDON SACRED HARMONIC SOCIETY.

The revival of Handel's oratorio, "Belshazzar," performed only once by the old society, in 1847, will certainly inspire regret that the magnificent music was not wedded to a less absurd and wearisome poem. The adaptor of the "Messiah" for Handel, Mr. Jennens, has been singularly unfortunate in his arrangement of the incidents; and the driveling dogeral with which the recitative is invested of an destroys the effect of the most sublime situations, amongst which we need scarcely quote that of the "Handwriting on the Wall." Under the infliction of such poetry, can it be wondered that the genius of Handel has failed to realise the terrible point of sacred history. On the other hand, the immortal composer has been eminently successful in delineating other less objectionable portions. The scene of *Daniel*, assigned to a contralto, "O sacred oracle," so finely sung by Miss Dolby, is one of the noblest musical inspirations we are acquainted with; the orchestral undercurrent is quite a gem. The choral pieces are also rapids with power, solemnity, and picturesqueness; in short all

WINTER ASSIZE.—On last Saturday, in pursuance of the Queen's warrant, commissions were issued for holding a special assize of over and terminer and general gaol delivery for the counties of York and Lancaster. The Judges, Mr. Baron Parke and Mr. Justice Erle, have issued the precepts for holding the assize at Liverpool on Saturday, the 6th of December. Mr. Justice Manse and Mr. Baron Platt have fixed Saturday, the 13th of December, for opening the commission at York.

IMPERIAL SALT AND ALKALI COMPANY.—A meeting was held before Master in Chancery Tinney, when the list of contributories was further settled, and instructions taken for the realisation of assets from the sale of the company's property. It is understood that the arrangements making are such that there will be a return of money instead of a call on the unfortunate shareholders, as we were led to believe that "scrip" could be made out of "dust."

BRITISH EMPIRE MUTUAL LIFE ASSURANCE COMPANY.—At a meeting, on Tuesday at Radley's Hotel, it was resolved to obtain an Act of Parliament to incorporate the company, in consequence of the great expense of registration in consequence of the profits, and the return of the balance-sheet enabling any rival company to inform itself of the business of the company. The expense of the application for the act was stated to be £100.

THE METROPOLITAN CATTLE SHOW.—The show will take place on Tuesday, December 9, and three following days, at the Horse Bazaar, Kingstreet, Portman-square; all implements, seeds, &c., must be sent in before twelve o'clock on Thursday, December 4, and all animals before ten o'clock on the 6th of December.

RAILWAY TO THE STRAND.—The directors of the Hungerford Market Company have in operation with the directors of the South-Western Railway, intend to make a railway bridge from the Vauxhall-station, across the river, to near Charing-cross and the Strand. There will be four lines of rails, besides a roadway for carriages and foot passengers.

THE TOWER.—The improvements in the Tower, sanctioned by the Commander-in-Chief, the Master-General of the Ordnance, and the Inspector-General of Fortifications, are rapidly progressing.

NEW BRIDGE AT PUTNEY.—The proprietors of Putney-bridge have given notice of their intention to apply to Parliament for power to erect a new bridge in lieu of the present one, which is basically inadequate to the public requirements. The new one is intended to be built as near the present one as possible.

KENSINGTON COMMON.—An act of Parliament is to be applied for to improve the common and divert the ancient road.

THE WEATHER AND THE PARKS.—During the week the weather has been intensely cold. The ornamental waters in the Royal parks have already become partially frozen. The Royal Humane Society erected a number of huts on the margin of the several ponds in the parks, in case of accidents. On Tuesday afternoon the thermometer stood at 36° whilst the sun was shining brightly; at the same time the night the mercury was as low as 24° in the shaded situations, and 22° in the open thermometers, being several degrees below freezing point. The barometer stood at 29°.89°, the wind N. by W., and an exceedingly sharp and cutting breeze. The preceding day the barometer stood at 29°.94°, and the lowest state of the mercury in the thermometer was 29°, the wind the same N.N.W., with slight falls of snow in the morning. In Suffolk, the *Bury & Norwich Post* says, that a gale of wind has been blowing from the north-east for many hours, and the sea has been so high that no boat can put to sea. The earth has been covered with it to the depth of from four to six inches. A large number of vessels have sought shelter in Harwich harbour, amongst which are many colliers that are unable to make their passage to the north. In Scotland the snow falls and Scotch mists, which were very prevalent, have given way to a biting black frost.

HYDE PARK.—Previously to the setting in of the bad weather, the authorities of the Woods and Forests have caused the temporary damage done to Hyde-park by the irregular enlargement of the footpaths and the formation of fresh footpaths across the various quarters of the Park, by the numerous mass of persons who for so long a period daily wended their way to and from the Great Exhibition, to be repaired by re-gravelling the paths in various directions, and enclosing the sides with iron hurdles, to prevent their further encroachment. The work has begun to show a considerable bit of new life, and this favourite park will very shortly regain its fresh appearance, and all traces of the myriads who have passed across it from all parts of the country during the past eventful season be altogether removed, thus proving the utter groundlessness of the fears of the alarmists who prognosticated the utter destruction of the park among the results of the Great Exhibition, and the impossibility of its regaining its former town-like appearance. We observe also that some important improvements are in course of being effected towards the carriage entrance to Kensington-gardens, on the north side of the bridge, the removal of the old and decayed wooden railing, and the substitution of iron rails of a handsome and substantial character, and also the repair of the footpaths bordering the large enclosure at this spot for carriages and equestrians, and the impassibility of the ground in wet weather.

THE WATER QUESTION.—Notices have been given of intended application to Parliament for new powers and improvement of supply on the part of the principal water companies of the metropolis. There is also a notice for making a Government inquiry, and appointment of a Select Committee of Supply of Water to the Metropolis," and one of a character similar to that brought in by the Secretary of State last session, proposed to be carried out on the principle of the sewers, and called "The Metropolis Water Supply and Drainage," and founded to a great extent on the results of the labours of Sir James Graham's committee of last session. The bill proposes the appointment of commissioners of water supply, to be elected in the same mode as by a central board and executive committee, and for the purchase by agreement of the existing water companies. The other new measures proposed are jointly by the New River Company, the East London Company, for the amendment of each company's acts, diversion of sewers, and improving of supply of water from river Lee; by the Lea River Company, for the service of the metropolis north of the Thames; by the East London, for raising further capital; by the Southwark and Vauxhall Water Company, for enabling works for obtaining water from the Thames at Hampton, and for power to contract with other companies; by the Grand Junction Water works Company, for additional works for obtaining water from the Thames at Hampton, and power to contract with other companies; and by the Wandle Water and Sewerage Company, for metropolitan district services south of the Thames.

ADULTERATION OF PEPPER AND TEA.—A second crusade of the officers of the Inland Revenue department against the grocers of the metropolis has just been brought to a close, and in upwards of fifty instances samples, both of adulterated pepper and the materials for such adulteration, have been made. The spurious compound consists of the preparation known as "P. D.," husks of mustard seed, beans, chilis, linseed, rice, and numerous other substitutes for pepper, which, being ground up together, are very difficult of detection. In two or three cases, on the Surrey side of the water, the offenders were amongst the number who were fined by the Inland Revenue Commissioners in May last, in penalties varying from £50 to £100. From information that has come to the knowledge of the commissioners, it appears that only half the proportion of real pepper finds its way to the consumer. Proceedings will be commenced for the recovery of penalties to a large amount. A series of prosecutions have lately taken place in the City and provincial districts against vendors of spurious tea. John Ballantine, a grocer at Northampton, was fined by the borough magistrates in the sum of £015 for having in his possession 12lb. of imitation tea there. They adjudged one half of the penalty to the informer who made the seizure, and the other half to the poor of the parish; in default of payment, to be imprisoned for twelve months, with hard labour. Armstrong and Britnell, tea-dealers of the same town, fined £40, or six months' imprisonment.

THE SOUP KITCHEN A DISTRESS BAROMETER.—The pressure on the mercury of the barometer is no less an indication of the weather than the pressure of distress. At the soup-kitchen is a sure indication of increase of want and destitution. On Tuesday, no less than 1017 persons were relieved with good, warm mug beef soup, meaten broth, and bread; and 26 persons were provided with supper, lodging, and breakfast, at the Asylum for Houseless Poor.

THE NEW PRISON AT WANDSWORTH COMMON.—The Home House of Correction for the county of Surrey is now open for the reception of prisoners, and orders have been sent to the committing magistrates to commit all prisoners, for two months to that prison. All prisoners for trial at assizes will be sent to Brixton, Kingston, and Guildford, as usual; but, after the 31st of next month, the latter prisons will be closed, and all will be committed to Wandsworth. All prisoners committed for trial, remanded, or for bail, will be confined, as usual, in the county gaol, Horsemonger-lane.

BIRTHS AND DEATHS.—The number of births registered in the week ending saturday, the 15th inst., was 1,814; females, 712; total, 1897. The average number in six corresponding weeks of 1841-50 was 1334; deaths during the same period, 1032. The official report says: "The effect of increased cold in the week or two perceptible in the weekly returns of mortality. In October 1,000 deaths registered in London did not in any week exceed 961, and in the fourth it fell to 861; while the weekly mean temperature during the greater part of the month was more than 9° dog. In the week ending November 8th the mean temperature was only 40 deg., last week it was 3 deg., and contemporaneously with this fall the deaths rose in the former week to 989, and in the last to 1092. In corresponding weeks of the ten years (1841-50) the average number of deaths was 992, and 1,000 a corresponding increase of population becomes 1091. The 1622 deaths registered in the week ending last Saturday show a decrease of 69 on the estimated amount. Last week the number of deaths registered in London did not in any one case exceed 1092, showing no important difference from the usual amount at this season. Eighteen young persons and five adults of 15 years and upwards were carried off by small-pox. Of the former the greater portion had not been vaccinated, or imperfectly done. Complaint is made of the prejudice still existing amongst the poorer class against vaccination. From consumption 253 persons (of whom 105 were in middle life) have died, 126 of bronchitis, 111 of pneumonia, 18 of croup, 44 of pleurisy, and 3 of laryngitis. Intemperance destroyed two lives. The death of one child, caused by scalding a piece of walnut, which produced irritation of the air passages, is recorded. There are 88 cases of typhus, nearly the same number as last week. A reduction is shown in the cases of scarlatina.

METEOROLOGICAL OBSERVATIONS. At the Royal Observatory, Greenwich, the mean daily reading of the barometer was above 30 in every week, which is 3-4 below its average. The daily mean for the week was 30 deg. mean temperature was below the average of correspondent days in every day of the week. The mean temperature of the week was 40 deg., which is 3-4 below its average. The daily mean for Friday was 41 deg., Thursday and Friday to 31·3 deg. on Saturday. The wind blew general from the north.

THE GREAT EXHIBITION.

THERE is so little to report under this now familiar title, that we might readily have dispensed with the notice altogether. The removal of goods progresses on the Foreign side; but, as the Commissioners never hurry, and as this habit also suits our French and German neighbours, the movement is more sure than perceptible. The heavy works of art placed in the Central Avenue take much time and care to re-pack and hoist for removal. A beautiful vase, in terra-cotta, was hurled down on Saturday last by one of the windlass ropes used in raising the large Swedish vase, after it was packed, and it was irreparably broken. These fragile objects should have been the first to have been removed.

It is now finally decided that the Building shall be opened to the public when cleared, and by so doing the contractors only do themselves and the said public justice, inasmuch as the latter will, we have no doubt, evince quite as much interest in the Building when empty as will attend to it when the mass is as it is at present. The point as to its preservation in its present position or elsewhere may be, so far at least, considered as settled.

The fury medals are in due course of distribution by notices sent to those who are entitled to them. The name of each person is engraved on the rim, with "Juror, Great Exhibition, 1851," added to it. They are elegant and pleasing *souvenirs* of the great event of the age. Mr. Wyon's death is likely to retard the completion of the other medals.

The executive staff is now so far reduced, that those officers whom it may be requisite to retain for the full completion of the business will be removed to the former offices, 1, Old Palace yard, when the Building is duly vacated by Messrs. Fox, Henderson, and Co., who will be at the end of the present month, and from the spot in which all the early work of this great undertaking was executed its closing acts and documents will emanate, such as the precise figure of the 1,500 pounds of medals to exhibitors and for service, and the closing accounts, as we have no doubt a most interesting balance-sheet, will be issued to all interested in the final results.

Though not so regular in our notices as heretofore, we shall, from time to time, report progress on all matters likely to instruct our readers prior to the final dispersion of the works, which is now engaging much attention.

We understand that the Royal Commissioners have presented Mr. H. Cole with the sum of £2000, in addition to £4000 for his services before the issue of the commission. To Mr. Digby Wyatt has been offered £1000, and to Colonel Reid the like sum; both which offers have been declined. To Mr. Wallis has been presented the sum of £500, in addition to his salary.

NATIONAL SPORTS.

Frost prevented the Warwick and several other meetings from being held this week, and will no doubt interfere with many future appointments, in fact during the remainder of the week, as they must be taken with the usual qualification, "weather permitting." On Monday we have a meeting at Musselburgh, in Scotland. On Tuesday it is proposed to run the flat races that did not come off last Tuesday at Warwick; we say proposed, because many of the racing conoscenti incline to the opinion that the races, not having been postponed from Tuesday to day, but from Tuesday to Monday, much attention will not be paid to them at Creswe, a bit ensuring at Southminster and Hovingham. On Thursday is the day at Ashdown Park (three days), Blackpool, Wolverhampton, and Brampton; and on Friday steeple-chasing at Nottingham.

TATTERSALL'S.

MONDAY.—The premises were crowded this afternoon, solely, however, for the sale of Sir Joseph Hawley's celebrated stud or rather what remains of it, for the proceeds of which amounted to 5564 guineas. We have no quotation to return.

TUESDAY.—The only bets laid this afternoon were the following —

Chester Cup: 100 to 15 each sgst Nancy, Picaroon, Grand Duke, Knock Knoll, and 1000 to 10 sgst Bolthorpe.

SIR JOSEPH HAWLEY'S STUD.—The sale of the first portion of Sir J. Hawley's stud took place on Monday at Hyde Park corner, and, as might have been expected, drew an immense attendance, the crowd being so great that it was with much difficulty the horses were brought out. The following were the prices:—

HORSES IN TRAINING. Lanbury, bay colt, 3 yrs, by Old England out of Lady Sarah, 65 gs. Caleb, chestnut, 3 yrs, by Bertram Blacklock out of Oxygen, 60 gs; Bilberry, bay filly, 3 yrs, by Bertram out of Sarah, 125 gs; Bess, 4 yrs, by Bay Middleton out of Miss Sarah, 30

The portrait, after Droeshout, has been engraved in line, by H. Robinson, in the first style, of which fifty India proof impressions have been taken on arge paper, and can be obtained, price 3s each. Publisher, WILLIAM WHITE, Fall-mall

DR. HOWARD ON SALT.
Fourth Edition, enlarged 8vo, cloth, 5s 6d, or by post 5s,
SALT, the FORBIDDEN FRUIT in FOOD, and the CHIEF CAUSE of DISEASES of the Body and Mind of Man (chiefly Women) and of Animals; as truly taught by the Wise Men of Egypt, and by Solomon, Radray, v. 5, c. 9, 10. The Pillar of Salt, that is the Absolutetism of Incrtation, explained. Showing that from Children brought up under the system a new race of Wise Men and Women will arise, of transcendant beauty, like the Wise Men and Sibyls, or New Women, of old; and that diseases, age, and apoplexies are wonderfully avoided hereby. "Well worthy of a serious-ness we doubt not that Dr. Howard will make a great many converts."—Medico-Chirurgical Review. "Of extreme and universal importance."—Asiatic Journal. "Worthy of immortality."—Lancet.
PITMAN and Co., 2, Paternoster-row; post-free, for 58 stamps, of the Author, 8 Upper Gloucester-street, Dorset-square, London.

FORD, Habit-maker to her Majesty, 12, Rider-street, Cavendish-square, London.

NEW MUSIC.

COMPANION to the PSALM and HYMN BOOK. By GEORGE FORBES. Pocket Edition of Congregational Psalmody for Four Voices, Organ, Piano, with words, 5s. cloth, gilt.—WRIGHT, RIVINGTON, BOOSEY, &c.
"No father of a family should be without copies of this useful little work."—Globe. "We cordially recommend it."—Sun.

NEW GLEE, THE TROUBADOUR. By G. A. MACFARREN (late pupil of Sir H. Bishop). This elegant and spirited composition, for soprano, contralto, and bass, is decidedly one of the best trios that has been published for years: there are beautiful solos for each voice, and the harmony of the ensemble is highly effective.
DUFF and HODGSON, 65, Oxford-street.

OH! CHARMING MAY. Composed by G. H. RODWELL. Sung by all the public singers. This song, of which 30 000 copies have already been sold, is the most popular of his many known songs. Old as time, and it seems destined to an universal popularity. Price 2s, sent post free. Just published, Arrangements of the Air for piano, flute and piano, guitar, and concertina.
J. WILLIAMS, 123, Cheapside.

SONG, "THE OLD CHIMNEY CORNER," as sung by Miss Joly at Vauxhall Gardens and the public Concerts. Composed by J. M. Jolly. The social comforts of an English fireside are charmingly portrayed in this fascinating ballad, which daily increases in popularity
To be had, price 2s, of G. JEFFERYS, Soho-square; Williams, Cheapside; and all Musicsellers in the Kingdom.

THOU ART NEAR ME AGAIN, by the Author of "Thou art Gone from my Gaze," price 2s, post free. The beauty of the melody and pathos of the words of this song, combined with the charming singing of Miss M Williams, cannot fail to make it a general favourite
London. ADDISON and HOLLIER, Manchester: Hime and Addison.

THE "MARY CALLINACK POLKA," by W. H. GOODMAN, Author of the popular Five Fly and Wood Nymph Polkas. In the Illustrated London News of Nov. 15, Mr. Goodman from life of the now celebrated old Cornish Fisherwoman. Price 2s 6d.—London: ADDISON and HOLLIER, 210, Regent-street. Manchester: HIME and ADDISON.

NEW SONG.—THE YOUNG LADY'S "NO." Composed by the Author of "Will you love me then as now?" "The Silk Purse," "The Secret," "Tom, I have dared to love thee," &c. Price 2s (sent postage free). This arch and pleasing ballad, just introduced into public singing by Miss Poole, is likely to become one of the most popular songs of the day: both words and music possess that point which will ensure success.
DUFF and HODGSON, 65, Oxford-street.

NEW SONG, "I MET HER in the CRYSTAL HALLS." Price 2s. Sent postage free.
"This beautiful and expressive song will find a home to every frequenter of the Crystal Halls with a force and pathos perfectly irresistible. The words are by J. E. Carpenter, one of our finest lyric bards of the day, and the music is equal to the words."—Musical Review. "Mr. Glover's song, by producing a ballad to rival his former songs, ranked pre. No visitor from the country, possessing a piano, should return without obtaining this charming souvenir of the World's show."—Musical Review
London: DUFF and HODGSON, 65, Oxford-street.

PIANOFORTE STUDIES.—CZERNY'S 101 EXERCISES (the best edition extant), only 2s; Etudes de Velocité, 2s; Schmitt's 50 Studies, 2s; Beethoven's Symphony in C, Haydn's Toy Symphony, Mozart's Twelfth Mass, Rossini's Stabat Mater, each 2s; L'Etude d'Amore, 2s, and 40 other Operas, 2s each. Treatises on Thorough Bass, Counterpoint and Harmony, and Instrumentation, 2s each. Catalogues gratis and post-free.—Offices, 69, Paternoster-row; and 15A, Argyll-street, Regent-street.—Be careful to order the Pianista Editions.

BEAUTIES of CAMBRIA. By BRINLEY RICHARDS
1. THE LIVE-LONG NIGHT. 2. LADY OWEN'S DELIGHT
2. MARGARET'S DAUGHTER. 4. MARCH of the MEN of HARLECH.
3. THE BELL BUOY.
5. SWEET RICHARD.
Price 2s each.
THE PRINCE of CAMBRIA'S BAND MARCH.
The Publishers of the "Musical Bouquet," by Brinley Richards, were first performed by the Author at an annual Festival of the Cambrian Society of Ancient Britons, at the Freemasons' Hall, in Freemasons'-place.
The delight and enthusiasm which these beautiful native Melodies produced on the company was unbounded. The "Prince of Cambria" is the Duke of Newcastle, by whose kind patronage this talented Author has been enabled to visit the principal Courts of Music, where he gained the honour of being elected a King's scholar.
DUFF and HODGSON, 65, Oxford-street.

MUSIC for the ORGAN or HARMONIUM.—The AMATEUR PRELUDIST, a collection of preludes, with the organ stops carefully marked, in one book. Price 4s. By EDWARD TRAYS. Views of the Building. Harmony to our Hymns, interludes to play between the verses of the Psalms, in one book. Price 4s. By Edward Trays and J. PYE. The Amateur Organist, an interesting work for the organ or harmonium, under the title of "The Amateur Organist." Mr. Trays has availed himself of an extensive and classical music library, and selected with great taste the most beautiful movements from the best masses, which will be found by lovers of classical music this work will be found to be the most useful selection that has ever been published. Price 4s. Sold by Mr. Trays, 31, Seal Street Nine—London: LEE and COCHRAD, 48, Albemarle-street; and can be had of all Book and Music-sellers. "A valuable work."—Queen's New Paraforte School, 4s

ELASTIC BANDAGE.—BALEY'S NEW BANDAGE is soft, it increases in elasticity, and gives great comfort to the parts requiring bandages. May be had through the trade, 6d and 7d per yard. Also, his Patent Elastic Stockings, knee-caps, socks, bunting-belts, trusses, crutches, spinal stays, and every article for the comfort of the afflicted. Copy the address—B. BAILEY 19, Oxford-street, London N.B Surgeons supplied

BONNETS.—PARISIAN MILLINERY DEPOT.—79 Cash Purchasers, wishing to avoid the charges of private Milliners, the richest Genoa Silk Velvet Bonnets, one Guinea each, in all colours. French Satin, Dunnge, Crape, Felt, and Straw Bonnets, recently imported, in the fashion, style, &c., cannot be surpassed. Also, the largest Stock in London to select from. For Cash only. At Cranbourn House, No. 39, Cranbourn-street, Leicester-square. Wholesale Trade. SHORT and COMPANY.

BABY LINEN and CHILDREN'S DRESS. —Infants' Embroidered Robes, long and short, from 3s to £5 5s Christening Gloves from 12s 6d to £4 4s; fine French Merino ditto, lined with silk, and handsomely braided, 31s 6d; Muslin ditto, from 7s 6d; French Cambric Hoods, all the prevailing styles, from 3s 11d; French Cambric Caps, from 2s to 48s; ditto, trimmed, from 5s 6d. Monthly gowns, improved shapes, from 2s 11d to 12s, fine lawn Bibbs, 1s to 3s 6d. A Superior Set Drawers and Pinafore, from 4s 6d. Hundreds of white and coloured Frocks and Pelisses from 2s 11d to 42s. Also, a Stock of Children's Vests, Jackets, Jackets to Mats, &c. Silker Sash Buntles and Vittes, from 6d. Merino Jackets and Pantels, 2s 11d; Cloth ditto, 3s 6d; Velvet ditto, 10s 6d. Trimmed Baby Baskets, 12s 6d; Bassinettes, 22s 6d; Bedding, extra. Baby Linen, Hosiery, Gloves, and every article for the use, comfort, and adornment of infants and children, on the country as samples, for Approval, on receiving a remittance or town reference. Lists forwarded, post paid. Ladies Wadding, Bitting-up, and Night-caps, in the greatest possible variety, at the most reasonable prices.—MISS S. SOLOMON, 103, Regent-street, adjoining the Circus, Oxford-street.

MESSRS. HARDING and CO.'S SALE, PALL-MALL.—By order of the Executors of the late Mr. Harding, a FURTHER GENERAL REDUCTION of PRICES has been made
The house, having been closed for an entire revision of the Stock, has now RE OPENED
The Stock consists of every novelty and variety in silks, satins, velvets, merinos, dresses, robes, lace and embroideries, furs, scarves, shawls, cravats, gloves, hosiery, cloaks, habits, and Parisian millinery.
Also an assortment of gentlemen's cloaks, cravats, scarves, and dressing-gowns, &c. Every article marked in plain figures. Terms, net cash.

CUTLERY for CHRISTMAS.—DEANES, London-bridge. Established 1700. DEANE, DRAY, and CO., having made extensive purchases at the Great Exhibition, including the splendid case of Messrs. Rogers and Sons, beg to announce that they have removed the same to their premises, King William-street, where they have now on show an elaborate and magnificent display of every description of CUTLERY, including several rare and costly specimens. An early inspection of their stock is respectfully solicited, comprising, in addition to the above, electro plate, japan, and papier maché tea-trays. Exhibition prize stoves, fenders, and fire-irons, and every article connected with general furnishing ironmongery. Lists forwarded, post paid. Ladies Wadding, Bitting-up, and Night-caps, in the greatest possible variety, at the most reasonable prices.—MISS S. SOLOMON, 103, Regent-street, adjoining the Circus, Oxford-street.

MESSRS. HARDING and CO.'S SALE, PALL-MALL.—By order of the Executors of the late Mr. Harding, a FURTHER GENERAL REDUCTION of PRICES has been made

NUMBER ONE, ST. PAUL'S CHURCH-YARD.—Messrs. DAKIN and COMPY have most respectfully to inform the inhabitants of the Metropolitan districts, that, in consequence of the great demand made upon them for the goods they supply, they have organised such extensive arrangements as will enable them, on and after WEDNESDAY next, the 19th inst. to DELIVER all ORDERS, within Eight Miles of St. Paul's, on the day after such orders are given. The plan adopted by DAKIN and COMPY. of declining by their vans the goods required, and at the same time of causing the young man in attendance to take orders for receipts on a future occasion, has been so generally approved of, that it is now to be extended, with a view to meet the requirements of all residing within Eight Miles of St. Paul's. DAKIN and COMPY., tea merchants, and Patentees for Roasting Coffee in Silver Cylinders, Number One, St. Paul's Churchyard.—Nov. 12, 1851.

LONDON: Printed and Published at the Office, 198 Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE, 198, Strand, aforesaid.—SATURDAY, NOV. 22, 1851

.—SOUTH-EAST PORTION OF THE NAVE.

1

ial Teeth Dental Instruments—Jay and Newell's Nineteen r Lock—Improved Inoxidizable Lightning Rods.

Californian Gold Tea Service—Silver-mounted Patent Leather Harness—Flintes—Portmanteaus—Furs—Rifles—Colourless Glass—Double Grand Piano.

Violet-grey Jasper Vase, border cut with diamond—Gold and Silver Brocades—Embroidered Leathers—Leather—Skins—Grain—Corn Trophy—Metals—Ores, &c.

2

-Porcelain—Cotton Goods—Toys—Type Planing Machine—Em-Ware Lamps—Oil-cloths—Fleeces, and Stuffed Saxony Sheep.

Frankfort Carpets—Hangings—Shawls—Dresses—Chemicals—Hosiery—Yarns—Printed Velvets.

THE GREAT EXHIBITION.

TELEGRAPHS.

(SECOND NOTICE.)

WHILE Alexander, Davy, Cooke, and Wheatstone were astonishing the Londoners with their respective electric telegraphs, and Whishaw with his hydraulic telegraph, our Transatlantic brothers, always alive to improvements of every kind for the benefit of mankind, were also busily engaged on the same important subject, and Professor Morse, now of world-wide fame, who had for several years paid considerable attention to the means of transmitting intelligence by the agency of that great power, electricity, did on the 2d September, 1837—mind, the very same year in which the practical electrical telegraph was first brought forward in England—make an experiment with a length of copper wire, of the size known as No. 18, Birmingham wire gauge, extending to a length of 1700 feet, in order practically to test his own preconceived views and theories. The practicability of Morse's method was fully proved on that occasion by the record obtained. The results were derived from types of particular form, in connexion with mechanical agency. Particular marks were produced from the type, being simply variations of the letter V, so that by altering its position, or repeating it in the same position, different signals were obtained. Morse's improved printing telegraph is at the present time extensively used throughout the United States; and we were fortunate enough to see the practical application of this ingenious invention, while at Hamburgh three years since, at the telegraph station of the line extending from that city to Cuxhaven—a line, by the way, the wires of which are carried across the country on poles after the English fashion. The manager at the Hamburgh and Cuxhaven Station was perfectly satisfied with the working of this instrument. We also found it in use at some of the Prussian Government telegraph stations, being specially used for despatches; while Siemen's telegraph, placed side by side with it, was used for the ordinary colloquial intercommunications relative to the railway and ordinary business transactions. A modification of Morse's improved telegraph, worked by secondary power, is exhibited in the Zollverein department of the Great Exhibition, by Siemen's, of Berlin, in the Middle Gallery of the South; and a similar instrument is made to the Exhibition by the British Electric Telegraph Company, which is exhibited, but not in operation, with the telegraphic instruments and apparatus of the Messrs. Highton, in the Middle Gallery North. The communications by Morse's method are made by means of lines scratched on paper, which are necessarily not so distinct as if marked with ink; nevertheless, to those accustomed to the task, the reading off such communications is readily effected.

In addition to Alexander, of Edinburgh, we must not forget one whose name is intimately connected with the application of electricity to telegraphs and clocks; we allude to Mr. Alexander Bain, of Edinburgh, originally a working clockmaker, but who, by his great mechanical knowledge and persevering habits of industry, has raised himself to a most respectable position. It must not, however, be forgotten that he owes much to his attached friend, Mr. Finluson, who, seeing that, for want of capital, this ingenious artist was likely to founder on the rock on which so many talented inventors had split, advocated his claim at the first inventor of the electro-magnetic printing telegraph, which was likely to be unscrupulously owned by another inventor in the same field of usefulness, had not Mr. Bain's warm friend and advocate made out a clear case in favour of his *protégé's* prior claim to the invention.

It appears, that, so long ago as 1838—the very year to that in which so many applications of electricity for telegraphic purposes appeared before the public—Mr. Bain had meditated his electric clock, which our readers will remember to have seen in front of the Polytechnic Institution, Regent-street; and in 1840 he had made some experiments with regard to the printing telegraph, and printed therewith the name of his friend, Robert C. Pinkerton. In 1841, in connexion with Lieutenant Wright, R.N., Mr. Bain applied for a patent for this invention; and in 1842 repeated experiments in Hyde-park, and across the Serpentine River, in order to show that in some cases the moisture of the earth contained power enough to indnce sufficient electricity, without the aid of an ordinary battery. In 1842, the patent for his improved printing telegraph was specified on the 7th of June. In this specification we find that he claims the natural *agency of water as half the electric circuit*, although we have already mentioned that Winkler, of Leipsic, had included, in his electrical experiments of 1746, a reach of the river Pleisse; so that, although Mr. Bain is the original patentee of this important discovery, yet Winkler was the original inventor so far as we are able to ascertain.

Mr. Bain put up a single wire telegraph between Edinburgh and Glasgow, called by him the I and V Telegraph. We have already stated, that, in Morse's telegraph, dots and V's were the only figures used, the changes being effected by altered positions of that letter, or by a repetition of the same. By using two letters, Mr. Bain was enabled to obtain a great number of changes. This, the first electric telegraph erected in Scotland, did not long retain its name; for, after very lengthy law proceedings against Mr. Bain for an infringement of the patents belonging to the Electric Telegraph Company, a handsome compensation was awarded to him; his single wire telegraph was removed, and replaced by one of Cooke and Wheatstone's needle telegraphs. Many other the inventions of Mr. Bain were subsequently purchased by the same company; so that he is not able to lay down or erect any telegraph in this country on his own account, but in America he has carried out his printing telegraph to a considerable extent.

The Electric Telegraph Company had another formidable opposition to subdue, owing to Messrs. Nott and Gamble having patented a circular dial electro-magnet telegraph, worked by means of what clockmakers call a step by step motion. This telegraph was successfully applied in the Box Tunnel of the Great Western Railway, and also between Blisworth and Northampton, where we had an opportunity of practically testing it. Although certain, the signals were given slowly; yet it is much more easily understood than the needle telegraph, which requires several weeks' practice to work efficiently. Mr. Gamble, of the above firm, is now connected with the Electric Telegraph Company, who have purchased all right and interest in Nott and Gamble's telegraph.

While the last-named telegraph inventors practically illustrated the use of their telegraph between Blisworth and Northampton, the Messrs. Highton had extended wires across the London and Birmingham Railway at Rugby, and produced their *gold-leaf telegraph*, the signals by which were given merely by passing a current of electricity either to the right or left side of a suspended leaf, so as to cause it to strike on one station or the other as required. This telegraph also became the property of the Electric Telegraph Company.

Since disposing of their first-born, the Hightons have been indefatigably engaged in producing modifications of the same telegraph, as well as printing, letter showing, and other instruments. The entire collection has become the property of the British Electric Telegraph Company, who exhibit the whole series of Highton's recent inventions in the Telegraph Department of the Great Exhibition.

In 1847, the electro-telegraphic converser of Breit and Little made its appearance—the former of these two gentlemen being son of the well-known Breit of Holborn, and the latter being a practical telegraph mechanic who had been for some time in the employ of Mr. Cooke. This instrument is simply a modification of Cooke and Wheatstone's telegraph—a curved magnet supplying the place of the magnetic needle, while the pointers in front of the dial are much more steady and decided in their action; but the mode of giving the signals is equally complicated. This firm also introduced a new battery, the object of which is to preserve a uniform power, which cannot be the case with the batteries ordinarily used by the Electric Telegraph Company, as it is very difficult to prevent the accumulation of sulphate of zinc on the plates constructed of that metal. In Breit and Little's battery there are three troughs instead of one; the upper one containing the dilute acid which is allowed to find its way to the trough immediately below it, through a series of small stocks, as many in number as there are cells in the trough immediately below it. The trough immediately below that already described consists of a series of plates of copper and zinc alternately placed as usual, the cells containing the plates respectively being filled, as in the case of the first form of battery, with fine sand, which becomes sufficiently saturated to act on the metal from the dilute acid received from the reservoir above: the third, or waste trough, is placed at the bottom, for the purpose of receiving the vitiated fluid containing the sulphate of zinc, which finds its way from the middle trough through similar filter-shaped outlets to those of the top trough. Whether the additional cost of this battery is more than sufficient to compensate for the disadvantage of the Cooke battery already mentioned, we are unable to say; but we believe its use to be confined to the stations of those lines of telegraph which Breit and Little have, through the hot firing of the enemy, succeeded in laying down. Following the example of Cooke and Wheatstone, they erected their first line on the Whitehaven Junction Railway, on the very defective wooden post system; but were afterwards glad enough to avail themselves of the underground plan first proposed in England by Mr. Whishaw, using copper wires coated with gutta percha, as exhibited by that gentleman at the Great Exhibition, and which is likely, in time, to supersede the dangerous, and, at times, perfectly useless plan of suspending the wires still persevered in by "the old company."

We need only add, that, after repeated legal encounters between the Electric Telegraph Company and the firm whose instrument and battery we have just described, the latter has been subdued, and their instruments and other properties are now safely deposited in the Telegraph office, at the entrance of the Crystal Palace, having been removed from the Telegraph department of the Great Exhibition, where they were for some time exhibited and are recorded in the last edition of the Official Catalogue.

It is to be regretted that Dujardin's magneto-electric printing telegraph is not to be found either in the French or English departments of the Great Exhibition, as it is one of the most novel applications of electricity to the transmission of signals which has yet appeared; and these instruments have now been tested by 8 signals have been transmitted to a distance of 400 miles and upwards, with one wire only, whereas at least 144 cells of Cooke's sand battery are required to transmit signals the same distance in connexion with his needle telegraph. On a late occasion, her Majesty the Queen, and her Royal Consort, visited the Telegraph-office of the Electric Telegraph Company, at the Great Exhibition, and had the satisfaction, while remaining in the Building, of receiving a reply to a message sent by her Majesty's command to Edinburgh; but how much more gratified would the Royal party have been to have witnessed the same results with one of Dujardin's telegraphs, without the enormous array of batteries necessary on that occasion! The time is not far distant when all the errors of the present system, chiefly practised in England, will be exploded. But to proceed with Dujardin's telegraph. A powerful horseshoe magnet is fixed on a pedestal or foundation of wood, the poles of such magnet being placed opposite to a bar of soft iron, mounted in proper bearings, and made to rotate by means of a wheel furnished with eight handles, projecting at right angles to the radial arms: this wheel, placed vertically, has somewhat the appearance of a steering wheel. From this transmitting apparatus, the electric current is passed by a single wire to the signal apparatus at a distant station, which consists of two distinct methods of giving signals: first, by sounds repeated at proper intervals to obtain distinct signals; and, second, by printing; the sounding apparatus is also required specially for calling attention. When the attention of the distant correspondent has been obtained, and notice given by a particular signal that a despatch is about to be printed at the receiving station, the current of electricity is cut off by what the Prussian telegraph engineers call a commutator, and the circuit is then completed through the printing apparatus, which is also mounted on a pedestal or foundation of wood, and consists of a metallic roller for containing an endless band of paper, on which the dispatch is to be printed, the lower part of the band of paper being kept down by a metallic ruler placed within it, and which ruler falls into indents, one in either iron vertical standard, on the top of which a screw—forming the axis of the paper-roller—works in proper threads formed in the right-hand standard; motion being given to the whole by clock-work in connexion with an iron weight. In front of the lower part of the endless band of paper is a copper circular reservoir for the ink, with a pad floating within to prevent the over flowing of the ink by any accidental disturbance. From the reservoir a small cup is fed by means of a duct or pipe; and into this cup the magnetic pen is dipped every time it is repelled from the fixed magnet by means of the current of electricity being passed through it—the equilibrium being effected by similar poles of the pen and the permanent magnet being placed opposite to each other: the action to produce the above effect which causes the pen to mark a dot in ink on the revolving endless band of paper at the receiving station, consist of bringing one of the eight arms of the transmitting instrument opposite to the cushion already mentioned, when the soft bar of iron being immediately opposite to the poles of the magnet, the circuit is completed; whereas as soon as the arm has passed the cushion the circuit is broken: thus the rapidity of print ng the despatches is dependent on the attention and skill of the manipulator at the transmitting station. When one line of dots has been printed on the endless band of paper, the screw having made one entire turn, a second line of dots is printed, and so on till the despatch is completed, when it is easily removed from its former position and handed over to the translator. As an example of the mode in which the different letters of the alphabet are represented, we may notice that the vowels are considered as simple signals: E is represented by a single dot (.); then I, being next to E, is represented by A with three dots (...); O with four dots (....); U with five dots (.....); this order being observed as the vowel E is more frequently used than the rest, and so of the other vowels. The above signals are given by one hand of the manipulator, consonants or compound letters are to be transmitted, then the manipulator uses both hands: thus for S, which is the letter more frequently used than any other, two dots (. .) are used, with a larger space between them than in the simple signals. The operator holds one handle in the left hand, and the next one in order in his right; the interval that occurs between bringing one hand and the other down to the cushion, affording the requisite space between the two dots. We need only give one further illustration of the mode of sending another consonant, as T, which is next in numerical figure. This letter is represented thus . . .; so that the manipulator first brings down the handle in his left hand to the level of the cushion, and immediately afterwards the next two in succession; holding, of course, the right-hand handle of the two. The ordinary rate of transmitting signals by this telegraph is at a rate of 100 letters per minute.

We now come to the telegraph and telegraphic apparatus exhibited at the World's Fair, which occupy not a very large space, considering the importance of the subject, in the Middle Gallery North, adjoining the Musical Instrument department; and we shall take the different contributions in the numerical order adopted by the compilers of the Illustrated Catalogue. There are altogether fifteen exhibitors of telegraphs and telegraphic apparatus, most of whom we have already alluded to as having taken prominent parts in the progress of telegraphic communication.

The first set of contributions in this department are placed at the west end of the space in the Middle Gallery North, appropriated to telegraphs which have been sent by Francis Whishaw, having only one number (419) to the whole, which consist of his index electro-telegraph, and gutta percha-covered wire, subaqueous insulated and protected telegraph conductors; wrought-iron chain pipes, for a similar purpose; patent multitubular glazed pipes of earthenware for insulating and protecting a series of wires placed under ground; patent stout glass or earthenware pipes, with gutta percha plugs for the same purpose; private code-box and battery protector; in addition to which, in connexion with the same subject, are a model to illustrate his hydraulic telegraph of 1837, a mechanical domestic telegraph (another of which is to be found in the Horological department), two telephones, and, finally, his telekeuphonon, or speaking telegraph, which is in extensive use in London and many parts of the kingdom.

The index electric telegraph consists of two distinct parts the one electrical, placed in the lower division of the mahogany case which encloses it, and the other mechanical, placed in the upper division of the same case, which is finished with a sloping top, furnished with a dial-plate and double pointer, worked by a thumb-handle or pull, similar to that used for bells—both plans having been successfully used. The upper part, for indicating what has been signalled by the electrical apparatus in connexion with the conducting wire laid underground from a distant station, gives the name to the whole, as it is designed to be used within a very short time after a person has once seen it; whereas all the needle telegraphs require the process of application, in order to transmit accurately, and to receive accurately the signals intended. The signals on the dial of the index telegraph consist of letters, numerals, and words—the latter indicative of the kind of signals to be transmitted at any given time. The names of telegraph stations are also painted on the same dial: thus, if one of the rodes of sensedon are suddenly turned or written on perforated cards is to be used, after the notice has been given by an alarum, the station "Crewe" or "Northampton" is first pointed to, then the word "Code," and afterwards the number of the code—say for example "5:" then the attendant takes down the perforated code, which he finds to be relating to lost luggage; then the next signal may be, "Have you a large carpet-bag with initials (C W)?" the letters being given by a second signal: the answer he returns, using in the first instance the contrary end of the pointer, is "Yes" or "No," as the case may be. Thus railway servants generally may use with facility this kind of instrument, which the inventor recommended strongly, in connexion with others, to the Hon. East India Company, whose officers at Calcutta are at present engaged busily on the important subject of "Telegraphic communication for India." The sounds, to regulate the movement of the index pointers, are given by electrophones, in connexion with a reservoir, invented by J. C. Whishaw, for changing or alternating the sounds. Besides the conversational codes, this telegraph is arranged for the extensive series of letter codes constructed by Mr. Whishaw, with a view to keeping all communications entirely private, very bad use having on several occasions been made by the telegraph clerks obtaining particular information even sooner than the receiver. As an example of this mode of private communication, we may bring forward a practical example of a similar method used by the exhibitor at a general election, when officially engaged for the Electric Telegraph Company. The needle instruments having been properly furnished with numbers pasted on the dials, and occupying nearly the same positions as the ordinary letters, a list of all the candidates in Great Britain was printed, with a number set opposite to the name of each. The times were indicated by letters, as A for nine o'clock, B for 9.30, and so on, every station-clerk being furnished with a list of the candidates, and printed directions. It was an easy thing for him either to send or receive rapidly such a communication as the following:—"Ten o'clock—Russell for London, 1600: represented thus:—C, 581, 1600; and so of the other candidates—582, 805; 560—400; 562, 393. In connexion with the index telegraph, a Smee's or other suitable battery in gutta percha trough is used, and the wires are covered with gutta percha, carefully laid underground. The index part of this invention has been tried in connexion with Dujardin's magneto-electric transmitting and bell apparatus respectively, and thus the objectionable battery is dispensed with.

As regards the wires covered with gutta percha, we have already, in a notice of "gutta percha contributions" to the Great Exhibition, described the method of encasing them in that valuable material—so great an acquisition to practical electrical operations.

The subaqueous telegraphic conductors exhibited in two forms—first, the gutta percha covered copper wire is braided with whipcord, and painted white to prevent the attacks of fish, when laid down in a channel formed in the bed of a river, the chain and pipes may be placed in any irregular line, whether as regards vertical section or plan. The wires within are coated with gutta percha, as above.

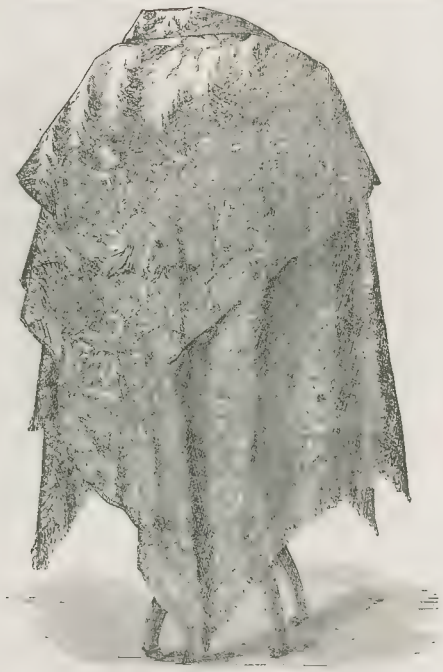
The multitubular pipes (which are made at the pottery of Mr. Northern, the well-known manufacturer of earthenware goods at Vauxhall), as the name implies, have a number of ducts, all glazed within, so that each duct affords a safe channel for one wire, which is thus insulated and protected independently of its neighbours. The joints are made with Roman or other suitable cement; and a particular method of connecting pipes (included in the patent, but which is not at the Exhibition) is called the panerpous joint, as being suitable for pipes of all kinds. The strong glass, or single earthenware glazed pipes, for the same purpose, are furnished at convenient intervals with gutta percha, or glass, or earthenware plugs, perforated so as to separate the wires from each other, which, of course, do not require to be coated with gutta percha. The private code box is made of mahogany, with sloping top, having a number of slits cut in horizontal lines, with a row of letters of the alphabet placed horizontally above the slits, and another row of letters placed vertically, corresponding with the lines of the slits horizontally. Corresponding slits, and within the box, are as many rollers, each surrounded by a long slip of paper, the end of which projects in front of the slip: on each of these slips is printed some every-day sentence, as to state of markets, funds, &c., or any private communications which are required to be made almost daily between A. in London and B. in Liverpool or Newcastle respectively. The message or communication, so far as the Telegraph Company and their *employes* are concerned, is as a sealed book, for two reasons: first, each communication is almost three, are all that pass from London to Liverpool, or *vice versâ*, by the electrical agency. In order to show the principle of using the private code box, the top of that exhibited is left open, but a cover, with one of Day and Newell's or Jennings' double locks, can be added. When required for actual service the battery protector is used for the prevention of the escape of gases arising from the acids used in batteries: its principle is extremely simple, being that of the effluvium trap, well known to architects and builders; the lower part of the instrument, which is made air and water tight, contains water to a few inches in depth, into which the moveable top of the case dips, and the conducting wires from the battery to the telegraph electrical apparatus, or earth battery, as the case may be, are passed through gutta percha tubes, proceeding from the cover of the box down into the water—thus the escape of the gases is entirely prevented, and they are taken up by the water. Any battery, however pernicious and injurious to health, placed in one of these protectors, may be safely used, even in a drawingroom. When done with it is removed into the open air. In addition to the above, we have already described the "uniformity of time" telegraph, which also being a clock with two faces, suitable, therefore, for two different apartments at once, is exhibited among the clocks in the opposite gallery.

The model to illustrate the hydraulic telegraph is chiefly constructed of wood and glass, the foundation being of the former material, and the reservoirs and index and conducting pipes of the latter. At each station, a cistern with two cocks, the one to admit water from the cistern by the conducting pipe to the glass tube at each station, for the purpose of elevating the column of water within the same tube, and the other for depressing the water simultaneously in the two index tubes, so that by figures, letters, words, and sentences pasted at regular intervals, by the aid of each of the tubes, it will be clearly understood that a communication is most readily carried on if the two reservoirs be on the same level. If, however, the reservoirs are at entirely different levels, the exhibitor has provided means for getting over the apparent difficulty: as practical purposes water is incompressible, and even a slight leakage of the conducting pipe does not prevent the transmission of signals. Finally, it may be stated, that to whatever distance a pipe of water can be conveyed to the same distance, and a communication by hydraulic telegraph be established. The telegraph, on this principle, put up at the Adelaide Gallery, under the direction of the exhibitor, remained in constant use for two years; and it was shown that the apparatus at the different stations, put up both on the level and also at different altitudes, answered equally well.

The mechanical domestic telegraph consists of a circular dial with double pointer, which is made to rotate by mechanical means, the usual family wants being printed or painted *seriatim* in radial lines around the dial, one of such instruments being placed in the kitchen, or servants' hall, and a corresponding one in the situation most convenient for the family. The communication between the two is by means of cranks and wires; and every time the pointer is moved forward a sound is also given. It would be folly to think of an electrical apparatus for such purposes, when the former can be put up at one-sixth of the cost of the latter; besides the constant trouble and expense of a battery, except, indeed, Dujardin's or Healey's magneto-electric instruments be used for such purpose.

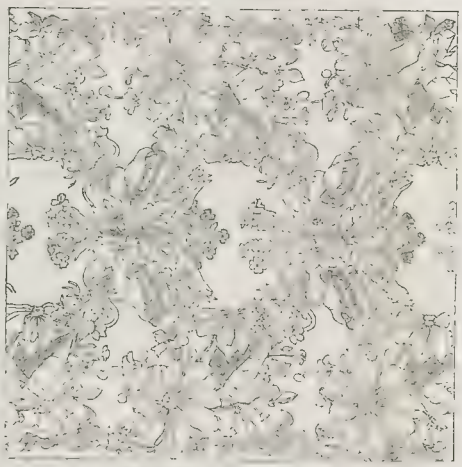
The telephones, of gutta percha, as exhibited, are for the purpose of illustrating two applications of the invention: the one for communicating between distant buildings; and the other, reversing its position, for transmitting a discourse from the pulpit to the house of the sick at some distance from the church. In appearance, the telephone is similar to a very large speaking trumpet, having a mouth of 12 inches diameter, the pipe being conveyed, for the former application, from the roof of the house, where it is fixed diametrically opposite to its counterpart at the distant station; and for the latter application, from the pulpit down the antechamber to the floor of the church, and thence underground to the house of the sick. The latter plan has already been carried out, as between the pulpit and a distant part of a church, to enable deaf persons to hear the whole discourse, and several branches may be established in connexion with the main trunk. The invention of the telekonphonon, or speaking telegraph, arose out of the exhibitor's experiments with gutta percha, first made at the Society of Arts; for, as he had shown that this material was very suitable for pipes, the Gutta Percha Company, who patented various

SHAWL.—BY WEBBER AND HAIRS.



SHAWL.—BY DENEIREUSE, PARIS.

SILK PATTERN.—BY SOPER.



HANDKERCHIEF PATTERN.—BY WILKINSON.

CARPET.—BY BRINTON AND SONS KIDDERMINSTER.

SHAWL. BY WEBBER AND HAIRS.

We have, or fancy we have, a distinct recollection of this shawl, in the Central South Gallery of the Crystal Palace, and also, that it struck us as being a little *too* "striking" in respect of outline. The design is ingenious enough, and certainly bold, though making use only of acknowledged shawl decorative figures. The fault is that the pattern is not sufficiently interwoven; and that, in aiming after effect, that most essential point in the intended "effect" of a shawl, comfort and repose, has been disregarded. In articles of dress the successful blending of colours should be the prime consideration; and as to pattern, for those of daily use, the less out-of-the-wayism the better.

SHAWL. BY DENEIREUSE.

M. Deneireuse has been honoured with a "council medal," the only one in his class (XV.), for "the discovery of a new and important process in the production of elaborate designs." What that "discovery" is, or what the resulting designs, we have yet to learn; the report of the jury, which we are promised soon, will doubtless afford some information upon these points. The shawl before us is of a florid pattern, tolerably well mixed; but still with too much of the flower-garden about it to suit our sober notions of the requirements of this article of dress.

SILK PATTERN. BY SOPER.

The display of silks and figured satins by Soper is strongly rich and varied, combining every requisite possibly bearing upon the production of these materials—luxury, elegance, richness, and elegant.

HANDKERCHIEF PATTERN. BY W. WILKINSON.

This is a new pattern for printed "ponge" and bandanna handkerchiefs, which we have no doubt will prove effective, though we are afraid that not exactly suitable for [illegible] and constant [illegible], too remarkable.

machines for making different articles of this invaluable material, soon introduced an apparatus for making tubes, and, having produced some of considerable length, the exhibitor soon discovered that a gutta percha tube was the best conductor of sound that had yet been discovered. It therefore occurred to him, that, by the addition of mouthpieces of metal, ivory, or hard wood, furnished with some means of calling attention in any distant part of a dwelling-house, warehouse, club-house, or factory, a most admirable and economical substitute for bells would be provided. He, accordingly, brought out the telekouphonon, which has now found its way into hundreds of establishments. Another important use of the telekouphonon is that of communicating between the guard and driver of a railway train, mentioned in our notice of "Railway Plant."

CARPET. BY BRINTON AND SONS.

This is a very handsome patent velvet tapestry carpet, of a scroll and flower pattern, of which these manufacturers exhibit several varieties the designs being all registered. At the same time we must observe that there are some critics who object to an elaborate display of flowers, especially if too closely imitative of nature, in carpets; and, upon the whole, we are inclined to their view of the case. The conventional designs of the Oriental models are safest and best in the long run.

RAILWAY PLANT.

(SECOND NOTICE.)

HAVING in the previous article gone through the "rolling" plant, we will now proceed to the "permanent way" and stationary furniture of a railway, including the rails, chairs, sleepers, turn-tables, traversers, and signals, &c. in connexion therewith.

Before the introduction of rails, the use of tram-plates of iron was very general in the coal districts of the north of England. These trams were formed with a side flange, to prevent the cylindrical form of wheel from running off the way. As soon, however, as passenger traffic was introduced, the edge rail came into use on the Stockton and Darlington and the Liverpool and Manchester railways respectively, and on some of the coal lines. So much had to be learned with regard to this backbone of the permanent way, that rails weighing only 35 lb. to the yard lineal were, in the first instance, laid down on the "great experimental line" between Liverpool and Manchester; which were, however, soon found to be unfit for the heavy loads continually rolling over them. The Leeds and Selby, and other railway companies about that time, adopted the same weight and form of rail. At the present time the rails have reached to upwards of 80 lb to the yard lineal; but it has arrived at this large section only by gradual steps.

In Whishaw's "Railways of Great Britain and Ireland," published in 1840, we find engraved sections of *eighty-four* different forms of rail, including those in use on the Transatlantic lines, and also on various European railways. Of this number, 19 were modifications of the bridge form originally adopted by Mr. Brunel for the Great Western Railway, which was in every respect a new model, differing entirely from all its predecessors, including the "gauge of way," which caused so much discussion among engineers, and led to the battle of the gauges. Mr. Brunel's first bridge-rails were also too light, being only 45 lb. to the yard; and, as was the case with the first edge-rails, were entirely reinstated with heavier rails after a few years' traffic had been allowed fully to test them. The bridge-rail is still used on the great Western Railway and some other lines; but the double parallel rail, of similar section both at top and bottom, may be considered the standard form, and is to be found on almost all the lines laid down to the national gauge of 4 feet 8½ inches

As the Liverpool and Manchester was the great experimental line, so it was the standard for the great lines that followed it; and the faults committed in its construction were unfortunately copied by the engineers under whose direction the other lines were constructed. Thus we found, in all railways north of the Thames, stone blocks to support the rails in those parts of the way which either were on the surface of the ground or in excavations, more familiarly known as cuttings; while Mr. Giles, who stood almost alone in his view of what a permanent way should consist, adopted transverse sleepers of wood for the Southampton Railway, now called the South-Western. He had two reasons for adopting wooden sleepers— the first on account of the railway passing through a country abounding with suitable timber; and the other on account of the greater facility of keeping the permanent way in order: and perhaps he might have considered a third very satisfactory reason; viz. that of the greater amount of destruction which would take place to the locomotive engines and carriages in passing over the rigid way constructed with the stone blocks. Be this as it may, Mr. Giles's plan, modified as to fastenings, came into general use in most of the narrow gauge lines, and the massive granite blocks were seen, after a few years, lying along several of the main trunk-lines, to be removed at a great sacrifice. Except the gauge of way, and perhaps the fastenings, there is scarcely any part of the narrow gauge railway which is not widely different from that which presented itself when first constructed; and now, after ten or twelve years' experience, it seems likely, that on some lines the transverse sleepers of wood will be replaced with sleepers of cast iron. Perhaps the Great Western permanent way is less changed than any other, with the exception already alluded to, of the increased weight of rail.

We need say nothing about the gross errors committed by the first railway engineers in point of estimates. Unfortunately, that great fact is too well known to thousands "who lent their money in aid of the national prosperity." Having thus introduced the subject of permanent way, we may now mention the names of those persons who, as exhibitors at the Great Exhibition, have brought forward what they consider improved methods of laying down the permanent way, and different forms of rails, chairs, sleepers, &c.

The Brothers Barlow, J. W. Hoby, H. Greaves, J. Samuel, Joseph Cubitt, and Cruttwell and Co., are the engineers who have laid down in the railway department of the World's Fair various forms of permanent way, some of which are already under trial on two or more trunk lines. As P. W. Barlow stands first in the Official Catalogue (No. 601, Class 5), we shall commence with his "Cast-iron Permanent Way." Mr. P. W. Barlow has had considerable experience in railway construction, having been connected with the South-Eastern from its very commencement, under Mr. Palmer. He must also have had abundant opportunities of discovering the defects in the permanent way so long in use on his own line. It is fair, therefore, to suppose, that, not merely for the sake of novelty, but for the sake of economy and other weighty reasons, he has brought forward his cast-iron permanent way. The cast-iron chairs, or pedestals, to which the rails are fixed, are usually secured to the transverse wooden sleepers, but, in the present instance, are cast on to a large base plate of the same material, which the inventor calls a sleeper. The intermediate chairs are in pairs; at the joints there are two ordinary chairs, the same as those placed intermediately, and one joint chair to receive the ends of the two meeting rails. At each of the joints there is a transverse tie of iron, to bind the whole together, and to prevent the rails from spreading. By this plan wooden keys are rendered unnecessary; and Mr. Barlow considers that he shall obtain greater durability by his new plan, and mentions, in addition to this important advantage, that an additional number of supports is obtained for the rails

Mr. W. R. Barlow (602), engineer of the Midland Railways, goes even farther than his brother, as, by his "wrought-iron permanent way," he boldly casts on one side sleepers, chairs, and wedges, and introduces bridge rails in 18 feet lengths, and having a base taken transversely of 11 inches, the rail being made "to form its own bearing surface in the ballasting;" the top of the rail on which the wheels run is 2½ inches wide, and the thickness of the base or bottom flanges half an inch. At the joints, cross tires of iron, 2 inches in width, are introduced to bind the two lines of rails together. We had almost forgotten that the permanent way of the Great Western Railway (601) is laid down at the Exhibition to receive the mighty locomotive engine described on another occasion, consisting of longitudinal sleepers and bridge rails bolted down thereto.

616. H. Greaves' plan of cast-iron permanent way differs from that of Mr. P. W. Barlow, though he evidently has the same objects in view. His chairs and sleepers are also cast together, the latter being in form semi-spherical: the joints of rails are secured together by coupling pieces. Wooden keys are rendered unnecessary; and Mr. Barlow considers that he shall obtain greater durability by his new plan, and mentions, in addition to this important advantage, that an additional number of supports is obtained for the rails

THE ILLUSTRATED LONDON NEWS.

No. 531.—VOL. XIX.] SATURDAY, NOVEMBER 29, 1851. [SIXPENCE { WITH SUPPLEMENT, GRATIS.

THE "KNOWLEDGE RATE" AND THE "IGNORANCE RATES."

A LARGE and influential class of persons—matter-of-fact people, who, whenever they take up a question, argue and re-argue it with such pertinacity and effect that they ultimately carry their point—have taken it into their heads that they have a more imperative task before them than has yet been performed in England. They are not satisfied that the multitude should live by bread alone, but desire to provide mental food for the children of the people. In a word, while they admit the great zeal of the religious teachers of all denominations of Christians in this country, they desire that the body politic, represented either by the general Government, or by the particular municipality or locality, shall take care that secular knowledge shall be conveyed to the future workers, or, it may be, idlers, of our great social hive, with as much zeal as religious instruction is provided, and that the stigma shall no longer rest upon England of possessing a population deeper sunk in the slough and mire of a semi-barbarian ignorance than is to be found in any other civilised country in the world.

Hereupon a great outcry of dissent is raised. The ignorance of the great mass of the English poor is emphatically denied. We are told of thousands of Sunday-schools, in which hundreds of thousands of infants are taught spelling, but not writing or arithmetic, as a proof that the education of the rising generation is not neglected. We are told of factory schools, and parochial schools, and charity schools without number, in which something more than mere reading is taught, as an additional proof that the schoolmaster has not become superannuated since Lord Brougham announced that he was abroad. The efforts of the National School Society, and of the British and Foreign School Society, are still more triumphantly cited in support of the same proposition; and such a din of voices is heard, that any one who knew nothing of the subject otherwise, and was contented to shut his eyes to the palpable facts around him, might well be coerced into the belief that all was going on for the best, and that in our happy island it was as rare a thing for a child to be deprived of mental as of bodily sustenance, and that utter ignorance was as rarely to be heard of as absolute starvation. To any lingering doubts that may still be started, after this imposing array of school statistics has been paraded, many bewildering inquiries are always ready to be launched at the heads of the sceptical. Is not England the foremost nation of all the world? Is it not the land of social progress?—of steam?—of railways?—and of electric telegraphs? Is it not pre-eminently the land of charity and religion? Is not everything for the best? and have we not made more advances in religion, in true freedom, in art, in science, in literature, in morality, and, in spite of our alleged deficiencies, in popular education, than any other people on the face of the globe? If all these things be true, it is asked, why should we meddle? Should we not let well alone, and refrain from stirring up the angry elements of religious discord, by seeking to improve the unimproveable, and by the superaddition of mathematics to the catechism?

Besides—and this is considered the climax of all argument—are we not over-taxed already? And why should we add a school rate, as proposed by the Manchester people, to the number of those local burthens and rates which at present fall so heavily on the shoulders of the people? A poor-rate, say the objectors, is bad enough; but infinitely worse would be a school rate. If we desire to have the poor taught to spell, let charity provide the means; but, to teach the poor to write and to cast accounts, to make them acquainted with the sublime truths of physical science by means of a compulsory payment drawn from our pockets, is a monstrous tyranny not to be borne in a free, and an invasion of the rights of conscience not to be tolerated in a religious, country! Like *Falstaff*, who would not be reasonable on compulsion, these admirable friends of the poor will not permit little babes to be taught upon compulsion, even though education were a thousand times holier than it is. Charity is so great a thing, that they prefer it even to Justice. Besides, Charity may fall asleep if she pleases; but Justice is ever wakeful.

But, amid all the mass of irrelevant argument that has been introduced into this great and urgent question, the voice of reason begins to make itself heard. Above the din of polemics and the uproar of theological controversy, the calm and sonorous appeal of common sense has at last become plainly perceptible, and admissions are now and then made, on all hands, that voluntary efforts have hitherto been quite inadequate to provide for the public exigences. But one strong and formidable objection still lingers—the religious objection—that whether, in the schools which it is proposed to establish, religion be or be not taught, it will be equally an infringement of the liberty of conscience. "If religion be not taught," exclaim all the sects, "our money will be taken from us in support of a system of instruction which we consider to be worse than useless in this world, and fatal to salvation in the next. If, on the contrary, it be taught, there are such irreconcilable differences of faith and doctrine amongst us, that, if one be satisfied, a thousand will be aggrieved, and the money of the majority will be wrung from them for the teaching of what they conscientiously believe to be error." But we think, if it can be shown that, under the present system of *laissez faire*—that system under the fatal operation of which so much vice, misery, and degradation have grown like gangrenes in the body politic—the same, or even a greater, degree of violence is done to the consciences of those who do not agree with the only religious teaching that the State can sanction, the ground of objection will be

DESTRUCTION OF THE LARDOARD BOAT OF THE "ANN ALEXANDER," BY A SPERM WHALE, IN THE SOUTH PACIFIC.—(SEE NEXT PAGE.)

materially narrowed, and a step will be made towards the solution of a very great difficulty.

Supposing that we paid a knowledge tax, or school rate, and that it might in some respects be objectionable, we would ask whether it could be to any thing like the same extent as objectionable as those taxes which we now pay for the support of ignorance? A penny in the pound on the rental of England would pay the knowledge rate, and save us a deal of trouble besides; but we put it to any one who has studied the social statistics of this great empire, whether a penny per pound on the rental, or six times that amount, would meet the expenditure which we annually make for the removal and prevention of the evils, and still oftener for the punishment of those evil-doers, which our neglect of the education of the multitude has brought upon us. For want of a school rate we most indubitably increase the poor-rate; and, as religion enters into the observances of our union workhouses, we think that conscientious Dissenters might as well object to pay the one tax as the other. Then, again, it is clear that for want of a school rate we are obliged to have recourse to a much larger police and prison rate than would otherwise be necessary. These are the "Ignorance Rates," and very heavily they bear upon the industry of the country; much heavier than any Knowledge Rate could bear, and with quite as much violence to those religious feelings which now so effectively impede the cause of education. Every one who pays a poor-rate or a prison rate pays for the teaching of religion, with this essential difference between such payment and that which he would make for a school—that he pays it after mischief has been done to the State, and that he bestows upon the idle pauper and the confirmed thief what he denies to those innocent children, of whom the Divine Author of Christianity declared, "that of such were the kingdom of Heaven." We never hear any complaints against the principle of a poor rate or a prison rate in this respect. It is great people, but in the composition of the world we must yet become a greater, or we shall not continue to hold so high a place as we at present occupy. There are no uneducated people in the United States of America, except the emigrants from our shores; and they, in the next generation, cease to deserve the unhappy distinction. Surely that fact ought to make us open our eyes.

WHALING IN THE SOUTH PACIFIC.

(From the *New Bedford* (U.S.) *Mercury*.)

We have just received the following thrilling account of the destruction of the whale-ship *Ann Alexander*, Captain John S. Deblois, of New Bedford, by a large sperm whale, from the lips of the Captain himself, who arrived in this city from Paita on Sunday last, in the schooner *Providence*. It is fully authenticated by nine of the crew, in a protest, under the seal of the United States Consul, Alexander Ramsay, junr., at Paita.

The ship *Ann Alexander*, Captain John S. Deblois, sailed from New Bedford, Massachusetts, June 1, 1850, for a cruise in the South Pacific for sperm whale. Having taken about 800 barrels of oil in the Atlantic, the ship proceeded on her voyage to the Pacific. Nothing of unusual interest occurred until, when passing Cape Horn, one of the men, named Jackson Walker, of Newport, New Hampshire, aged about twenty-four, was lost overboard in a storm. Reaching the Pacific, she came in the coast, and stopped at Valdivia, coast of Chili, for fresh provisions, and on the 31st of May last she called at Paita for the purpose of shipping a man. The vessel proceeded on her voyage to the South Pacific.

On the 20th of August last she reached the well known as the "Off-shore Ground," in lat. 5 deg. 30' south, long. 102 deg. west. In the morning of that day, at about 9 o'clock, whales were discovered in the neighbourhood, and almost from the same day they seemed to be in nobody's fast to one. Two boats had gone after the whales—the larboard and the starboard, the former commanded by the first mate, and the latter by Captain Deblois. The whale which they had struck was harpooned by the larboard boat. After running some time, the whale turned upon the boat, and, rushing at it with tremendous violence, lifted open its enormous jaws, and, taking the boat in, actually crushed it into fragments as small as a common-sized trunk! (See the Illustration upon the preceding page.) Captain Deblois immediately struck for the scene of the disaster with the starboard boat and succeeded, against all expectation, in rescuing the whole of the crew of the demolished boat, nine in number.

There were now 18 men in the starboard boat, consisting of the captain the first mate, and the crews of both boats. The frightful disaster had been witnessed from the ship, and the waist-boat was called into readiness and sent to their relief. The distance from the ship was about six miles. As soon as the waist-board arrived the crews were divided, and it was determined to pursue the same whale and make another attack upon him. Accordingly they separated, and proceeded at some distance from each other, as is usual on such occasions, after the whale. In a short time Lacy came up to him and prepared to give battle. The waist-boat, commanded by the first mate, was in advance. As soon as the whale perceived the demonstration being made upon him, he turned his course [illegible] and [illegible] a tremendous dash at this boat, with his [illegible] jaws [illegible] into atoms, allowing the men barely time to escape himself into the ocean.

Captain Deblois, upon seeing the perilous condition of his men, at the risk of meeting the same fate, directed his boat to hasten to their rescue, and in a short time succeeded in saving them all from a death little less horrible than that from which they had been so miraculously rescued. He then ordered the boat to put for the ship as speedily as possible; and no sooner had the order been given, than they discovered the monster of the deep making towards them with his huge body extended. Escape from [illegible] seemed totally out of the question. They were six or seven miles from the ship; no aid even there to afford them necessary relief, and the whale, made furious by the wounds of the harpoon and lances which had been thrown into him, and seemingly gloating with the prospect of speedy revenge, within a few cables' length. Fortunately, the monster [illegible] at a [illegible] distance. The boat Lewis made her way to the [illegible] reached the whale, and threw a lance into his head; but it being [illegible] to cause his death.

Captain Deblois was at this time standing in the nigh-heads on the larboard [illegible] with oar in hand ready to strike the monster a deadly blow, should he [illegible] when working on the side of the ship [illegible] rushing towards the stern of the boat. In an instant the monster struck the ship with tremendous violence, shaking her from stem to stern. Captain Deblois immediately descended into the forecastle, and there, to his horror, discovered that the [illegible] had struck the ship about two feet from the keel, abreast the foremast, [illegible] great force through her bottom, through which the water was rushing in so rapidly that he could procure nothing. He then came upon deck, ordered all hands into the boats, and was the last himself to leave the ship, which he did by throwing himself into the sea and swimming to the nearest boat. The ship was on her beam-ends, her topsail-yards under water. They then pushed off some distance from the ship, expecting her to sink in a very short time. Upon an examination of the stores they had been able to save, they discovered that they had only 12 quarts of water, and not a morsel of provisions of any kind. The boats contained 11 men each, were open, and, night coming on, they were obliged to bale them all night, to keep them from sinking.

The next day they returned to the ship, but could save little.

Mid-day-hope of reaching a ruling latitude, they directed their course northerly, and on the 23d of August, at about 5 o'clock p.m., they had the inexpressible joy of discovering a ship in the distance. They made a signal, and were soon observed, and in a short time they were reached by the good ship *Ann* [illegible] Captain Gibbs, who took them all on board, [illegible] ed to them in every way the greatest possible [illegible] wearing they Captain Gibbs went to the wreck of the ill-fated *Ann* [illegible] nor the party saw or heard anything to prompt him to make something from her; but, as the sea was rough, and the ship considered dangerous, Le abandoned the project. The *Nantucket* then set sail for Paita, where she arrived on the 15th of September, and where she landed Captain Deblois and his men. Captain Deblois was kindly and hospitably received and entertained at Paita by Captain Bathurst, an English gentleman residing there, and subsequently took passage on board the schooner *Providence*, Captain Starbuck, for this port, arriving here on Sunday last, the 19th instant.

FOREIGN AND COLONIAL NEWS.

PARISIANA.

(*From our own Correspondent.*)

THURSDAY, Nov. 27.

The panic, which commenced some weeks ago among foreigners who had intended to winter in Paris, continues, or rather has increased to a general *sauve qui peut*; and the hotel-keepers and others who live by the *spoils* of these agreeable *locataires*, and who had promised themselves a rich harvest this season, now seriously begin to hang out signals of distress—prosaically, labels with the ominous words *Appartements meublés ou non meublés à louer*, are seen in every part of the town.

The week has been rather a busy one for the sightseers; military reviews by the President and his staff taking place nearly every morning in the Champ de Mars, besides which, we have had the *launch of a frégate* on the Seine! a sight which positively bewildered "the oldest inhabitant" with delight. This was indeed a novelty for Paris, and, though we are informed by English naval officers that all was not managed according to Cocker, the vessel certainly looks a very fair imitation of a real 40-gun frigate, and it daily attracts thousands to view it.

Musical and theatrical novelties crowd upon us. At the Grand Opera, the [illegible] ballet, "Vert, Vert," was produced on Monday, for the *début* of Mdlle. Priora, whose [illegible] of attitude is one of the highest order. Her [illegible] and [illegible] that character (beauty so loudly [illegible] noted by the author of "Coningsby," are of the darkest Italian. As Byron has it:—

> Like the night
> Of cloudless climes and starry skies,
> And all that's best of dark and bright,
> Meet in the lustre of her eyes.

Mdlle. Priora's figure befits her noble countenance, though for some tastes (*de gustibus*, &c.) it may be deemed a trifle too massive for a *danseuse*. Her *débutante* achieved a decided success, owing, we must add, in a good part, to her beauty—for in grace and lightness she is decidedly inferior to both Cerito and Ferraris, whose style her dancing much resembles. The ballet itself is a very second-rate affair, founded on Gresset's well-known subject. A little dash of fancy and ingenuity might have raised upon it a very piquant and amusing ballet. As it is, all the gaiety and vivacious pleasantry of the original is lost in a mass of silly and unintelligible absurdities, spun out into three dreary acts. Gresset's wicked parrot is replaced by a young student in the person of Mdlle. Plunkett, who plays all kinds of pranks among the [illegible] mates of the convent; among others, he introduces a party of young *militaires* into their dormitories at night; but, owing probably to the vigilance of the new board of censorship, everything passes off with the most rigid propriety, and one of the sisters, being by some means released from her vows, is married to the student, the wedding giving an opportunity for one of those ball-room scenes for which the Grand Opera is renowned. Here the figures, groupings, and dancing are tasteful, elegant, and effective; but the preposterous length to which the affair was attenuated had so completely wearied out the audience, that the only applauders were the *claqueurs*, who manfully rose to the occasion, but in vain. The scenery, particularly the ball-room, was admirable; this is, indeed, the only feature in the ballet department which has not fallen off. Messrs. Cambon and Thierry are poets as well as artists.

Félicien David's long-expected opera of "La Perle du Brésil" has at length seen the light, and, had he never composed "Le Désert," would have been hailed as a most successful *début*; as it is, though containing much of a high order, it rather leaves a feeling of disappointment. It was produced at the Opéra National on Saturday, and had the advantage of two *débutantes*, the sisters of merit—Bouché, a good, spirited basso, formerly of the Grand Opera, and who, I believe, was for a season or two at Her Majesty's Theatre; and M. Philippe, a young tenor with a charming voice, and expressive though not highly finished style. The *Perle* (*Zora*), who before the curtain rises is found by the Admiral Sabador, amid the burning embers of some village in Brazil destroyed by the Portuguese under his command. He carries her to Lisbon, where he rears her with tender care; and passing over the love intrigue, which no opera can be without, we accompanying her benefactor in one of his voyages, she is enabled to repay his services by preserving him and his crew, when their vessel is driven by a tempest on the Brazilian coast, and they are surrounded by hostile savages. This bare outline of the piece will be sufficient to indicate the general colour of the music, the elements of which are—the reminiscences of childhood by the young savage, the rude martial character of the naval chief and his associates, the imitative effects of a storm at sea, and those which are supposed to exist in the virgin forests of America, with their breezy freshness, the strains of their feathered songsters, and other effects of sylvan nature characteristic of the composer's genius, as already made known by his "Désert" and "Christophe Colomb." They are throughout bold and original, but not altogether in their places in a comic opera. M. David's tendencies being rather instrumental than vocal. The overture (particularly the earlier portions) is striking and masterly: a violoncello passage, replete with melody and expression, the motive of which is afterwards repeated in the opera, was received with well-merited plaudits. A trio in the first act for the tenor and two sopranos, into which a tender romance is interwoven by the young Brazilian: a duo between the tenor and soprano, full of tenderness and expression: a warlike air for the bass, with a magnificent chorus for the crew, which had the honours of an encore; the air of *Zora* in the forest, in which the imitative accompaniments are possibly carried to too great an excess, and a second duo for the tenor and soprano, form the list of notable vocal morceaux. The accompaniment to the storm at sea was exceedingly grand; it is difficult to conceive descriptive music carried further than in the whistling of the winds and battling of the elements, here so successfully imitated by the composer. His instrumentation is, indeed, nearly always grandly effective. In his vocal music a rude and vigorous melody is the pervading quality, requiring more finish and elaboration to give perfect satisfaction. On the whole, the work, though it will not advance the reputation of the composer of the "Désert," will not detract from it in the estimation of those who make due allowance for the inferiority in the execution of a composition of which the first condition of success is a large and perfectly-trained orchestra. Mdlle. Duez, though not so much at home as with Rossini, sang very beautifully, and was led out by the composer, after the fall of the curtain, to share with him in the tribute of applause bestowed on the performance. The opera is extremely well got up, but we fear the remote situation of the theatre (Boulevard du Temple) is fatal to anything like remunerative success.

The celebrated Jenny Lind is announced by Mr. Lumley for Saturday, in "Ernani," with Mdlle. Cruvelli as *Elvira*. "I Lombardi" is in preparation, and also "Maria di Rohan." In the latter, M. Ferlatti, who has also arrived, and of whom Italian report speaks highly, will appear in the *Comte de Chalais*. We are in hopes of hearing the celebrated Madame Wagner at the Italiens before the close of the season. The pre-eminence of this *artiste* is countersigned by the most fastidious of living (or perhaps dead) *maestri*—Giacomo Meyerbeer, who makes the engagement of this lady a *sine qua non* for his permission to perform "L'Africaine."

The new opera, composed by M. Duprez, "L'Abîme de la Maladetta," was brought out last week at Brussels; and from a detailed notice of it by M. Fétis, director of the Conservatoire in that city, we learn that it was very successful. Mdlle. Cinq-Mars is written in friendly spirit as supporting the opera effectively; the other vocalists were less satisfactory, but the orchestra and choruses were entitled to unmixed approbation.

FRANCE.

The Ministerial changes which we indicated in our Postscript last week have taken place. M. de Casabianca, Minister of Commerce, has been nominated to the post of Minister of Finance, in place of M. Blondel, who refuses to accept office; and M. Lefebvre-Duruflé, representative of the people, is appointed to the portfolio left vacant by the removal of M. de Casabianca. M. Lefebvre-Duruflé is representative of the Eure, where his importance as a manufacturer, moderation as a politician, and popularity with the working classes, procured him a large majority at the elections of May, 1849, for his return to the Legislative Assembly. He is a leading member of the Club of the Pyramids, and during the conflict between the powers has always promoted conciliation. His appointment is, therefore, regarded with approval by all who have the cause of order really at heart.

On Tuesday the distribution of the prizes awarded to the French exhibitors at the Crystal Palace, and of the Crosses of the Legion of Honour, took place in the Circus in the Champs Elysées. The ceremony was to have taken place on the previous Sunday, in the Louvre; but, the apartment selected for the purpose proving too small to accommodate the vast numbers furnished with tickets of admission, the proceedings were adjourned to another day and a more convenient locality. Accordingly, on Tuesday the arrangements at the Cirque were of the most commodious and satisfactory character, so that every person present, to the number of between 3000 and 4000, could view the proceedings without the least inconvenience. The President was surrounded by his Ministers, the *corps diplomatique*, the highest civil and military authorities, and an elegant assemblage of ladies. The whole scene was most brilliant and animated. The President, before presenting the honourable rewards to the several successful candidates, stood up and addressed the company in an able speech, in which he complained of the obstacles opposed to the development of national industry, by democratical theories on the one side, and monarchical hallucinations on the other. He urged the industrial population of France to continue their exertions without anxiety or fear, in the full assurance that the Government would not fail in its duty; feeling strong, as it did, in the right it had derived from the people, and trusting firmly in the aid of Divine Providence. The President was repeatedly and vehemently cheered, particularly those portions of his speech which referred to the greatness that the Republic would achieve, if undisturbed by "demagogic ideas" on the one side, and "monarchical hallucinations" on the other; adding, "Have no fears for the future. Tranquillity shall be maintained, whatever may happen."

A new subject of dissension between the Legislative Assembly and the President of the Republic has been brought forward this week. It is an organic law framed by the Council of State on a very delicate question the responsibility of the President of the Republic and his Ministry. The matter has lain dormant now two years and a half, and has been taken up at a most inopportune moment, and, as many think, with a view to annoy Louis Napoleon, towards whom one of its clauses—the main one, in fact—is regarded as extremely offensive, since it pronounces it to be high treason if he "provoke a violation of the 45th article of the Constitution," which declares that the President can only re-eligible when four years shall have elapsed from the period of his quitting office. It will be rather a difficult legal process to define what constitutes "provoking the President's re-election;" and the adoption of the article in its present shape can only be looked upon as a piece of petty spite, arming Louis Napoleon's enemies with an instrument of annoyance, rather than as a real measure of precaution against ambitious designs on his part. A notice of an amendment on the bill has been given by M. Pradie, which is merely a repetition, in an aggravated form, of the project of the questors which was lately rejected by the Assembly. That project gave the President of the Assembly the right of "direct requisition;" in other words, of calling out the army on his own authority and responsibility direct, and without intermediate command, while M. Pradie's proposition gives the right of direct requisition to the Assembly itself.

In the early part of the week an article from the pen of M. Granier de Cassagnac, appeared in the *Constitutionnel*, charging the leading political men of the "party of order" with being engaged in a conspiracy against Louis Napoleon. The article was written in such a positive, violent, and even menacing tone, that it attracted considerable attention, and was made the subject of some interrogatories to Ministers in the Assembly by M. Crémieux, who, in the course of his observations, denounced the author of the article as a "wretched scribbler," which so exasperated M. de Cassagnac that he demanded personal satisfaction from M. Crémieux; but the latter has refused to fight M. de Cassagnac, upon the ground that he did not attack the private character of that gentleman. M. de Cassagnac has since posted him as a coward. In reply to M. Crémieux, the Minister of the Interior denied the existence of any conspiracy; adding, that if the Government knew of any conspirators, no matter how high their rank, they would have them brought before the tribunals of justice.

The Lyons Railway Bill was under discussion in the Assembly on Wednesday, when M. Fremy moved an amendment, granting Government 16,000,000 francs to allow the works to be continued until May. M. Passy moved another amendment, recommending the sum of 10,000,000 francs for the purpose named. M. Fremy's motion, however, was adopted by 340 against 326.

The committee of the Assembly to whom the subject was referred have approved of the state of siege in the Ardèche, the Cher, and the Nièvre, by a majority of 11 to 3.

The Prefect of Police has prohibited the electoral meetings held in the Rue Martel, it being discovered that anarchical doctrines were advocated thereat.

The Toulon fleet, consisting of seven vessels, has received orders for sea; the destination is conjectured to be the Levant.

HANOVER.

The death of King Ernest has been followed by a change of Ministry. The new Ministers are said to be reactionist, or opposed to the liberal political concessions which his late Majesty had granted his subjects in the year of revolutions 1848, and to which he had strictly adhered since that time.

Baron Scheele is President of the Council and Minister for Foreign Affairs in the new Cabinet. The other Ministers are M. Borries, Minister of the Interior; M. Windhorst, President of the Second Chamber; M. Backmeister, Public Instruction, General Brandis, War. The Finance office has not yet been settled, M. Bac having refused it.

UNITED STATES.

Accounts to the 13th instant from New York mention the rejection, by Mr. Webster, of the terms proposed by Spain for the settlement of the Cuban difficulty, and for a better understanding between the two countries. The proposition was, for the American Government to invite the Spanish Consul to return to New Orleans, to bring him in a national vessel, and to salute the Spanish flag over him; and, further, to restore the value of the property of the Consul, and of the Spanish citizens of New Orleans, which was destroyed by the rioters. In case this proposition should be rejected, the Minister was instructed to demand his passports and return.

The *Mississippi* steamer arrived at New York on the 10th. The officers of the vessel contradicted the stories of a disagreement or rupture between Captain Long and Kossuth.

The steamer *Buckeye State*, used at 150,000 dols., was destroyed by fire, at Buffalo, on the night of the 10th inst.

Three lives were recently lost by the burning of the steamer *Montgomery*, on the Mississippi, just above Vicksburg; 2500 bales of cotton, together with the boats, were entirely consumed.

The Canadian Government is still engaged in the important business of constructing railroads. The Quebec and Halifax and Richmond and Quebec roads were soon to be commenced, with money obtained at 3½ per cent.

By an arrival at Boston from Port-au-Prince we learn that the Emperor of Hayti had complied with the demand of foreign powers, and had concluded a truce for one year with the Dominicans, and is also to give one year's notice of the commencement of hostilities. This will tend to greatly enhance the prosperity of the island.

THE RIVER PLATE.

We have accounts this week which state that the war has been brought to a conclusion by the capitulation of General Oribe, who was at the most recent date (the 8th of October) on board the British corvette *Sheldrake*, being anxious to proceed to England. Urquza entered Monte Video in triumph on the 8th of October, and in the evening the city was illuminated, the inhabitants rejoicing at the prospect of a settled peace. The election of a President for the Oriental Republic was to take place as soon as the excitement produced by recent events should have, in some measure, subsided. The whole affair had been effected without bloodshed, Oribe's Argentine troops having all gone over to Urquza.

From Buenos Ayres we learn that the arrival of the three families of General Oribe, his brother-in-law, and son-in-law, had created a strong sensation there. General Rosas had openly displayed extreme irritation at the conduct of his lieutenant, Oribe, in allowing himself to be, as the Dictator constantly exclaimed since the capitulation has became known,

'Conquered without striking a blow!'' Oribe was no longer his "worthy ally, the legal President of the Oriental State," but denounced as "a foul traitor to the Argentine cause," and was publicly burnt in effigy accordingly. This disgrace he shared with Generals Urquiza, Virasoro, and Benavides (the Governor of San Juan), upon whose names every possible insult was heaped, and against whom dire vengeance was threatened by the foiled tyrant, who had gone through the farce of having himself proclaimed "Supreme Chief of the Argentine Confederation" by the assembly of his creatures called the "Provincial Junta of Buenos Ayres."

WEST INDIES.

This week's intelligence from the islands is of little interest.

At Jamaica the Legislature met on the 28th of October, but no business of importance had been transacted.

The cholera had nearly disappeared, a few cases only occurring in the parish of Hanover.

The necessity for some sanitary measures was strongly urged upon the Legislature by the local papers.

The census of the island of Trinidad had been taken, showing the population to consist of 35,631 males and 32,969 females—total, 68,600; of whom 43,005 were members of the Roman Catholic Church, 16,246 were members of the Church of England, 1016 Mohammedans, 2964 Gentoos, and 880 Heathens; the rest of the population being subdivided into various Christian sects.

The islands were generally healthy.

From Demerara we learn that the Governor had withdrawn from the Court of Policy the plan of reform of the legislative institutions, alleging as reasons for so doing, that he had no desire to consent to a surrender of the prerogative of the Crown, and that he was reluctant to press through the court, by a majority composed chiefly of official members, measures not approved of by the majority of the elective section, although popular among the community. Before the Court of Policy adjourned, the following resolution was passed :—

That it is the opinion of this Court, that the sum of £50,000, as part of the parliamentary loan, should be applied to the introduction of Chinese immigrants.

LITERARY TREATY BETWEEN ENGLAND AND FRANCE.

The following are the main provisions of the treaty between England and France for the suppression of literary piracy. It will be seen that it is likely materially to affect the interests of authors, publishers, dramatists, musical composers, and artists :—

"Art. 1. The period, after which, conformably to the stipulations of art. 14, hereinafter mentioned, the present convention shall come into force, the authors of works of literature or art, to whom the laws of either country now ensure, or shall in future ensure, the right of property or copyright, shall be authorized to exercise the said right on the territory of the other country, during the same time and within the same limits as would be allowed in the latter to the right attributed to the original publication of works of the same nature if published there; so that the reproduction or piracy by persons of one country, of any work of literature or art published in the other, shall be treated as if it were the reproduction or piracy of works of the same nature, originally published in the former country. Moreover, the authors of one of the two countries shall have the same action before the tribunals of the other, and enjoy the same guarantees against piracy or unauthorised reproduction, as are or may hereafter be granted to authors in the latter country. It is understood that the words 'works of literature or art,' used at the beginning of this article, comprise the publication of books, dramatic works, musical compositions, paintings, sculptures, engravings, lithographs, and any other production whatever of literature or fine arts. The representatives of authors, translators, composers, painters, sculptors, engravers, shall enjoy in every respect the same rights as those which the present convention grants to the authors, translators, composers, painters, sculptors, or engravers themselves.

"Art. 2. The protection granted to original works is extended to translations. It is, nevertheless, well understood that the object of the present article is merely to protect the translator in so far as his own translation is concerned, and not to restrict the exclusive right to translation upon the first invention of any work whatever, except in the cases and in the limits mentioned in the following article :—

"Art. 3. The author of any work published in one of the two countries, who shall have declared his intention of reserving his right of translation, shall, from the day of the first publication of the translation of his work, authorised by him, enjoy during five years the privilege of protection against the publication of any translation of the same work, unauthorised by him, in the other country; and this on the following conditions :—1st. The original work shall be registered and deposited in one of the countries within the first month after its publication in the other country. 2dly. The author must have declared his intention of reserving to himself the right of translation on the title-page of his work. 3dly. At least a part of the said authorised translation must have appeared within a year of the date of registration and deposit of the original; and the whole of it must have appeared within a space of three years from the date of such deposit. 4thly. The translation must have been published in one of the two countries, and be registered and deposited, as directed in art. 8. As regards works published in parts, it is sufficient that the declaration by which the author reserves his right of translation be expressed in the first part. Nevertheless, in so far as regards the period of five years assigned by this article to the author for the exercise of his privilege of translation, every part shall be considered a new work, and shall be registered, deposited in one of the two countries within three months from the day of its first publication in the other.

"Art. 4. The stipulations of the preceding articles shall apply also to the representation of dramatic works, and to the execution of musical compositions, in so far as the laws of each of the two countries are or may be applicable in this respect to dramatic or musical works, publicly represented or executed for the first time in one of the countries. Nevertheless, in order to have a right to such protection, in so far as regards the translation of a dramatic work, the author must publish his translation within three months after the registration and deposit of the original work. It is understood that the protection granted by the present article is not intended to prohibit *bonâ fide* imitations or the adaptation of dramatic works to the respective theatres of France or England respectively; but only to prevent pirated translations. The question of imitation or piracy shall in all cases be determined by the tribunals of the respective states, according to the legislation in force in either country respectively."

The other articles are of minor importance.

"By Art. 5, newspaper articles may be freely translated, on condition of quoting the original paper, provided the author of such an article has not publicly declared his intention of preventing reproduction.

"Art. 6 prohibits the introduction and sale of pirated works, whether printed in France or England, or any other country.

"By Art. 7 such contraband works shall be seized and destroyed, and the persons who have introduced or sold them may be prosecuted.

"Art. 8 regulates the formalities of registration in the two countries.

"Art. 9 extends the same formalities to productions of literature and art not specially mentioned.

"Art. 10 regulates the duty of importation upon works of literature and art in the two countries.

"Art. 11 stipulates that the two powers shall mutually communicate to each other the new laws and regulations that may hereafter be made in either country with regard to literary property.

"Art. 12 reserves to each Government the right of prohibiting any production it may think necessary so to prohibit.

"Art. 13, in execution of treaties with other powers on the subject of literary property.

"Art. 14 stipulates that the Queen of England engages to present a bill to the British Parliament for the ratification of such clauses in the present enactment as require a legislative sanction. A day is then to be fixed on which the present convention is to come into force, and such day shall be duly announced by each Government. The convention is to be applicable only to works, &c., published after that date, and is to last ten years, and continue to be in force until a twelvemonth's notice be given."

THE "ILLUSTRATED LONDON NEWS."—One of the causes of the indifference of parents of the working classes to education, even if they have been sufficiently educated to enjoy it, is the want of books. There are few villages where there are any lending libraries, and still fewer where there is enough variety of subject. The libraries generally only contain religious books, very good in themselves, but not so interesting as to engage the attention of the general body of readers. A certain variety and range of knowledge is desirable. In the Weald of Kent (Norfolk) school the clergyman has succeeded in attracting his scholars by lending them the ILLUSTRATED LONDON NEWS every week, an advantage which is seized with great avidity; and perhaps no more effectual way could be followed to awaken the children's attention, and to afford them amusement as well as instruction. "It is true, sometimes there are matters in the paper I don't quite like, and sometimes they are treated in a way I don't quite approve," said he; "but then I merely take the paper and explain what I think of the matter, and I don't find any harm result." It is by such liberal confidence that children and their parents may be won to virtue.—*Extract from General Report for the Year 1850, by the Rev. Mr. Mitchell, M.A., her Majesty's Inspector of Schools in Cambridge, Essex, Huntingdon, Norfolk, and Suffolk.*

MARSHAL HAYNAU.—A letter from Pesth, of the 16th, says:—"Feld-Marshal Haynau, who is at present residing on the estate in possession in Hungary, is accustomed to sleep in a little room on the ground-floor, in a detached building in the garden of his *château*. In the night of Monday last he was awoke by a thick smoke, which filled the chamber. He immediately jumped out of bed, and leaped out of the window into the garden. Some moments after, all the building was in flames. A strong wind having arisen, the fire extended to three barns filled with the corn of the last harvest, and they and four contents, together with the hut it is, were destroyed. No fire having been lighted in the day, it appears certain that the fire was caused by a criminal, in the hope, probably, of killing the general. It has not been possible thus far to discover him."—*Gabignani.*

THE PERILS OF THE STOCK EXCHANGE AT VIENNA.

The correspondent of the *Daily News* (who has been since expelled by the police) at the Austrian capital, writing from that city under date the 13th instant, thus describes the proceedings of the paternal government of the Emperor when dealing with its own dear children :—

Vienna, Nov. 13.—Between Tuesday afternoon and this morning, nearly 200 persons have been forced to quit Vienna, and the Austrian dominions, in consequence of being suspected of having speculated on Change with the view to increase the price of silver. No excuse has been listened to in any case. The individuals actually expelled are redoubtable bankers like Mirsanger. Herr Rothschild is a director of the bank, a wealthy man, highly honoured for the skill and integrity with which he conducts an extensive banking and booking business, and one of the last men to meddle with any affair of an improper character. His character is no safety; he is liable to be expelled, or tried by court-martial, at the pleasure of Chevalier Weiss. The police terrorism has been in a stop to the *bona fide* transactions of bankers and merchants. In the course of yesterday the Chevalier Weiss had a banker, named Königswarter, brought before him, and warned him that he would be severely punished if he continued such "*Unfug*," or doings on the Exchange. Herr Königswarter

PARHELIA, WITNESSED OCTOBER 4, 1850, AT GRIFFITH'S ISLAND

ESQUIMAUX WOMAN.

ESQUIMAUX YOUTH.

ESQUIMAUX GIRL.

In the month of May, 1845, Sir John Franklin sailed from England, with two ships, the *Erebus* and *Terror*, under his command, in the hope of discovering the North-west Passage. Of the gallant commander, and the 128 men and officers by whom he was accompanied, no satisfactory tidings have since been heard. The *Erebus* and *Terror* were provisioned for three years, but more than six years have elapsed since the departure of the Expedition; and when we consider the frightful rigour of an Arctic climate, winter after winter, and that the untiring exertions made for their discovery have all proved fruitless, the hope that remains is but faint. The three Expeditions fitted out simultaneously in 1848, in search of the missing ships, were unsuccessful; and the more recent one, under the charge of Captain Austin, has had no better effect. Let us add to this the generous co-operation given by the Imperial Government of Russia in the search for Sir John Franklin, and by that of the United States. Large rewards have been also held out to whalers of all nations to join in the search; but those ships are not fitted for the dangers of such expeditions. This will be readily understood when it is remembered that this very year no less than twelve

CAIRN LEFT BY THE "NORTH STAR," AND FOUR GRAVES, IN WOLSTENHOLME SOUND.

whalers have perished in the ice, and that in latitudes far to the south of places where H. M.'s ships have lately wintered.

The last Expedition, under the command of Captain Austin, C.B., consisting of the *Resolute* and *Assistance* and two steamers, sailed from the Thames on the 4th May, 1850, and on the 15th June anchored in the Whalefish Islands. Here inquiries for the missing ships began. After leaving Upernavick, in latitude 72 degrees 45 minutes N., the progress of the ships became impeded by floating masses of ice, from which these seas are never entirely free. On the 13th August the Expedition entered the north waters; and then, separating into two divisions, commenced closely to explore the neighbouring coasts and islands. On the 9th of September, the ships again joined company to the westward of Griffith's Island, and on the 24th of the same month the whole of the Expedition were frozen in between the islands of Cornwallis and Griffith. From the 24th of September, 1850, to the 11th of August, 1851, the vessels remained firmly locked in the ice. Whilst the ships were thus ice-bound, exploring parties proceeded in various directions over the floe. The daring, the energy, and the endurance of our countrymen who embarked in these expeditions cannot be too highly praised. One of our Engravings represents Captain Austin addressing the officers and men about to start on one of those enterprises. The group is standing out on the frozen sea, twenty miles distant from their ships. They are in the midst of a wilderness, where, beyond their own resources, no human aid can reach them. In the silence of that frozen desert their voices have been raised in prayer to the Almighty to aid them in their enterprise and to watch over them in their peril. On the 15th of April they started. Captain Ommanney, who commanded one of the parties, proceeded across the ice in a south westerly direction till he reached the land, when he carefully explored and surveyed a great extent of coast hitherto unknown. Captain Ommanney returned to his ship on the 18th June, having been absent on the ice nearly three months. Lieutenant M'Clintock led another party in the direction of Bathurst Island, the coast of which he explored as high as 74° 30′ N. He

WESTERN DIVISION OF SLEDGES.

CAPTAIN AUSTIN ADDRESSING AN EXPLORING PARTY.

then crossed the ice to Byam Martin Island, and thence to Melville Island, the coast of which he followed as far as 118° of long., having in the interval gone round Seddon's Gulf. Lieutenant M'Clintock did not get back to his ship till the 4th July. On his return the ice began to thaw, so that his sufferings and those of his men were most trying. At each step they sank in the melting ice, and at times dark slushy pools would open before them whose bottom might be in the fathomless sea. But the men's courage never flagged, and after nearly four months' absence they were welcomed back by their companions. The other parties on the expedition were commanded by Lieutenants Osborne, Brown, Mecham, and Aldrich, and by Dr. Bradford and Mr. Macdougall. It is unnecessary to add, that in these searches no traces of the missing ships were found.

The substance of Captain Austin's report, it will be recollected, has already appeared in our Journal. (See page 347.)

WINTER QUARTERS OF SIR JOHN FRANKLIN.

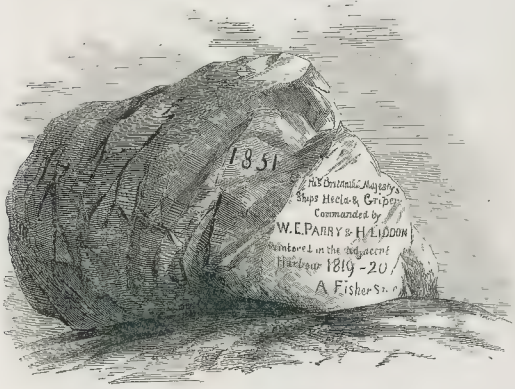
THE ILLUSTRATIONS.

We now proceed to detail the accompanying Sketches.

Of the atmospheric phenomena seen in these northern latitudes, the *Mirage* is one of the most remarkable. Objects at great distance are often by the power of refraction made visible to the naked eye. Thus, Lieutenant M'Clintock and his party, on returning from their exploring expedition to Melville Island, were seen from the deck of the *Assistance* whilst yet two days distant from the ship. One of our Engravings represents a very beautiful *mirage* seen in Melville Bay, July 28, 1850; and the other a similar phenomenon, seen August 4th following. Next are two *Parhelia*, seen at Griffith's Island, half a mile distant rom the frozen-in ship, October 4, 1850; temperature 47 deg. below freezing point Fahrenheit. Ere the sun sank behind the island, on either side, and at an equal distance, a parhelion was observed, and from the lower limb of the sun a column of white light subtended: the air was hazy.

"Ere reaching North Star Mount (says the Journal of the Expedition) we discovered cairns at some distance on the south-east shore. In the first examined was a tin cylinder, whence was extracted the following document:—

This paper is placed here to certify that her Majesty's ship *North Star* was beset at the eastern side of Melville



SANDSTONE ROCK IN WINTER HARBOUR, MELVILLE ISLAND.

"GOT'G OUT TO DINNER."

Bay, on the 29th July last ear, yand gradually drifted from day to day, until, on the 26th September, we found ourselves abreast of Wolstenholme Island on the 26th September, we found ourselves abreast of Wolstenholme Island when, perceiving the ice a little more loose and the Sound perfectly clear, we made all plain sail and pressed her through it, anchoring in the lower part, of the Sound that evening, and arrived in the bay on the 1st October, where she remained throughout the winter. It is my intention to leave as soon as the breaking-up of the ice will permit, and prosecute my voyage in search of the arctic sities. (Signed) J. SAUNDERS, Master and Commander.

North Star Bay, 18th April, 1850, Wolstenholme Sound,
lat. 76° 34′ N., long. 69° 30′ W.

The two cairns on the opposite shore were also visited; each contained a document similar to the one deposited in the first. At the foot of the largest and most regularly-built one we found four graves with tomb-stones, on which the names of seamen belonging to the *North Star* were written; and in the paper the following list of their names was added:—

William Sharp, A.B., died 1st Nov., 1849.
William Brisley, boatswain's mate, died 20th Jan., 1850.
Richard Baker, A.B., died 7th April, 1850.
George Deverell, A.B., died 17th May, 1850.

On the back of this paper the date 3d July, 1850, was written.

"These papers speak plainly the history of the *North Star*, which vessel, thwarted in her original design, had been forced into this Sound, and, had, unprepared, wintered amid these regions of eternal ice.

"Substituting for these documents other details of our proceedings, we rebuilt the cairns; and, placing a separate memorial on the height of Wolstenholme Island, we crossed the Bay of Baffin, with hope newly raised, and ready and anxious to set about the search anew."

Next are three characteristic *Esquimaux Portraits*—a youth of Kittischut, a girl of Disco, and a woman and child. An interesting account, with a Portrait, of the Esquimaux brought to England by Captain Ommanney, appeared in the ILLUSTRATED LONDON NEWS for Oct. 25.

The *Western Sledges* are next represented: the labour of dragging them over the ice, and the sufferings of the exploring parties, from exhaustion and intense cold, are described in Captain Austin's report; and the patient endurance of the brave fellows must not be forgotten.

The mode of progress over the floe is for the men to drag the sledges until they are more swiftly impelled by the wind acting upon the sails and kite-like arrangements; when the men leap into the sledges, and there remain until the wind slackens, when they leap out, and resume their toil on foot.

The *Winter Quarters* of Sir John Franklin in the season 1845-46 are next shown. The passage in Captain Austin's report is as follows:—

Previous to the arrival of the *Resolute*, Captain Penny had found on Beechey Island three graves, and various other positive evidence, which, the moment I saw them, assured me that the bay between Cape Riley and Beechey Island had been the winter quarters of the expedition under Sir John Franklin in the season 1845-46, and that there was circumstantial evidence sufficient to prove that its departure was somewhat sudden; but, whether at an early or late period of the season, very difficult to determine.

The interesting "written rock" of sandstone in Winter Harbour, Melville Island, is the subject of the next Sketch.

During the long night of three months the officers and men amused themselves occasionally with private theatricals and fancy balls. One of our Engravings represents two officers of the *Resolute*, preceded by a guide, going across the ice to dine on board the *Assistance*. In going from one ship to another during the night there was a danger of being attacked by bears, so that, instead of dining yourself, you ran the risk of serving as a dinner for one of these disagreeable animals.

The preceding extract is from an interesting work in course of publication, entitled "Arctic Miscellanies," the production of the officers and seamen employed in Captain Austin's Expedition. The work is dedicated, by special permission, to the Lords of the Admiralty.

CALENDAR FOR THE WEEK.

SUNDAY, November 30.—Advent Sunday.
MONDAY, December 1.—Alexander of Russia died, 1825.
TUESDAY, 2.—Bonaparte crowned, 1804.
WEDNESDAY, 3.—Flaxman died, 1826.
THURSDAY, 4.—Cardinal Richelieu died, 1642.
FRIDAY, 5.—Mozart died, 1792.
SATURDAY 6.—St. Nicholas.

TIMES OF HIGH WATER AT LONDON BRIDGE, FOR THE WEEK ENDING DECEMBER 6, 1851.

MACRAE'S MEMORIALS of EXTRAORDINARY POPULAR DELUSIONS.

THE BOOK of SCOTTISH SONGS.

In the Press, and will shortly appear.

THE LIFE of GENERAL WASHINGTON. Edited by the Rev C. H. UPHAM. 2 vols. post 8vo, Steel Engravings (Portraits of Washington and Franklin, with Vignettes). Cloth gilt, price 7s.

LADY FELICIA: a Novel. By H. COCKTON, Author of "Valentine Vox," "Sylvester Sound," &c

THE ILLUSTRATED LONDON COOKERY BOOK, &c.

London, Office of the NATIONAL ILLUSTRATED LIBRARY, 227, Strand; and to be had of all Booksellers, and at the Railway Stations.

DOUBLE NUMBER OF THE ILLUSTRATED LONDON NEWS.

Next week, DECEMBER 6th, 1851, will be issued an EXTRA NUMBER of the ILLUSTRATED LONDON NEWS, containing the FIRST PART of the

NATIONAL MUSIC OF ENGLAND.

This Number will, doubtless, be welcome to our Subscribers as a work that could not be otherwise produced, from its intrinsic value, at far beyond the price charged. The Musical Accompaniments are by SIR H. BISHOP, the Poetry by DR. MACKAY.

Besides these Two Numbers, Price ONE SHILLING, will be given an

EXTRA HALF-SHEET,

A Continuation of the GRAND PANORAMA of the GREAT EXHIBITION, &c. &c. 198, Strand. Nov. 27, 1851.

*** PANORAMAS of the GREAT EXHIBITION.—Directions to the Binder: The Half-sheet Supplements containing these Views are to be inserted as folding-plates.

SCHOOL FOR THE INDIGENT BLIND.—In the Notice of this excellent Institution, at page 509, the last year's receipts are stated to have been £10,000; whereas the ordinary receipts during the year were £3381 4s 8d; the former sum including legacies, stock sold, and other sources.

THE "AMERICA" YACHT.—We have received a letter from Mr Dixon, the artist of the drawings published by Messrs Ackermann, in which he states, in explanation of the objection made in Captain Hewson's letter, in our Journal of the 15th inst. that the *America* has no short boom to the foresail, when on a wind; but, when going free, a boom is rigged out to assist the spread of the sail.

WITH THIS WEEK'S "ILLUSTRATED LONDON NEWS" IS GIVEN A SUPPLEMENT, GRATIS.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, NOVEMBER 29, 1851.

THE combat thickens in the French Republic. The Legislative Assembly, led on by unprincipled men of two hostile factions, reels and staggers to and fro, under the influence of a party rage that is as unreasonable as it is vindictive, and before which all considerations of public interest fade into nothingness. Smarting under a defeat which it brought upon itself by its ill-judged question of appointing a military force to overawe the Executive power, it has been advised by M. Thiers, or some other mischievous and incendiary politician of the same calibre, to disinter an old plan for defining the powers and responsibilities of the President and his Ministers. This plan has slumbered in the *bureaux* of the Assembly for eighteen months, and its revival at this moment is avowedly intended as an act of aggression against the President. Eighteen months ago, such a measure might have been harmless. At the present time its discussion is in the highest degree perilous to the tranquillity of the country. When it is considered that one of the crimes which, supposing it to become law, might be charged against the President and his Ministry, would be that of doing certain things "*having a tendency*" to overturn the Constitution, it is obvious that the Assembly means nothing else by it than to usurp the whole power of the State. The impeachment of the President for any act, real or supposed, having a tendency, however vague, to destroy the Constitution, would, *ipso facto*, supersede his authority, and pending his trial, all power would be vested in the Assembly. This is too monstrous, and too absurd; but this is the matter which the Assembly has resolved to deliberate, and on which a coalition of Legitimists, Orleanists, and Red Republicans has already taken place. Should such a measure be carried, the long-foreseen battle between the Executive and the Legislative power could no longer be postponed, and the President would march the army to the Assembly, turn the members out of doors, put the key in his pocket, and very probably consign M. Thiers and a few of his Orleanist as well as Socialist allies to the dungeons of Vincennes. Events are fast ripening to that or some other very similar solution, and the whole tendency of public opinion foreshadows that the Assembly must inevitably be defeated in the conflict it has so stupidly and wantonly provoked. The language of Louis Napoleon leaves no doubt of the fact that his faith in himself, and his courage to do and dare, are equal to the emergency; and the manner in which his language is received by the great bulk of the people, and by the press, shows that the popular support will be on his side. On occasion of the distribution of medals awarded by the juries to the French exhibitors at the Great Exhibition in London, the President made a most telling and eloquent oration, in which he severely reprimanded the perturbators of the public peace who have seats in the Assembly, and threw down the gauntlet of defiance to them. Referring to the industry of the French nation, and to the honours which it merited and carried away in London, he said:—"In presence of these unhoped-for results, I must again repeat, how grand would be the French Republic if it were only permitted to pay attention to its real interests, and to reform its institutions, in place of being incessantly disturbed on the one hand by demagogical ideas, and on the other by monarchical hallucinations. Do demagogical ideas proclaim a truth? No; they disseminate everywhere error and falsehood. Disquietude goes before them, and deception follows in their wake, whilst the resources employed in repressing them are so much loss to the most pressing ameliorations, and to the relief of misery. And as to monarchical hallucinations, without causing the same dangers to be incurred, they impede all progress, all serious labour; for, in place of an advance, a struggle is obliged to be had recourse to. Men formerly the ardent upholders of the prerogatives of the Royal authority are now seen to make themselves conventionals, in order to disarm the power which has issued from universal suffrage. They who have the most suffered, the most bewailed the effects of revolutions, are seen to provoke a new one, and that for the sole object of opposing the national will."

These passages were received with such applause, that on one occasion the President was obliged to pause for several minutes in his discourse, to permit the shouts of his approving and sympathising auditory to be again and again renewed. "Whatever may happen," he said, "tranquillity shall be maintained. A Government which is supported on the entire mass of the nation, which has no other motive but the public good, and which is animated with that ardent faith which guides you most surely even across a space where there is no road marked out—that Government, I say, will know how to fulfil its mission, for it has in itself both the right which is derived from the people, and the force which comes from God."

France is evidently on the eve of a new revolution. Things cannot remain in their present state. Every hour expedites the catastrophe. That it may be a peaceful and bloodless one, and that nothing worse than a new 18th of Brumaire may bring it about, is the sincere wish of every well-wisher to that great and generous but most unfortunate nation.

THE electric telegraph is no longer the only subtle and invisible influence which is to link in amity and good-will the once rival nations of Great Britain and France. The two most illustrious states of the world have just concluded a treaty of international copyright, long desired and urgently needed; and henceforth the English pirate of French literature, or the French pirate of English literature, will be amenable to the public tribunals of either country. It will no longer be allowed that a bookseller in Paris shall reprint—without permission of the author or his assigns—in the English language any English book of which the merit and popularity shall tempt his cupidity, and enrich himself at the expense of that genius which is perhaps starving, and trudging wearily afoot, while he is becoming sleek and riding in his coach and pair. It has not been creditable to the civilisation of Europe that thereto the law which protected the owner of a watch, or any other tangible article, should not have protected the creators and owners of that higher and nobler description of property comprised under the term of works of literature and art; yet it is none the less a matter for rejoicing, that justice has at length been done. Both England and France have, however, a greater work before them. The international copyright which they have instituted is, in reality, of more value as an example than as a practical fact. England never suffered so much from the pirates of France as she realised from those of America, and France never suffered a hundredth or thousandth part of the injury from English booksellers that she endures from the unscrupulous buccaneers of Brussels. The moral influence of this great treaty, upon the details of which we will not at present expatiate, has yet to be extended in the quarters we have named. For their own sakes, the men of genius in Belgium will, it is to be hoped, co-operate with their Government in doing justice to the genius of others; and, in like manner for their own sakes, the men of genius in the United States of America—who speak and write, as we do, in the language of Shakspeare and Milton—will be induced to co-operate with their Government in doing justice to the men of genius in Great Britain. In fact, they have already done so. The professors of art and literature in all countries are linked together by the bonds of sympathy, as well as of common interests; and it is the apathy of Governments which is to blame for the present anomalous state of the laws of copyright. The intellectual heroes of all countries are sound in this respect. They not only know, but desire to pursue, the right course. But, under the present system, both Belgium and the United States of America suffer in character—the talent of their sons is ignored, or rendered of no avail—the national fame is prevented from reaching its full development—all for the benefit of a few booksellers, who will never encourage Belgian or American literature (that must be paid for) while they can rob with impunity the literature of France and England.

We shall doubtless have future occasion to remark on some of the details of the new treaty, but at present we purposely confine ourselves to the expression of our most cordial approbation of the principle thus solemnly and authoritatively promulgated. The year 1851 is likely to be memorable through all time; and, though as yet the last, it will not be the least of its claims to honourable mention in history, that it witnessed so splendid a recognition of the claims of literature and art as that which is involved in the recent treaty. It is a first step in a new path, and is likely to prove a great one.

THE SMITHFIELD CLUB CATTLE SHOW.—The entries of stock for exhibition at the ensuing cattle show of the Smithfield Club indicate that the specimens this year will exceed in number those exhibited on any former occasion. The all-important question to the agricultural interest of the country, whether the breeding and feeding of stock can be made of itself a profitable business to the farmer, may not, indeed, receive its final solution at the approaching show of cattle in the Horse Bazaar, but, judging from present appearances, and the anticipations generally entertained respecting it, the show will most certainly tend very much to elucidate this greatly-mooted problem in agricultural science in this country, and test our capabilities for becoming more of a pastoral and grazing nation than we have hitherto been. His Royal Highness Prince Albert is a competitor on a more extensive scale than formerly; and the noble president, the Duke of Richmond, Earl Spencer, the Duke of Rutland, Earl Chesterfield, the Duke of Beaufort, the Earl of Radnor, Lord Portman, and other distinguished members of the club, have also applied for space. Since last Christmas the proprietor of the Bazaar has made great alterations. The portion of the building formerly known as the riding-school, at the end of the grand area, in which the cattle are usually contained, and where the extra stock and long-wooled sheep of the Leicester breed were formerly exhibited, has been enclosed, and covered with a flooring, on which now stands a bazaar for the sale of porcelain and fancy articles of every description. The implement galleries have also been enlarged to the same extent as the basement of the building, and pass round, leaving an open court in the centre. The roofs of the galleries have been elevated, and have light and airy roofs, upon the principle of those of railway stations. Amongst other improvements is the erection at either end of the galleries of spacious staircases, in lieu of the exceedingly narrow access formerly existing at the southern end, the entrances at the northern extremity being from the main area, instead of, as formerly, up a staircase and round the gallery of the riding-school, as it was then called. Although the exhibition does not open to the public until the 9th of December, the ground in the galleries is not only taken, but several of the specimens of agricultural implements which excited considerable attention at the Great Exhibition have already arrived.

COURT AND HAUT TON.

THE COURT AT OSBORNE.

The Court have remained in retirement in the Isle of Wight since Saturday last, on which day they arrived at Osborne, from Windsor. Her Majesty and the Prince Consort left the Castle at half-past ten o'clock in the morning, accompanied by the Prince of Wales, Prince Alfred, Prince Arthur, the Princess Royal, the Princess Alice, the Princess Helena, and the Princess Louisa, and attended by the Marchioness of Ely, the Hon. Miss Cavendish, Colonel the Hon. Charles Grey, Lord Charles Fitzroy, Colonel the Hon. A. Gordon, Lieutenant-Colonel Biddulph, the Rev. Mr. Birch, and Mr. Becker. The Royal party arrived at Gosport at half-past twelve o'clock, and immediately crossed over from the port in the Royal steam-tender, commanded by Lord Adolphus Fitzclarence. The Queen landed at East Cowes at 1.17 P.M., and the Royal standard was hoisted at Osborne Tower, denoting her Majesty's arrival at her marine palace, at 1.30 P.M.

Her Majesty and the Prince Consort, with the Royal children, have taken their usual exercise in the grounds of Osborne during the week; but none of the Royal family have left the precincts of the Royal demesne since their removal on Saturday.

There has been a total absence of visitors.

THE DUCHESS OF GLOUCESTER.—Her Royal Highness the Duchess of Gloucester returned to town on Wednesday, from the Bedford Hotel, Brighton, where her Royal Highness has been sojourning during the past month. Her Royal Highness the Duke of Cambridge, who came to Brighton on Tuesday last, on a visit to his august relative, returned to London with her Royal Highness, and accompanied his illustrious relative to Gloucester House.

MARRIAGES IN HIGH LIFE.

The marriage of his Serene Highness Prince Edward of Saxe-Weimar with the Lady Augusta Gordon Lennox, second daughter of the Duke and Duchess of Richmond, was solemnized on Thursday at St. George's Church, Hanover-square, in the presence of a very large circle of the aristocracy. The body of the church was densely crowded long before the arrival of the betrothed pair. At a quarter to two, the choice of a bride was led to the altar by her noble father. Her Lady ship looked exceedingly beautiful, and was attended by a train of eight bridesmaids, the youthful daughters of some of the noblest houses of the British aristocracy. His Serene Highness followed, looking admirably, and evidently in the highest spirits. The ceremony was performed by the Rev. William Tarner, vicar of Box Grove, Guildford, assisted by the Rev. Mr. Bell, rector of Goodwood, where their Serene Highnesses will pass the first few weeks of their married life. We understand the bride's *trousseau* was exceedingly elegant, and in every way worthy the auspicious occasion. Her Ladyship received presents of a most valuable character from a great many members of the aristocracy.

The marriage of the Earl of Lanesborough with Frederica Emma, relict of the late Sir Richard Hunter, of Dalany House, Sussex, was solemnized on Monday, at St. George's Church, Hanover-square, in the presence of a select circle of the friends of both families. The ceremony was performed by the Rev. Freeman H. Bishop, M.A., brother of the bride, assistant minister of Grosvenor Chapel, and domestic chaplain to the noble bridegroom. Shortly after leaving the church, the noble Earl and Countess took their departure for Leamington *en route* to Swithland Hall, the family seat in Leicestershire. A sumptuous repast was provided at the town mansion in Great Stanhope street, of which a select party of relatives and friends partook after the ceremony.

The Duke and Duchess of Leeds, accompanied by Miss Lane Fox, have arrived at Hornby Castle, from Mar Lodge, N.B., where the noble Duke and Duchess have been entertaining visitors during the autumn. The noble Duke's lease of Mar Lodge, Braemar, having expired, his Grace has taken Inverlesk House, Inverness, for the remaining season.

The Marquis of Salisbury's third son, Lord Eustace Cecil, has entered the army as Ensign in the 43d Light Infantry

The Earl and Countess Howe arrived in town on Wednesday, from Gopsal Hall.

The Countess Dowager of Mansfield and the Ladies Murray have arrived at Langham House, Portland-place, Germany.

Viscount and Viscountess Villiers have arrived in town, from Germany.

His Excellency Baron Bentinck, Netherlands Minister at this Court, has returned to Mivart's Hotel from Brighton, where he has been staying for some time on account of his health.

The Marquis of Douro has returned to town from Scotland. The Marchioness has gone into waiting on her Majesty.

Viscount and Viscountess Palmerston entertained at dinner, on Saturday last, at their mansion in Carlton-gardens, his Excellency the Brazilian Duke's lease of Mar Lodge, Braemar, having expired, his Grace has taken Inverlesk House, Inverness, for the remaining season.

The Marquis of Salisbury's third son, Lord Eustace Cecil, has entered the army as Ensign in the 43d Light Infantry

The Earl and Countess Howe arrived in town on Wednesday, from Gopsal Hall.

The Countess Dowager of Mansfield and the Ladies Murray have arrived at Langham House, Portland-place, Germany.

Viscount and Viscountess Villiers have arrived in town, from Germany.

His Excellency Baron Bentinck, Netherlands Minister at this Court, has returned to Mivart's Hotel from Brighton, where he has been staying for some time on account of his health.

The Marquis of Douro has returned to town from Scotland. The Marchioness has gone into waiting on her Majesty.

Viscount and Viscountess Palmerston entertained at dinner, on Saturday last, at their mansion in Carlton-gardens, his Excellency the Brazilian Minister (Chevalier de Marcedo), his Excellency the Marquis Lisboa and Madame Lisboa, his Excellency the Portuguese Minister and the Countess Lavradio, his Excellency the Bavarian Minister, Lady William Russell and Mr. Russell, Lord Granville Somerset, M.P., and the Countess of Shaftesbury. The noble Viscountess received a select circle of the *corps diplomatique* in the evening.

Miss Burdett Coutts, who has been making a tour in Germany and Italy during the autumn, is not expected to arrive in Stratton-street until next month

Field-Marshal Count Nugent (Austrian service) and Colonel Count Nugent have arrived in Dublin.

His Excellency the Russian Minister (Baron Brunnow) has arrived at Ashburnham-house, from St. Petersburg.

Sir Henry and Lady Lytton Bulwer are in Paris before returning America, their departure having been deferred until after Christmas.

Sir George Gray is expected to return to town on the 1st of December, to attend the Cabinet Council on the 2d. Sir George's health is much improved.

Accounts of an unfavourable character have reached London regarding the health of Lieut.-General Sir Richard Armstrong. The gallant officer left England a few months since to assume the command of the troops in the Madras presidency. He was considered to be in a precarious state when the mail left Madras.

PUBLIC MOURNING FOR THE LATE KING OF HANOVER.—Orders were issued from the Lord Chamberlain's office on the 14th inst. for going into mourning for the late King of Hanover. "The ladies to wear black silk, fringed or plain linen, white gloves, necklaces, and earrings, black or white shoes, fans, and tippets; the gentlemen to wear black or trimmed, fringed or plain linen, black gloves and cravats. The Court is to change the mourning on Sunday, the 7th of December next; viz. the ladies to wear black silk or velvet, coloured ribbons, fans, and tippets, or plain white, or white and gold, or white and silver stuffs, with black or coloured ribbons; to wear black coats, and black or plain white, or white and gold, or white and silver stuff waistcoats, full trimmed, coloured swords and buckles." And on Sunday, the 14th of December, the Court goes out of mourning. Directions have also been published by the College of Arms, to the effect that, in pursuance of her Majesty's commands, all persons are expected to put themselves into mourning for ten days, commencing last Sunday. The great seal of St Paul's will be veiled on Sunday between the two services. A ceremonial only observed on the decease of a member of the Royal family. Colonel Sir George Couper arrived at the Bedford Hotel, Brighton, on the 21st, bearing the condolences of her Royal Highness the Duchess of Kent to her Royal Highness the Duchess of Gloucester on the death of the King of Hanover.

THE LATE LADY WARD.—The Ostend steamer has brought over the mortal remains of Lady Ward, who died at Schwalbach, in the duchy of Nassau, on the 14th inst. They were accompanied by Lord Ward and her Ladyship's father, Mr. Hubert De Burgh, who have been in attendance on her during her painful illness. The remains were forwarded on Saturday night to Hunley, near Dudley, in Staffordshire, the burial-place of his Lordship's family, where they were interred on the 25th inst.

HER MAJESTY'S ESTATE OF BALMORAL.—We are happy to be able to announce that the beautiful estate of Balmoral, in this county the Highland home of our beloved Sovereign for four years past—is now Royal property." We believe that Dr. Robertson, accountant for the Royal Highness Prince Albert, and Edward White, Esq., solicitor, have come to a final agreement with the trustees of the Earl of Fife, by which the fee simple of the estate has become the property of her Majesty the Queen.—*Aberdeen Herald*. The property lies on the Dee, and extends fully seven miles in length by four in breadth, and includes the best deer range in the Grampian chain. The purchase-money agreed on is £31,500. To this must also be added about £2000, as a *solatium* to the tenant of Balmoral; for her Majesty's occupancy, during these two or three past seasons, has been in the capacity of a sub-tenant, the premises being under lease to a different party, and of which there were upwards of twenty years to run.

LIBERALITY OF THE EX-QUEEN OF THE FRENCH.—Piety has ever been a distinguishing feature in the character of Maria Amelia, the ex-Queen of the French, and it will be remembered that during her short visit to Inverness last summer she and the suite regularly performed their religious duties in St. Mary's (Roman Catholic) Chapel. Her Majesty seems to entertain a pleasing remembrance of the chapel, over the altar of which is placed a fine work of a , and she has sent a donation to the funds in a note addressed to the Rev. Mr. Mackay—"Caramont, 11 Nov., 1851.—Monsieur le Curé: La Reine m ordonne de vous écrire qu'elle est en mesure de pouvoir vous offrir un témoignage quelques bien faible, du bon souvenir qu'elle a conservé de la chapelle Catholique d'Inverness. Sa Majesté me charge de vous adresser en ordre qui vous parviendra en même temps que cette lettre. Agréez, Monsieur le Curé, l'assurance de mon respect.—A. TROUPEAU."

COUNTRY NEWS.

DINNER TO THE HON. MR. WALKER, OF THE UNITED STATES.

On Monday evening, about seventy of the principal merchants and gentlemen connected with the trade, and the members of the American Chamber of Commerce, entertained the Hon. R. J. Walker, late Secretary to the Treasury of the United States, at dinner at the Adelphi Hotel. Mr. Walker is one of the candidates for the presidential chair, and is favourable to the participation by British ships in the carrying trade to California. To him, also, the British mercantile interests are indebted for the introduction of the bonding system, and many ameliorations of the obnoxious tariff which have proved beneficial to British interests. W. Brown, Esq., M.P., was to have taken the chair, but, from indisposition, that gentleman was unable to attend, and William Rathbone, jun., Esq., President of the American Chamber of Commerce, officiated in his stead.

The usual loyal toasts having been given and duly responded to, the Chairman proposed the toast of the evening:—"The Hon. R. J. Walker, to whom both countries are so much indebted for his exertions to promote commercial intercourse between the two branches of the Anglo-Saxon family."

The toast was enthusiastically received with all the honours.

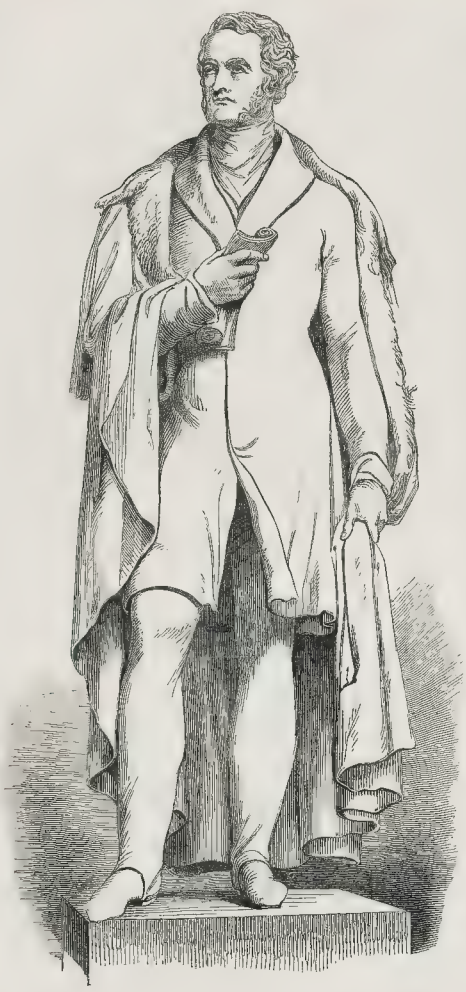
Mr. Walker acknowledged the compliment, observing that it afforded him the greatest pleasure at all times to reciprocate courtesies and friendly relations with those upon whose efforts, intelligence, and prosperity, so much depended for the advancement of civilization, refinement, and peace. It was not to him, as a humble citizen, now without power or patronage, that any but the most honest that evening, but to the country and policy of the American Congress and to her commercial freedom. The speaker then entered into a series of statistics to prove that America in twenty years more than doubled her population, and that Great Britain in the same period more than doubled her revenue. Comparing the high tariff of 1842 with the effect of the policy since 1846, he went on to say that duties had been lowered 30 per cent., population had increased 10½ per cent., tonnage 47½ per cent., and exports 60 per cent. And the official account of the first quarter of the fiscal year received by the steamer the day previous announced a surplus of 4½ millions. High tariffs reduced the amount of exports more than imports, excluding them from foreign markets. Their commerce was not geographic—it belonged to the world; and it was a singular fact that America and England were the only nations whose receipts exceeded their expenditure. He concluded by proposing "Prosperity to Liverpool."

Several other complimentary toasts followed, and, after an evening spent with the utmost conviviality and harmony, the company separated.

FATAL COLLISION ON THE LONDON AND NORTH-WESTERN RAILWAY.

On last Saturday afternoon, shortly before dusk, the railway station at Weedon was the scene of a collision, by which several passengers were severely hurt, and one killed. The passenger train, which leaves Liverpool at a quarter past eleven in the morning for London, had just arrived at the station, when a special cattle train, at the rate of 10 or 20 miles an hour, was observed rounding the curve which leads to the station, and before the alarm could be raised it dashed with great violence into the stationary passenger train. Many of the persons in the carriages were cut, bruised, and much shaken. A man named Currie, a market-gardener and nurseryman, of Upper Clapton, in almost as bad a condition, was taken from the same carriage, and turned out to be the servant of Colonel Sir Douglas Pennant, also a passenger; he is now progressing favourably. The engine-driver, whose name is Schenk, escaped with a severe contusion on the chest, but was also taken out insensible, with several severe cuts about the head and face; and a Mrs. Bell, of Warrington, who was coming on a visit to her sister, Mrs. Gower, of Oxford-street, was also much injured. Both, however, were sufficiently recovered to be removed by the station. Most of the other passengers suffered from wounds and contusions more or less; and one poor fellow, a labourer, both of whose legs were dreadfully crushed, it is feared, will not recover.

Mr. Bruyere, the superintendent of the line, at the moment of the accident, was leaning in through one of the carriage windows, conversing with Captain Hinds, the general manager of the traffic. The escape of both with no more than a shaking was almost miraculous. The engine



BRONZE STATUE OF LORD GEORGE BENTINCK, BY CAMPBELL; JUST ERECTED IN CAVENDISH-SQUARE.

STATUE OF THE LATE LORD GEORGE BENTINCK, IN CAVENDISH-SQUARE.

THE site chosen for this bronze effigy of the late statesman who has cast such lustre on the House of Cavendish is appropriate enough. The inner and planted portion of the square is already in possession of an equestrian statue of some other personage. The horse's tail is unfortunately turned in the direction of Oxford-street, and consequently exhibits a back presentation to the new Statue, which stands at the Holles-street side of the square, and looks towards the great thoroughfare just mentioned. One great advantage of being visible from the causeway is thus secured; as, in the majority of cases, statues erected in the centre of enclosed spaces throughout this metropolis are inaccessible to the multitude, and waste their sweetness on the desert air within the railings. George Canning and William Pitt have each respectively the good fortune to be placed prominently under the public eye, in Hanover-square and Palace-yard; and Lord George Bentinck, in his present position, is equally well off.

The attitude is chosen with judgment, and his Lordship holds in one hand some political document, while the other is engaged in the folds of his favourite mantle preparatory to casting it over his shoulder: the effect combines graceful ease with a due proportion of dignity and the genuine bearing of a thorough-bred gentleman. We have rarely seen the modern costume treated so skilfully, and made to assume the flowing simplicity of classic drapery. The figure is eleven feet in height: the pedestal, formed of one block, highly polished, of red granite, from the Peterhead quarries in Aberdeenshire, is a mass of eight tons weight, and is eight feet high. It bears the following inscription:

WILLIAM GEORGE FREDERICK CAVENDISH BENTINCK,
BORN, FEBRUARY 27, 1802.
DIED, SEPTEMBER 21, 1848.

This monument to the great Parliamentary leader of a powerful political party has been erected by subscription; and the work issues from the studio of Thomas Campbell, of 10, Great Marlborough-street. This eminent sculptor has long since won his laurels in the execution of colossal figures, both in bronze and marble. Several of his best performances adorn the capital of Scotland; and the great equestrian group of the Earl of Hopetoun is a very remarkable specimen of his powers. The horse is represented as fondly caressing with his neck and head the person of his gallant master, who stands dismounted, concerning which Lord Peter Robertson has put on record a facetious criticism—that the national character of the artist was clearly discoverable from his making the war charger *scratch* his Caledonian proprietor.

TESTIMONIAL TO THE LORD-LIEUTENANT OF IRELAND.

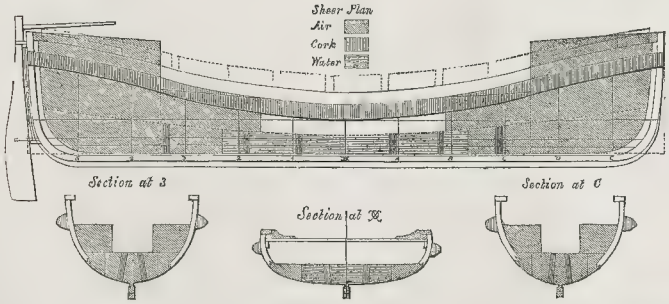
On the 29th ult., a deputation, consisting of the Marquis of Downshire, the Earl of Erne, Mr. Crawford, M.P., Messrs. Mulholland, M'Kibbin, Charters, Campbell, Hancock, Heidman, M'Master, Dargan, Grimshaw, and Macadam, waited upon his Excellency the Earl of Clarendon, at the Vice-regal Lodge, Dublin, to present a testimonial from seventy-six members of the Royal Flax Improvement Society of Ireland. The gift consists of a Silver Vase (of which we present an Engraving), a set of Damask Table-linen, and a Case of Cambric Handkerchiefs. The Vase has a tripod base of carved Irish bog-oak. On the three sides of the plinth are the arms of the borough of Belfast, the Royal arms, and those of Lord Clarendon; all in frosted silver, which contrasts strikingly with the dark colour of the bog-oak. Three silver figures, emblematic of Science, Genius, and Commerce, are seated on the feet of the plinth; the figure of Science holding a medal of the

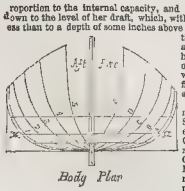
TESTIMONIAL PRESENTED TO THE LORD-LIEUTENANT OF IRELAND BY THE ROYAL FLAX IMPROVEMENT SOCIETY.

Royal Flax Society. The body of the Silver Vase is wreathed with shamrocks of flax in seed and blossom, and shows three medallions, representing a flax-field, with people at work; the spinning-room of a linen-factory; and the quays of Belfast, with shipping, &c. On the remaining face is the inscription as follows:—

This vase, with a set of damask table-linen and cambric handkerchiefs, of Irish manufacture, was presented to his Excellency George William Frederick, Earl of Clarendon, K.G., G.C.B., &c., Lord Lieutenant-General and General Governor of Ireland, by the President and members of the Royal Flax Improvement Society of Ireland, as a slight but sincere recognition of their appreciation of his exertions to extend the culture and manufacture of flax, and of his eminent services in developing the resources of the country, in fostering enterprise, and in promoting a spirit of self-reliance and independence among the people. Belfast, 1851.

The top of the vase is surmounted by a figure of Hibernia holding the harp. The order for this piece of plate was executed by Mr. W. Gilbert, of Belfast, and the design and work were furnished by Mr. Angell, Panton-street, Haymarket. The medallions were drawn by pupils of the Belfast Government School of Design. The damask, which consisted of table-cloths and napkins, was manufactured by Mr. Andrews, Ardoyne, Belfast, and has a border of flowers, a double centre with the Clarendon arms; and the insignia of the Garter, Bath, and St. Patrick, of which orders his Excellency is a Knight, are introduced, along with festoons of flax and shamrocks. The cambric is of very fine texture, manufactured by Mr. Henning, of Waringstown, county Down. Some of it was embroidered at Killileagh, in the same county, from a design furnished by the Belfast Government School of Design, and has Lady Clarendon's cipher elaborately worked in the corners. An address was read, on the presentation, by the Marquis of Downshire, to which his Excellency replied in suitable terms. The deputation afterwards dined at the Vice-regal Lodge, the Duke of Leinster, Earl of Charlemont, Lord Mayor of Dublin, Sir W. Somerville, Sir J. N. Redington, &c., being of the party.





portion to the internal capacity, and would rapidly free the boat of water, down to the level of her draft, which, with her crew on board, would not be to less than to a depth of some inches above the floor. The air-cases are built into the boat, which renders them liable to accidents; if this were remedied, and her internal capacity reduced, a 30 feet or 32 feet boat built on similar lines, with her internal fittings slightly modified, would make an efficient life-boat, adapted for many parts of the coast.

On Wednesday week this prize-boat made a trial trip out to the Goodwin Sands, and proved herself of the most extraordinary qualities as a sea boat. Captain Charlwood, the inspecting commander of the district of the Coast Guard, with Lieutenant Simmons and Mr. M'Donald, the master of the *Rose*, revenue cutter, and a crew of 14 picked men, went out in her to the Goodwin, where she was placed in such positions as to allow the surf to have the greatest effect upon her. Nothing could exceed the admirable style in which she behaved; and enough was seen to satisfy the officers and men who were in her that she would weather the most tempestuous sea. Her sailing qualities were also tested with the most successful results; indeed, it is said that if it were possible to throw her on her beam ends she would not go over. Such was her buoyancy, that when filled with water she cleared herself to the grating in about 12 seconds. The success of the boat has been the source of much gratification along the coast.

THE NORTHUMBERLAND PRIZE LIFE-BOAT.

1. Victoria Adelaide Mary Louisa, born November 21, 1840, *Princess Royal.*
2. Albert Edward, Prince of Wales, born November 9, 1841.
3. Alice Maud Mary, born April 25, 1843.
4. Alfred Ernest Albert, born August 6, 1844.
5. Helena Augusta Victoria, born May 25, 1846.
6. Louisa Caroline Alberta, born March 18, 1848.
7. Arthur William Patrick Albert, born May 1, 1850.

PORTRAITS OF THE ROYAL CHILDREN, MODELLED BY COMMAND OF HER MAJESTY, BY L. C. WYON, ROYAL MINT.

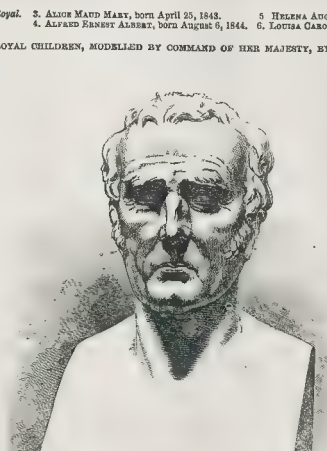
Among the contributions to the Fine Arts Court of the Great Exhibition was the original of the above Illustration; in the Catalogue, No. 286, "Portraits of the Royal children, modelled by command of her Majesty the Queen, in August, 1850, by L. C. Wyon, medallist, Royal Mint." The respective portraits are most delicately executed by the Modeller; and this very interesting work has been engraved by our Artist, by gracious permission of her Majesty. It will be seen that the Portraits are not ranged in the order of seniority, as in the accompanying figures of reference.

COLOSSAL BUST OF THE DUKE OF WELLINGTON.

BY BEHNES.

This noble Bust of his Grace the Duke of Wellington has just been executed in marble by Mr. Behnes. It is more than twice the size of life, and is remarkable for its truthful rendering of the well-known characteristics of the great original. The Bust terminates in the simple and massive manner which we see in some of the finest specimens of Greek art. It is a commission from his Majesty the King of Prussia.

The likeness is perfect, both in features and expression; the general air of repose, and the benevolent play of the mouth, being successfully caught, and most delicately rendered. Although the head measures 16 inches from the crown to the chin, there is something so natural in the treatment, that the difference from the ordinary magnitude is scarcely to be perceived. It will shortly be sent to Berlin, and is in the meanwhile exhibited at the rooms of Messrs. Graves and Co., Pall-Mall.



COLOSSAL BUST OF HIS GRACE THE DUKE OF WELLINGTON.—BY BEHNES.

THE THEATRES.

PRINCESS'.

As previously announced, this house re-opened for a new season on Saturday. If the manner in which "The Merry Wives of Windsor" was placed on the stage may be accepted as a symbol of the intentions of the management, the promises of the farcical. Scenery, costumes, and cast all presented thought and originality. The first was for the most part new painted; the second were adopted from the reign of Henry IV., instead of, as usual, that of Elizabeth, and the third combined the strength of the company. Not that every part was so cast as to ensure an ideal exactitude in the representation, but that each was given to the actor best qualified in the establishment to embody it with efficiency. We dare not say that Mr. Harley was so good a *Slender* as Mr. Charles Mathews, or that Mr. Keeley was the very best Welsh parson we have seen; but both were entitled to the business entrusted to them, and executed it with care and ability. Mr. Meadows, as *Shallow*, was singularly quaint, and Mr. Wigan's *Dr. Caius* was perfect. To Mr. Bartley's *Falstaff* no criticism is fairly applicable: it is the best on the English stage, and, moreover, combines the traditions of the manner in which the part has come down to us from leading representatives in former times. Decidedly the best-conceived and most artistically executed character, however, was *Ford*, by Mr. Charles Kean. The first interview with *Falstaff* was nicely interpreted, and the whole matter of the jealousy touched off with elegance and comic *vis*. No actor within our recollection has hit so well the due mean between the tragic and the farcical, in the expression of a passion which tends generally to the sublime or the absurd. No doubt exists that in this class of characters Mr. C. Kean exhibits a masterly amount of genius, and compels judicious appreciation even from those who are disposed to question his earlier claims. He was ably supported by Mrs. Kean, who, by certain delicate traits of acting, indicated the perpetual uneasiness which a wife subject to the caprices of such a husband would necessarily undergo. Mrs. Keeley, as *Mrs. Page*, also evinced her power of sustaining the more elegant range of comedy; and, indeed, added to it a vivacity which is usually excluded from drawing-room parts, but as rightly belongs to them as to those of the veriest *soubrette*. With the advantages of such a cast, the comedy went off with a satisfactory smoothness, and minor defects were forgotten in the general excellence of the impersonation and *mise en scène*.

On Monday a farce by Mr. Serle, under the title of "Tender Precautions; or the Romance of Marriage," was produced after the historical play of "Henry IV.," in which Mr. Wigan performed the *Prince of Wales* with an originality of interpretation which peculiarly belongs to his assumptions. The farce was in one act, but, we suspect, was intended to be in two; and the want of division made it become tedious. Mr. and Mrs. Keeley, as *Mr.* and *Mrs. Gosling* tender, jealous, and forgiving; soft of head, but honest of heart—were capital. The scapegoat of his friend *Jack Sparkes*, when he finds that he has incurred the ignominy of being well kicked, his perplexity between the roused sentiment of honour and his usual timidity of disposition, gives to Mr. Keeley the desired opportunity of exhibiting his peculiar points as an actor of humour. The parts in this respect are well suited to those for whom they were intended; and, as a piece of theatrical tailoring, the farce is not without merit, though the mediocrity of the dialogue, as usual with Mr Serle's pieces, constantly succeeded in disappointing the expectation continually excited. The number of traps that missed of their effect was indeed something curious.

HAYMARKET.

"The Two Bonnycastles" is the name of a new farce by Mr. J. M. Morton produced on Tuesday, and which proved amusing. The hero is Mr. Buckstone who, conceiving himself to be robbed in the park, snatches a watch from a stranger's fob, and, when he gets home discovers the mistake. To escape from the consequences he changes his name to *Jorum*, and becomes a lawyer's clerk and is nearly entrapped into bigamy by the desire of *Mr. Snuggens* (Mr. Lambert), his master, to get rid of his niece, whose property he has embezzled She, however, happens to have a lover who is the very person robbed by *Bonnycastle*, and who, becoming acquainted with the latter's wife, assumes himself for the nonce the name of *Bonnycastle*, thereby exciting the real *Bonnycastle's* jealousy. *Mrs. Bonnycastle*, afterwards entering, identifies her husband, and precipitates explanations. Mr. Buckstone, as usual, does the drollery of the piece with characteristic vigour, and to his exertions its success is fairly attributable.

PUNCH'S PLAYHOUSE.

A farce entitled "Counter Attractions," by Mr. Tilbury, the actor, has been produced at this theatre, for the purpose of enabling Mr. John Reeve to perform the part of a strolling player, imitating not only the manner of several living performers, but the sound of musical instruments, in which the actor was successful.

ASTLEY'S.

The spectacle of "Azédi" has been produced at this theatre with a series of most effective processions, *tableaux*, and other accessories, peculiar to the establishment, including troops of horses, camels, zebras, goats, ostriches, &c. The drama is, altogether, gorgeously mounted; and, from its completeness, bids fair to enjoy great popularity. In addition are presented, nightly, several new and most attractive scenes in the circle, by eminent native and foreign artists, who have recently been added to the *programme* of the establishment.

To-night a performance will take place at St. James's theatre by the members of the Printers' Dramatic Society, when the tragedy of "Othello" and the farce of "All that Glitters is not Gold," will be presented. Mr Roach has written for them an appropriate address to be delivered as a prologue to the tragedy. As the performers, though amateur, are from a class remarkable for intelligence, and indeed already honoured in the annals of histrionic fame, the performance is likely to prove interesting.

MUSIC.

HAYMARKET THEATRE.

On the 29th of January, 1852, a century and a quarter will have elapsed since John Gay's "Beggar's Opera" was produced at the Lincoln's-inn-fields Theatre, on the site of which an additional wing to the Royal College of Surgeons is now in progress of erection. Dr. Pepusch wrote the overture and arranged the airs, the songs being selected by Gay from the popular English, Scotch, and Italian songs of the time. Until 1777 the instrumentation to the airs was confined to the melodies and a bass, but then Mr. Linley composed some effective accompaniments, which Mr. Arnold revived at the Lyceum some years ago, and are now generally adopted. Gay intended his work as a satire on the Italian Opera, and so successful was it that the foreign singers were driven for a season from this country; but there can be no doubt that the popularity of the airs in the "Beggar's Opera" ultimately contributed to the advance of musical taste, and consequently to an unprejudiced appreciation of the attractions of the minstrelsy of the southern sky. There always has been and will be a great difference of opinion as to Gay's production, which was a suggestion of Swift. Gibber's refusal to produce the opera, which caused the saying that it made "Gay rich, and Rich gay;" the great Duke of Argyle's prophecy, "It will do, it must do, I see it in the eyes of the people," on the first night; its unexampled run; Sir John Fielding's attempt to put it down, with Garrick's adhesion and Colman's witty refusal, stating that he did not think "*he* the only house in Bow-street where thieves are pandered and encouraged;" Dr. Johnson's defence of the opera—are all well known facts connected with its history. If space permitted, a very entertaining record might be supplied of its career—of its changes of cast—of the appearances of Beard, Mackin, Shuter, Barry, Weston, Wewitzer, Parsons, Bannister, &c., Mrs Clive, Mrs. Pritchard, Mrs Gibber, &c., in the olden time; of the chief parts in the men's characters being first sustained by women, and the women's characters by men (1781)—of Incledon—of Mathews's imitation of the latter in character by men (1781)—of Incledon—of Mathews's imitation of the latter in character by men (1781)—of Incledon—of Mathews's imitation of the latter in character

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

M Kossuth received the first substantial aid for the cause of Hungary from Birmingham, Mr. R. W. Tyndall (deputed by the committee) having, on Tuesday, last week, in an interview at Eaton-place, presented to him £760, which had been subscribed by a few gentlemen, to be by the illustrious Hungarian appropriated as shall seem to him most advantageous to the cause of Hungary. The list of subscribers to this fund has not been closed, but it is stated that Mr. Charles Geach, M.P., has subscribed £100; and Mr. Mantz, M.P., Mr. Scholefield, M.P., Mr. Alderman J. James, Mr. Charles Sturge, and other gentlemen, have made equally liberal donations.

The correspondent at Vienna of the London *Daily News* has been expelled from the Austrian capital by the police. No reason is stated in the accounts from Vienna for this very arbitrary act, but there is no doubt it has been caused by the liberal political views which the correspondent has developed in his letters to his journal, and the censures he passed on the extraordinary doings of the Austrian police on the Vienna Exchange.

From various quarters the Earl of Rosse has been suggested as the most suitable person to fill the office of Chancellor of the University of Dublin, vacant by the death of the King of Hanover

Among the grand jury not in attendance when called at the Central Criminal Court on Monday were Sir G. F. Young, Bart., M.P., who was fined £20 for non-attendance. The Lord Mayor said Mr. Young was a most proper person to be on the jury, and was generally a most punctual man. Sir James Duke said, no doubt the farmers would pay the fine. (A laugh.) The fine was ordered to be recorded.

The Duke of Northumberland has given orders for the construction of no less than a thousand new and comfortable dwellings for the labourers on his Grace's estates in Northumberland.

The *Demerara* steam-ship, the accident to which we noticed lately, was safely removed on Saturday, the 22nd inst., into Cumberland Basin, at Bristol, preparatory to being placed in the dry dock for the necessary repairs.

The Duke of Newcastle has ordered his tenants on the Clumber estate to kill the hares, as he only intends to preserve the birds for his own use. Besides the hares, the whole of the Clumber estates are being re-valued, and sundry repairs are progressing upon various farms.

The *Hampshire Advertiser* of Saturday states that Mr. Andrews, the Mayor of Southampton, has just been offered the honour of knighthood.

The fine old church at Northam, on the north coast of Devonshire, whose lofty tower serves as a beacon to mariners traversing the dangerous navigation of the Bristol Channel, has just been completely renovated. New Gothic windows adorn the sacred edifice, and the internal improvements are creditable alike to the designer and accomplisher of the work.

Coals are very scarce in Holland. There is one coal-mine at Kerkrade, in Limburg. The coals are chiefly imported from England, Belgium, and the Rhenish provinces of Germany. Holland is so rich in the very finest turf, that this replaces in a great measure coal in general consumption. In some of the best houses in Amsterdam turf is used for fuel

The Council of King's College have appointed Mr. James Stephen, the son of Sergeant Stephen, the learned author of the "Commentaries," to the Professorship of English Law and Jurisprudence, vacant by the resignation of Mr E Bullock. Mr. Stephen was called to the bar in January, 1846.

Notice was issued on Saturday at St. Paul's Cathedral, that the public will only be admitted on Sundays during the morning and afternoon services, and on other days from eight a.m. till four p.m. (gratis), the same as Westminster Abbey.

The Royal London Yacht Club have under consideration the propriety of altering the mode of measurement of their yachts, which will, no doubt, be carried out as soon as they have ascertained the best mode of doing so without injury to the existing yacht-owners.

The Elector of Hesse has gone on a visit to Vienna.

The Landgravine Eleonore of Hesse-Rohlenburg died a few days ago, near Brunn, in Moravia, aged 92.

A letter from Palermo of the 2d, in the *Augsburg Gazette*, states that the Neapolitan Government intends to increase the export duties on sulphur and oil.

Conferences are to be opened at Berne, on December 1, relative to the extension of the Baden Railway to Basle, and beyond that place, going up the Rhine. The Grand Duchy is to be represented by the Baden Minister, M. de Berckheim; and on the other side will be delegates from Basle and Schaffhausen, chiefly interested in the proposed extension.

The £10 given by Jenny Lind to the Mayor of Toronto, Canada, to be distributed in charity, had been disposed of to the satisfaction of all parties, £20 was added between the vaults charitable institutions already existing; and the remaining £290 was given to the projected "Orphan Home," on the condition that it should assume the name of "Jenny Lind's Orphan Home."

On the 20th the Berlin Court put on a four weeks' mourning for the late King of Hanover. Their Royal Highnesses the Grand Duchess Dowager of Mecklenburg Schwerin, the Duke of Brunswick, the Prince and Princess of Sigmaringen, the Prince and Princess of Windischgratz, Count Stolberg, and Baron Brunnow, secretary of the Swedish Embassy, have left Berlin.

The intendant-general of the Royal theatres, M. Von Hülsen, lieutenant in the Grenadier Guards, was to leave Berlin shortly for London and Paris, in order to make himself acquainted with the condition of the English and French stage.

The railway from St. Petersburg to Warsaw has been, by command of the Emperor, already marked out, and the earthworks have been commenced. General Gerebelle, who was 1st assistant of General Kleinwichel in the making of the line from St. Petersburg to Moscow, superintends the construction. As the contemplated line is nearly double the length of the Moscow and St. Petersburg, it is not expected that it will be many years less than ten years. The works of the last-named line occupied in all eight years.

On the 12th instant the French residents in Rome, or at least a part of them, attended a requiem mass for the soul of Maria Theresa of France, in their national church, St. Louis des Français.

On the 10th instant the daughter of Bouteneff, the Russian Ambassador, was died of consumption on the 8th, in Rome, was interred with the honours due to her rank. She was in the flower of her age, and was about to be married to the son of Prince Schuvaloff, of the Russian embassy at Naples.

The Tiber has returned within its usual limits, but not without having produced considerable damage. Two young men were drowned by the Roman river washing down a wall, on which they were stationed with hooks and ropes to fish out the trunks of trees brought down by the current.

Mademoiselle Rachel has concluded the three representations which she had announced to take place at the Metastasio Theatre, in Rome. The theatre was tolerably well filled, but by no means crowded, and a considerable part of the audience had great difficulty in following the meaning, or, at any rate, the words, of the impassioned scenes, notwithstanding which inconvenience to her Roman auditors, Mdlle. Rachel may be said to have produced a decided and profound sensation.

The Society for the Propagation of the Gospel resolved, at the general monthly meeting which was held on the 31st, to send three missionary clergymen to Australia as soon as well qualified men can be found, for the special purpose of supplying the ministrations of religion to the multitudes who are flocking to the newly-discovered gold regions in the Bathurst district.

Two English gentlemen, Mr. Galton and Sir Coutts Lindsay, met with a severe accident on the Civita Vecchia road (Rome), the week before last, owing to the overturning of the postilions at Palo, where there is a sharp turn, round which they are fond of going at full gallop. The two gentlemen were thrown out, but Mr. Galton had his wrist sprained, and Mr. Galton, pitching on his head, sustained a severe cut, which rendered the scalp from ear to ear. Both parties are recovering. Mr. Galton's injuries alone proved serious.

On Monday morning, shortly before ten o'clock, as the driver of one of Pickford's heavy waggons, drawn by two horses abreast, was in the act of driving from Messrs. Harvey's across the other side of the road, through the carriage-gate-hill, in an endeavour to avoid an omnibus the horses got on to the pavement, the pole of the waggon being driven with great force through the shop window of Messrs. Deane and Son, silversmiths. The window and jewellery were scattered in various directions, and considerable loss and damage occasioned.

The mortal remains of his late Majesty the King of Hanover will be interred in the new mausoleum for the Sovereigns of Hanover. The Duke of Cambridge, commanding the Dublin district, is expected to attend the Royal obsequies.

The aggregate amount of traffic on railways in the United Kingdom, published weekly from the 1st of January to the 15th November, inclusive, amounted to £13,049 919; corresponding period of 1850, to £11,853,011; corresponding period of 1849, £10,894,104; and in 1848, to £8,981,923; showing an increase in 1851 over the corresponding period of 1850 of £1,592,901; an increase in 1850 over the corresponding period of 1849 of £1,334,907; and in 1849 over the same period of 1848 of £986,811. The traffic receipts for the above period averaged, in 1851, £3038 per mile; in 1850, £2905 per mile; in 1849, £2669 per mile; and in 1848 they averaged £2300 per mile.

At the annual hirings just over, in the East and North Ridings of Yorkshire, it is an important fact, as indicating the prospects of agricultural labourers, that the demands for their services have been greater than for some years past, and higher wages have consequently been obtained.

The cold was so severe in Norfolk on Monday night week, that a travelling tea-dealer perished from it, on his way from Docking to Creake

From Western Australia we learn that plumbago in large quantities had been discovered on the grant of the Gera dine Mining Company. A report was also current that coal had been discovered in the vicinity.

Colonel Rawlinson, her Britannic Majesty's Consul at Bagdad, is promoted to the rank of Consul-General.

Mr. Wakem is appointed Surgeon to the Queen's Prison, in the room of Mr. Robert Little Hooper, deceased.

Mr. J. A. Le Seur is appointed Postmaster at the Cape of Good Hope.

We are happy to find, that, through the kindness of his Excellency the Lord-Lieutenant of Ireland, arrangements have been made for the reception of Irish-grown roots, &c., at the approaching great agricultural show in London. Exhibitors have been applied to to furnish fresh specimens; and for their own credit, as well as that of the country, we trust they will not fail to do so.

CHESS.

TO CORRESPONDENTS.

F, Shrewsbury Chess Club. The game sent has some points of interest; but be is parties overlook opportunities which a critical reader would think unpardonable in a published game. For instance, White, at his 15th move, may secure the same by merely playing P to Q R 6th, since he would lose not all the adversary's pieces on the Queen's side; and Black, at move 38, has only to play P to Q5 to win the game at once. In the same 38, move, Black, instead of merely capturing the Knight, has an obvious checkmate in two moves at command, by mere y moving the Q to K 3d, and then advancing the P to K R 4th. Let us see some future specimens of play between the same competitors

T H—In the position given, White calls for a Queen, and of course gives check, compelling Black to move his King

J. C. VEN—The means of the suggest would obviously enable White to win the "exchange," by s'opping the Black B if with his Kt checking

W—When a problem is given as mate in which mate is to be effected in four moves, it is understood to be impossible to accomplish the mate in a less number. Problem No 409 cannot be solved in the way you suggest

SCHLAGINTZEN—The "Final Results" of the Theory of the Bishop's Gambit," which Major Jaenisch describes as his most careful and conscientious work, was not to satisfy much the extended for our limited space. It has been entrusted to the "Chess-Players Chronicle," where it will probably appear in the December number.

ORACLE—II. We can give no present hopes of a collection of the games and problems published in the ILLUSTRATED LONDON NEWS. 2 Mr. Buckle has joined the committee which you mention 3 Frequency to the study of the works named, you will do well to make yourself conversant with Boden's "Popular Introduction to Chess"

MAX FULGOR—The same communications reach us, the greater is the likelihood of their receiving notice the same week

SCLAVONIC—The chief players in St Petersburg, where, we are gratified to learn, there is a probability of a Chess Club being formed this winter upon a scale of unparalleled splendour, are Messrs Jaenisch, Schumoff, Kieseritzky, and Purowsky The champion of Russia, M Petroff, resides at Warsaw, having the dignity of "Secretary of State to the kingdom of Po and

H S—Problem No 404 is quite correct. Try it again

SOLDIOLA—It shall be reported on next week

G —When you have obtained a second Queen by advancing a Pawn to his 8th square, you are quite as much entit ed to make use of her as of the original Queen

JUST—May or maybe. You are quite right. Unless some limit is assigned either as to the time a player shall be permitted to consider over a single move, or the duration of each sitting, chess skill will go for very little, since it is always in the power of the physically stronger player to wear his opponent out. The experience afforded by the late Tournament will go far, we hope, to remedy this and other anomalies which call loudly for redress

A CONSTANT SUBSCRIBER—We have not room. See page 197 of the "Chess Players' Handbook" just laid by Bell

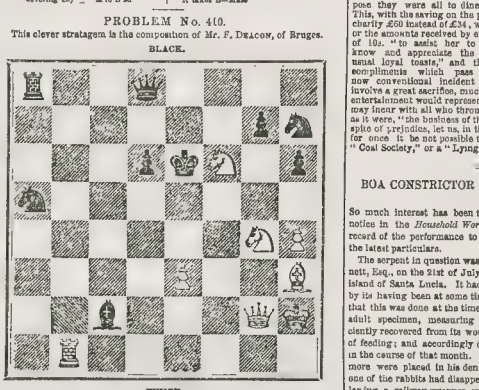
PROBLEM No. 410.

This clever stratagem is the composition of Mr. F. DEACON, of Bruges.

BLACK.



WHITE.

White, playing first, mates in five moves.

THE MATCH OF CHESS, BY ELECTRIC TELEGRAPH, BETWEEN FRANCE AND ENGLAND.

The arrangements for this highly interesting contest are now complete, with the exception of some trifling details.

It is proposed that two games shall be played. The winners of one, either winning or drawing the other, to be declared victors. With the view to save time and give more popular interest to the struggle, the competitors will play only *open* games; that is, that the beginning of each game will be a Gluoco Piano, the Scotch game, or one of the giuoco.

The players on the English side, it is expected, will include Mr. Staunton, Mr. M. Wyvill, jun., M.P., and Captain Kennedy. Mr. Buckle, who has expressed his warmest approval of the match, is prevented by indisposition and absence from London from taking an active part in it. On the part of France we believe the combatants will be led by MM. Kieseritzky, Devinck, and Laroche.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

Mr. Editor,—On reviewing with perfect impartiality the game between Messrs. Staunton and Williams, printed in your last Number, it is impossible to refuse assent to the justice of the complaint expressed in your note of the unreasonable time taken by certain players for the consideration of a single move. Good heavens! sir, of what materials must that player be composed who can endure the delay of *one hour*, and even bounce that period, wasted in such unnecessary ruminations? You may well say that this torturing process involves the question of physical endurance much more than that of real skill in Chess combinations. I, for one, would never be induced to place myself a second time *tête-à-tête* to such an opponent; and, if Mr. Staunton will take the advice of a friend and admirer, he will make a stipulation in all future matches that some limit shall be affixed to so inordinate a demand upon his powers of endurance. A *three-minute sand-glass* is an admirable reminder of the lapse of time; and I am quite sure that any player who is not prepared to move after the fifth turn of the glass deserves to lose every game that he sits down to play. After all, such a limitation is equally fair to both parties, and therefore both parties might be expected to concur in the adoption of such a rule in the match.

I have this day, the 24th instant, been favoured with a note from Mr. Staunton, in which he says, "I am sorry that your correspondent's remarks would be sufficient to deter a novice from any further acquisition of knowledge which leads to such unprofitable results. In the name of common sense, in the name of Christian mercy, let every chess-player unite to condemn this unconscionable practice. If it be found still to prevail, I hope to see every table in the room of the St. George's Chess Club furnished with a three-minute sand-glass.

I am, sir, your obedient servant,
CELER.

November 24, 1851.

* The extent to which these "ultra Fabian" tactics are now carried by certain players renders such a stipulation absolutely imperative in future matches. We have no opinion of the eminent player who recorded the games, that, with a reasonable limitation as to hours of play, and the duration of a sitting, Mr Williams, notwithstanding the three games given him, would never have had a chance throughout the contest.

CHESS ENIGMAS.

No. 695.—By BELLAMY, of India.

White: K at his Kt 7th, R at K 3d, Bs at K Kt 5th and Q R 4th, Kts at K 6th and Q Kt 7th; P at Q B 7th.

Black: K at his sq, Q at her R sq, Rs at K 4th and Q R 3d, B at Q Kt sq, Kts at Q B 4th and Q R 2d; P at Q B 3d.

White to play, and mate in three moves.

No. 696.—By Mr. B. W. F., of Paswick.

White: K at his sq, R at K R 6th, Bs at Q 4th and Q Kt 3d; P s at K R 2d, K B 3d, and Q B 3d.

Black: K at Q 6th; P s at K R 6th, K B 3d and 4th.

White mates in four moves.

DISTRICT CHARITIES.

THE CHELSEA BENEVOLENT SOCIETY.—The thirteenth annual meeting of the "Chelsea Benevolent Society" took place on Wednesday evening, at the Commercial Hall, King's-road, when about eighty gentlemen sat down to dinner; Dr. W. V. Pettigrew in the chair. This society owes its origin, as we are informed by the report, to "the circumstance of the death of a poor widow, who preferred starvation to a separation of herself from her children, as then enacted by the new Poor Law, had one night shelter in a parish union; to obviate the recurrence of so dreadful a calamity, some few benevolent men who formed a part of the inquest jury, sought the assistance of their neighbours, framed laws, and, upon the system of district visiting, founded the 'Chelsea Benevolent Society.'"

Since that date upwards of eight hundred pounds has been collected from charitably-disposed persons, and more than 7000 indigent persons have received relief in amounts varying from 2s 6d. to 10s. These amounts, though small in themselves have no doubt in many instances, of what we might term "accidental distress," been attended with important and valuable results to the recipients, protecting the independence and keeping warm the hops of the industrious workman temporarily incapacitated by sickness, redeeming his tools from the pawnbroker, when, and after being out of work for a period, he has again an opportunity of earning his bread. There are exceptional cases which the relief provisions of the Poor Law will not meet, and to which the rigour of that enactment ought not to apply; and so keenly alive are the public upon this subject, and so great and generous the feeling of individual communities in regard to it, that the "Chelsea Benevolent Society" is only one of very many similar institutions established to stand as a *media* ess between the "union" and all its demoralising horrors on the one hand, and indiscriminate private charity on the other. Of all these institutions, are itable as they are to their respective promoters, and useful, in a limited way, to individuals and to the public, it must be observed, though not without regret, that, as a consequence of their number and their individual limited extent, economy of distribution is hardly consulted, when even it is within be possible; in other words, trust the contributions of the charitable are inadequate, both of a very large percentage, to meet establishment charges, before they reach the objects of their benevolence. Thus, to take the institution whose report is now before us, it appears that, of £564 11s. received during the twelvemonth, £34 4s. had been distributed in charity, and £29 8s. paid for expenses, leaving a balance of £8 to go on with. In short, for £34 6s. 8d. bestowed in charity, there has been £56 spent; and of every pound subscribed by the benevolent, there has been 13s. has become available for the good work intended.

We do not point out these facts with a view to discourage private charity, much less that system by which it may be guarded by proper precautions through the agency of visiting committees. With the prospect of a cold winter before us, we would rather encourage the charitable to bestow a still larger amount of bounty, whilst, at the same time, we would inculcate the necessity of the most stringent economy, the most rigorous and philosophical self-denial in the administration of the affairs of such societies. Time cannot be wasted in and out of sixty odd pounds, it will be said; but it no may be wasted, even here, and, when we find £10 7s. as one item for "printing and stationery," we must say it is too much to bestow in giving publicity to the names of indigent recipients of a charitable fund of £40 *net*. True, a good 4-page bill, with blue cover, of some acore of pages, is produced, which looks very well on the dinner table; but we are convinced that a foolscap circular, of which three and a sheet of hundreds might be printed and distributed, for a fourth of the money, would answer the present purpose much better, besides the additional one of obtaining increased publicity. Then there is the "public dinner;" think of the cost of that. Eighty guests, 10s. each, £40. Suppose they were all to dine at home, and give half the cost to the fund. This, with the saving on the printing, &c., would make the available fund for charity £60 instead of £34, would have nearly doubled the number of recipients, or the amounts received by each; have allowed poor Susan Sadler £1 instead of 10s. to assist her to join her husband in Australia." To those who know and appreciate the attractions of a public dinner, with "the usual loyal toasts," and the cheers, and the speeches, and the mutual compliments which pass current there, the abandonment of that now conventional incident in all our deeds of mercy would doubtless involve a great sacrifice, much more, perhaps, than the mere money-cost of the entertainment would represent We are aware of it—aware of the odium we may incur with all who throw a long and active career have made "charity," as it were, "the business of their lives." But, in spite of established usages, in spite of prejudice, let us, in this plain and matter-of-fact age, just try whether for once it be not possible to get up a "Benevolent Visiting Society," or a "Coal Society," or a "Lying-in Charity," without an annual feed.

BOA CONSTRICTOR IN THE ZOOLOGICAL GARDENS, REGENT'S PARK.

So much interest has been taken in the "Zoological problem," proposed for notice in the *Household Words*, that we have taken some pains to obtain a record of the performance to which it relates, and to present our readers with the latest particulars.

The serpent in question was presented to the Zoological Society by T. C. Barnett, Esq., on the 21st of July, and was, we believe, obtained by him in the island of Santa Lucia. It had been severely wounded in two places, apparently by its having been at some time secured with a ligature. It is most probable that this was done at the time of the capture. The serpent is a remarkably fine adult specimen, measuring nearly thirteen feet in length. It had sufficiently recovered from its wounds by the beginning of September to be capable of feeding; and accordingly devoured two rabbits which were offered to him in the course of that month. On the evening of the 3d of October two rabbits more were placed in his den. About ten o'clock the watchman observed that one of the rabbits had disappeared, and that the serpent was engaged in swallowing a railway wrapper which had served for some time as a place of shelter, as well as a means of increased warmth. Perceiving the danger to which the reptile was exposed by this extraordinary ailment, the watchman went for assistance. On his return in about fifteen minutes, with the head keeper, the wrapper had, with the exception of about two inches, passed into the gullet of the snake, and certainly disappeared before he could open the den to interfere. The only step which could have been taken would have been to cut off whatever portion remained unswallowed, as the backward direction of a snake's teeth would have effectually prevented its being withdrawn against its consent.

For five weeks and a day the serpent retained the wrapper, exhibiting at intervals a strong desire to drink, and giving other indications of internal uneasiness. On the night of the 8th of November, it commenced disgorging between eleven and twelve o'clock, as the watchman discovered nearly half of the woollen substance protruding from the jaws on coming to the den at midnight. The weight of this mass (now greatly compressed in bulk, although but slightly acted upon otherwise) appeared to embarrass the serpent; and the watchman therefore opened the den, and assisted the operation of disgorging by lifting the wrapper, and thus enabling the serpent to project the remaining part it. The serpent remained almost perfectly quiet for three days afterwards, only growing to drink. From that time it became more lively; and, on the 15th, having again exhibited a desire to feed, took the two rabbits which was offered. The functions of nature are now gradually resuming their ordinary course, and on Thursday last an approaching change of skin was manifestly in progress. It is probable, when this important indication of returning health has been realised, a second meal will be the next result, and may eventually enable the animal to regain the condition which he has lost.

The most recent additions to the collection of reptiles belonging to the Zoological Society are a pair of the smaller Python, of Sierra Leone, which have been presented by Captain Skene, R.N., and some specimens of a beautiful green and orange Iguana (*I. tuberculata*), which were obtained by Captain Abbot, of the R.M. steamer *Thames*, at Carthagena, and presented by him on his last arrival in England.

CLEOPATRA'S NEEDLE.

(From our own Correspondent.)

HAVING lately passed several days at Alexandria, I am enabled to send you three sketches of the obelisk, &c. First is a ground plan showing their position, and next are represented the hieroglyphics on the upper or exposed surface of the obelisk given to the *British*.

Cleopatra's Needles, as the two remarkable obelisks within the walls of Alexandria are called, are situated close to the sea wall, near the south-eastern extremity of the town, and are easily distinguished, the Old Marbour. The one that lies prostrate and partly covered by the rampart or embankment which supports the sea wall or line of defence, which latter commands the harbour, has been given to the British nation. Its base is but seven or eight yards from the water's edge; the sea wall being washed by the waves of the harbour.

The upper side of the prostrate obelisk is much defaced, apparently more by the hand of man than owing to exposure to the atmosphere. Pieces are frequently chipped off by curiosity-seekers, who too often are to unmindful of really preserving the relics of antiquity. We had an instance of this in our Arab donkey-boy, who, without making us aware of what he was about, speedily broke off a small piece of the red granite of which the obelisks are composed, thinking the same would be acceptable to us. To such an extent has this system of spoliation been carried that but few of the hieroglyphics are traceable on the portion of the prostrate obelisk above ground.

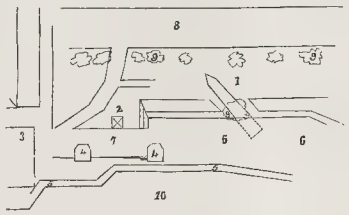
The figures of three hooded hawks are from the most perfect por-

UPPER PORTION OF CLEOPATRA'S NEEDLE.

tion of the shaft, being, however, sadly battered. The human figure and sphynx, with numerous hieroglyphics, are copied from the exposed facet of the apex of the obelisk, and are nearly perfect, probably from having been cut very shallow. Thirty-six feet only of the prostrate obelisk are uncovered. The whole length given by Champollion is a little over sixty-three French feet. It is 5 feet 8 inches wide at the part embedded in the sand and débris of the rampart; at the other end, at the base of the apex, it is an inch or two less than 4 feet in width. The north face of the upright obelisk is 7 feet 4 inches wide 10 feet from its base, and 3 feet from the latter it is 7 feet 7 inches wide on the west face. This obelisk is also close to the sea, as will be seen in the ground plan; it is nearly perfect to the north and west, while the south and east sides are nearly effaced, apparently by the action of the heated sandy wind, which blows from the south and eastward during the spring for fifty days, as its Arabic name, "Khamseen," implies; but this does not account for the effects produced, unless we allow that the proximity to the sea exerts some influence in the work of destruction; for the two obelisks which still remain in their original place at Luxor are unaffected by the Khamseen, which is more felt there than at Alexandria; they retain as keen an edge as if they were turned out of the sculptor's hands but yesterday.

A sort of margin, about a foot wide, runs along the north portion of the east face of the upright obelisk at Alexandria, presents a nearly perfect surface from the base to the apex, and forms a remarkable contrast to the rest of the east face, which is in a very decayed state.

Gallice Bey, the French General of Engineers, who constructed the orifications of Alexandria, in 1845-46, and who was brought to Egypt by the late Mehemet Ali for that purpose, left a space in the ramparts so as not to cover in the prostrate obelisk entirely; though its preservation might have been better secured by covering it over. To this French officer we are much indebted for the taste he has shown in beautifying the grounds adjoining the obelisk, and rendering it not only accessible, but a pleasant and now much-frequented promenade, where formerly nothing but mounds of rubbish, herds of dogs, and mud huts of the poorest natives made the locality formidable to visitors.



GROUND-PLAN, SHOWING THE POSITION OF THE OBELISK.

In removing the obelisk, some difficulty would be experienced from the shallowness of the water, which, for thirty or forty feet from the wall, is only two or three feet deep; and at the distance of several hundred feet is only thirteen feet deep.

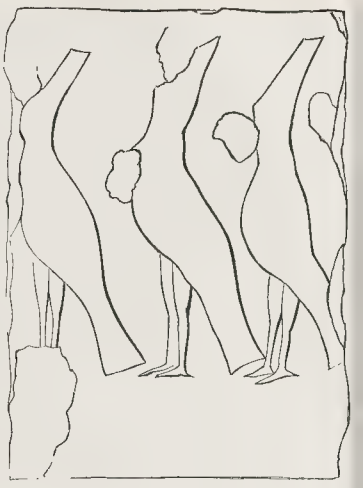
Mr. Stephenson, who has so recently visited Egypt, might be consulted as to the expense of the removal of the obelisk, and whether it would be worth the trouble; while his staff of engineers for the construction of the railway, could easily afford great assistance in the matter.

Judging from the friendliness so constantly shown by Abbas Pacha to the English, and his great attachment to the Hon. Mr. Murray, no difficulty would probably be experienced from the Viceroy of Egypt.

BOTTESINI, THE CONTRABASSIST.

THE musical marvel of the age is unquestionably Bottesini, the extraordinarily gifted musician and contrabassist, whose Portrait is presented by our Artists in this day's columns. He was born in 1833, at Crema, a small episcopal town on the Serio, in the delegation of Lodi, Lombardy. Jean Bottesini's parents, and indeed all his family, are in the musical profession. He was only four years of age when he commenced his studies, his master being his uncle, Cegliati, a priest.

Crema is a manufacturing town of some 9000 inhabitants, but it has its gymnasium, and Bottesini's early education was carefully attended to. His uncle evidently perceived that the musical indications of the boy were of no ordinary nature. The violin was his first instrument, and at seven years of age he played a solo on the stage, making thus his first bow to the public. Singularly enough, whilst he was being taught the violin, he took a fancy for the double bass, and indulged this exceptional taste by playing on the huge instrument, without guidance, and without any fixed ideas of its competency for effect. As he progressed rapidly with the violin, great pains were taken to make him an accomplished pianist, and no difficulty was found in this respect, as his natural aptitude was so marked. When he had attained the age of twelve years, there was a vacancy in the famed Conservatory of Milan, and Bottesini entered the lists as a candidate. His election followed as a matter of course, so remarkable were his talents; and on the 1st of November, 1833-36, he was installed in the great Milan Academy of Music, where he formed a lasting acquaintance and friendship with the celebrated Piatti, the violoncellist. It was Luigi Rossi who became the teacher of Bottesini of the mystery of double-bass playing, according to the schools of the distinguished Andreoli and the renowned Dragonetti. The pupil of Rossi always speaks in the highest terms of the valable instruction of this professor. Whilst conquering the intricacies of his unwieldy double bass, Bottesini carefully studied counterpoint and composition under Vacaj and other masters. Such was the rapid advance made by Bottesini, that he was permitted by the authorities to leave the Conservatory three years before his time of probation had expired, pupils, by the regulations of the foundation, being ordinarily obliged to remain until they are twenty years old. Bottesini then took to the wandering musical Arab-like life of young and roving dispositions, visiting every part of Italy, playing and composing in turn—sometimes writing overtures, then throwing off romances, and anon making up fantasias. He visited Germany; but, after playing in Vienna, was compelled, owing to serious illness, to give up his career for a time. Tired of this wandering artistic existence, he willingly accepted an offer that was made for him to visit the New World, and Bottesini for three years was conductor of the Italian Opera-house at the Havannah, Mdlle. Steffanoni, Signor Salvi and Signor Marini being members of the company.



FIGURES ON "CLEOPATRA'S NEEDLE."

M. BOTTESINI, THE CONTRABASSIST.—DRAWN BY RAUGNIET.

The Italian *artistes* who have been associated with Bottesini speak in the most enthusiastic terms of his abilities as a musical director and conductor of an orchestra. Bottesini's first appearance in this country was at the annual concert of Mrs. Anderson, May 25, 1849. The directors of the Royal Italian Opera, Covent-garden, appreciating the marvellous ability of Bottesini, afforded him the opportunity of a *debût* on their boards at the morning concert, May 30, 1849. Never shall we forget the sensation created by this appearance of the contrabassist. It was in the second part of the programme that a pale-looking young man, whose person ladies would and do declare to be interesting, came forward with a double bass to perform Paganini's "Carnaval de Venise." To describe the enthusiasm of the audience would be impossible: Costa and the band joined quite as heartily in the cheering at the astounding feats of the young player; and Grisi, Mdme. Persiani, Mdme. Dorus-Gras, Miss Catherine Hayes, Mdlle. Angri, Mdlle. Corbari, Mdlle. de Meric, Mario, Sims Reeves, Tamburini, &c., were seen on the stage or at the side, applauding with vehemence the Italian wonder. Bottesini returned to this country in the spring of this year. His *débût* was at Miss Catherine Hayes's farewell concert, at the Hanover-square Rooms, May 19; on the next day he played at the Musical Union; and on the 26th at the Philharmonic Concert. On the 2d of June he performed, with Piatti, a duo at Ernst's concert with unparalleled effect. This past season he reached, indeed, the summit of popularity. Jullien has had the good fortune to engage him for the present series of concerts at Drury-lane Theatre, and Bottesini has performed nightly to crowded houses, with a growing rapture on the part of the masses at his wondrous achievements. His execution and style are indeed unique; he makes the double bass sigh with caressing sweetness like a "lover's lute," whilst nothing can surpass the force, delicacy, and precision of his passage playing. His performances are as agreeable as they are astonishing, as wonderful as they are graceful, as masterly as they are melodious. His manipulation is so perfect that he produces the most exquisite harmonies with unexceptional justness of intonation. His singing of the tenor air from the "Somnambula," and his rendering of Paganini's "Carnaval" eccentricities, are equally to be admired. Bottesini, we may add, has composed an opera for the Italian company in America.

II.

My mammy and my dad,
My mammy and my dad,
They thus to me did say,
Yes! thus to me did say:
"When those we trust upon
Forth to the war are gone,
By whom shall all the fields be plough'd, by whom the grass be mown?"
Why, that's the very reason why we all must march away,
Or else will come the Germans here, and for us make our hay;
And therefore will I fight, like a gallant soldier, fight.
Hurrah! hurrah! hurrah!

III.

The Danebroy,* 'tis known,
The Danebroy, 'tis known,
It fell from heaven down,
Yes! it fell from heaven down;
It floats upon the mast,
The soldier grasps it fast,
And there's no other flag whose name through such renown has pass'd.
And this the Germans wildly tear and trample under foot:
But for such use our flag is far, is far too old and good.
And therefore will I fight, like a gallant soldier, fight.
Hurrah! hurrah! hurrah!

VI.

The Germans we defy!
The Germans we defy!
For with us is the King,
Yes! for with us is the King;
He stands with sabre drawn,
To cut the Germans down:
For many years no king like this has worn the Danish crown.
They'd have all the world believe that he is no longer free,
And yet themselves would keep him in German slavery.
And therefore will I fight, like a gallant soldier, fight.
Hurrah! hurrah! hurrah!

V.

For our girls and our home,
For our girls and our home,
We'll fight 'gainst all who come,
Yes! we'll fight 'gainst all who come;
And woe the wretch betide
Who would dare himself to hide,
And will not give his life and blood for "Danebroy," his pride!
But should I not return to my old dad and mother dear,
King Frederick, with these famed words, their drooping hearts will cheer:
"His faith and love he proved, the gallant soldier proved."
Hurrah! hurrah! hurrah!

* Danebroy is the name of the Danish flag.

THE DANISH NATIONAL AIR.

DENMARK is celebrated for the nationality of the population: the capital, Copenhagen, is at the head of the civilisation of the north of Europe, and there is no city in which education is more universally disseminated, and which contains a greater number of literary and scientific institutions. It has been asserted that a nation may be judged by her songs; and the patriotism of the Danes cannot be mistrusted after the soul-stirring appeal to the gallantry of the sons of Denmark put forward at the period of the conflict on the Schleswig-Holstein question. In Hurton's *Voyage from Leith to Lapland*, the subjoined account is given of the national war-song of Denmark:

"The most famous national war-song in the world is the "Marseillaise," but in my humble estimation it is decidedly inferior to that of Denmark, "Den tapfre Landsoldat" ("The brave Soldier-lad"). The latter, moreover, does not partake of that blood-thirsty spirit which pervades the French hymn. "Den tapfre Landsoldat" was written and set to music at the commencement of the war between Denmark and the Duchies; and so eminently national is it, that one burst of enthusiasm from end to end of the kingdom hailed its advent. The author and composer were both rewarded with knighthood of the order of the Dannebrog. During my residence at Copenhagen, "Den tapfre Landsoldat" was in the mouth of old and young, at all hours, in all places, on all occasions. The gentleman hummed it over his wine, the lady at her toilet, the mechanic at his bench, the shopman at his counter, the maiden at her spinning-wheel, the child at its play. If you walk the streets, you hear it more or less every few yards; if you enter a drawing-room, the young ladies were sure to be thrumming it on the piano; if you bought a pocket-handkerchief, you would find the words and music printed on it. I have heard it sung in grand chorus by whole battalions of soldiers on the march, and my own little fairy queen of three years of age has lisped it to me. So powerfully does it appeal to the hearts of Scandinavians, that in Christiania and Bergen I heard it sung by the Norwegian troops, and almost as frequently as by the Danes in Copenhagen, and when I sailed into the harbour of Fromsø, close on the borders of Finland, a boat came from the town with a bugle playing the spirit-stirring air with first-rate skill."

The *motif* of the Danish national air was printed in notation on a handkerchief, in the centre of which a soldier was displayed, bearing the loved banner of the nation. On the handkerchief were displayed the arms and colours of Denmark, with emblematical devices. Every soldier in the army had one of these colours about him. The air was cleverly arranged for the pianoforte by Brinley Richards, the pianist and composer, and published by Cramer, Beale, and Co. It was dedicated to the late respected Danish ambassador, Count Reventlow. Mr. Richards's published arrangement would have been too high for singing, and we now present the air in this day's number of *The Illustrated London News*, arranged by Mr. Richards in a lower key, with a translation of the Danish words by the Countess de Reventlow. The late ambassador sent over to Denmark a number of copies of Mr. Richards's arrangement of the air, and it was played by royal command by the military bands on parade. The music and words are now published, for the first time in this country, in our columns: in the translation, the fidelity of the meaning has been very closely adhered to by the Countess Reventlow.

CHURCH, UNIVERSITIES, &c.

THE JERUSALEM BISHOPRIC.—The recent proceedings at the Jerusalem Mission have been made the subject of the following resolution by the South Church Union:—"Whereas his Grace the late Archbishop of Canterbury, when negotiating the appointment of a Bishop of the united Church of England and Ireland to Jerusalem, expressly guaranteed that no interference should take place with the existing state of the orthodox Eastern Church, and whereas it appears that her Majesty's Secretary of State for Foreign Affairs has, in the face of the late Archbishop, interfered with the existing state of the Eastern Church, of the late Archbishop, interfered with the existing state of the Eastern Church, by supporting a proposal of the Church Missionary Society, to gather into a schismatical communion such persons as may be dissatisfied with their own, and already existing Church and congregations under the jurisdiction of Bishop Gobat placing such converts and congregations under the jurisdiction of Bishop Gobat —Resolved, that this union enter its protest against a breach of such a solemn engagement, and against such unscrupulous proceedings, as tending to foment dissensions and divisions in the orthodox Eastern Church, and pledge itself to bring this scandal before the notice of other Church unions, with the view of calling the attention of the Church in general, and the Bishops in particular, to the subject."

HIS BISHOPRIC OF BORNEO.—A public meeting of persons favourable to the establishment of a new bishopric in Borneo was held on Tuesday night at the National School-house, Lambeth, with the view of stirring in the accomplishment of that object. A large number of the influential clergy of the district attended, and after a lecture by the Rev. T. F. Stocks, on the Borneo mission, Sir James Brooke addressed the meeting. If Christianity, he observed, were to be introduced there, it must be done in a Christian spirit, or they could not want it at all. If any particular church, as the Church of England, was introduced, toleration was as much as it had a right to expect amongst a heathen people. If they required a Bishop there, that was the very simplest matter of discipline in the Church of England—clergy without a Bishop were like a regiment without a Colonel. But, if the Christian religion became in Sarawak a religion of division and unchristianness, he hoped it might leave the country. Christian people should always consider how they approached a Mohammedan or Hindoo population; for undue zeal might beget undue zeal in opposition to it. When he went to Borneo he found bad government: the very bonds of society were loosened, action was taking shape. He struggled with difficulty after difficulty, not knowing what the morrow would bring forth; but gradually light came out of darkness. He found certain laws and customs existing; above all, a generous, high-minded population, willing to be improved. Though lacking European culture, the natives were not at all inferior to us in mental capacity. He established, as far as possible, self-government. But they would bear no oppression; they would have daggers by their sides, and were as ready to use them as an Englishman to use his fists. They would bear nothing in the shape of an insult. By acting on this principle their main rajahs easily ruled. Piracy was even pursued by their confidence; and that bad been a lesson to him which he had followed ever since. The proceedings and to the north of Borneo were most simple. The courts were composed of a certain number of English gentlemen, with a certain number of natives, who together formed a judge and jury, or rather the functions of the two were combined. There was always the element of piracy to guard against, though that he hoped was at an end; still there were a number of Governments that would desire to raise Sarawak, if they had the power. But they had no such power; and the question was, whether we might not in future apply the same development that had been applied to Sarawak to the other rivers along the coast. The Venerable Archdeacon Robinson, the Rev. E. Hawkins, and other gentlemen, addressed the meeting in support of resolutions which affirmed the desirableness of founding the proposed bishopric of Borneo, and a liberal subscription was entered into for furtherance of that object.

THE FRIEND OF THE CLERGY.—On Tuesday the half-yearly meeting was held for the purpose of electing six pensioners on the funds. The Rev. J. E. Cox occupied the chair, and observed that the objects of the society were to make some permanent provision for the widows and orphan unmarried daughters of clergymen of the Established Church, and to extend relief, by loan or otherwise, to clergymen who were embarrassed by temporary difficulties. The question as to the usefulness of this institution had long been decided by the large number of candidates at each election, and there was every prospect of increased and permanent success. He announced that the society had received a donation of £50 from the master and fellows of St. John's College, Oxford; and also an annual donation of 10 guineas from the president and fellows of Magdalen College, Oxford; and 10 guineas from the Dean of Christchurch. The meeting then elected six pensioners from a list of 36 candidates.

THE LAW OF MARRIAGE.—The Manchester papers state that in consequence of the refusal of the Vicar of Leigh to marry any one without he repeat the catechism, or who has not been confirmed, or become a regular communicant, marriages have ceased to be solemnised at the parish church, at and agreed to. In the course of a meeting on the same subject was held at St. which previously nearly 200 marriages were solemnised; not a single marriage having taken place at Leigh Church during the quarter from June to September. The marriages formerly solemnised at church, now, it is stated, are taking place at this registrar's, and at the various dissenting chapels licensed for the purpose; and, in illustration of this, it is stated that at the last meeting of Guardians no less than eighteen "askings" were read by the superintendent registrar.

THE MANCHESTER EDUCATION SCHEME.—The South Church Union has adopted the following resolution:—"That this union, after seeing the correspondence which has appeared on the subject, rejects the principle of the scheme of education lately put out as 'The Manchester and Salford Scheme of Education,' as subversive, in its results, of the Catholic faith, and earnestly desires the Committee of the National Society not to lend themselves to any scheme in which the catechism is not made the essential point of teaching."

WELLS CATHEDRAL.—A splendid window has just been completed in the choir of Wells Cathedral. It was subscribed for by the clergy of the district as a testimonial to the Venerable Archdeacon Brymer. It is what is termed a figure and canopy window, and is three compartments, on which are the figures of St. Andrew, St. Augustine, and St. Athanasius, all of which are most beautifully executed. The heading is tracery-work of the finest description, and the whole is of delicate and highly workmanlike design.

NATIONAL EDUCATION.—At a meeting of the chapter of the rural deanery of Balcombe, in the diocese of Chichester, held on Tuesday, it was unanimously resolved that a respectful address be presented to the committee of the National Society, requesting them to lend themselves to no scheme of national education, emanating either from Manchester or elsewhere, which might entail any relaxation or a fundamental one of the society, which colleges all schools in connexion with it to take the Catechism of the Church of England as the basis of the religious education therein imparted.

SACRILEGE.—On Monday night Christ Church, Hoxton, was entered, and the alms-chest forced open. As the contents had been removed in the previous week, the thief probably took but a small booty. It is suspected that the robber concealed himself at the previous evening prayers, and let himself out of the church by the skeleton key. Great complaint exists in the neighbourhood, which is notorious for robberies, and of the inadequacy of the police force. On Saturday night last some sacrilegious persons broke from 180 to 200 panes of glass in the windows of Hillingdon church, near Uxbridge. The church is the property of Mr. Newdegate, one of the members of Parliament for North Warwickshire. Mr. Newdegate has offered a reward of £20 for the discovery of the parties who committed the outrage.

PREFERMENTS AND APPOINTMENTS.—The following preferments and appointments have been made:—The Ven. T. Hill, Archdeacon of Derby, to a residentiary canonry in Lichfield Cathedral. *Rectories:* The Rev. T. G. Cartler to Doveridge, Worcestershire. The Rev. Archer Thompson, to Sedgefield, Durham. The Rev C. C. Spencer to Benefield, Northamptonshire. The Rev. R. Surtees to Hutby, in Yorkshire. *Vicarages:* The Rev. J. Smith to Brandeston, Suffolk. The Rev. W. J. Hall to Tottenham, Middlesex. The Rev. J. Price to St. Augustine, Bristol.

TESTIMONIALS.—The following clergymen have recently received testimonials of esteem and affection:—The Rev. Arthur Randall, from the teachers and children of the Sunday schools in Fritton Sunday-school, Norfolk; the Rev. John Casebow Barrett, incumbent of St. Mary, Birmingham, from the congregation; the Rev. John Charles Napleton, late curate of St. Helier, Jersey, from the members of his congregation; the Rev. T. Bennett, from the parishioners of St. Michael, Cornhill.

VISIBILITY OF THE AIR.—An interesting paper of M. Andraud, the engineer, is so well known to the public by his experiments with compressed air, as a substitute for steam, was communicated at the last sitting of the Academy of Sciences. This paper is entitled by the author "Atroscopie," or the visibility of the molecules of the air. M. Andraud proves that by a very simple contrivance the air is rendered visible. By taking a piece of card coloured black, and piercing it in the centre with a fine needle, this interesting fact is established. If we look through this hole at the sky, on a fine day, or at a strong light, or on a ground grass, we see a multitude of little transparent globes moving in the midst of confused nebulosities. These little globes, some of which are more transparent than others, are molecules of air. Some of them are surrounded with a kind of halo. The latter, says M. Andraud, are the elements of oxygen, whilst others are elements of azote. After continuing the observation for some time, we shall see small points detach themselves, and disappear in falling; these are the molecules of carbon, which are not perceptible to the eye of vision. It is essential to remark, passes within the eye itself; the molecules of air which are observed are those which float in the liquid which occupies the anterior part of the organ. According to M. Andraud, this liquid, rather, the

KING'S COLLEGE HOSPITAL.—On Thursday last a meeting of the friends and patrons of this hospital was held at the Hospital, in Portugal-street; the Rev. Dr. Jelf in the chair. The report stated that during the last six months there had been 617 in-patients admitted, which, with 116 remaining in the house at March, made 733. Of these 549 had been discharged cured, 26 were incurable, 81 had died, and 98 remained in the house. The number of out-patients for the same period amounted to 18,725, besides 260 who had been confined at their own homes. The accounts showed a diminished annual expenditure of £1357 in-patients and 185,469 out-patients. The report was adopted, and a vote of thanks passed to Mr. J. H. Fisk for his donation of 100 guineas, making that gentleman's donations, from his first connection with that institution, £1800. After a vote of thanks to the chairman the meeting separated.

BROMPTON HOSPITAL.—On Thursday a general court of the governors of this hospital was held at the hospital, Brompton; Mr. Perry in the chair. The report stated that the annual military bazaar at Chelsea had added the funds of the institution to the amount of £680. The want of a sanitorium had been long felt, and a sub-committee had been appointed to select a site on the sea coast suitable for the location of such an institution. Since May last 457 patients had been admitted, of whom 33 died, 292 were discharged, either cured or relieved, and there remained in the house 90. The report was adopted, and, after a vote of thanks to the chairman, the meeting separated.

IMPERIAL BRAZILIAN MINING COMPANY.—On Thursday the half-yearly meeting of this company was held at the London Tavern; Mr. Joshua Walker in the chair. From the report it appeared that the produce of the half-year from the workings had only been £3646 13s. 11d., whilst the expenditure had amounted to £7926 14s. 6d., and the reserve fund had been reduced from £22,500 to £15,500. The meeting was adjourned to the 15th of next month, when the accounts connected with the purchase of the property called Santa Maria workings, and to consider whether it would be more advantageous to dissolve the company, or make a further call of 20s. per share on the proprietors, with a view of continuing the new workings.

MR. CHARLES PEARSON'S PROPOSED IMPROVEMENTS IN THE CITY OF LONDON.—On Thursday evening Mr. Charles Pearson gave a *soirée* at his house, Park-street, Westminster, which was attended by Sir John Rennie, Sir Charles Fox, and a large number of engineers and architects, when Mr. Pearson explained at length the proposed scheme for improving the city of London—making spacious markets and a central railway terminus—explaining that now or never was the time for carrying it out.

NATIONAL BENEVOLENT INSTITUTION.—On Thursday the annual meeting of the members of this society was held at the Freemasons' Tavern; the Right Hon. Sir Edward Knatchbull, Bart., in the chair. The report had been a slight falling off in the annual subscriptions during the past year, the donations and bequests, the latter of which amounted to nearly £1200, had gone far to balance the fluctuations. The amount distributed in pensions during the year was £5091, the number of pensioners at Christmas last was 236, namely, 14 males, and 222 females. The total number of pensioners since the establishment of the institute on in 1812 amounts to 793, and the total amount disbursed to them is £29,129 18s. 10d. The total income of the year, including £1000 from the funds of the institution, was £5814 9s. 7d. from the last accounts, amounts to £2346 18s. 10d., and the expenditure (including the pensions as above stated, and £1943 14s. invested in the purchase of £2000 stock) to £7823 18s., leaving a balance in hand of £23 3s. 10d. The report having been adopted, and some formal business transacted, 20 additional pensioners were elected.

ROYAL NATIONAL INSTITUTION FOR THE PRESERVATION OF LIFE FROM SHIPWRECK.—On Thursday a meeting of the members of this institution was held at the offices, John-street, Adelphi.—Mr. T. Wilson in the chair—when the society's medals having been awarded to the coxswains of the five Liverpool life-boats, through the instrumentality of the crew of which 1128 lives have been saved during the last ten years, and to the coxswain of the life-boat stationed at Skegness, Lincolnshire, who has personally assisted at the saving of 14 lives, and awarded a reward to several persons not belonging to Spain, near Skibbereen, in the county of Cork, who, by means of a raft, made of casks and planks, saved the lives of ten persons wrecked from a boat on a reef near Cape Clear. After the transaction of some formal business the meeting broke up.

INTRAMURAL INTERMENTS.—On Monday a deputation from the Metropolitan Interments committee, consisting of the Bishop of London and several clergymen; Mr. Godwin, F.R.S.; Mr. Abraham, &c., waited on Lord John Russell, at the Treasury, to present a memorial calling the Ministers' attention to the continuing interment within the metropolis, notwithstanding the existence for more than fifteen months of the new act of Parliament, passed by unusually large majorities, empowering the Government to remedy the evils. The deputation consisted of the Bishop of London, Messrs Godwin, Lord, and Abraham, Lord John Russell and Sir Charles Wood promised the difficulty that had taken place in carrying out the act, arising out of the financial question, as the Board of Health had been unable to procure money to purchase the whole of the cemeteries, and had applied to the Government for fresh powers. Sir John Russell, in conclusion, declared that he felt the importance of the subject, but the manner of carrying it into full effect was a matter of consideration.

KENNINGTON PARK.—It has been arranged between that the Ordnance department shall be removed into one building; and the office of the Ordnance in the Tower will be removed to Pall-Mall, as soon as the alterations shall be completed. Another and greater consolidation will be the removal of the Excise department from Broad-street to Somerset-house, where the Stamps and Taxes are located, and which are now consolidated with the Excise under the name of the Inland Revenue. By bringing these offices into one locality a large saving will be made, so soon as the new buildings, just commenced at the west wing of Somerset-house, shall be completed, and that accommodations can be found elsewhere for the several establishments in that building. Gwydyr House is being evacuated for the Poor-law Board. The Exeter Change Strand already comprises the Board of Health, located in Parliament-street, in the house formerly occupied by Mr. Thomas Carver, but the ease of which has lately fallen into the Woods and Forests. The sol citor of tax Stamps and Taxes have also left Gwydyr House, and gone to the Treasury. It like manner the Lord Advocate of Scotland and the Counsel to the Home-office will proceed to No. 5, Newgate-street, Spring-gardens, which is in possession of H.M. Woods and Forests. So also is No. 1 in the same street, whither, it is likely, the School of Design will be removed from Somerset-house. It is probable that the portion of the Admiralty-offices which fill so large a space in Somerset-house may be accommodated at the Admiralty in Whitehall, as soon as the buildings there can be altered for public purposes. The Registrar-General's offices are also to be removed from Somerset-house. The Tithe and Enclosure Commissioners are to be consolidated, and a saving in their establishments will be thus effected. They will probably occupy a portion of the residence of the late Lord Harrington, in Whitehall-gardens, which is finally to revert to the Crown. The Offices of Woods and Forests, and Public Works, have been divided by the act of last session. The Office of Works, a large one, is presided over by H. Whitehall-place, until the two weeks of November increased to 989 and 1022. During three weeks of October the weekly mean temperature at Greenwich exceeded 52 deg; in the last week of the month it fell to 46 deg.; in the first two weeks of November to 40 deg; and last week it exhibited a further decline to 35 deg. The prevalence of fogs is heavy as compared with corresponding weeks of the ten years 1841-50, the average of which did not exceed 908. If the same average be increased for increase of population, it becomes 1091, on which last week's mortality shows an excess of 41. With the depression of temperature towards the close of the year the increased fatality of diseases of the respiratory organs. Consumption has not had the same increase, the number for the last three weeks being 120, 132, and 135, this last being, however, rather greater than the corrected average. Typhus, scarlatina, and smallpox have been the most fatal, after the above cases; typhus numbers 62; scarlatina, 40; the smallpox, 31; in four of the latter cases vaccination had taken place. Amongst other causes of death are measles, which 21 persons died; inflammation, 3; hooping-cough, 27; croup, 7; diarrhœa, of fever, 1; erysipelas, 12; 8 children died from inanition; and two were suffocated in bed. At Woolwich a boy of ten years died of "disease of the lip (cancer?)" (query?) It is added that his injured himself in endeavouring to imitate some strolling tumblers who were passing through the town.

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, [illegible] deg.; [illegible] deg.; [illegible] deg.;

NEW BOOKS, &c.

THE NATIONAL ILLUSTRATED LIBRARY.

Now ready, the DECEMBER VOLUME.

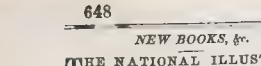
NEW MUSIC.

Handel's "JUDAS MACCABÆUS."—



See, the conqu'ring he - ro comes.

NOVELLO'S CHEAP MUSIC.—The general complaint that "printed music is too dear" was so well founded as to induce us, in the year 1849, to reduce the prices of our publications full 50 per cent., and the same scale has been adopted in printing all the subsequent additions to our Catalogue: these reduced prices are marked in plain figures. Certain Musicsellers, in town and country appear to think that this concession to the public interferes with their interests, not perceiving that we have, by our arrangements more than makes up to them for the change; and they interfere in various ways to deprive the public of the benefit, by stating "Novello's Editions are out of print," or trying to sell other copies marked at a higher price, which sometimes even by altering the Prices printed on my publications

THE PUBLIC, FOR THEIR OWN PROTECTION,

Should therefore—

1st.—Insist on having "Novello's Edition," which are always in print, and can be obtained by every respectable Musicseller or Bookseller in town and country.

2nd.—Compare the price they pay with the Catalogue prices.

3rd.—If other models fail, address their orders direct to

The Public's obedient Servant, J. ALFRED NOVELLO,

69, Dean-street, Soho, or 24, Poultry, London.

CAUTION to MUSICSELLERS.—In consequence of spurious imitations of BOOSEY'S BROOMEN POLKA, Fourth Broadside, 3s.; Broomen Quadrilles, 3s.; Bloomer Schottische, 3s.; and Bloomer Waltzes, 3s.; also, Boosey's Clipper Polka, 3s.; Quadrilles, 3s.; and Galop, 3s. purchasers will please to ask for Boosey's Bloomer Polka, &c., and see all copies are signed J. J. Hockley. ADDISON, Hamilton-terrace.

NEW GLEE, THE TROUBADOUR. By G. A. MACFARREN (sent post free), price 2s. This elegant and spirited composition, for soprano, contralto, and bass, is decidedly one of the best trios that has been published for years there are no difficulties for each voice, and the harmony of the ensemble is highly effective.

DUFF and HODGSON, 65, Oxford-street.

NEW SONG.—THE YOUNG LADY'S "NO." Composed by the Author of "Will you love me then as now?" "The Rich Man's Bride," "The Secret," "Yes, I have been Madness." Price 2s. Sent post free for 24 stamps. This charming song, possessing ballad, just introduced most successfully by Miss Poole, is likely to become one of the most popular songs of the day: both words and music possess that pathos which

DUFF and HODGSON, 65, Oxford-street.

NEW SONG, "I MET HER in the CRYSTAL HALLS." Price 2s. Sent postage free.

"This beautiful air expressly adapted by the words to every frequenter of the Crystal Halls with a force and pathos perfectly irresistible. The words are by J. E. Carpenter, and the air, full of [illegible] bards, and the music, by Stephen Glover, is equal to anything from his long-practised pen. No visitor from the country possessing a pianoforte, should return without obtaining the charming souvenir of the World's Fair."—Musical Review.

London: DUFF and HODGSON, 65, Oxford-street.

BEAUTIES of CAMBRIA. By BRINLEY RICHARDS.

1. THE LIVE-LONG NIGHT. 4. LADY OWEN'S DELIGHT.
2. MARGARET'S DAUGHTER. 5. MARCH of the MEN of
3. THE ASH GROVE. HARLECH.
4. SWEET RICHARD. Price 5s. each.

THE PRINCE of CAMBRIA'S BAND MARCH.

"Beauties of Cambria," by Brinley Richards, were first performed by the Author at an annual Festival of the Cambrian Society of Ancient Britons, on St David's Day, at the Freemasons' Tavern. The first time he conducted an orchestra of his own composition, and the applause elicited on the occasion was unbounded. The "Prince of Cambria's Band March," an original composition, by the Author of "Beauties of Cambria," threw the company into a state amounting to delirium. Several hundreds of votes were demanded by persons in his Grace the Duke of Newcastle, by whose kind patronage this talented American Prince became a member of the Royal Society of Musici, where he gained the honour of being elected a King's Scholar.

LEE and COCKRAD, 63, A-bemarle-street.

MUSIC for the ORGAN or HARMONIUM. "The Harmonium Perelude," a collection of Preludes, with the organ stops carefully marked, in one book. Price 4s. By EDWARD TAYLOR. "The Amateur Interlocutor, a collection of short interludes to play between the verses of the Psalms, &c. Price 4s. By Edward Travis and J P Dyer. The Amateur Organist, a collection of well-known Airs arranged for the organ, by Edward Leach, by Edward Travis, and may be had, elegantly bound, price 5s. "Fairy Stories by the Author of Sentences. This is an interesting work for the organ or harmonium, under the title of "The Fairy Queen's Revels." The work is studied from the most favourite and classical music library, and selected with great taste the most delightful movements for grand musical effect. Every one of the covers of classic music this work will be found to be the most superb selection that has ever issued from the musical press."—Vide Musical Review. LEE and COCKRAD, 63, A-bemarle-street, and can be had of all Book and Music sellers.—A new edition of Kalkbrenner's New Pianoforte School, 4s.

PIANOFORTES for SALE or HIRE, at CHAPPELL'S, 50, New Bond-street. A large Stock of NEW and SECOND-HAND PIANOS, by Erard, Broadwood, Collard, and other eminent makers, for SALE or HIRE Instruments by less reputed makers at the lowest prices. Any piano lent on hire for not less than one year may be purchased, chosen a perfectly new instrument from the factories of any of the best makers. Old pianofortes taken in exchange. A large stock of the best Harmoniums, by Alexandre, of Paris. Cabinet 18 to 30 guineas; 36, New Bond-street.

TOLKIEN'S 25-GUINEA ROYAL MINUTE PIANOFORTE, with Trichord Treble, C to A, fine-toned, with all the latest improvements, in mahogany, rose, maple, walnut, or mahogany wood. The great peculiarity and beauty of these pianos is, that they will stand any climate without injuring the delicacy of their original beautiful tone and touch.—TOLKIEN, manufacturer, 37, 38, and 39, Great William-street, London-bridge. Easy terms free.

SILVER-PLATED DISH COVERS and CORNER DISHES.—A. B. SAVORY and SONS, 14, Cornhill, London, opposite Bank, invite an inspection of their Stock of these elegant appendages to the dinner-table, which they continue to sell, of superior quality, cheaper than any other house in the trade. Drawings, with prices annexed, forwarded to any part of the kingdom, postage free.

SILVER PLATE, New and Second-hand.— T. COBB SAVORY and CO.'S Furnisher of prices, with outline, may be had gratis, or will be sent free, if applied for by a paid letter. The contents are the prices, weights, and patterns of new and second-hand Silver Spoons and Forks, new and second-hand Tea and Coffee Services, Waiters, Silver-edged Plated Goods, the new plated on white metal Spoons and Forks, Waiters, Cloaks, Cruet Frames, Candlesticks, Sconces, Chains, and Jewellery

T. COBB SAVORY and Co., 47, Cornhill (seven doors from Gracechurch-street), London

SILVER TEA SERVICES, of New Patterns, at A. B. SAVORY and SONS', Working Silversmiths, 14, Cornhill (opposite the Bank), have recently finished several new and elegant patterns of TEA and COFFEE SERVICES, of novel and elegant design, and of the highest finish. The following are a few from many admired

The Portland Pattern, tastefully engraved	The Louis Quatorze Pattern, richly chased

£45 0 0	£47 10 0

Alarge stock is offered for selection in the Show-rooms, including every variety of patterns, from £24 upwards.

KARL'S ARGENTINE SILVER PLATE.— This beautiful metal continues to stand unrivalled amongst all the substitutes for silver. Its intrinsic value, durability, and extreme brilliant appearance, defies all competition. It is upwards of 20 years since this manufacture was introduced by SAHL and SONS to the public, and, notwithstanding the many spurious and unprincipled imitations, the present demand exceeds all former precedents, thus giving a convincing proof of its having answered the end proposed, which was to produce an article almost equal in the durability and appearance of solid silver at one-sixth its cost. The magnificent stock has recently been enriched with many splendid novelties in Dinner, Tea, and Breakfast Services, and never possessed so many attractions as at the present time. The Spoon and Fork pattern of 1851 is now all the rage, and can be had manufactured in solid silver, and orders to any extent can be immediately executed. A new and enlarged pamphlet of sketches and prices is just published, and now ready for delivery, and may be obtained gratis by applying at the manufactories.—SAHL and SONS, 1 and 16, Cornhill.

THE ILLUSTRATED LONDON NEWS

SUPPLEMENT

VOL. XIX.] FOR THE WEEK ENDING SATURDAY, NOVEMBER 29, 1851. [GRATIS.

ON ORIENTAL TRAVELLERS.

I PROPOSE to discourse here, for a little while, on a body of men whose works form a staple ingredient in the supply of literary food consumed by our friend the "reading public." Every now and then a young gentleman returns from Greece or Egypt, [with a beard and an M.S. In a week or two, the new journal of Travels in the East is announced, and a new "oriental traveller" takes his place among the "wise men" who have preceded him. The title has become as habitual and familiar as that of "commercial traveller;" it denotes a higher order of "bagmen"—one whose carpet-bag has accompanied him beyond the highways of civilisation, and who bears samples of the products of the lands of the rising sun. All sorts of riches are brought home by the gallant fellows—sometimes "stuffs," in the way of useful information—sometimes the perfumes and ointment, the myrtle and frankincense, of sentiment sometimes relics, and beads of devotion -sometimes the gay garments of buffoonery. It is curious to see how each school of thinkers at home sends its representative abroad—how each school's disciple brings home his own views of the East. Let us take the opportunity of examining a few of the works of these gentlemen, *apropos* of the cheap issue of "Eothen," (Longman's Edition,) the most popular of them all—a book which everybody has read, and which everybody will be glad to recur to.

I know the oriental traveller of old, and have seen him in his glory. I have heard him hold forth on ancient architecture, at a dinner at Athens—I have met him trotting along on horseback in the lanes near Beyrout—I have seen him drinking bottled stout

A STREET IN CONSTANTINOPLE, WITH THE FOUNTAIN AND MOSQUE OF SULTAN ACHMET. DRAWN BY THOMAS ALLOM.

(and very good bottled stout) at a little village in the plains of Smyrna—I have stood with him, and seen the caravan pass over the Camel's Bridge, in the last-mentioned town, and heard the jingle of the bells, as the motley-coloured crew, with their camels and their freight, in all their picturesqueness, disorder, seeding, and tawdriness, passed away by the cypress-grove towards the heart of the old countries. I sympathise with the wanderer when he will speak honestly -though, of course, I laugh at the raptures of Higg, who pretends to find perfume in the odour of a dead camel, rather than not be enchanted with everything oriental; while, on the other hand, I equally despise Snigg, who goes upon the sneering principle, and mixes muddy satire with the waters of the old Nile. I pleasantly laugh, also, at the youth who will be determinedly critical about the spelling of words, who tortures me to perplexity as to "nargule," "nargilly," or "nargileh;" who has discovered a new variation of the word "harem"—who is too punctilious in writing Al Raschid as the name of an old friend, the good Haroun Alraschid. These are various forms of the absurdities which are patronised by what fanatics call the "weaker brethren;" they journey to the East, but instead of orient pearls, genuine —they give us, paste.

It is a sad thing to reflect on, that, with regard to the East, Europe's honeymoon of travelling is over. Pleasure she may

have—but no more rapture. The East has no more that sublime veil of mystery round her which she had for our ancestors. We don't gather round the pilgrim to gaze with reverence on the shell in his hat—to touch his palm-branch—to listen to his wonderful stories. We ask him when he left Alexandria in the steamer, and we know that he left his curiosities at the Custom-house. We are perfectly acquainted with the "natural productions" of the places he has visited; we have caught leviathan, and sent him to the Zoological Gardens. How different the position of our modern from our first oriental traveller! Picture to yourself old Sir John de Maundeville! Leaving his native St. Albans, he resolves to explore the regions of wonders. In 1332 the knight wandered away—he travelled for thirty years—he returned, and was known as Sir John of the Beard—and it must have been a beard to attract so much notice in those days. He tells us of "oels thirty feet long," and "men of evil colour, yellow and green." The old gentleman was under the impression that Rhodes was five hundred miles from Cyprus. Of the island of Lango he tells us that it contained "Ypocras, the king's daughter, in the manner of a dragon, who is one hundred feet long. Some say," he goes on, "that she shall dwell so until the time that a knight come that is hardy enough to kiss her mouth, and then she shall turn again to her own kind, and be a woman." It must be added, however, that he proceeds to say, "I have not seen her." And further on he gives us a vegetable to match the zoological miracle. "In Egypt," he says, "men fynden long apples to sell, and clep them *apples of Paradys*, and they be right sweet, and of good savour. And though they cut them in never so many parties—evermore you shall find in the myddes the figure of the Holy Cross."

Not so false, Sir John!—we may exclaim—not so false at all events, Sir John, to you! For in Sir John's age, out where you liked—the poetry, the social life, the public policy—you would find the figure of the Holy Cross at the heart of it.

So, the knight jogs along, in his stiff, quaint style—a style like the cumbrous armour of his day. He dismisses one valley in a phrase with, "This vale is all full of devils, and hath been always." He returned to Europe, a grave, bearded, brown old knight—grumbled at the state of the age—says Fuller, being wont to say, *Virtus cessat, Ecclesia calcatur, Clerus errat, Demon regnat, Simonia dominatur*; till, dying at Liege, he escaped from the formidable list of evils, all at once. Let us kindly remember our first Oriental Traveller!

Our first in one sense—that is, of the list of English gentlemen travelling to consider and to know—a genuine traveller, as distinct from pilgrim or crusader—though these were fine, brave men in their day. But our first *modern* oriental traveller, acute, picturesque, adventurous, was a different person altogether. Turn to the days of Pope and Addison, and make your bow to Lady Mary Wortley Montague! In her letters we have the East viewed by European light, in a style quite perfect of its kind—elegant, acute, vivacious, with a dash of pedantry—what you may call a *Bloomer* literary style, such as women not uncommonly write—a semi-masculine ornamental garb. Her ladyship cleared away many absurdities of opinion about the East, and got a great insight into the domestic relations of the Constantinople society. She is a perfect connoisseur in the Turkish dress, and writes with the same freedom on Turkish morals. "The Turkish ladies do not commit one sin the less for not being Christians," says she, in her epigrammatic way. And she observes, in contradistinction to preceding travellers, that they (the Turkish ladies) have, in reality, more freedom than the English have—a remark which would seem to be borne out by the observations, in our day, of Mr. Urquhart, who lived in Turkey long. Lady Montague's letters contain some capital descriptions—and she never softens colour—she may look on her as the Eve (though I fear she would have sneered at that name)—the Eve, or mother of modern travellers in the East. She kept those bright eyes of hers open to all that was going on about her, and spoke with entire sincerity what she thought—two most necessary and uncommon qualifications for a traveller.

Our business, in this article, is not to deal with the travellers for purposes of political and antiquarian inquiry. I shall not ask whether Sphinx is a female, or what is the state of the Syrian silk trade. The camel may shamble along with his load of mulberry leaves unnoticed, unless some touch of human sympathy be awakened by him. It is with men as men, travelling for pleasure or sentiment, and looking with human eyes, that I at present busy myself. I heartily honour Belzoni (I have drunk his health in Antiparos); I have tried to read Wilkinson; but, with these luminaries I have nothing at present to do. I occasionally consult Bell, and occasionally Christopher Wordsworth; but this is not the time to inquire whether the Parthenon was originally coloured, or who was the architect of the graceful little Temple of the Winds in its vicinity; still less shall I meddle with the records of diplomacy, or what Thackeray calls the "treaty of Kabobanople." With the proceedings of Lord Ponsonby, and the exploits of Grivas, we have no business here.

To resume:—Everybody remembers what a fresh impulse was given to our curiosity about the East, by the writings of Byron. The East was one of England's attachments when she awoke at the end of the last century, and found that she had turned out half-a-dozen men of genius in a batch. Scott's harp charmed her into the halls of feudalism; Byron succeeded to him, and called her into the divans of the Osmanlee. The "Corsair," the "Giaour," the "Bride of Abydos," brought oriental figures into our drawing-rooms to be wondered at, and loved, and worshipped. The favourite ideal of a youth of imagination, in those days, was a Fatima or Leila, with almond-shaped eyes of lustrous black, and with the figure of a palm-tree. Every pretty girl became "a gazelle," and no tobacco was so popular as Latakia. The "yataghan" was a favourite instrument among *dilettanti* warriors. The effect was perfectly oriental—it was of the same character as that of opium. In Byron's time, one oriental work was published which I am glad to mention; it seems to be neglected unjustly at present, but one of these days it will, I hope, see the light in a cheap form, and regain its old reputation. I allude to Hope's *Anastasius*. Who that has read that admirable romance will ever forget the subtle, vain young Greek; the "old consul, who could not see an inch before his nose—and that was a snub one!"—the moving pictures of oriental life in its heat, its colour, its vivacity, its variety the hum of war, the murmur of trade—the shadow thrown over all by the antiquity among the ruins of which this life goes on!—And in noticing books that have reflected the East to us, let the memory of our boyhood make us say a word of Lalla Rookh—that most wonderful *ballet!* We will not forget the wit, the gay redundancy of fancy, the silver charm of music in this poem of Moore's (admirable for the *outside* of oriental life)—though the little of pure Nature in his work be set in what is artificial—visible only dimly in it—like the drops of water inside the crystal which excited the epigrams of Claudian.

But it is time to be coming to our more immediate contemporaries. The Byronic orientalism paled away gradually: the soft sympathies with Leila and Zuleika must have sorrowed when the great master became, instead of the passionate singer of woes, the brilliant, relentless, cold-blooded satirist of his age. *Don Juan* is the most un-romantic of all great poems. Keats flung it down on the floor in a rage. All Byron's giaours and gazelles seemed tame compared with its sense, its piercing insight, and its demoniac scorn. Byron, in fact, began the anti-Byronic reaction himself. And "Pelham," which introduced us first to Bulwer, was the first striking effect of the Byronic reaction in popular literature. Peacock had felicitously ridiculed the worst Byronisms in his satirical romances before: Shellev and Wordsworth were slowly diffusing an opposite spirit also: but "Pelham"—(a capital novel, irrespective of its purport)—gave our youth a fresh ideal. Pelhamism became a creed on its own account; there was now a certain gay worldliness and common-sense dominant, instead of the old passion and romanticism. A few young gentlemen began to whisper that Scott was "slow"—and the pungent, exciting, dazzling school of literature began its course.

Eastern literature—if the expression may be permitted varied, of course, with these changes. We were not now deluged with tales about "yataghans," nor was the gentle gazelle worked to death, as of old. Instead of the oriental passionate school, we had two schools, into one or other of which each "oriental traveller" may be, with considerable accuracy, allotted. One of these was the Sentimental; the other the Humorous.—(To be sure, there are plenty of travellers who are neither—but with these I have nothing to do.) These two classes of traveller may, by a slight stretch of fancy, be compared to the two great classes of the olden day.—The Sentimentalist is a modern Pilgrim; the Humorist a comic Crusader!

The Sentimentalist visits the East full of reverence for its Past. He is tinged with a gentle melancholy among its ruins, and "doth to the moon complain," like the owl in Gray. He sees in the oriental life the realisation of the pictures of manners in the "Arabian Nights." He delights in the bazaars, in the gleam of the Bosphorus, in the waving of the palm, in the tinkling of the camel's bell. But chiefly he loves to mourn uneasily among the ruins of the old times. For, after all, your "yataghans" and your "turbans" are things of to-day compared with the dark, gaunt, dead relics of Egypt. The Sentimentalist is disposed to sympathise with the East, thoroughly. He is tolerant of mosquitos, and mal-odorous spots, and extortion, and cruelty, and crime even, perhaps; he knows that he is free of Europe, has got rid of ten-pounders, and Radical newspapers, and is in a land of mysticism and romance.

Mr. Disraeli is one of the travellers of this class, and one of the earliest we have to notice here. Does not "Contarini Fleming" open thus: "Wandering on those deserts of Africa, which border the Erythræan Sea, I came to the Nile"

To be sure, the simple phrase, "Red Sea," sufficed for the translators of the Bible, but "Erythræan" gives a certain magnificence which the simpler adjective wants. Then, Mr. Disraeli invokes destiny in the desert. Nothing can equal his sadness on this occasion. We have further evidence of his love of the East in the "Wondrous Tale of Alroy," than which title no title was ever more appropriate. "Wondrous," indeed, the work is—being written, to begin with, in a style which is neither verse nor prose—which abandons the constraint of prose, without rising into music—a style, reading like the rhymeless rhythm of "Queen Mab," robbed of its melody. But it is full of capital stuff—of vivid, gorgeous action and spirit—though it is not equal to his other Eastern tale, the "Rise of Lokander." And neither of them are equal to his later work, "Tancred," the Eastern parts of which (exhibiting the Sentimental school in its most efflorescent state) are done with a very effective, stately grandeur—as rhetoric, perhaps unequalled altogether. But, indeed, what rhetoric was not required to carry out such an idea as that of the journey of a mediocre young English peer—in a yacht—attended by servants, to kneel all night at the Holy Sepulchre! It needed great power to save the whole work from being ridiculous and profane.

Lord Lindsay published, in 1838, "Letters on Egypt, Edom, and the Holy Land." Lord Lindsay is one of the sentimental travellers. His work is more than sentimental—it is devout. And there is about it a fine manly healthiness—a manly, joyous good-nature, which gives a stamp of sincerity to all he says, and makes you respect it. He does not mope, as some of the school do: his sigh is not lack-a-daisical. He does not *bore* you with his peculiar views—pours them out in a warm, hearty way—rhapsodises, regrets, venerates—and then, presto! he is as homely as his neighbour, and speaks of an oriental functionary as a "jolly old cock!"

Let us look at a sentence or two, for Lord Lindsay typifies the sentimentalist in politics. (And what people call "Young England" is nothing but a knot of gentlemen who try to introduce sentiment into politics—to perfume the cotton, as it were!)

"The crescent is pale," he says, "pale all over the East now." This is pretty.

Then his lordship is at Malta, and, of course, goes to see all possible relics of the old Knights of St. John.—(The Governor, by-the-by, has their grand-master's palace now, and they have balls there, and the dockyard people dance the Polka there *Tempora mutantur!*)

"One, the last survivor, I believe, of the old knights, a countryman, too, of Bayard and Duguesclin, was pointed out to me—a poor, decrepit, feeble old man. Alas, alas!" (p. 23)

Well, it was a melancholy sight, Lord Lindsay. But, say distinctly, do you regret the death of the Order, for the knight must have got feeble, anyhow? Better, surely, that the Order should have died than lived degenerate—lived, as it was doing, in an old age like that of Swift's *Struldbrug*. It is true that *that* is a pity, too, but that was part of the whole movement of Europe. Why weep for yesterday's roses? They belonged to yesterday!

He is speaking of the Obelisk of Amense, the "record of a daughter's love," and has this graceful and fanciful remark, which reads like a sentence of Longfellow's "Hyperion:"

"Time surely read the inscription, and could not find it in his heart to strike!"

"I never," he says further on, "drive in a tent-pin without thinking of Jael and Sisera."

But here is a pretty "sigh" indeed—quite a musical sigh. He has been speaking of Acre, and Ibrahim Pasha's proceedings there, and exclaims "Ibrahim Pasha! Ibrahim Pasha! why not a sigh for the olden day when the standard of England streamed from St. George-Mount, and the young knights stood and listened to Blondel's lay; but he that was to win on the morrow the honoured name of D'Aire, sat apart from his companions, watching the sun setting in the far West, where dwelt the lady of his love, his casque lying on the grass, and his steed feeding beside him."

This is a delightful picture, and one *may* sigh with propriety, as one thinks of the dead time and all that has passed away

Mr. Monckton Milnes gave the results of his sentimental travel, in the "Palm Leaves," published in 1844. He chose to embody his feelings in regard to the East, in verse Thus, as we have Lord Lindsay for a pilgrim, we have Mr. Milnes for a troubadour. Let us take a stanza from the "Harem"

> "Within the gay kiosk reclined,
> Above the scent of lemon groves,
> Where bubbling fountains kiss the wind,
> And birds make music to their loves,—
> She lives a kind of faëry life,
> In sisterhood of fruits and flowers,
> Unconscious of the outer strife
> That wars the palpitating hours!"

Very pretty, indeed; but does Mr. M. mean this stanza to embody his serious notice of woman's life in the East? Is a woman leading a faëry life, there, never having any strife with the other wife? Is there no *inner* strife within the faëry walls? Does Mr. Milnes imagine that any such system could produce a woman like Wordsworth's "Phantom of Delight?"

The "Mosque" is one of the best poems in the volume. It is pleasant to be reminded of the honest Mussulman, who, when prayers are due, will

> "——Quietly the carpet spread,
> To Mekkah turn the humble head."

I remember once seeing—when going from Malta to Gibraltar—two worthy Turks come to the compass—ascertain the point of orthodoxy—perform their ablutions in little pewter basins, and tranquilly go through their devotions on the upper deck, in the sight of us all. I remember, too, how little Snogg laughed, and how much the most ridiculous of the two exhibitions Snogg's laughter was.

Mr. Warburton's "The Crescent and the Cross" (published in 1845) may be classified on the whole as "sentimental"—though the author shows a decided wish to be equally conspicuous for smartness. The style is brisk and lively, but there is a decided conventionalism both in feeling and expression throughout. One of the prettiest notions—is taken from Washington Irving.

Turn now to a gay scarlet volume, glittering with gold. It was published in 1846. It is the "Journey from Cornhill to Grand Cairo," by Michael Angelo Titmarsh. Here we have the Humorist; the Crusader with the lance fluttering with the pennon of wit. Mr. Thackeray's book was a protest against the Sentimental school—it was the voice of cultivated and satirical Europe crying woe to all the oriental Babylons. "Come forth here," cries the crusader of comedy—"I am come to break your enchantment. Your boasted houris in seraglios are poor little fat girls, very stupid and very miserable. I hear the musquitoes humming through that perfumed air of yours. That divine cloth of gold has bugs in it. Your splendour is very like Vauxhall—like our Vauxhall in the day-time." So shouts the Democritus of travellers—and his laughter echoes through the ruins.

We none of us will forget in a hurry, I imagine, how that laughter woke up our sentimental souls. How capital the details of the voyage are—the mention of that cook "who used (with a touching affection) to send us locks of his hair in the soup!" Pleasant old "Lieutenant Bundy," too, remains for ever a family portrait in our rooms.

It was a perfectly natural reaction—this reaction against the Sentimental school. It was the assertion of our common-sense, and our sharp English worldliness, and our social cultivations, and our commercial development, against the pretentious mystery and the ostentatious gaudiness of the East. "Reverence, if you like," says Democritus, "any reverence that you *feel!* But don't let us go about shamming enthusiasm, shamming regret; let us be honest, at all events!" So he draws away the veil from Mokanna. "The life of the East is a life of brutes," he says distinctly, and he introduces us to a *Skingtint Bey*, and takes the Ottoman humbug by the beard! He calls the Pyramids an "exaggeration of bricks," and owns that they are very "big." And our nature confesses that his laughter is healthy—differ from him how we may.

And yet, and yet—I know not whether the sentiment of pathos be not more profoundly excited by touches in this humorous book, than by the direct wailings of the mourners of the past When a genuine humorist grows serious, you are more impressed by him than any body else; just as you feel saddest when the *gaiety* of a dead friend is the thing which strikes on your memory. When Thackeray speaks half-contemptuously of "the dead coat-of-arms of the dead knights of the dead Order" at Malta, he touches you more than the graceful Antigone-like sorrow of Lord Lindsay. Look at the two following strange reflections:—

"Think of the centuries during which these wonderful people (the Jews) have remained unchanged; and how, from the days of Jacob downwards, *they have believed and swindled.*"

"Of the race of Englishmen who come wondering about the tomb of Socrates, do you think the majority would not have voted to hemlock him?"

What do our travellers say to the last query? It ought to teach them, at all events, not to profane that tomb with their autographs as they (the Yankee ones, particularly) are in the habit of doing. I know, from experience, that it is no pleasant sensation to be reminded at once, by the same spot—that Socrates is dead, and Mr. Snobkins still living!

And now we come to the work, *apropos* of which we have discussed these writers. "Eothen," with its classic elegance of dignity—its frolic grace its gentlemanly glancing satire, is before us again According to the classification we have pursued—how shall we apportion "Eothen?" It is poetic, tender, sentimental, and yet humorous and satirical. Of all the oriental books, none impresses one with a more entire conviction of its author's *sincerity*. He does not seem to have gone abroad either to support a cant or to destroy one. He does not leap into mysticism and bound back, like Lord Lindsay. All that Warburton does well, he does better. If he does not cut so deep as Thackeray, in satire, his weapon is brighter. It is observable, too, that he never loses his self possession. He never forgets himself, in a rapture. He can always whistle his imagination back when it is in full swoop. One pictures him on his camel in the desert—moving along between the sand and the sun—saturated with the oriental life—yet always the self-possessed English gentleman, and ready to dismount, perfectly *comme il faut*, in Pall Mall. There is a graceful homeliness, too, with all his gravity and his poetry. If he has to introduce himself, it is with the easiest of bows. It is one of the *best-bred styles*—that of his book—I know.

Everybody must remember the capital scene between the pasha and the ordinary English traveller, and the sulky dragoman. It is perfectly dramatic. The pasha is seated—a fine, flowery, orthodox, and old provincial pasha.

Traveller (to his Dragoman). "What on earth have you been saying about London? The pasha will be taking me for a mere cockney. Have I not told you always to say that *I am from a branch of the family of Mudcombe Park*, and that I am to be a magistrate for the county of Bedfordshire, only I'm not qualified, and that I should have been a deputy-lieutenant, if it had not been for the extraordinary conduct of Lord Mountpromise?"

The innocent, gentlemanly "snob" goes on, and the sulky dragoman, growing "liberal," informs the pasha that this "branch of Mudcombe," this *possible policeman of Bedfordshire*, is recounting his titles. The whole scene is full of humorous dramatic life.

"Eothen" has a cant to protest against, like most books. It protests against the cant of Utilitarianism, and the superstitions of our English conventional life. I sometimes think that he never gives his best qualities full play that he is afraid of being thought to cant, too; that—to use a metaphor, from hawking again—his flight to heaven is impeded by the bells he wears—the appendages of ornamental life with which we are all adorned and impeded.

But why particularise in treating of a book which is to be placed before us for two shillings? Of his chapter on the Dead Sea; of his account of the Plague; of his Sketches of Jerusalem; it were easy to speak at length, and impossible to speak too highly. But it is time to draw to a conclusion. And—"Who are you," exclaims the reader, "who speak thus confidently of these worthy men? Show us *your* book, and let us have one thing at that!"

I answer—varying the words—in the tone of brave old Knox, "I am a subject of this—orient—realm." I know this style of book of old. While I write, memories of the Eastern life are about me. Those who write with charity should be judged with charity. *That* lesson, reader, we all owe to—the East.

J. H.

THE PARROT OF THE BENCH.

BY MAHMOUZ EFFENDI.

"The Prince mingled in the crowd, but was astonished to perceive that they were all listening to a parrot, who, with his bright green coat, pragmatical eye, and consequential top-knot, had the air of a lord on excellent terms with himself."—*Legend of Prince Ahmed Al Kamel.*

R! eh! what's that you say? 'You *don't* think THE BENCH such a bad place after all?' You! A pretty hard hearted Inspector of Prisons you'd make! Drench my feathers! I should just like to know what benevolent individual or M. P. would or could bow to *your* opinion in the matter. What do *you* know about it? Have you ever been a prisoner here yourself? 'No.' I thought not. Of course you're now only what we call an 'outsider.' Yes, yes, I see; you're some clerk, perhaps, in the Liverpool or Bristol Custom House, and you merely drop in here to take a bird's-eye view, and show your sweetheart——I presume that young lady on your arm is your sweetheart.—Eh! eh! What's that I hear? What does she say? '*Pretty Polly*,' indeed! Now, don't 'Pretty Polly!' *me*, ma'am, if you please, but simply attend to what I'm saying. Little girls should be seen and not heard.

"You and your fond swain, ma'am, have, of course, merely dropped in here, into our Borough of CAMPBELL-TOWN, as Christians well may, to see with your own eyes what sort of a place Parliament has provided for no less than two hundred unfortunate defendants——Eh! eh! what do you say, sir? *you* call 'em 'debtors,' not 'defendants?' Well, well, I stand corrected (on my perch), and I'll readily say unfortunate debtors, if you particularly prefer that term. Anything to oblige——

"'*What's o'clock?*'—Don't 'what's o'clock' *me*, ma'am: don't think to curry favour with me by such soft sawder. Just now you bawled out '*Pretty Polly.*' No more of that, if you please. D'ye think I'm one of your common parrots, to be talked to in that strain? Not I, indeed! Just ask my good master; there he stands, as hot as his own gridiron, at the door of the PUBLIC KITCHEN—we've got a kitchen, you see, as well as the fine fellows at the Reform Club: just ask my master, I say, whether I'm a common parrot, and he'll astonish your weak nerves in a twinkling. He don't think 'small beer' of *me*, I can tell you, nor ought he. So, I beg, ma'am, once for all, that neither your beau nor you interrupt and insult me by bawling out again (as you have done) '*What's o'clock?*' and '*Pretty Polly!*' or any such stuff.

"Master and I, as you may perceive by our stew-pans and tureens, and plates and dishes, know a mystery or two in the art of cooking. Master wasn't born yesterday, and there's nothing green about me but my feathers. None even of your corporation cooks in the provinces can make a *potage à la skillee* as we do here. Ah! by my beak! there's not a little science required to do *that*, I can assure you. Step in and taste it.

"What's that you say?

"Hi! hi! 'Any skillee is good enough for prisoners, or even for debtors,' is it? That's *your* opinion. You're at it again, you will harp upon that. 'Debtors!' Ha! ha! you're very virtuous, *you* are; you never get into debt, of course no. You never will. You'll never become a prisoner, or even a defendant. Catch a weasel asleep. You'll never run into debt. Oh, no! You'll 'bestride the world like a Colossus.' You'll command circumstances, and so will all your family. No doubt they're a bright set; of course they are. Some people's geese are always swans. You and all your kith and kin remember the fable of the bundle of sticks: who doesn't? But for all that, blight may affect fruit—tenants may not pay rent—a bad harvest may happen—doubtful debts will be discovered—old ocean may swallow up ships—fire may destroy ledgers as well as lodgings—bankers may fail, and a thousand such interesting incidents occur, which, I dare say, you and *that* young lady little think of when you meet in the moonlight alone. All is sure to go well with *you*, of course. You're to be particularly favoured by Destiny. You're not always to be a clerk in the Custom House. Oh, no! CHANCELLOR OF THE EXCHEQUER wouldn't be much too high for you, would it?

"But if things *do* go badly, you can always take an excellent situation. 'Take' is the term, of course. First catch your fish. 'An advertisement in the *Times* always brings employment.' Does it? Don't lay *that* flattering unction to your soul. A second advertisement would be sure to do so! You tell that young lady so (I know you do); and, poor little thing, in her inexperience—I won't be rude enough to say ignorance—she believes you. She fancies you know the world well enough, and more than enough. She thinks you are at least out of the range of all those horrid, heart-breaking, ruinous Chancery suits she now and then reads about in CARPENTER'S TRACTS. The lawyers know better than that, though, in Lincoln's Inn and so do I. I tell you, sir, that the whole path of life is strewed, as it were, with parchment gunpowder (I like similes), and that any pettifogger can at any time fire the train and scorch up you or me, and——

"You 'don't think so!' *You* don't think so! Rich again, my young ignoramus. I thought as you do once, before I left Africa for England. There's some difference between this melancholy SPIKE ISLAND and our jolly LIBERIA, I can tell you; and there are such things as black minds in *some* places, as well as black bodies in *other* places, which I forbear to mention. *Experientia docet.* I hope my Latin's not thrown away upon you. Pettifogging lawyers can stir up clients to do anything. You say they can't. I say they can. Well, well, if I *am* 'but a parrot' (I heard you muttering that), you're a goose. Why should *you* escape? Listen to me.

"Ah, ah! notwithstanding *my* pedigree and talent, a 'gent. one, etc.,' once managed to make, yes, even *me* the subject of an action of trover! Well, I can afford to laugh at that now. But *you* mustn't holloa till you're well out of the wood. Just wait till you have to settle a lawyer's bill of costs. I ought to know something about bills—and beaks too, for that matter. Excuse my jocularity; but if the lawyers caught *me* in their net—as they did for a time—why should *you* escape? You don't pretend to be equal to *me*, I hope. I should think not, indeed!

"'Don't attend to that green thing.' That's what you said, ma'am. I heard you; and I thank you for the compliment. But perhaps, after all, I'm not so green as *you* are. Pray don't colour up. I meant nothing offensive. Dear Augustus, there, will protect you if I did.

"And now, sir, I really don't wish to say anything severe—especially in the presence of that young lady—though she made a somewhat impertinent remark just now; but, between ourselves, you gave her that pretty Paisley shawl, didn't you? You may continue scratching my poll, ma'am (if you like), or you may not, but I must nevertheless speak out; I've a duty to perform. I think, sir, you presented that elegant shawl. What's that you say? 'you know you did, and you paid for it, too.' Well, well, you need not flare up; I dare say you *have* paid for it, by what you Government clerks call payment, that is by an acceptance at three months—but *that* sort of thing I and my master do *not* call payment—acceptances are still acceptances—and when the little bill becomes due, you'd better 'take it up,' that's all: or, smart as you are, and one, as you are, of a bundle of sticks—I really mean nothing personal—I may speedily have the honour of renewing my acquaintance with you here as a defendant. Excuse me, I mean prisoner; you always prefer that term. Yes, sir, here; many such gents as yourself find it convenient, by habeas, to take lodgings in 'SIXTEEN STAIRCASE,' under the guardianship of my good-natured and lively little friend BUFFER. There he is, sir, now; on the Key. He'll know your face again.

"You don't know what's meant by '*on the key!*' Never mind, never mind; all in good time, my young friend. I shan't explain that mystery to you at present, beyond assuring you that we've locks here even a Yankee couldn't pick. We know something about locks and keys in *this* place, I can tell you. We could teach Chubb, and Bramah, and Hobbs, a trick or two. Couldn't we, Colwell? And by a long *chalk* of argument too.

"Oh! 'you must now be off,' must you, ma'am, or you'll be 'too late for the train.' I'm afraid my rattling conversation has fatigued you. Well, well, get along; be off, sir; enjoy the railroad while you can, and with *that* young lady too; but mark well what I say, *we've people here, defendants, or debtors, or prisoners, call 'em which you will, who never saw a railroad: who entered the Bench before railroads were invented; before Huskisson was killed;* and who, poor souls! having heard of Robert and George Stephenson's exploits, do daily and hourly wonder how it is that some sort of locomotive can't be invented to increase the speed of the Chancery and other courts, that term after term continue to detain them *here.* My friend TRURO isn't quite up to the mark, in my opinion. It makes me wild to find him so slow. 'I'm a prisoner myself, hard and fast, and I needn't interfere with other people's business.' That's what you say, sir? That's your creed, is it? Pretty sort of a Samaritan you are! Dear it all! fellow would in one instant more have clutched Bu

"My governor, the Head Cook, has, I admit, kept me close enough under his eye, cage and all, these many years—but that's no business of yours. *He* feeds me, and takes care of me, and pets me—creditors do *not* feed debtors in England as they do in France, and as Shakspere says (taking one thing with the other), 'by the best feather of our wing,' I rather like the chap—my governor, I mean—and of course I revere Shakspere—but the case is far different with yon

'Prisoners wildly overgrown with hair.'

They, for twenty, or thirty, or forty years, have had no one to take care of them—they have had none but Shylocks to give a passing thought to them——everybody recollects and admires *me*. They would willingly enter the world again, but the world knows them not. They are down, and must be kept down. They are deserted. I don't want my liberty, but they do. Had they but stolen moneys, they might, by this date, have served their time, and returned from actual transportation; but as they have, from untoward and insurmountable circumstances, but delayed or neglected to pay moneys, &c., &c., &c., LAW and EQUITY continue to hold them prisoners here, day after day, month after month, and year after year. Heigho! Law and Equity! What a farce!

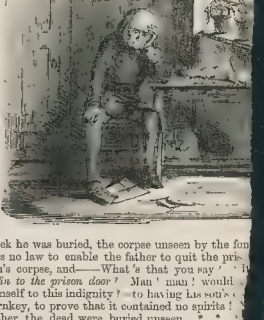
"Don't interrupt me, sir; talk not to me of 'going through the Court.' *There are scores of cases where a prisoner cannot do so without committing perjury.* But were there some court to set men free on giving bail not to leave the country, or even quit the metropolis, and were reasonable time therein allowed—for inside this place little can it to be earned—many could, in a year or two, pay off all their debts in full. But it seems the fashion now for all creditors to be anti-Christian, 'the law allows it, and the court awards it.' I wonder some specimen of a Bench-prisoner was not displayed in the Crystal Palace, together with one of our incomparable cells, labelled thus—'Warranted not to break a debtor's heart in twenty years.' Such a cell might, perhaps, have been squeezed into the Austrian furniture department. The Austrians—who, unmoved, can flog women would have had, of course, no insurmountable objection to a mere model of a cell standing among their household furniture. Drench my feathers! while I am speaking of Austrians, I can't help chuckling over Kossuth's reception at Southampton. I wonder what they think of that at Vienna! Kossuth has been in prison in Turkey; but *his* imprisonment was a mere bagatelle to that of many still within these very walls!

"Ha! ha! D'ye see that old man hobbling along? *He entered this treeless prison before the Battle of Waterloo*, in 1815, *and has not left it since, even for one hour!* Talk of the law's delay! Here's an instance of it. Now, ma'am, now; wrap your pretty shawl about you, go home comfortably by the railroad, plume yourself on living in a Christian country, and rail against 'stubborn Turks and Tartars;' but still think of this poor English prisoner, and of Waterloo, of 1815, and of 1851 (the figures scarcely differ), and then sit down to supper, in your own snug sylvan home, with what appetite you may! That poor fellow hasn't been *home* for a period extending to double your own age. That's an interesting fact for you to take back from THE GREAT METROPOLIS. He is perfectly right in his own view of his case, and, with the pluck of a true-born Briton, he won't surrender; but even if he were wrong, the sublime sentence, 'Forgive us *our* trespasses as we forgive them that trespass against us,' were enough to convict his persecutors

"Eh! eh! ma'am, what's that you're saying? 'You *do* admit and think it a burning shame that a prisoner, for any debt, or for any contempt, can be kept incarcerated for thirty or forty years!' You are right, ma'am. That observation does you credit as a woman. I think the same, and I know 'tis contrary to MAGNA CHARTA.

"I know *you* will remember me if you come here again; although the benevolent people who call to see our prisoners very, very seldom leave 'em a little present of tea, or coffee, or sugar There is one honourable exception his name ought to be inscribed in letters of gold; yes, ma'am, it ought—his name is BARON PLATT, one of Her Majesty's Judges of the Court of Exchequer—Christmas is now approaching, and as soon as Christmas comes, BARON PLATT will be seen here, as he has been seen for years, courteously dispensing charity with his own hands—yes, ma'am, with a Christian manner that more than doubles the value of the gift. He's a rough one on the Bench sometimes, but in the Bench a kind one. Now for the subject I want to mention. Your young man, there (I plainly see you are really keeping company with him), has, I dare say, A VOTE; if he has not now, he will have under the NEW REFORM BILL; let him call, then, on the members for your borough, and remind them of that significant fact, urging them as a *quid pro quo* to insert a clause, in the very next Prison Bill brought before Parliament, giving all prisoners here a right to a *habeas*, under which, attended by a tipstaff or a turnkey, or, without one, on lodging sufficient bail with the KEEPER, they may for a day or two, or at least for one day, quit these pri walls to attend the funeral or to visit the death-bed of wife, or a parent, should such a calamitous necessity CAN'T DO SO NOW. And the sad circumstance fre occur. Day-rules would prove sufficient, but day-rul altogether and uncharitably abolished. Now, even even for a death-bed, grant a day-rule, or a *habeas*, legal permission. The Lord Chancellor may, so far prisoners are concerned, but the Common-Law J Here, then, is a practical and practicable case for your members to bring this question forward, this is for it is so, it affects wives and mothers more d than prisoners themselves—agitate, ma'am, agitate, of Law Reform; and when you succeed—for succeed you will ever have cause to thank the star that to you in contact (though he has told you some perhaps) with the PARROT OF THE BENCH!*

"Now, then, sir, I address you. '*Give a case!*' Tha want, is it? I can give a case, and a score of cas Mr. Attorney General Cockburn examine no before Commons, and I'll give any committee cases enough hardship of so rigid an imprisonment for debt as requires and enforces. I will not here mention nam do so if called upon. Listen: a silvery-haired old n a young wife; and for a few years, notwithstanding t of age, all went merry as a marriage-bell, and chi was born to them. It boots not to tell how, thr security for his wife's kinsmen, the old man became the Bench. Hither he found his way under arrest, for his wife to take lodgings in the neighbourho hitherto lived out of town), that he might daily children of his old age. They were all to come t Monday. On the Sunday night the Bench was al of 'Fire.' In hot haste the engines rolled past th The old man had an upper room, and could o'er flagration. 'Twas a fierce one, and in the street abutting on the prison. Cheers burst ever and a crowd, as inmate after inmate was, through the h brigade and the daring of the police, rescued fro At last the fire was subdued, and the night pas morrow came, and with it the news that *one* child one who had fallen through the sinking floor when reach of one of the brigade, whose outstretched fellow would in one instant more have clutched Bu deceased. He was then to die. And he did die. this child? *The son of the silvery-haired old watching the fire from the interior of the Bench.* brought her family to town one day *before* the time and, arriving late, after the prison was shut for taken the nearest, the first lodgings that offered, forward to the next morning, to the early mes husband. In that night his heir was burned to d



week he was buried, the corpse unseen by the fo was no law to enable the father to quit the pri son's corpse, and——What's that you say? *cogito to the prison door?* Man! man! would himself to this indignity?—to having his sou turnkey, to prove that it contained no spirits! rather the dead were buried unseen. * * matical Parrot, an' you will, but let not your M desire for Reform, till they *do* reform some of t And now be off with you, for touching on the me melancholy—a mood anything but congo OF THE BENCH."

* Those who have done duty as chaplai to the fact that scores of cases have oc children have died *within a gunshot of* provides no means by which the priso to their bedside to receive their dying w

BITS ABOUT LORD MAYORS.

state of the City of London is not allowed to
duties of his office with any notion of hiding his
(in City phrase) under a bushel. To the minds
and foreigners, the Lord Mayor is a splendid
o be lightly talked of—not to be approached
renown of his office obscures his personality;
n Parkins, coal-merchant, serving his year of
y wonder, which no London visitor must fail
muffled in gorgeous robes, and invested with
with which those of Queen, Lords, and Com-
nignificance. Simple country folk talk about
r as one of great London rejoicings; when
asses choke up every avenue to the City, and
ered in with feasts and illuminations. These
egarding an annual custom, which draws some
inveterate sight-seers to Cheapside, have been
e living generations by grandfathers and great-
from remoter ancestry—ay, from the times
sed the Lord Mayor's pageants, and crowned
the show from balconies. It appears that the
ds was the work of Elkanah Settle, and that it
702, before Queen Anne, who, with the Prince
, sat in a canopied balcony in Cheapside to
witnessing one of these pageants held on
r. Pole, may yet be seen at Fishmongers'
the instalment of Sir John Leman, a member

who included Sir Hugh Middleton (who ruined himself with the New River scheme) in their body. After them follow the Skinners' Company; presently we notice the Ironmongers', to whom Viscount Hood belonged; then the Clothworkers', who are associated with James the First and the gossip Pepys, and others of less importance. But the show is tediously long. The sheriffs' carriages are dazzling—but we have seen them before in Oxford Street; and here, shaking in the last stages of a most debilitating disease, is Cipriani's coach, drawn by eight horses, and containing that awful mystery—The Lord Mayor. The bells ring merrily; the people are amused; the Cheapside warehouses are closed, and snug cold luncheons are going forward within, pending the return of the procession. Let us take an imaginary Lord Mayor. A few bold spirits venture to inquire as to the history, prospects, and personal character of the old gentleman, who has now no name, who must not be called Mr. or Alderman anything—who is the Lord Mayor, and nothing else. He is independent of himself. He has passed St. Paul's, with the serene consciousness that, should he die at the Mansion House, the very heaviest bell in that vast building will toll for him. Yesterday he was a plain, homely man, who dandled his grandchildren upon his knee; brushed his hat with his own hands; himself removed the cover from his leg of mutton; and, with exquisite humility, pulled on his Wellingtons without help; he wore a bland smile throughout the day; he remembered, perhaps, a few little histories of his school time at the Merchant Tailors' School—for instance, how Sir John Pouitney, who built "the Rose" in which the school was held till the Fire of London consumed it, was five times Lord Mayor of London in the reign of the third Edward. A pleasant recollection for a man in his position! Then there was Henry Fitz-Alwin, the first Lord Mayor of London, who held office for the space of twenty-four years. But this was many centuries ago; and now no Lord Mayor succeeds in getting a sentence of even two years in the Mansion House passed upon him by his brother aldermen. No, all of them are eager to taste the luxury of a year's lordship, and so the best of Lord Mayors must be prepared to reign a year, and no longer. Even modern Whittingtons share no better fate than their compeers. The man who has fought his way from sweeping a door-step to the seat of honour in the Mansion House, is not a very remarkable man, at the present time. Old-established firms regard him rather as an energetic interloper than as a man to be remarked and courted. The horny texture of labour has hardly had time to soften on his hands: he must be refined through one or two kid-gloved generations before the family can be altogether an unexceptionable introduction to the great City circles. But as Lord Mayor, he is not a lucky speculator fresh from manual labour;—he is the giver of feasts, the host of the Premier, the representative of the City, taking precedence before many a proud aristocrat, pale with blood that has been refined almost to water. Therefore, in his state-coach, his nod is accepted as a mark of particular distinction; he is lost in the velvet and gold of office. He will inhabit a splendid mansion—not like his predecessors, an ordinary house in Cheapside—and it is very probable that the Queen will cross his shoulder with a sword before his year of office has expired. At all events the game is on the cards. He may tempt Her Majesty into the City, to witness the graceful accomplishments of the aldermen, and the respectful order with which official citizens can receive their Sovereign; there will be novelty in this display that may attract the Queen. He may leave his mark upon some of the public buildings, or found some charity. Simon Eyre, Mayor of London in 1445, converted the manor-house of Leaden-hall into a granary for the city, and so originated the present market of that name. This was not an untimely work on the part of Eyre; well, there is room for one or two improvements in the City even now. The turtle is perfect—no art can improve that; the barons of beef are faultless—they may pass; the City wines are famed far and wide—they may be sipped composedly; yet the City water is not always the best in the world, and fastidious persons have been known to utter a string of angry words touching the City sewers. But then on his return from Westminster Hall, our imaginary Lord Mayor has made up his mind to say at the Guildhall banquet, amongst other well-digested impromptus, that "he may affirm, without fear of contradiction, that London is the finest, the best-regulated city on the face of the civilised world." He must give up this rounded period, if he thinks of the sewers. No, he is afraid, after all that may be urged to force him into a different course of action, that he must fall in with the Court of Aldermen, and acknowledge that he rules over a corporation that defies reform, being perfect in every particular.

A Lord Mayor erected an honorary monument in Westminster Abbey to the author of "Hudibras;" perhaps our imaginary lord mayor may have dwelt upon this singular episode in the corporation history, or, as he invited the Barons to dinner, the thought of acquiring a sprinkling of their legal erudition to help him in the discharge of his judicial labours may have crossed his mind. Some men acquire that logical precision of judgment from nature; others grasp it after many years of hard and anxious striving. Of the former class is the Lord Mayor—of the latter are the Lyndhursts and the Denmans. Therefore, our Lord Mayor refuses to subscribe to a new edition of Blackstone, and is rowed back to Blackfriars in a pleasant dream, throughout which his lordship figures in many brilliant scenes, as the sun of them all. Of his office, considered in the abstract, he may well be proud. The first magistrate of the first city in the world may be excused when he shows his pride, and declares that, after the labour of forty years, he is content with the pedestal upon which his fellow-citizens have placed him. He is reminded that within the boundaries of his realm he takes precedence of Blood Royal, in spite of the protest made by the Prince Regent in St. Paul's. The long sword protruding from his carriage window has figured in the pageants of Lord Mayors since the days of Elizabeth, and was, possibly, touched by that determined royal virgin. The great gold mace, which is somewhere about the carriage, may be noticed, also, as a contribution from Charles the First—given, perhaps, with the idea of imparting an imposing front to those employed in the levying of ship-money. But the great event of Lord Mayor's Day remains to be performed.

Our Lord Mayor has been sworn-in, but has not consummated the assumption of the mayoralty. The swearing is, as far as it goes, a serious matter; but it is a routine gone through without any particular show of interest. The progress in a rickety carriage, with which the worms must now be very busy, is an exciting event; but these details dwindle into insignificance when compared with the Guildhall banquet. It is this banquet to which the citizens of London are indebted for those curious liberties vouchsafed to them by the mysterious corporation. Therefore our Lord Mayor—our mysterious and awful Lord Mayor—returns from Westminster with a feeling of gathering and increasing importance. He rises with the tremendous solemnity of the coming time. He is a little nervous, perhaps; he has his fears on the subject of the cooks. He is well aware that his mayoralty, to be popular, must be based upon sound culinary principles. He remembers the unpopular mayor who had the basenes to save two or three thousand pounds out of his stipend, and he is anxious to avoid any such dishonour. He is expected to spend more than he receives in feeding those who have elected him. He looks at the Aldermen and Common Councilmen as so many birds of prey flapping about him. They represent a round number of inevitable feasts for which he must pay. He is the living representative of a certain number of turtle, oxen, geese, turkeys, winter strawberries and peas, and truffles; and if any of these be not forthcoming in due season (that is to say, when they are out of season, properly), he will be frowned from the civic chair, and will retire into private life at the expiration of his term of office, without a congratulatory or laudatory address.

A Savarin might discourse eloquently of the viands that smoke upon the hustings at the Lord Mayor's banquet; but we, to whom a dumpling is almost as profound a mystery as it ever remained to the sagacious monarch who could never understand how the apple got in it, we must let the feast pass without comment. Yet we perceive, dimly shown in the distance, fingers pointing to sinking steam-boats, crowded with hundreds of rash human beings, while the Conservator of the Thames is helping the Chancellor of the Exchequer to "just one more glass;" and countless noses grasped by countless hands, suggesting the vicinity of sewers, over which our City friends have claimed exclusive control, flit about the heads of the Common Councilmen.

THE HEIRESS OF BILBERRY.

ARY F—— had been left an orphan at a very early age. Her aternal grandmother, with whom she had resided from infancy, s a proud, stern, and selfish woman, little calculated to secure her the affection or obedience of an impulsive and wilful child, e Mary F——. The consequence was, that although the two ed beneath the same roof, their intercourse was unfrequent and astrained, and as Mary approached to womanhood their estrange- nt became greater. It is, therefore, no wonder that the gossips Bilberry were one morning fully employed in narrating, to all o would listen to them, the particulars of the elopement of ary F—— with the young lieutenant of Dragoons recently artered at the Red Lion. The young soldier had been attracted less by the well-known wealth of Mary's grandmother, than by e pretty face and graceful form of Mary herself; but whatever ight have been his mercenary hopes, they were not fated to be alised, for the old lady was, or affected to be, so scandalised by her andchild's conduct, that from that hour to the day of her death e refused to hold any intercourse either with Mary or her husband. Shortly after his marriage, the regiment of Lieutenant B—— as ordered to the Peninsula, whither Mary accompanied her sband. The fatigue and anxiety which she had to encounter on had a fatal result, and Mary died, after giving birth to a girl. he infant was confided to the care of the wife of one Sergeant ers, who tended it with the affection of a mother, and, when e father fell on the field of battle, refused to part with the ild, and ultimately brought it with her to England, when the ace was proclaimed. The friends of Lieutenant B—— readily lowed the poor orphan to remain with its kind nurse, who was ore than compensated by a small allowance made by the family the father, and the affection of her little *protégée*, whom she d called Mary, after its mother.

Time passed on, and little Mary grew into maidenhood—a fragile, ntle creature, that seemed to look upon sorrow as its heritage. he friends of her father had long ceased to take an interest in r fate, and she was generally considered by every one to be e daughter of Mrs. Sergeant Byers. Among the visitors of her ster-mother was Thomas Brown, a kind and somewhat simple ung man, who followed the then well-paid and reputable trade a tailor. His quiet manners soon made an impression on the ntle heart of Mary; and he in his turn found no place so reeable to him as the house of Mrs. Byers.

A great day was the 5th March, 18—, for the neighbours and iends of Mr. Thomas Brown and Mary B—. About 11 o'clock n the morning of that eventful day, not a first-floor window in e whole street but teemed with human heads, principally longing to the gentler sex. It is wonderful the interest women ke in a wedding. They may know nothing of the bride and ridegroom, nevertheless they evince as much interest in the arest kith and kin. It is an instance of the universal benevolence of the female character; for, as marriage is the "be all nd the end all" of a woman's life, from 18 to — (well! I know not where to set the limit), every daughter of Eve rejoices when a sister has achieved her destiny. How the news of a wedding spreads through a neighbourhood is to me a marvel, for, let such an intended event be a sworn secret between the contracting parties, and I would wager a pair of gloves that when the happy day arrives, not a housemaid in the neighbourhood but is cognisant of the fact. It must be from sympathy.

Well, when the hackney-coach arrived, and its jingling steps fell down, ringing, as it were, a rude marriage peal, the excitement was intense. What straining of necks, nodding of heads, and waving of handkerchiefs, as the gallant tailor led forth Mrs. Byers, and the old sergeant, spruce as on drill, handed into the dear old roomy hackney-coach, the bride, all blushes and white bows. There was a tuneful cheer—tuneful with women's voices, as the "leathern convenience" rumbled up the street. The weather-beaten Jarvey seemed to have thawed his face for the occasion, and beamed with smiles, as though he sat upon a Lord Mayor's hammercloth, instead of a mat of straw. The pew-opener and beadle were heartily glad to see the young couple; and the latter functionary had done honour to the occasion by putting on his Sunday coat and cocked hat, and appeared just as he would have done had it been a lord's wedding, instead of a tailor's; the only perceptible difference was, that he had not taken his chin to the barber's, but as he was of a sanguine complexion, that did not signify so much. Mary was a favourite parishioner with the clergyman; and the reverend gentleman read the service very impressively, and made the bridegroom clearly comprehend the responsibilities he was incurring. Poor Mary looked to need more than ever the support she had obtained; and though she did smile once or twice, the faint expression faded like breath from a mirror. Yet she was happy, very happy, in her quiet, gentle way, but she seemed to live in the shadow of the future.

When they got home again, there was quite an avenue of neighbours, extending from the curb-stone to the door step, through which they had to pass; the bridegroom gasping out as many "thank you's" as he could, in return for the good wishes uttered by the little crowd. The wedding dinner was not, of course, splendid, but, to quote Sergeant Byers—"it was prime;" and, though Mary could not eat anything, weeks had passed before Mrs. Byers had finished sounding the praises of the baked potatoes.

And Mary and her husband lived very happily together, humbly but contentedly, until it was found out that Mrs. Brown was the heiress of Bilberry.

How that was discovered you are now to hear.

Death had been busy in the little town of Bilberry, and had garnered, in the fulness of years, Mr. Jonathan Trail, attorney-at-law, and for many years confidential adviser to half the population of Bilberry. The funeral had been "performed," and the friends and relatives of the deceased gentleman were assembled in the drawing-room, listening to his last will and testament. As Mr. Robert Nailer, late copying-clerk to the deceased, had no interest in the important document then under perusal above stairs, he had taken his accustomed place in the office, and, resting his head upon his hands, endeavoured to read upon his blotting-pad his own future destiny. To think of occupying the shoes of his late employer was quite out of the question, as Mr. Nailer had, unfortunately for himself, and fortunately for the good people of Bilberry, distinguished himself by sundry acts of blackguardism, which had rendered his reputation the reverse of a sweet-smelling odour in the nostrils of his master's clients.—No! he felt that he must seek elsewhere a sphere of action; and London appeared to him the largest field for operation.

But how to make a beginning?—His ready money amounted to a sum somewhat under twenty pounds, and the only friend he knew who would lend him a shilling, was that universal uncle who originally came from Lombardy. A silver watch, and sundry trumpery rings and ornaments, were the only things he had likely to move the cautious Lombardian. What was to be done, or who was to be done, he cared not. The blotting-paper seemed to have absorbed all his hopes, so he looked up at the ceiling, which only presented a dusky blank. From the ceiling his eye wandered to the shelf, supporting numerous japan boxes—some of them exhausted, others inexhaustible mines of wealth to the successor, whoever he might be, of the late Mr. Trail. At length, Mr. Nailer remembered, that among the last official acts of his deceased master, and in which he, Mr. Nailer, had been concerned, was the examination of certain dusty papers referring to a considerable amount of property, situate in the said township of Bilberry. He remembered, also, that the late Mr. Trail had expressed some doubts as to the present occupier's title thereto; but, unfortunately for the rightful owner's interest, one Orcus served the attorney with a writ of *habeas corpus*—and so terminated, for the time being, further speculation upon the subject. It now occurred to Mr. Nailer that nobody was likely to inquire after these papers, and, as there might be a Chancery suit wrapped up in them, he should be doing good, possibly to himself, and no serious injury to anybody that he knew of, if he included the said papers among his own baggage. As there was no one present to argue the propriety of the act with him, he gave himself the benefit of the doubt, and removing the dusty papers from one of the aforesaid tin boxes, conveyed the same to the depths of a mangy hair-trunk, emblazoned with, "Richard Nailer," in round-headed brass nail-

It is said that rats have, by instinct, knowledge of a falling house or a sinking vessel, and very naturally endeavour to escape a catastrophe. So it was with Mr. Robert Nailer. He knew, to use his own expression, "that he should be scuttled" as soon as the executors had done with him; and, therefore, he preferred selecting his own time of departure, instead of waiting to be expelled. It was from this determination that he and his mangy trunk were, one morning, the sole occupants of the roof of the stage coach then plying between London and Bilberry, and which, after a journey of five hours, arrived safely at that comfortable hostel, the Old Bell, Holborn.

Mr Nailer's first business, after his arrival in London (having "remembered the coachman," very much to the dissatisfaction of that worthy), was to convey himself and his trunk to a coffee-house in Fetter-lane, where, on a former visit to the Great Metropolis, he had found cheap and not over-cleanly quarters. Mr. Nailer immediately proceeded to refresh himself with a muffin

THE WEDDING-PARTY AT MRS. BYERS'S.—DRAWN BY JOHN LEECH.

and a pint of indescribable mixture, called coffee, but which mitted an odour savouring much more of burnt horse-beans than he aromatic berry of the East. His frugal repast ended, Mr. Nailer called for pen, ink, and paper, and busied himself in compiling an advertisement, the subject of which had occupied s thoughts for the greater part of his journey from Bilberry. The effects of the remarkable composition were made apparent on he afternoon of the following day, through the agency of our old riend Sergeant Byers.

The gallant sergeant had retired from the army on a pension of half-a-crown a day. Nevertheless, being of an active turn of mind and body, he had sought to relieve the monotony of his existence by running of messages, beating carpets, and performing other business connected with the profession of a light porter, thus maintaining an independent position, and benefiting himself and his fellow-creatures. To the morning generally sufficed for the performance of his day's labours, the sergeant was accustomed to resort, in the afternoon, to the Balsover Arms, and there, over a modest half-pint of porter, a pipe, and the newspaper, satisfy his mind as to the existing state of Europe, and of things in general. On the day following Mr. Nailer's arrival in London, the sergeant was thus employed, when he laid down his pipe very suddenly, and seizing the paper with both hands, appeared to be fearful of losing his hold upon some valuable piece of information. After a careful re-perusal of the interesting passage, he rushed out of the room with the newspaper, leaving porter and pipe both unfinished, and entirely forgetful of his little carpet cap, which he had taken

off and laid upon the bench beside him. Bareheaded and excited, he hurried through the streets to the shop of Thomas Brown, and arrived there in such a state of breathlessness and exhaustion, that he could only point to the newspaper, and exclaim, "Look at that!" The alarmed tailor did as he was desired, and read as follows:—

IF the child, or children (if any) of Mary F——, of Bilberry, who in the year 18—, married Lieutenant B——, of —Dragoons, and who is supposed to have died abroad, will apply to Logos—(in the first instance by letter only, Franco)—Fetter Lane; he, or she, or they (as the case may be), will hear of something greatly to his, or her, or their advantage.

When the tailor had finished, he looked to the sergeant for a solution of the enigma. Mr. Byers having recovered his breath, proceeded at once to the elucidation of the mystery.

"I knew it!" he exclaimed. "I knew it must come some day! She's owned by her unnatural relations, and they're about to do her justice at last. Go and break it gently to Mary, and get tea ready; and I'll run home for Mrs. Byers, and get my cap from the Falsever Arms, and we'll hold a council of war on the matter."

The tailor did break it gently to his wife, who, nevertheless, was ready to faint at the intelligence—so was Mrs. Byers, but was prevented going quite off by a very unparliamentary remark of the excited sergeant.

The council was held; and after the consumption of much tea on the part of the tailor and the ladies, and a pardonable amount of tobacco and gin-and-water on that of Mr. Byers, a letter was written to the unknown "Logos," and posted forthwith, duly reaching its destination in Fetter-Lane by the first delivery.

This immediate reply exceeded Mr. Nailer's most sanguine hopes; and he expressed his great satisfaction by adding an egg and a rasher of bacon to his matutinal meal. He proceeded next to shave and dress himself, putting as much respectability into his face as it was capable of containing, and forthwith proceeded to the house of Thomas Brown. Had the Lord Chancellor himself put in an appearance at that humble abode, he could not have been received with more breathless deference than was Mr. Nailer. Mr. Nailer did not fail to perceive the effect his presence produced, and of course gave himself the full benefit of it. He tried to look as though all the tin boxes at Bilberry were under his control, and that there was a balance standing in the name of Robert Nailer at some banker's, that would make any suspicion of his disinterestedness an insult to our common nature, in its most prosperous condition. Mr. Nailer glanced his eye round the tailor's shop, and saw enough to convince him that the man had credit, if he had not money, and he secretly resolved to set off a suit of clothes against his prospective costs. Mr. Nailer then proceeded to examine and cross-examine the Browns and the Byers, occasionally referring to the bundle of dusty papers which he had abstracted from the office at Bilberry. Mr. Nailer professed to have hopes—great hopes—that he had found "the parties" he had been so desirous to discover; in fact, after seeing the certificate of marriage between Mary F—— and Lieut. B——, he had no doubt but he should have the happiness to put Mary in possession of her great-grandmother's property, at present so unjustly enjoyed by "other parties." Mr. Nailer was prepared to do this merely for costs out of pocket, being content to leave any further remuneration to the generosity of the Browns, who were too grateful for this disinterestedness not to promise a very liberal per-centage. Mr. Nailer then made an appointment for the succeeding day, just hinting, whilst he grasped Brown's hand as he lingered on the door-step, that it might be as well to have a trifle, say twenty pounds, ready on the morrow for counsel's fees and other preliminary matters. The tailor returned to his wife and friends, rather staggered by the amount of the trifle Mr. Nailer required; but another "council" was held, and it was resolved that Mr. Byers should wait upon a neighbour (reported to have £500 in the bank), and by offering him a share in the golden harvest, obtain the means to set the legal reapers to work.

The monied neighbour was of a speculative turn of mind, and having gained a prize in the lottery, had believed ever since that he was to make a fortune by luck, and not by labour. The proposition, therefore, of Mr. Byers was so far entertained that the twenty pounds were advanced, and duly handed to Mr. Nailer in the morning after that person had strengthened his conviction of the justice of Mrs. Brown's claim by another perusal of the marriage certificate, and a small quantity of Burton ale, which a thirst, consequent upon a breakfast of Yarmouth bloaters, had compelled him to solicit.

Mr. Nailer's next step was to qualify himself for "a gentleman, one, &c.;" and at the time at which we write, an admission on the rolls was no very difficult matter. Being duly qualified to practise, he did so; and with what a result!

Some few years ago, I attended a police-court in London, to make a declaration as to the truth of some official documents. My business was over, but I remained seated at the attorney's table, for I confess that a police-office has for me a strong though painful fascination. Phases of life are exhibited there so terrible, from their misery and crime, that they reprove the selfish indifference which, contented with its own happier fortunes, never seeks to know the wretchedness which may be alleviated, or the ignorance which might be tutored into good. I have felt that reproof, and have listened to narratives of error, crime, and misery, to strengthen my resolves for a better future.

I was seated, as I have said, at the table set aside for the use of the attorneys attending the court. Two other persons also occupied seats, and, from their appearance, I concluded they were gentlemen learned in the law. One was rather remarkable for the extreme neatness of his dress, and an unmistakeable expression of low cunning; the other appeared to be a man of much good-nature and benevolence.

"The next case," said the clerk; and a pale-faced, meek-looking woman was placed at the front of the bar. Her dress, a faded black bonnet, with a ragged veil—a shawl, so soiled and tattered that it was impossible to guess at its original colour or texture—a rusty gown, so thin and threadbare that it clung about the wasted limbs beneath it, and seemed to be their only covering.

"What's your name?" asked the clerk.

She answered in a voice so "gentle and low," that it was scarcely audible.

"Who is the complainant?" inquired the magistrate.

"I am, sir," said the cunning gentleman. "The woman at the bar, your worship, is continually calling, not only at my office, but at my private residence, and creating a disturbance."

She create a disturbance, with that feeble voice—that emaciated body!

"What have you to say to the charge?" asked the magistrate.

"I only want my papers, sir," said the woman. "He's my lawyer, sir, and he won't give me my papers."

"What papers?" inquired the magistrate.

"The papers of my property, sir. I only want them, sir," answered the woman, in the same feeble voice.

"The fact is, your worship," said the cunning gentleman, "I have been concerned for this woman in an attempt to establish some fancied claim which she has upon some property at Bilberry. I have expended much money—hem!"

"Which I have given you," said the woman. "Three hundred and twenty pounds, sir!—and now he won't go on with the suit, or give me my papers. We have parted with everything we have in the world. We have nothing but a heap of rags to sleep upon—nothing to eat——" Her tears made her silent.

"With that I have nothing to do," continued the cunning gentleman; "and (though it's not for me to tell your worship what is your worship's business) nothing to do with your worship.—I don't wish to be hard with the woman. If she'll only promise not to molest me again, I will not press the charge."

"But will you give me my papers?" urged the woman.

"If you give me fifty pounds, I will; not without," said the cunning gentleman.

The poor wretch at the bar felt the mockery to be so great that she could say no more, but held out her bony hands, and looked towards the magistrate imploringly.

The good-natured man at the table could sit quiet no longer. He rose and said, "Your worship, I know something of this case. The woman has, I think, some claim to something, somewhere; and if this gentleman will give up the papers, I will look into them for her, and either assist her in the recovery of her property, or satisfy her of the hopelessness of pursuing it. She has now been fifteen years ——"

"More than that," said the woman; "nearer twenty years, at law—three hundred and twenty pounds have we paid him, and all I want is my papers." Here she produced from beneath her shawl a tattered white handkerchief, and unrolling it, displayed a small memorandum-book, and something which looked like a very little brief.

"I am not here to go into these matters," exclaimed the cunning gentleman, "I am to be found at my office every day, from nine till five. Will this woman promise not to create any further disturbance at my house?"

"I have no doubt she will," said the magistrate. "You will promise this, will you not?"

"I never did, sir; and I will promise; but my papers——"

"Are yours for fifty pounds, or perhaps this gentleman will advance it," said Mr. Nailer (for it was he), bowing to the poor woman's advocate.

The magistrate here interposed, and, having again exacted a promise that no further annoyance should be attempted, dismissed the complaint. Mr. Nailer bowed to the bench, and retired, looking around him as he retreated, as though to enjoy the mute applause which he considered his forbearance had merited.

"You can go!" said the clerk, in a loud, official tone.

But the woman still lingered, with her eyes fixed upon the magistrate, whilst she mechanically rolled and unrolled the ragged handkerchief which contained her vouchers.

"My good woman," said the magistrate, "I can do nothing more for you."

The poor creature's eyes filled with tears. After a moment's pause, she again said—"My papers we have sold everything for them."

"Have you, then, a partner in this misery?" inquired the magistrate.

"Yes, sir. I've a husband and a child. My husband's a tailor, sir, and when he can work makes soldiers' trousers five pence a pair, sir; when we are all well we can make two pair a day but none of us *can* work now; we are all ill, sir."

Yes—all starving! The magistrate gave the woman some money, and bade her go—but she lingered still, and made another mute appeal with her little bundle. She evidently thought that if the kind magistrate would but look into her case, she should have justice. No one spoke, not even the stern clerk. At last she turned to go away—stopped—held out the ragged handkerchief turned again, and then glided away as it were among the crowd. Poor Mary Brown! (God help her!) The heiress of Bilberry!

What the impediments were to the recovery of her property I could never learn. Death has been more merciful than the law, and long since given rest to the victim of Chancery.

A DOG-CART DIALOGUE.

MY man Davis is a bit of a character. If he 's not up to a thing or two, I should like to know who is. I am often puzzled to know how a man who has seen so much of life as he has should condescend to have "no objection to the country," and to take service with a retired linen-draper, which I am. I keep a dog-cart, and, not being much of a whip, Davis generally drives. He has some capital stories; at least, I think so; but, perhaps, it is his manner of telling them, or perhaps I 'm very easily pleased. However, here 's one of them.

HOW MR. COPER SOLD A HORSE.

"Mr. Coper, as kept the Red Lion Yard, in ——— Street, was the best to sell a horse I ever know'd, sir, and I know'd some good 'uns, I have, but he *was* the best. He 'd look at you as tho' butter wouldn't melt in his mouth, and his small wall eyes seemed to have no more life in 'em than a dead whiting's. My master, Capt. , stood his hosses there, and, o' course, I saw a good deal of Mr. Coper. One day a gent came to look at the stable and see if he could buy a hoss. Coper saw in a minute that he knew nothing about horseflesh, and so was uncommon civil. The first thing he showed him was a great grey coach-hoss, about seventeen hands and a inch, with a shoulder like a Erkilus."

"I suppose you mean Hercules?"

"I suppose I do, sir. The gent was a little man; so, o' course, the grey was took in agen, and a Suffolk Punch cob, that 'ud a done for a bishop, was then run up the yard. But, lor' the little gent's legs 'ud never have been of any use to him; they'd a stuck out on each side like a curricle-bar,—so he wouldn't do. Coper showed him three or four others—good things in their way, but not at all suited to the gent. At last Coper says to him, with a sort of sigh, 'Well, sir, I 'm afear'd we shan't make a deal of it to-day, sir; you 're very particular, as you 've a right to be, and I 'll look about, and if I can find one that I think 'll do, I 'll call on you.' By this time he had walked the gent down the stable to opposite a stall where was a brown hoss, fifteen hands or about. 'Now, there 'ud be the thing to suit you, sir,' says he, 'and I only wish I could find one like him.' 'Why can't I have him?' says the gent. 'Impossible,' says Coper. 'Why impossible?' says the gent. 'Because he 's Mrs. Coper's hoss, and money wouldn't buy him of her; he 's perfect, and she knows it.' 'Well,' says the gent, getting his temper up, 'I don't mind price.' 'What's money to peace of mind?' says Coper. 'If I was to sell that hoss, my missus would worry my life out.' Well, sir, the more Coper made a difficulty of selling the hoss, the more the gent wanted to buy, till, at last, Coper took him to a coach-hus, as tho' to be private, and said to him in a whisper, 'Well, I tell you what I 'll do; I 'll take ninety pounds for him; perhaps he 's not worth that to everybody, but I think he is to you who wants a perfect thing, and ready made for you.' 'You 're very kind,' said the gent, 'and I 'll give you a check at once.' 'But mind,' says Coper, 'you must fetch him away at night; for if my missus saw him going out of the yard, I do believe she 'd pull a life-guardsman off him. How I shall pacify her I don't know! Ninety pounds!—why, ninety pounds won't pay me for the rows, leave alone the hoss!'

The gent quite thought Coper was repenting of the bargain, and so walked away to the little countin' house, and drew a check for the money. When he was gone, I burst out a laughin'; because I know'd Mrs. Coper was as mild as a bran-mash, and 'ud never a' dared to blow up her husband; but Coper wouldn't have it—he looked as solemn as truth. Well, sir, the horse was fetched away that night."

"But why at night, Davis?"

"Because they shouldn't see his good qualities all at once, I suppose, sir; for he 'd got the Devonshire coat-of-arms on his off knee."

"Devonshire coat-of-arms?"

"Yes, sir; you see Devonshire 's a very hilly country, and most of the hosses down there has broken knees, so they calls a speck the Devonshire coat-of-arms. Well, sir, as Mrs. Coper's pet shied at everything and nothing, and bolted when he warn't a-shieing, the gent came back in about a week to Coper.

"'Mr. Coper,' says he, 'I can't get on with that hoss at all—perhaps I don't know how to manage him; he goes on so odd that I 'm afraid to ride him; so I thought, as he was such a favourite with Mrs. Coper, you shall have him back again.'

"'Not if you'd give me ninety pounds to do it,' says Coper; looking as tho' he was a-going to bite the gent.

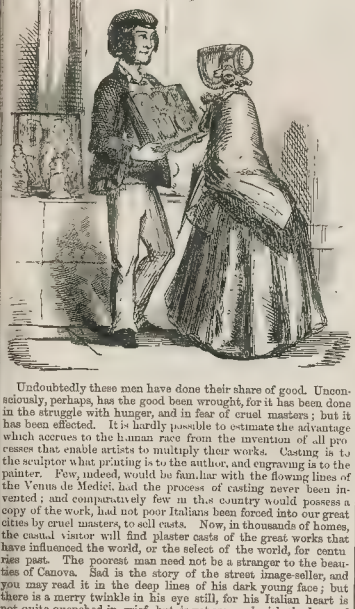
"'Why not?' says the gent.

"'I wouldn't go through what I have gone through,' says Coper, hitting the stable-door with his fist enough to split it, 'not for twice the money. Mrs. Coper never left off rowing for two days and nights, and how I should a' stopped her I don't know if luck hadn't stood my friend; but I happened to meet with a hoss the very moral of the one you 've got, only perhaps just a leetle better, and Mrs. C. took to him wonderful. I wouldn't disturb our domestic harmony by having that hoss of yourn back again not for half the Bank of England.' Now the gent was a very tender-hearted man, and believed all that Coper told him, and kept the hoss; but what he did with him I can't think, for he was the wiciousest screw as ever put his nose in a manger."

ART IN THE BYEWAYS.

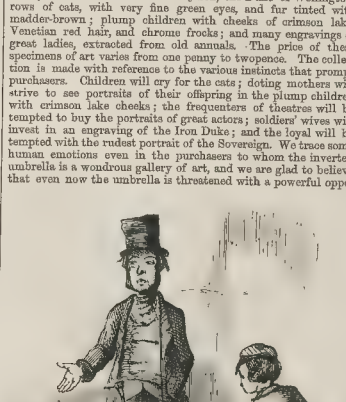
IT is late now to advocate the influence of beauty, as opposed to that of the ugly and the repulsive. Very tedious would it be to the modern student were he confined in a lecture-room to hear an enthusiastic gentleman discourse on the propriety of erecting fine architectural buildings, instead of shapeless masses of brick and stucco. An impulse that is as universal in the nature as the instinct of self-preservation, attaches man to the true, which, whether manifested in the results of science, the graces of literature, or the realisations of art, is the beautiful. There is a kind of moral gravitation in human nature towards the beautiful, that has only lately attracted the attention of the class of men who have wielded the sceptres of nations; but now it is acknowledged in many places, and is about to be used for the good of the human race. The man touched with a sense of beauty, alive to harmony, and filled with a feeling of reverence for the grandeur of the scheme, of which he is taught to believe himself the highest emanation, may be reached by means that would in no way influence a coarser nature. It is a hard matter to treat with the sullen strength of ignorance; but the soul that has the light of the beautiful burning within it, is bound by all the highest attributes of which human nature is susceptible, and is easily controlled. Only a cord will bind the hyæna; but emotions were given to bind men. Therefore that civilisation which develops a mighty nation, glistening with gold, and loaded with the vast treasures of the inhabited world—which represents the perfection of cunning, and the highest elaboration of the means to wealth, is not in the highest sense of the word, civilisation; while the picture, powerful as a battlepiece, lacks the touches of emotion—the emotional laws, which go forth from the closet of the poet and the philosopher, the laboratory of the man of science, and the studio of the artist. It is easy to vote supplies, to make motions on the state of the nation, to frame smart sallies, and, in the midst of personal contention, to pick up here and there, as by chance, little bits of truth that may be fairly appended to the next volume of the Statutes at Large; but it is not often that men are given to the world who could evolve the reason of our position as a planet from the falling of an apple; or sketch the mighty proportions of the giant of the nineteenth century, from the steam of a tea-kettle! Neither do the annual millions of births include always an infant in the mould of Shakspeare. We may always find a decent prime minister, but we rarely light upon a poet; we may always command an individual who can accurately add up the items of the national revenue, but not in everyday life do we meet a Phidias or a Raphael. If, in the present movements of the social mass, we discern any unanimity, it is in their tendency towards the Newtons, the Shakspeares, and the Raphaels of their day. Thankful in their hearts that the commercial relations of men afford them the time for higher pursuits than those which have corporeal gratification for their object, the public of the present time begin to see that they have achieved conquests only in the lesser objects of life. The practical tendencies which have led us to our present prosperous commercial state will soon be regarded only as the baser condition of civilisation, for even now large masses of men see, and not in the far distance, that high state of intellectual and moral culture pervading the various classes of a great and courageous community. The best lessons of civilisation are not typified by the merchant prince in his saffron coach; but rather by the modest artist, snugly painting in his comfortable studio, with high thoughts and limited appetites. He is in close communion with the truths that are thickly scattered about the great solitudes of nature, as they lie, though seldom seen, in the poorest haunts of men. He is painting for the people, who are now beginning to understand him. Hard and crushing in its thanklessness was the task to him when the world glanced at his works with a cold eye, and many mornings were spent in dancing attendance upon a nabob in want of "furniture pictures." But now many eyes, weary with the dull monotony of workshops and offices, are strained towards the fields; many hearts leap to the harmony of Beethoven; many lights shine in this city upon the pages of our greatest and best teachers. And here thoughtful men pause, in the passing hour, to gather hope. Bentham and his train of followers sink into insignificance before the reformers, who present themselves at the baby's cradle, instead of waiting at the prison-door. The labourer may see Beauty, in all her noblest manifestations, steadily approaching his threshold. She bears in her arms the glorious works of God's elect; her limbs glow from the touch of Phidias and Canova; and in her seraphic countenance the souls of Raphael, Guido, Murillo, Angelo, and

Rembrandt, are concentrated. The sight is one to touch the hearts of us all. The first pages of great lessons that, when comprehended, will send the gaoler's keys to rust, and set the worm at work in the greedy gallows, are already open to the bulk of the people. The voices that would have cried down the influence of the beautiful; that would have passed a law declaring rags, and filth, and squalor to be altogether without effect upon the poor human creatures doomed to them; that would have ignored the hunger for truth which rages more or less in every man's heart; these voices, that ever had the sounds of tyranny and social wrong in them, are uttering their dying speech. And as their dread words die upon appalled ears, the gentle voices, with truth, and charity, and love in them, swell and float upon the air. The ministry of the beautiful are about to seize their inheritance. We are beginning to comprehend fully the story of the money-lender, who, when he was about to cheat a customer, drew a curtain before the portrait of his favourite saint. Well, curtains have hidden the noblest works of mankind from the eyes of thousands of men, and they have been ignorant and criminal; and they have been scourged and killed for their exceeding wickedness; but scourgings, killings, and manacles have failed to humanise, and now the curtains are falling from before the gentle oracles. In everything, the great masses of the people are consulted and appealed to. Libraries of sterling books are offered to them; the graces of Macaulay, with his vast historic lore, are placed before them; our great novelists publish cheaply, that all may read them; railway companies offer to convey them to the green fields at the cheapest possible fares; Art-unions hold out chances of pictures, and present well-executed works of art; and popular caterers for the public amusement recognise the growing taste of the bulk of the people, by offering the finest choruses and panoramas that modern art can produce. These are signs of the time. happy, hopeful signs, pointing to a great future. Let us, however, examine the state of public taste more in detail; and we may do this by noticing the revolution that has taken place recently in the art which poor men hawk about the meaner neighbourhoods of London. And first, of the poor Italians who travel about our streets with plaster casts.



Undoubtedly these men have done their share of good. Unconsciously, perhaps, has the good been wrought, for it has been done in the struggle with hunger, and in fear of cruel masters; but it has been effected. It is hardly possible to estimate the advantage which accrues to the human race from the invention of all processes that enable artists to multiply their works. Casting is to the sculptor what printing is to the author, and engraving is to the painter. Few, indeed, would be familiar with the flowing lines of the Venus de Medici, had the process of casting never been invented; and comparatively few in this country would possess a copy of the work, had not poor Italians been forced into our great cities by cruel masters, to sell casts. Now, in thousands of homes, the casual visitor will find plaster casts of the great works that have influenced the world, or the select of the world, for centuries past. The poorest man need not be a stranger to the beauties of Canova. Sad is the story of the street image-seller, and you may read it in the deep lines of his dark young face; but there is a merry twinkle in his eye still, for his Italian heart is not quite quenched in grief, but is yet warmed with the hope of resting in its native earth. Let us glance at his board. Here is the head of Baily's Eve—a fine composition. The sweet lines about the mouth, the gentle bend of the head, indicating the meekness of her womanly nature; the fine forehead, and the flowing lines of the neck, are beauties that lighten many English homes. Milton, with his grave expression, and the massive ridges of his worn cheeks, is near Eve—Eve whom he drew with touches that have immortalised him. Here we have Hebe—young, light, and with an all-pervading modesty; and near her the model of a kneeling infant. Two Shakspeares are fastened to the board; and near one of these we pick out the familiar features of the Duke of Wellington, almost touching those of Minerva. The Queen and Prince Albert figure on various parts of the board; here her Majesty is stamped on a medallion; there the royal head is the size of life, and towers above the cap of the Prince of Wales, who is dressed in nautical costume, with his hands daintily inserted in his trousers' pockets. Sir Robert Peel is also familiarised to the public upon the board; and of late, Kiss's Amazon has been one of the most popular street casts. How far the modellers of Holborn are justified in appropriating to their own advantage the design of Professor Kiss, is a question between them and the sculptor; but it is indisputable that the public have been great gainers by the energy of the street image-sellers in this instance. Occasionally, in the midst of the casts we have noticed, we have seen works, the tendency of which was obviously bad. But of late these have disappeared; and now we may generally examine the boards of our street image-sellers with hearty good will, and recommend every item of the poor Italian's stock in trade to popular attention. The men who sell wax and plaster medallions in the streets also claim some attention. We find the head of Dante offered to the passer-by for sixpence, Mozart obtainable for a mere song, and the Holy Family, in a preparation of wax and plaster, sold in large numbers. And these medallions are not rough, unfinished, inartistic specimens, but very fair representations of the works from which they are taken; and when placed in juxtaposition with the specimens of street art that were in vogue some twenty years back, these modern works are comparative masterpieces.

Italians do not, however, monopolise the distribution of street art. Many people still remember the gaudy prints, in painted frames, which the Jews hawked through the country. The art displayed in the elaboration of these productions would disgrace a schoolboy of the lowest form in the present day; and it is easy to see in the pride with which an old villager will refer to such possessions, that they satisfied all the capacity for beauty that his eye contained, when, untutored and unrefined, he walked abroad with "the certain step of man." Yet even these rude prints, with trees not unlike cabbages, legs lying in confused groups under the bodies of a certain number of characters, hands more resembling empty gloves than human anatomy, horses painfully deformed, houses displayed with an imperial disregard of the laws of perspective, and frames which no depth of imagination could accept as maple—even these distortions, all this want of art, this confusion, and this glaring colour, had an effect, and a happy effect, upon the mind of the poor man who purchased them. It was not a sorry sight to see the peasantry hanging these monstrosities upon their walls; since it showed how, even in the most untutored minds, the love of art is rooted. The degrees of comprehension by which art is judged in a mixed community, at once prove the beneficial effect of even its rudest and most unsatisfactory development. Let us place Turner and a labouring agriculturist side by side on the brow of a hill, with a glorious landscape before them. Dissect the eye of the painter and that of the working-man, and you will find that the former has an organ, in every physical particular, exactly resembling that of his companion. Yet mark the difference of their vision. The countryman sees the river winding about the landscape; he can distinguish Jones's fields from those of his master; he can discriminate between oaks and chestnuts, he sees the bounds of the county, and he declares that it is a fine country that lies at his feet. The light in his eye is not very bright—it is not fixed: his pulse is placid; he sinks listlessly upon the sward, and busies himself with his pipe. But the artist's eye is fixed, and bright with the fire of genius. He sees before him all the marvellous beauties, that, with a magic touch, he will reproduce for the benefit, the enlightenment of his race. Jones's fields are to him so much opportune brown, that relieves the brightness of the swelling mass of rainbow foliage which lies beyond them. What marvellous touches of beauty! what variety in the flow of the river!—there, where it runs through those dark clumps of trees, it sparkles like a trailing serpent—and there, where the corn-fields glow, a cloud lies between it and the sunlight! And then how grandly the fine lines of the sober foreground—that grey gable-end, with the dun smoke rising in the golden light, and the group of cattle in the shade of patriarchal oaks—how grandly all these send back the landscape! And then how the clouds swell from the distance—darkly-red where they touch the horizon, and brightening as they rise in the firmament, with the glimpses of blue, purple, and green atmospheres that part them! That wondrous eye of the painter takes in all these beauties at a glance, analyses and orders them, and then, with a power which we all love to see, works them in upon his canvas! He has selected the harmonies of the landscape, added others, perhaps, and rejected ugly forms and confusing colour—he has added to the landscape the beauties he has caught and treasured up elsewhere, and of which his busy brain is full. His poor companion, whose eye has not been tutored, and to whom the instinct that impelled Giotto is not vouchsafed, hardly recognises the landscape in the painting—he is an art-critic of the lowest class. His pleasure is in broad imitations. Other critics, who have been half-educated, see in art only the cunning of accurate imitation; and "How like a vase!" is the exclamation that often falls upon the artist's ear when he has spent many feverish months over his most ambitious effort. Yet in these inferior comprehensions of art and its power, the thoughtful may detect germs of a hopeful future. The eye that lights daily upon a beautiful object, drinks in, at least, some of its beauty, and dwells ever afterwards with pain upon the ugly and the base. The eye that delights in imitations will learn to love the beautiful, and will yearn to rest in the realms of art for ever.—Let us now glance at the art we may find in the poor dealer's umbrella. Here is a motley collection of prints—all coloured; for it should be remarked that the vulgar eye is attracted first by colour rather than by form. The list includes many theatrical portraits, various likenesses of the Queen, the Duke of Wellington, rows of cats, with very fine green eyes, and fur tinted with madder-brown; plump children with cheeks of crimson lake, Venetian red hair, and chrome frocks; and many engravings of great ladies, extracted from old annuals. The price of these specimens of art varies from one penny to twopence. The collection is made with reference to the various instincts that prompt purchasers. Children will cry for the cats; doting mothers will strive to see portraits of their offspring in the plump children with crimson lake cheeks; the frequenters of theatres will be tempted to buy the portraits of great actors; soldiers' wives will invest in an engraving of the Iron Duke; and the loyal will be tempted with the rudest portrait of the Sovereign. We trace some human emotions even in the purchasers to whom the inverted umbrella is a wondrous gallery of art, and we are glad to believe that even now the umbrella is threatened with a powerful opposition in the shape of cheap engravings of good pictures. These street-sellers of prints already declare that the gratuitous illustrations issued by newspaper proprietors have done great harm to their trade—and good, let us hope, to a large public. We part from the inverted umbrella, viewed as a repository of art, with the belief that among those poor people who have purchased their galleries from it, are many who are open to the refining influences of higher and purer works.



GYPSEY EXPERIENCES.

By a Roumany Rei.

CHAPTER I.—My First Gypsey Lesson.

WO words of explanation before entering upon these experiences. I am not Mr. Borrow. I have not the pleasure of knowing that remarkable agent of the Bible Society. It is perhaps unnecessary to say, that I once had pointed out to me at a club-table, next to that at which I was dining, a gentleman in black, like a Colossal clergyman, with a very white head, and two very black eyes (I do not mean blackened eyes), who I was told was Mr. Borrow. This is all I ever saw of the redoubtable adversary of *Blazing Bosville*. My own experiences of Gypsey life are confined to this country. They profess to be, and are, real experiences. My Gypseys are genuine. My Gypsey women are not the Gypsey women of the theatre; they do not wear short red petticoats, worked at the bottom with black cabalistic signs, still less silk stockings or antique sandals on their feet, or turbans on their heads; nor are they called "Zarah," or "Zillah." My Gypsey men never, by any accident, swathe their legs in linen bandages, cross-gartered with red worsted lace; the nearest approach they ever make to a brigand's jacket is a velveteen shooting-coat, much the worse for wear, and altogether their appearance suggests rather a cross between a debauched gamekeeper and a Staffordshire pot-hawker, than anything like Mr. O. Smith, or Mr. N. T. Hicks, as he appears in *Lo Zingaro*

It is curious, indeed, considering how many Gypseys there are still in England, and how much the race has been worked by painters, dramatists, and novelists, to find how untruthfully they have, as a rule, been represented by all these artists. Among our painters there is scarcely one, except Oakley, who has painted these people as they are. In the pictures and drawings of them there is an entire lack of truth, which can be detected at a glance by the *aficionado*, the true lover and student of Roumany life. I cannot remember a single genuine Gypsey in a novel, though both Bulwer and Disraeli have tried their hands at the class. And among stage plays, the only one in which I have ever seen the Gypsey introduced, with evidence of a real life-like knowledge of the race, is in a version of *Sir Roger de Coverly*, played at the Olympic Theatre during the present year.

Mr. Borrow, no doubt, knows the Gypseys well, and could describe them perfectly. But his love of effect leads him away. In his wish to impress his reader with a certain mysterious notion of himself, he colours his Gypsey pictures (the *form* of which is quite accurate) in a fantastic style which robs them altogether of the value they would have as studies from life. His English Gypsey vocabulary, so far as I have been enabled to compare it with the language actually spoken by the Roumany race, is accurate and trustworthy.

In my native county the real Roumany is unknown. We have "potters," or "muggers," who camp in green lanes, and live by making and repairing small iron and tin wares, much in the Gypsey fashion, combining this industry with the manufacture and sale of coarse eathenware and birch brooms, at questionably low prices. But I had never seen the thoroughbred "Roumany" till I had arrived at man's estate—at least, till I called myself "a man," being really a freshman at —— College, Cambridge.

I suppose I must have a vagabond drop in my blood, otherwise I cannot account for the strong attraction this people have always had for me from the first time I came across them. If there be a Roumany camp within a mile, I wind it. In the country I find "the spirit in my feet" that Shelley sings of, always leading me across commons, and along green lanes, and into wayside woods, and bringing me up within sight of the thin blue smoke, curling mysteriously among the green boughs, and within scent of the pleasant pungency of the open-air wood-fire. No wonder that I have a tolerably wide acquaintanceship among the race. They see my relish for their company and appreciate it. It is to this that I owe the name by which they have kindly adopted me, of the "Roumany Rei," or "Gypsey gentleman." I remember, as if it was yesterday (though it is now some twelve years ago), not exactly my first sight of a Roumany, but my first lesson in their tongue—which I may tell you, *en passant*, is a genuine language, in that state of mutilation which a language must fall into when transmitted orally only, in the hands of an entirely illiterate people. It is closely connected with the Sanscrit, and proves incontestably to every philologist who has ever seen a vocabulary of it, that the Roumany are a North Indian race, whatever may have been their migrations since leaving their original seat, if ever they had one, and have not always been Pariahs and vagabonds. But I have no intention of going into the philology or ethnology of my Roumany friends just now.

I had been sketching all that day, or rather I had been wandering about with a sketch book in my hand, and a water-colour box in my pocket, stopping now and then to make believe to draw; but really enjoying an aimless ramble—away from lectures, and "cram," and private tutor—over the unfenced flats, and by the willow-fringed streams, and through the hap-hazard copses and still green lanes and primitive villages, which make even fenny Cambridgeshire beautiful, if a man has legs for a good day's walk, and eyes and heart to recognise beauty wherever he finds it, even in its homeliest garb. My ramble had been on the Huntingdon side of Cambridge. It was a bright May-day, and the sun was westering; and, though I had no watch, my appetite told me it was hard upon Hall-time. I had set my face Cambridge-wards, and was tumbling along over the tufts of sedge grass, and ploughing through the fallows, and over the young wheat, taking a line of my own across the country, when I saw a thin spiral of blue smoke creeping up the trunk and under the lower branches of a noble beech, one of an irregular avenue of the same trees, that seemed to begin abruptly in the flat I was crossing, and to end as abruptly some half-mile further on. As much from curiosity about the trees or the smoke, I turned out of my direction, scrambled through a sort of natural hedge of elder and bramble, and found myself in a still green road, that begins in the fields and ends in the fields, skirting one farmstead in its way; and, therefore, I presume, claiming to be connected with a country road that runs at right angles to it some fields off one of its ends.

It is an old Roman road. You may still see the vestiges of pavement under the grass that covers it. The people about call it "The King's Hedges." If I have among my readers a Cambridge man, fond of cross-country "constitutionals," he will probably recognise the place from my description. But to do this, he must be a man of about my own standing, I fancy; for the Enclosure Commissioners have been busy since then, and in

that neighbourhood, too. Even at that day, I remember, I had come now and then across raw-looking squares of newly broken-up common, with their lank, unpainted rail-fences, looking more like American zig-zags than genuine English work, and I had sighed to think of common-rights put an end to, and "constitutionals" abridged, on that side of Cambridge.

I came that day upon "The King's Hedges" for the first time; and its strange seclusion riveted me. Under the two broken lines of feathery beech-trees, on whose thin spring-green foliage the slant rays of the afternoon May sun were dancing, ran a low and broken hedge of bramble and elder, close up to which grew the short greensward, the stones of the causeway showing through it here and there, with no wear and tear of traffic on their velvety and irregular faces.

Some twenty yards from the point where I struck the lane, were grouped the three tents of a Gypsey camp, the rounded end of one towards me, while from the space they encircled rose the thin blue column of wood smoke that had first attracted my attention. A rough but light cart was pitched near the tents, and a rusty, saddle-galled, wall eyed pony, with a couple of unkempt donkeys, a black-brown and a dun, were hobbling about, as well as their foot-ropes would allow them, after the short sweet grass of the hedge-side. I stepped up towards the camp noiselessly, for the foot falls without a sound upon that old sward, and was close upon the tents before a long-backed, bandy-legged, yellow terrier, sleeping with his nose in the wood-ashes, was sufficiently aroused to a sense of his duty to fly at me, with that extra activity of yelping zeal which all functionaries are apt to assume when caught napping.

"*Bak-to-lal, chukel* (lie down, dog)," said a shrill voice from the nearest tent, across the entrance of which hung a patch-work quilt.

I lifted it without ceremony, and looked in. Its only occupant was a girl, sitting with her legs doubled under her, Indian fashion, and busied in weaving a small net.

As my shadow darkened the entrance, she let her small hands, every finger bedecked with rude silver rings, fall, with their work, slowly on her knees, and looked up steadily and composedly.

She appeared to me then a woman but her age, as she afterwards told me, was fifteen. I have seen many beautiful Gypseys since then, but I have never seen one so beautiful as Sinfi Curraple (*Anglicè* "Smith"), my acquaintance of "The King's Hedges."

Her features were small, and more Arab than Indian, and with nothing of the Jewish cast that is often seen in Gypsey women. Her eye had the veiled fire peculiar to the race, a sort of filmy languor that blazes up with passion, but which, even while unexcited, exerts still a strange, serpent-like power of latent fascination. Her teeth were small, and white, and sound, as Gypsey teeth always are. Her blue-black hair, in two short, shining plaits, came low across her narrow forehead, and close along her cheeks, sharply marking (if I may be allowed the bull) the triangular oval of the face, by its dark line relieved against the blood-red silk handkerchief, which she wore coiffed, hood-fashion, on her head. On each side of her little mouth, and in the centre of her soft, round chin, was a small blue tattoo mark, which heightened the mellow and velvety smoothness of her skin dusky, but not sallow, and glowing under the sun like the side of a brown Bergamot pear.

She sat so—the beautiful young vagabond!—and looked steadily and calmly at me, without speaking, as the dog, in obedience to her voice, ceased yelping, and nuzzled at her side.

I stooped under the tent, asking, "May I come in?"

"Come in, my rei, and welcome, if you're not afraid to sit by the poor Gypsey;" and, untwisting her legs from under her, she rose without aid of her hand, and reaching a piece of carpet from a bundle of bedding that lay rolled up at the back of the tent, spread it for me on the straw, gravely and courteously. "Let me tell your fortune, my pretty gentleman," she began, after a short pause, in the musical, cajoling, jaunty, sing-song of the race, but seeing, I suppose, from my impatient "No—no—I observe," that it was not for this purpose, at least, I had introduced myself to the tents, she stopped, and began to beg in the true Gypsey fashion. "Give the poor Gypsey a sixpence, my *rei*." I felt the romance coming out of me at this cool, cut-and-dry, business-like sponging, and said. "Don't beg, there's a good girl; if you don't ask for anything, you may get something, but if you begin to beg again I shall go."

She stopped short at this formidable threat, and looking at my sketch-book, said, "I know what that is—it's the book you draw things out in. There was a *rei* came and drew us out, when we were camped in the Gorsehole, near Newmarket, with the tents, and the cart, and the fire, and the *chukel* yonder, and me, and aunt, and uncle, and all of us—as natural as life."

"Will you let me draw you?" I asked.

"Me!" she said, and laughed, and looked archly in my face for the compliment she saw growing there.

"Yes, you are very pretty, and you know it."

"Don't laugh at the poor Gypsey, my *rei*," she said, nestling back into the shadow, and coquettishly drawing forward her red hood, till the arch little face glowed again under the warm light reflected from it, while she let the fire gather slowly under the film of her infernal eyes, till I felt uncomfortable. However, I looked into them as little as possible, and drew on as I best might without it.

"Oh the *cushgar poshnikes!*" she suddenly exclaimed, as I took, to wipe out a light, a flaming yellow and crimson silk handkerchief—how the deuce I came ever to have bought such a blazing Bandanna I can't think, unless it was the Gypsey drop in me that I have spoken of before; "Oh the *cushgar poshnikes!*" and she fairly clapped her hands.

"What is the meaning of '*cushgar poshnikes?*'"

"It is *Roumany rokkerpen*—it's Roumany talk, my *rei*, and it means 'pretty handkerchief.'"

"I should like to learn the Roumany talk. Will you teach me?"

She shook her pretty head doubtfully. "I don't know what Aunt Athaliah would say."

"Never mind Aunt Athaliah. Come, '*cushgar poshnikes*' (I put the words down), and I suppose I must call you '*cushgar*' too? What is 'pretty girl' in your language?"

"*Rincne rakli*. And now will you give me the handkerchief, my rei?"

"Yes, *rincne rakli*; if you'll ask for it in your language."

"*Pal, del mande* the *diklo*."

"That means?"

"Brother, give me the handkerchief."

"There! What will you do with it? Tell me in your language."

"*Chiv it adré* my *churro*" (put it on my head); and, with a rapid movement of her round arms and little fingers, she translated the words by replacing her red hood with my flaunting present. Somehow the vivid orange and crimson made a harmony with the glowing complexion, shining hair, and bright-coloured gown, all mellowed in the warm half-light that filtered through the brown tent. She was a magnificent bit of colour, seen so; and, as a painter, I had a right to admire her, but hardly a right to put my next question.

"What is 'kiss' in your language?"

She gave a quiet little chuckle as she answered, "*Tshuma.*"

"Will you *del mande a tshuma* for the *cushgar diklo?*" You see I was profiting by my lesson.

She put out her cheek, without the least discomposure.

"*Owri*, my *pal*."

I am bound to confess that, encouraged by the action, I took for granted that "*owri*" meant "yes."

"*Kek vafardes na tshuma*," she said very soberly, as I resumed my sketch; and, answering my look, added the interpretation, "No harm in a kiss—it's a Roumany saying, my *rei*."

"And a very good saying too. What is your name?"

"Sinfi Smith; there's Roumany for the name of Smith—*Curraple*."

"And have you always lived in a tent, Sinfi?"

"Yes; I was born in one—in the great snow. We were snowed up,—I've heard from my *dia* (mother)—for three weeks, under Haslingfield Wood."

"Would you like to live in a house?"

"*Kek! kek!*" (No, no!) she replied, with a peremptory shake of the head. "The *kekr's cushgar* for the *keirinyro*. (The house is good for the house-dweller.) I've been in a *keir* often, at Cambridge; the stairs make my head swim, and you can't breathe."

"But it must be very choky here in your tent; at night, now how many of you sleep here?"

"There's me, and cousin Florentia, and Morella."

Three of them in a space of six feet by four, and about four feet high!

"Why, you must be suffocated. How do you breathe?"

"It is hot, sometimes; but then we lift up the *koppa* (blanket) over the tent mouth, and let the sweet air take us."

So we went on, she interspersing her conversation with Roumany words, and interpreting them for me at my request, while I took them down. I had already filled some four pages of my note-book with the fruits of this pleasant lesson; and I must admit that my sketch did not advance quite as fast as my glossary. I found on her part no reluctance to give me the Roumany word for the objects about; and I may remark, by the way, that I have never found any difficulty of this kind among the young Gypseys. The older ones are occasionally more suspicious, and will often pretend that they have no word in their language when they think the knowledge of it likely to be turned against them. Thus, an old Gypsey man once gravely assured me that they had no word in their tongue for "thief." The old rogue, I may remark, was convicted of sheep-stealing at the Bury assizes, after he had solemnly assured me that the name and the practice were alike unknown among the Roumanies.

So our lesson went on for an hour or so. Sinfi was the most patient of instructresses, pursing and torturing her charming mouth in a thousand ways to give me the accurate pronunciation, and rocking her pretty head in the vain effort to comprehend my questions about nouns, and verbs, and prepositions. She had not the least notion of grammatical distinctions, and generally used her words (as the Roumanies all do) as roots, without inflection, interspersed with English. Occasionally I could detect an inflection in the concrete of a sentence, and I was careful to note these.

Though there was nothing either poetical or mysterious in Sinfi's way of talking, there were turns of phrase, every now and then, which agreeably denoted the influence of a free, roving, open-air life; and, above all, there was an utter absence of vulgarity both in the words and the manner of them. On the contrary, the thing that most struck me was the grace of her action in speaking and moving, and the gentle and quiet courtesy with which she brought me what I asked for—some water, some of my sketch-book, and so forth. This gracefulness seems to be found in all the Roumanies, and belongs to the East, like their small hands and lithe limbs. I observed now, too, in her what since I find a universal habit with the race, that she sat like an Oriental woman, her legs folded under her. Indeed, I might have fancied myself in Syria, looking on the slender lithe body, with its Eastern head-gear, its bright-coloured gown, looped upon the bosom, which was covered by two or three layers of red and yellow, and green spotted handkerchiefs; the lower limbs gathered under, and crossed, and the upper part of the figure lying lazily back against the pile of bedding, which, under its covering of a gaudy carpet, might have passed muster for a divan. There was only the *narghileh* wanting; and I grieve, for the effect of my picture, to say that, before our lesson was interrupted this was supplied in the form of a short black cutty pipe, which Sinfi smoked with great relish, declining the cigar I offered her. Cutty pipe, however, and all included, I don't remember that I ever spent a pleasanter hour in my life.

SINFI SMITH.—DRAWN BY F. W. TOPHAM.

REVOLUTION IN FRANCE.

THE PRESIDENT AND HIS STAFF, IN THE STREETS OF PARIS.

MEMBERS DEMANDING ADMISSION TO THEIR LEGISLATIVE PALACE. (SEE PAGE 665.)

THE REVOLUTION IN PARIS.

The most extraordinary revolution among the many recorded in the unhappy annals of France has just taken place—or rather, we should say, has been attempted; for, at the time we write, events are so uncertain, that it is impossible to say whether the act committed by the President of the Republic will produce his own overthrow or that of the Constitution under which he was elected. France is embarked in a new revolution. Louis Napoleon has staked at once his fortunes and his country's destinies upon one bold throw of the dice. Whether he will win all, or lose all, remains to be seen. With one effort of his will the President has annihilated the Constitution, and in breaking the highest bas been all the laws at once. We are still breathlessly awaiting the result. Will France quietly succumb and crouch beneath the bayonet? Will she allow the chief men of her National Assembly to remain, without a trial and without an accusation, in the dungeons of Mazas and Vincennes? Or, will she rise against her Dictator, and proclaim that not even the mighty force of universal suffrage—not even the admitted and disgraceful intriguing of the General Assembly—will induce her to sanction an act of violent repudiation of all agreements—all engagements—an act of perfidy to every principle by which her chief was bound, and an act of perjury to every oath to which he swore? Will she proclaim that the Constitution of 1848, which was cemented with her blood, is not to be made a reality—that her aspirations for social institutions are not to be surrendered to the caprice of an individual, and for the chances which may arise out of them?

We have ever done Louis Napoleon all justice. We have ever admitted his ability, his daring; and not later than last week we pointed out circumstances which we considered might possibly force him to the course which he has since adopted—predicting, indeed, as it happens, with literal accuracy, the very results which have taken place—the dismissal of the Assembly, and the arrest of the leading members of the Opposition. But the question now comes to be—were there steps legitimately forced upon the President? Was he driven unavoidably and unrelentingly by the great current of events upon the *coup d'état* we have just witnessed? We are neither pedants nor purists in the matter. We believe that the Constitution was made for France, and not France for the Constitution; but, looking deliberately back upon the events of the last few days, we cannot discover what was the overpowering necessity which drove Louis Napoleon to the commission of a deadly sin against all political morality—an outrage, indeed, against all political decency. Louis Napoleon alleges in his address to his late Ministers, that a conspiracy was then hatching against himself—against "me;" but does he allege—does he pretend—that there was any conspiracy against his legitimate authority within the terms of the Constitution? No. It is notorious that the only question at issue between the ex-President and the Assembly was the continuance in office of the former beyond the term prescribed by the Constitution. The Assembly, in this matter, were merely rigidly insisting upon the integrity of the Constitution; and Louis Napoleon, by a *coup d'état*, has sought to countermine any measures which they may have been legally preparing for the assertion of this principle. If, indeed, there had been anything in contemplation tending by violence to suspend the executive functions of the head of the State, we can understand that it would have afforded an excuse for some extraordinary measures for their preservation. But we cannot see that this was the case. We know nothing in the state of affairs this week which gave greater warrant for the *coup d'état* than was presented by the affairs of any week before; while there are circumstances which would lead us, on the other hand, to suspect that the recent blow has been long in preparation, and that, whatever had been the course of intrigue pursued in the Assembly, it was destined to fall upon the 2d of December, the anniversary of the "Sun of Austerlitz" and of the first Napoleon Empire.

But whatever the quarrel between Louis Napoleon and the Assembly, whatever their grounds for mutual distrust, there has been nothing alleged, nothing, in our opinion, to be alleged, for his flagrant attack upon the liberties of the press, and his utter suppression of all journals which were not supposed to be ready to echo to his bidding. This fact alone would go far to convince us that in these extraordinary proceedings he has not any moral confidence in the general support of public opinion.

That Louis Napoleon took his measures with consummate skill, and the most cool and comprehensive boldness, will be everywhere admitted. The blow was thoroughly a "knock-down" one, hit on the right place, at the right time, and after all preparations had been resolutely and carefully adopted. But at the date of our most recent intelligence the sun seemed to be wearing away—the benumbing influence of the shock had passed, and elements hostile to the Dictator—we will not call him President—of France were rapidly and ominously seething up around him. The summary stoppage of public conveyances, and of vehicles carrying provisions, which took place on Thursday, warrants apprehensions of more arbitrary measures in contemplation.

We do not speak of the different factions of the Monarchy; but will the *Rouges*, even with universal suffrage before them, rally round the chief of a Republic who acts like the Czar of a Despotism? Will the bulk of the middle classes place undiminished confidence in the man who, for his own private purposes, has not scrupled to break the oath to which he again and again swore—to tear up like a sheet of waste paper the Constitution which he was elected to defend? It may be a palliation of Louis Napoleon's conduct to say that the Constitution was a bad one, and that the Assembly was factious, unpatriotic, and that it hated him; but it is no excuse. Louis Napoleon has flung away in a moment a character for moderation and steadfast good faith which he was so long in making, and which, had he preserved it, would have stood him well in stead. He was assuming a great moral superiority to the Assembly; he was gaining the confidence of the middle classes, and disarming the hostility of the Monarchical factions. All this he has undone with a breath. All these advantages he has flung to the winds. He has broken his word and betrayed his trust. He may ultimately succeed, when he will be a hero among heroes, such as they are; he may fail, when he will be a traitor of traitors. Success is the revolutionary touchstone, and the sure guarantee for contemporary popularity; but, even if Louis Napoleon gain his utmost ends, and realise his most ambitious aspirations, he will not the less have marched to power, perhaps to empire, over broken promises and reckless political gambling.

FOREIGN AND COLONIAL NEWS.

PORTUGAL.

We have accounts from Lisbon of the 29th, and Oporto the 30th. The electoral contest had terminated in Portugal in favour of the present Government.

From Gibraltar we have accounts to the 26th ult. On the previous day the *Janus* left there for Tangiers, to purchase the freedom of the British prisoners captured by the Moors. Two out of the five imprisoned had died

A small French squadron quitted Cadiz on the 24th for Morocco, to claim satisfaction for wrongs inflicted on the Republican nation. The *Hogue* left Lisbon on the 28th for Tangiers, to protect British interests, in the event of the French vessels bombarding the town.

UNITED STATES.

The advices from New York this week are to the 18th ult., by which we learn, relative to the misunderstanding with Spain on the subject of Cuba, that neither Mr. Webster nor M. Calderon de la Barca, the Ambassador of Spain, entertain any belligerent intentions. The only difficulty appears to be the absence of any discretionary power on the part of the Spanish Minister. He has had to send for fresh instructions to Madrid, as was suspected.

The Presidential election almost wholly engrossed the attention of political circles. Speculations as to the probably successful candidate formed the main topic of conversation; and one of the New York papers, referring to the frequent mention made by Kossuth recently here in England of the nomination of Mr. Walker, the late secretary to the Treasury, observes, that that nomination "introduces another formidable aristocratic leader into the field for the campaign of 1852, and upon a platform grand, positive, progressive, and imposing in the highest degree. In connexion with the thickening shadows of the great events before us, this nomination of Mr. Walker at the London banquet is entitled to grave and deliberate consideration"

The question of cheap postage engages much attention at present throughout the Union. At a meeting on the subject, held at the Merchants' Exchange, New York, on the 11th ult., a committee was appointed to memorialise Congress, and urge the passage of a law making the postage on newspapers to any part of the United States one cent, and pamphlets and periodicals half a cent per ounce. It is stated that upwards of 600,000 dollars' worth of postage stamps had been disposed of by the department at Washington since the 1st of July. This gives some idea of the high estimate which the people of the United States place upon the cheap letter-postage system, notwithstanding all the admitted bad management of the department.

The Governor of Alabama had made a curious recommendation in his message to the Legislature. It is no more nor less than an import duty on goods, wares, and merchandise coming into Alabama from certain states.

Jenny Lind has returned to New York from Philadelphia, in excellent health and spirits. Crowds assembled to see her land. The Nightingale was about to give a concert at Boston.

From California there is no news of interest. Gold has been found near Saddle Mountain, which is plainly seen from almost any point near the mouth of the Columbia River, it being fifty miles south-east of Astoria. The quartz rock is said to be abundant in that region, as well as the black sand and other indications of gold.

A valuable mine of anthracite coal has been discovered in Charles River, about four miles from Astoria. The vein is said to be nine feet wide and three feet thick, and was discovered in digging a well.

The New York papers announce the conclusion of a treaty with the Indians on the southern boundary of Oregon.

INDIA.

The accounts in anticipation of the Overland Mail, which have come to hand this week, are dated Calcutta, October 22; and Bombay, November 3. They contain no political news of importance. There had been a serious riot in Bombay, occasioned by a religious quarrel between the Parsees and the Mohammedans, during the latter part of the Mohurrum festivals, the Mahommedans having conceived their faith insulted by a life, with a portrait prefixed, of the Prophet Mahomet, having appeared in a Parsee newspaper. Sixteen persons had been wounded, but the occupation of the town by troops had put a stop to the prevailing violence.

Some serious disturbances have broken out amongst the Mumuns, a powerful hill tribe, and Sir Colin Campbell had been ordered to proceed thither at the head of 2000 men to suppress them.

The forces of Kohat have advanced 60 leagues westward to take possession of the recently annexed districts. They have not yet found any opposition.

The European troops at Peshawur had been again attacked with severe sickness, arising from the variations of temperature. Genera. Sir W. S. Whish, who acted so conspicious a part at Mooltan, was in a very ill state of health, and was about to return to Europe.

CAPE OF GOOD HOPE

Intelligence has been received from the Cape to Oct. 4, which is three days later than the accounts by the mail steamer, published a week or two back. There was no change in the unsatisfactory state of matters existing at the seat of war. The Kaffirs still kept up an attitude of defiance against our troops.

The Kaffirs had burnt and destroyed the house and property of Sir Andries Stockenström at Maasstrom, and carried away his stores of Indian corn, provisions, &c.

STEAM COMMUNICATION WITH INDIA, CHINA, AND AUSTRALIA

We noticed, last week, that the Lords Commissioners of the Admiralty had just issued advertisements inviting proposals from parties willing to contract for conveying her Majesty's mails monthly between England, Gibraltar, Malta, Alexandria, Aden, Ceylon, Madras, Calcutta, Singapore, and Hong-Kong; and every alternate month between Singapore, Batavia, Swan River, or King George's Sound, Adelaide, Port Phillip, and Sydney.

The contract thus proposed to be submitted for public competition embraces a complete revision of the whole mail service between this country, the Mediterranean, Egypt, India, and China, and are intended to supersede and replace the contracts already in existence, which are performed by the Peninsular and Oriental Steam Navigation Company, and which expire in 1852.

The Lords of the Admiralty also propose to incorporate in this contract a stipulation of the conveyance of mails between Singapore and Australia, in correspondence with the outward mail packets from England.

The contemplated arrangements embrace many important alterations and modifications of the existing scheme, provide for a more frequent mail communication with our eastern possessions and China, and also a considerable acceleration in the speed at which the mails are to be conveyed.

From the conditions attached to the proposals it would appear that the projected scheme consists of a semi-monthly mail-packet service between England, the Mediterranean, India, and China, instead of the monthly East India and China mail now maintained by way of Southampton and Alexandria, leaving there on the 20th of every month.

The mail-packet service, hitherto performed by the vessels of the Royal Navy between Marseilles and Malta, is also to be performed by packet steamers, and is to be included in these arrangements.

The line from Aden to Bombay is, however, omitted from these conditions, and the vessels of the Hon. East India Company will continue to convey the mails on that station as at present.

With reference to the Australian mails, an alternate monthly communication only is to be provided by the contractors from Singapore to Sydney; and the route via Batavia, Adelaide, and Port Phillip to Sydney, is selected in preference to the previously recommended line *via* Torres Straits. In view of the existing state of our Australian possessions, and of their future prospects from the present discoveries of auriferous treasures of gold, and of the consequent necessity of providing a rapid, frequent, and regular communication with those distant parts of the world, it cannot be considered that a mail communication once every two months will be sufficient to meet the requirements of the case; it is, therefore, conjectured, or, at all events, hoped, that their Lordships have it in contemplation also to establish a semi-monthly mail between England and Sydney *via* the Cape of Good Hope. Tenders for the latter service were invited about three months since, and the prop-sals were to be sent in during the month of December. Supposing this to be the intention of the Government, the joint services will establish a monthly communication with Australia, a mail being despatched every month alternately, *viâ* Suez and Singapore, and the Cape of Good Hope.

THE TOBACCO TRADE.—The Lords of the Treasury have authorised the Commissioners of Customs to permit tobacco to be imported from the west coast of Africa, in packages containing no less than 80 lb. weight each.

OMNIBUS FARES.—The advantages reaped by the metropolitan public in the matter of omnibus fares continue to be manifested, several further reductions in the fares of the omnibuses on different lines of road having taken place for the first time; the most remarkable instance being that the London Conveyance and Paddington Association Companies have announced that passengers may travel by any one of the omnibuses on the Oxford-street line of road for penny and two penny fares between the Edgware-road and Farringdon-street, a circumstance entirely unprecedented.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

The correspondent in Austria of the *Daily News*, who had arrived from Vienna on the 1st inst., was arrested at Berlin at an early hour, and kept under arrest until the departure of the Hamburg train, at six in the evening, by which he was compelled to leave Berlin and the territory of Prussia No reasons were given, except that the order was issued on *poteretiche grunden*, or "reasons of police." A representation was made to the Foreign Office, through the English Embassy, but no answer had been received.

The demolition of the railway lines in the Papal states is becoming more possible, by the deposition of the million of dollars in the hands of the Nuncio at Paris, which was required of the contractors by the Roman Government This deposition is said to have been effected

General Oraa, the celebrated Christino General, died at Bexiam on the 23d ult.

On the 22d ult. the engineers were actively engaged in surveying the lines for the Egyptian Railway, and were in daily expectation of the arrival of Mr. R. Stephenson to decide finally the exact course to be followed between Alexandria and Cairo. Measures have been taken by the Pacha's Government to procure a supply of workmen, who are to be draughted from the different provinces in proper proportions, and who will be liberally remunerated and fed for their labour.

The *Bathurst Free Press and Mining Journal* says, that a body of gentlemen of that city, at the head of whom are the Colonial Secretary and the Speaker of the Legislative Council, have determined upon offering the Queen of England "a crown of pure gold"—an emblem of her Sovereignty and of her people's loyalty, not less than their determination to uphold the law which she dispenses.

On Monday information was received by the police, that a letter, posted at Manchester on Wednesday week, containing bank notes to the amount of £280, and addressed "Wm. Miller and Sons, 87, South Frederick-street, Glasgow," had been abstracted whilst in course of transit through the Post-office, and, notwithstanding the exertions of the authorities, the offender remains undiscovered.

The Chevalier Tottie, the Swedish and Norwegian Consul-General in London, who, during the long period of nearly 40 years, has officiated in that capacity, and who, during the Exhibition, served as Special Commissioner for Sweden and Norway, has just received from his Majesty the King of Sweden and Norway a distinguished mark of favour, in consideration of his valuable services, by being made a Knight Commander of the Royal Swedish Order of Wasa.

The *Mary Bonaparte*, which sailed from Sydney on the 24th of July, arrived, on Saturday last, in London with about £10,000 of Australian gold

Mr. Thomas Marriott, of Windsor-terrace, City-road, London, has bequeathed the munificent sum of £10,000 to the Wesleyan missionary Society. Besides this splendid addition to the wealth of his property, which will amount, it is said, to several thousand pounds, is to be paid over to the fund for the superannuated preachers and widows of Wesleyan ministers. His executors are the Rev. Dr. Bunting and the Rev. Dr. Alder, with two other gentlemen.

The Ackworth estate, situate near Pontefract, so long in the possession of Mr. John Gully, late M.P., has been purchased by Mr. Harry Hill, for many years well known in sporting circles.

On Saturday evening last, at a meeting of the members of the Mechanics' Institution of Fort William, Scotland, the Right Hon. Lord Abinger delivered a very interesting lecture on general literature and science. Speaking of poetry and poets, he enumerated a few of the authors whom he considered particularly worthy of study, and specially dwelt upon Pope and his happy translations from Homer. At the close of the lecture his Lordship very kindly presented the institution with a very handsome edition of the British poets, in thirteen large volumes—a valuable gift, which will certainly prove a popular addition to the library.

Mr. W. H. G. Kingston suggests that a portion of the Crystal Palace be set apart for the purpose of founding a colonial museum, on such a scale as to afford a complete and correct notion of our vast colonial possessions, whether as regards their soil, climate, productions, vegetable and animal, or manufactures

On Monday, the 17th ultimo, Mr. William Elliott, of Walton Mill, near Chesterfield, was shooting in the neighbourhood of Matlock, when suddenly two immense birds flew over him; by a fortunate shot he broke the wing of one, and its large size, singular plumage, and extraordinary weight (19 lb.) made him lost in conjecture as to its species It was sent to Sheffield, and proved to be the "capercalzie," or cock of the wood or mountain a bird so extremely scarce that it was very rarely found, even amongst the alpine districts of Scotland, where it is formerly to be met with in abundance, living upon the tender buds of the spruce fir.

The King of Hanover has issued a decree by which he declares that he takes the chief command of the army. As his Majesty is blind, this has caused some sensation; but the object of it is to take the command out of the hands of the Minister of War, because he is accountable to the Chambers

On Saturday, the 15th ult., the head keeper of Sir Alex. Dixie, Bart., caught in the large lake at Market Bosworth a pike, which measured three feet eight inches in length, and one foot seven inches round the thickest part, and weighed 22 lb.

On Friday se'nnight, as Mr. Henry Mumford, of Felsham, was out with the hounds, on taking a leap at a slight fence, his horse, a valuable animal, fell with him, and pitching upon his head broke its neck, and died instantly. Mr. Mumford escaped unhurt.

St. Giles's Church, at Hillsley, near Wotton-under-Edge, was consecrated on Thursday, last week, by the late Bishop of Madras, who officiated for the Bishop of Gloucester and Bristol. The body of the church is fitted with open pews to seat 280 persons, and the whole possesses an imposing and massive appearance.

The Rev. William Weldon Champneys, M.A., rector of Whitechapel, who has been appointed a canon residentiary at St. Paul's Cathedral, in the room of the Rev. J. Endell Tyler, B.D., deceased, publicly read himself into office on Sunday last. The Dean of St. Paul's, the Rev. Prebendary Hawkins, and several minor canons, were present during the ceremony.

During the year 1850 the diocese of Chester contributed £2490 4s. 10d.; the diocese of Manchester, £884 19s. 3d.; the diocese of St Asaph, £402 1s. 1d.; and the diocese of Bangor, £110 14s. to the funds of the Incorporated Society for the Propagation of the Gospel in Foreign Parts

A circular has been issued by the Lord Chamberlain, addressed to all the managers of the metropolitan theatres, requiring them to send a description of all the comic scenes in the forthcoming Christmas pantomimes a fortnight before their production.

The original title of "Highway Robbery—£20 Reward" to Mr. Morton's farce, the "Two Bonnycastles," at the Haymarket Theatre, was prohibited by the Licenser of Plays.

It appears from official reports that no less than 1007 fires have taken place within the bills of mortality districts of London from January 1 to November 29.

As an improvement on the great waste of light in street lamps, it is suggested that the tops or roofs be made of tin, to be kept bright, or of glass stirred over to be looking-glass, in order to reflect the light downward.

The *Milan Gazette* announces that Count Tedeschi, aged forty, has been condemned to death for having circulated revolutionary pamphlets; but that Marshal Radetzky has commuted the punishment to ten years' imprisonment in irons.

The *Messagiero* of Modena announces that the international committee for the execution of the railway of Central Italy commenced its labours on the 14th ult.

A letter from Naples of the 14th ult., in the *Corriere Mercantile* of Genoa, states that the King of Naples is forming a camp of observation at Capua. It is to be composed of 50,000 men.

A first trial of the electric telegraph between Genoa and Turin has been made with complete success.

Arrivals at Rome continued on the 20th ult., but more slowly than last year, owing to the resistance of travellers to move about in the continuous bad weather. Florence, however, was very full, and, if the state of Europe remain tranquil, everybody would swarm southwards before Christmas.

Mdlle. Rachel, after her visit to Rome, went to Florence.

The official list of those who won prizes in the gold ingot lottery in Paris has been published. The great prize of £16,000 was won by a vine-dresser at Bozzy, where fine champaign is grown. Only one spurious ticket claimed the prize, and that was so gross a forgery as to be instantly recognised.

Upwards of 160 miles of wire are to be laid down on the Lancashire and Yorkshire Railway and branches

The *Lincolnshire Chronicle* states that the Earl of Wilton, on Sunday, played ball several times on the splendid organ in Melton Mowbray Church.

A sparrowhawk, which measured 22 inches from tip to tip of the wings, was recently shot near Tranmere.

The Austrian Government are determined to keep the army upon as formidable a footing as possible; and, in spite of the severe winter which had set in, and the deep snow upon the ground, reviews and military parades went on almost daily, and were usually attended by the Emperor in person, or one of his brothers.

Every man's cottage at Crewe is lighted with gas at a cost of 1½d. per week.

There is now living at Wymondham, Norfolk, with his mental faculties unimpaired, Mr. Robert Bates, father of Mr. Bates, merchant, Mildenhall, in the 110th year of his age. He has now living five children, the youngest 69 and the eldest 80 years of age. This information was given by one of his *boys*, aged 76.

Within the space of two hours, on Tue day morning, the North Shields Theatre was entirely destroyed by fire. The fire was discovered she'ly after midnight, and by two o'clock the building and "properties" were in one mass of ruins. But for the exertions of the fire brigade and the military, a large block of buildings in the same street would have met a similar fate The loss to Mr. Rosby, the manager and the proprietor of the building, is exceed £1000.

The imports of grain, flour, cheese, &c., into Liverpool, for the fortnight ending 26th ult., were 125,192 bushels of wheat, 42,892 barrels flour, 3859 sacks ditto, 61,050 bushels Indian corn, 5070 bushels beans 923 barrels rye, 7902 boxes cheese

METROPOLITAN NEWS.

The Royal Society.—The anniversary meeting of the members of the Royal Society was held on Monday afternoon, at the apartments of that learned body at Somerset House. The Earl of Rosse (the president) came expressly from Ireland to take the chair. There was an extremely large attendance of the fellows of the society. The report of the proceedings of the council during the last session having been read, the Cowley medals were awarded, and also the Royal medals, the president (the Earl of Rosse) delivered them to the respective successful competitors. The customary bal lot for the election of the council for the ensuing year was then proceeded with, when the president (the Earl of Rosse), the treasurer (Colonel E. Sabine, R.A.), the secretaries (Mr. Samuel H. Christie, M.A., and Mr. Thomas Bell), and the foreign secretary (Captain W. H. Smyth, R.N.) were re-elected. The other members of the council elected were as follow, those in *italics* being new members this anniversary:—Mr. William Bowman; *Mr. Benjamin Collins Brodie; Mr. Charles Brooke*; the Rev. Professor Challis, M.A.; *Dr. W. Clark; Dr. J. Gates Dawson*; Sir *Sir Sir* Sir Malpas Gray Egerton, Bart.; *the Very Rev. the Dean of Ely*; *Mr. J. G. Gassiot*; Marshall Hall; *Sir J. F. Herschel, Bart.*; Professor W. Hallows Miller, M.A.; *Lieut.-Col Portlock, R.E*; Mr. E Solly; *Mr. W. Spence*; and *Dr. Nathaniel Wallich*. After a very interesting meeting, the Earl of Rosse, the vice-president, and members of the council, and a select party of the fellows, adjourned to the Freemasons' Tavern to celebrate the customary anniversary dinner.

Royal Institution of British Architects.—On Monday night the members held an ordinary meeting; Mr. P. Hardwick, R.A., in the chair. The routine of business having been transacted, Mr. C. Bruce Allen, as member of the institute, proceeded to read an interesting paper on the means adopted for the establishment of a school for lessons in drawing and modelling to workmen employed in executing works of art, and a museum for objects of mediæval art. He sought to establish the general proposition that the art of design was inseparable from that of execution, and that if it was desirable to encourage and savour to cultivate it in schools specially intended for that purpose. In support of this position he cited the examples of Michael Angelo, Ghiberti, Chantrey, and Gibbons, contending that all the various designs of those great artists were formed in their own minds, without the aid of teaching, before they were embodied or perpetuated on canvas or stone. The result was, that the designs of all great artists were purely spontaneous, resulting from the exercise of the highest powers of mind, combined and concentrated. To attempt to teach any man to design like Raphael, would be like teaching any one to write like Shakespeare. That being so, he contended that instead of seeking to teach design to artizans, it would be far wiser to endeavour to teach them drawing and modelling, so as to enable them to execute the conceptions of others in a skilful and artistic manner. Mr. Allen concluded by recommending the formation of a museum of mediæval art, remarking that, to our disgrace, not a single shelf in the whole British Museum was devoted to British antiquity, whilst on the continent they had a magnificent collection of the relics of kings, warriors, and statesmen, and of specimens of carved foliage, as were scattered up and down among our cathedral establishments. Some discussion followed among the members on the merits of Mr. Allen's proposition, and the proceedings concluded with a unanimous vote of thanks to him

Institution of Civil Engineers.—At Tuesday's meeting, Sir William Cubitt, president, in the chair, the discussion was renewed "On the Application of Machinery to the Manufacture of Rotation-Charred-wood fibre-arms, and the Peculiarities of those Arms," by Colonel Samuel Colt, U.S., America, in which the Hon. Robert J. Walker (late Secretary to the U.S. Treasury), General M'Neil, Mr. Hodge, &c. took part; the processes of manufacture were described, and the importance of machinery in a country like America, where labour was so dear, was shown. It appeared that slowly rotating rose-cutters were the chief agents in the various pieces being had to the tool, and presented in different directions to the required cutting action, almost without any intervention of the workman after being brought under the action of the engine. For instance, the lock-frame, after being centred, passed through twenty-two successive hores it was completed. And all the operations had reference to the arbor, or centre pin, first inserted. The same took place with other parts; and such a degree of uniformity was arrived at that in 30,000 arms made constantly in progress of manufacture in Colonel Colt's works were put together from pieces taken promiscuously from the mass. It was observed, that the object of all enlightened American was to produce articles between their country and this, their fatherland, and that this would be more aided by the labours of civil engineers than by any other class of men. That in the United States, though there was a less amount of high attainment among the engineers, there was a greater amount of sound education and ingenuity among the working mechanics than generally existed among the same class in this country. The aid of English civil engineers to improve the literary and scientific character of the United States ship canal, for which the American engineers were the pioneers with the railway now in course of execution, and, in paying a graceful compliment to the attainments of civil engineers on the part of Telford and his associates in the profession, it was stated, that almost every English engineer of any talent who had gone to the United States, even in very humble positions, had, in a few years, attained eminence and fortune.

Botanical Society of London.—The fifteenth anniversary meeting was held on the 25th ult., at the society's rooms, 20, Bedford-street, Strand; T. Moore, Esq., F.L.S., in the chair, Mr. G. E. Dennes, the secretary, read the report of the council, from which it appeared that 61 new members had been elected since the last anniversary meeting, and that the society now consisted of 270 members. Many thousands of British and foreign plants had been distributed to members in the United Kingdom and various parts of Europe, and the donations to the library had been considerable. The report was unanimously adopted; after which a ballot took place for the council, when J. E. Gray, Esq., F.R.S., was re-elected president; Mr. Reynolds, treasurer; and Mr. G. E. Dennes, secretary.

Entomological Society.—The monthly meeting was held on Monday evening; Mr. J. O. Westwood, president, in the chair. The secretary on behalf of Mr. H. Cooke, exhibited *Argynnis adippe*, *Lathonia*? *Dyptheræ*, and *Adela capitella*, all rare British lepidoptera, taken near Hastings. Mr. White announced that among the insects brought by Mr. Ede, R.N., from the Arctic regions, the spider and two flies had been the only observations on the great power possessed by such fragile creatures of resisting intense cold, and added that he believed the number of insects in the polar regions to be much larger than is generally supposed. The president read some notes on the entomological productions in the Great Exhibition, showing, from the examples in that collection, how much society was indebted to insect labours. The secretary read an abstract of Dr. Lacaita's elaborate memoir on the *Pselaphidæ*, published in the "Boston (United States) Journal of Natural History." Several donations of valuable books and insects were announced.

The National Freehold Land Society.—Sir J. Walmsley, M.P., presided at the second annual meeting, on the 28th ult., at the London Tavern. Mr. Cobden moved the adoption of the seventh and other routine business took place. The £30,000 received during the past year by the Freehold Land Societies, the National Society received £26,187; and out of 15,000 new members, it had 4231; and out of 25,000 new shares, 9381 were issued by it. The net balance was £3077; out of which a dividend of 5% 9s. 4d. per cent. would be the result of such numbers as had a right to dividend on their shares, and the balance to the reserved fund. Some lots of land remained, which had been offered to members entitled to choose, and which, on the 10th of January next, would be offered for competition to others when they were not entitled. Mr. Cobden stated that it was in contemplation to get up a similar society in Ireland.

Customs Duties.—Foreign Goods.—The Commissioners of Customs have issued a general order to all the ports in the kingdom, directing that no deposit be required in future on the issue of bills of sight for the examination of foreign goods for the duties of the several ports, and that the duties to be paid from the importing vessel, and examined by the proper officers, to ascertain their description and quantities, for the duties.

The City of London Association for the Relief of the Poor.—On Wednesday evening the annual meeting was held at the London Coffee-house; Mr. Alderman Wilson in the chair. The report commenced with an earnest appeal for contributions to the society, owing to the general belief that the coming winter would be one of great severity. During the last year the society had supplied the poor of the city of London with 24,561 cwt. of coals, at 6d. per cwt. The amount of subscriptions was less this year by £80 than the last. The report concluded with a hope that the loss in the present institution would sustain by the deprivation of the valuable services of the Rev. John Harding, who had been appointed Bishop of Bombay. The receipts during the year were £1789 9s. 9d., while the expenditure was so managed as to leave a balance in hand of £324 13s. 10d.

Saving Life on the Coast.—At a weekly meeting of the committee of the Shipwrecked Fishermen and Mariner's Royal Benevolent Society—Rear-Admiral Hope in the chair—the recommendation of the claims received for the life-boat department, the Right Hon. Lord Henry Cholmondeley chairman, the following rewards were unanimously voted; viz.—To Lieutenant A. Kennedy, R.N., and the crew of the Coast Guard, Gairloch, on the N.E. coast of Ireland, the silver medal of the society, and a pecuniary reward to two countrymen assisting, for their gallant conduct in saving the lives of the crew of the schooner Margaret Brown, Rock; to the crew of the revenue cutter *Thrush* and *Aurora's Increase*, a donation of £5, and a silver medal to William Lewes, John Tye, William Sodor, George Wyatt, and Joseph Day, who manned the boat, and succeeded in saving the crew of the brig *Neide de Jong*, wrecked on the Longsand, off Harwich (the crews of these two vessels were awarded a donation of £20 for saving the lives of the crew of the *Loyalty*, wrecked on the Whiting Sand in January last); to two fishermen of Thornham, a pecuniary reward for assistance rendered to the crew of the smack *Mersey*, which went to pieces on the Stubborn Sands, off Heacham. Four life boats for various parts of the coast were reported built, and tenders ordered to be entered for four others. It appeared that within the last two months £.00 had been expended in the relief of shipwrecked men, widows, and orphans; 71 widows, having 134 orphans, had been relieved, the widows receiving from £3 to £13. The late severe gales had caused much destruction to the coasts, in addition to the necessity so to make the committee fear being obliged to sell stock, which is the more to be deprecated as the interest of it was appropriated to further relief in yearly grants to the widows of those who have perished in their calling and who have orphans under fourteen years of age.

Early Delivery of Letters.—The Postmaster-General has effected arrangements by which the inhabitants of the populous districts of Clapham, Stockwell, and Brixton-hill will soon receive their general post letters nearly two hours earlier than heretofore; and that inquiries are making to accelerate the delivery of these letters in other districts near London.

Cabinet Council.—A cabinet council was held on Tuesday afternoon at the foreign-office. It was attended by Lord John Russell, the Lord Chancellor, Sir George Grey, Viscount Palmerston, Earl Grey, the Chancellor of the Exchequer, Sir Francis Baring, Lord Broughton, the Right Hon. Henry Labouchere, the Earl of Carlisle, the Marquis of Clanricarde, the Right Hon. Fox Maule, Lord Seymour, and Earl Granville. The council sat for upwards of two hours and a half. The Marquis of Lansdowne (Lord President) was prevented, by indisposition, from travelling to town from his seat, Bowood Park, Wilts, to attend the council.

Official Appointments.—Earl Grey has just appointed James St. John, fourth son of James Augustus St. John, to be Surveyor-General to the colony of Labuan, where his brother, Mr. Spencer St. John, already holds the high office of her Britannic Majesty's Commissioner to the Sultan of Borneo, and the Princes and independent chiefs of the Indian Archipelago. Lieutenant-Colonel John Gemmell Clerke, late of the 1st West India Regiment, appointed President and Senior Member of Council of the Virgin Islands. Captain James Richard Booth, R.N., is appointed Lieutenant-Governor of Montserrat. Mr. Robert Duncan Wilmot is appointed Colonial Secretary of New Brunswick, &c. Richard Francis Morgan is appointed a Member of the Legislative Council of Ceylon.

The Peel Penny Subscription.—Mr. Hume has written a letter to a contemporary stating that the subscription has been closed, and all the accounts audited and settled by the committee, the amount being only £1700 sterling, which is in the Bank, and that on his return to London measures will be adopted by the committee and others for the application of the funds in the manner that shall appear to them the best calculated to carry out the resolutions agreed to at the public meeting at the Whittington Club

Reform Meeting.—Lambeth.—A meeting of the electors and the inhabitants of Lambeth took place on Monday evening, at the Horns Tavern, Newington; W. Williams, Esq., M.P., in the chair. Sir J. Walmsley, M.P., Mr. Pollatt, Mr. Webber, Mr. M'Leod, Mr. Goldsmith, Mr. Slack, Mr. F. Dunkin, Mr. G. Thompson, Mr. Lee, and the chairman, addressed the meeting, insisting on the necessity of a thorough reform of the House of Commons. A household or home suffrage, whether rates were paid or not, or whether householders or lodgers, was contended for by the chief speakers and a petition to Parliament based on the resolutions was agreed to.

Anniversary of the Polish Revolution.—Saturday, the 29th ult., being the 21st anniversary of the Polish revolution of 1830-31, a great number of refugees, resident in London, attended a funeral service in the Roman Catholic chapel, Soho square, in commemoration of those of their countrymen who fell in the war of that national struggle.

Meeting of the Inhabitants of Nottingham.—A meeting of the inhabitants of Nottingham and its vicinity, convoked by the Reform Association of the district, took place on Monday night at the Prince Albert Tavern; Mr. Dunford, president, in the chair. Mr. Fergus O'Connor, representative of Nottingham, and Mr. Feargus of Italy and Hungary. Mr. Feargus O'Connor addressed the meeting, but was frequently called to order. A committee was formed to co-operate with the Society of Friends of Italy.

Kossuth Military Engineering School.—According to arrangements entered into by M. Kossuth during his stay in England, a military engineering school has been established, to teach Hungarian officers, resident in London, the art of military engineering. Colonel Pasaly, late director of the fortifications at Komorn, appointed by M. Kossuth as professor, gave on Monday last his introductory lecture, in which he urged upon his audience the necessity of making good use of their time

Italian Mission in London.—A mission or spiritual retreat has been given to the Italians resident in London, for the last fortnight, in Baldwin's-gardens, Gray's-inn-lane, by two Franciscan Capuchin friars, under the direction of the Rev. R. Mella, D.D., secretary of the Italian Catholic Church. It was while returning from this chapel that Dr. Férant was attacked and received several blows, but no attempt was made on his life. The mission was brought to a close on Sunday evening in the Sardinian chapel, Lincoln's-inn-fields, when Cardinal Wiseman preached the concluding sermon in Italian. The chapel was crowded with Italians. At the conclusion of the service hymns were sung in Italian by the congregation.

The Siberian Arctic Expedition.—Letters of the 25th ult. have been received from Lieutenant Pim, on his way to St. Petersburg. He had passed by railway through Cologne and Hanover to Berlin, the snow falling heavily, and at times so deep as to obstruct the train by its accumulation. Lieutenant Pim had letters of introduction to Baron Humboldt and M Adolph Hermann, from both of which he received much kindness and valuable counsel. He had also the honour of being presented to the King of Prussia, who received him most kindly, and expressed the greatest interest in his scheme, which he thoroughly entered into. The King has caused letters to be written to the Imperial Russian Ambassador at Berlin on Pim in his protection. Lieutenant Pim was to start for Warsaw on the evening of the 25th

Brompton Hospital for Consumption.—At the quarterly meeting of Governors of this valuable institution—the Hon J. W. Perry in the chair—the report of the committee, read by the secretary, Mr. Cross, gave a satisfactory account of the position of the charity. The proceeds of the military concert and bazaar at Chelsea, on the 17th and 18th of June, on behalf of the hospital, including donations, &c. amounted to £6,000 16s. 6d. The offer of Lascelles Iremonger, of Ranelagh's grounds, Fulham, was less successful, though the donations, inclusive of 10 guineas from the Bishop of London, were £110. A tender for erecting a new wing to the hospital, at the cost of £6,000, had been accepted, and the works are proceeding with vigour. A plan for the formation of a sanatorium on the south coast of England is under the consideration of the committee, and the Governors will receive due notice of the same. The institution. Among other legacies, the committee reported one of £3000 left by the late Edward Briggs, Esq., of Hayes-place. The number of patients admitted into the hospital, of whom 64 have died, and 70 have been discharged; the number now remaining in the hospital, 90; number of outpatients during the same period, 1462

Free Cancer Hospital.—A meeting of the committee took place on Tuesday, in the board-room, Cannon-row; Hon. Colonel Ogilvy in the chair. This is the only hospital in the country for the exclusive treatment of cancer, fatal to more hundreds annually than any other disease. In 1850 the deaths were, in England, 1398 males and 2388 females. The new hospital had only been in existence six months; but there were forty patients, three of whom had been perfectly cured. An earnest appeal for support has been made in the report of the medical officers

St. Helen's Catholic Church, Bayswater.—The first stone of a Catholic Church, to be dedicated to St. Helen, was laid on Tuesday by Cardinal Wiseman, assisted by the Very Rev. Dr. Whitty, Mgr. Magee, D.D., to whose charge the new mission has been assigned by the Roman Catholic clergy. The ceremony commenced shortly after ten o'clock, when a procession was formed to the ground. The position of the church is nearly due east, its south side fronting Westbourne-grove Terrace, and the new schools will be erected on nearly the half of Westmoreland-terrace. Attached to the sacristies will be a priests' house capable of accommodating three clergymen On the opposite side it is contemplated to erect a convent for the Sisters of Mercy, and schools for girls, those for boys being just finished. After the ceremony was finished, the procession moved towards the school-room (which is fitted up as a temporary chapel), when it was solemnly opened by Cardinal Wiseman, who preached a sermon from St. Paul to the Galatians, c. vi., v. 14 Mass was then said. Among those present were Lady Gerard, Mr. P. H Howard, M.P., Sir John Scott Lidell, and other members of the Catholic aristocracy.

Jubilee of the German Lutheran Church in London.—Last Sunday morning the jubilee of the establishment of the German Lutheran Church in London was celebrated at the church in the precinct of the Savoy, the first German mission in London having been established in the year 1550, in the present minister, the Rev. Dr. Steinkopf. The building on the occasion was very beautifully ornamented with laurels, evergreens, &c The congregation was very numerous, and amongst other distinguished persons present were the Duchess of Orleans, the Prussian Minister, &c. The sermon was preached by the Reverend Dr. Steinkopf; after which the congregation was addressed on the state of the Church by the Rev. Dr. Cappel, Dr. Charles, Dr. Wallbaum, Dr. Kilper, and Dr. Schmid, the ministers of the principal German churches in London. During the service several *Lieder*, composed expressly for the occasion, were sung by the choir.

Metropolitan Sewers Commission.—The monthly court was held on Wednesday, in Greek-street; E. Lawes, Esq., in the chair, supported by Sir John Surgoyne, R.E., Captains Dawson and Vetch, Messrs. Hawes and Allason The balance in hand was £6304 19s. 6d., and payments to the amount of £3393 2s. 11d. were ordered. One of the items of expenditure was £50, a quarter a salary to the Chairman of the Commission. From an official correspondence that was read, it appears that the Treasury have ordered that Mr. Lawes shall receive a salary of £1000 a year, with an intimation that the commissioners should consider the expediency of reducing the salaries and wages of the officers and persons employed by the Commission. The court resolved to refer the matter into consideration.

City Sewers Commissioners.—At the Court on Tuesday, Deputy Peacock in the chair, the motion of Mr. Barber, that the Commissioners should renew their application to the dean and chapter of St. Paul's for the removal of the iron railing from the western front of the cathedral, in order that a portion of the ground now enclosed might be paved, and opened as a public way, was carried. The commission is enabled by act of Parliament to purchase the ground, if necessary, from the cathedral authorities. Several contractors were fined for not cleansing the streets

Metropolitan Sewage Company.—At the adjourned half-yearly meeting, on Tuesday, at the offices in the Adelphi, the report of the committee of investigation was read It stated that the affairs of the company had not been conducted with sufficient economy, but there was no reason to despair of ultimate success. The expenditure had been £48,136. According to the report of the directors, sufficient support to the society had not been given by the market gardeners of Fulham and the public at large, but the expenses had been much reduced

Supply of Coal.—Within the last twelve months, in consequence of the facilities afforded by railways for the cheap and speedy transit of coal from the various parts of the kingdom to the metropolis, the inhabitants of London have enjoyed their fires as well as cheap bread. The supply is on the increase and consequently we look forward to a further reduction of price. The great Western and Forest of Dean Coal Company have been established to supply the coals of that locality, which possesses many excellent qualities of coal of first rate quality The west, the north, and the midland counties will thus be brought into active competition in the London market, and the public must necessarily reap the benefit.

The Scottish Distillers and the Board of Excise.—A correspondent of the *Daily News* states that the concession granted last year by the Commissioners of Inland Revenue to the distillers of North Britain of liberty to import spirits into England exempt from the differential duty of 4s. 8d. per gallon, upon special application to the board, has been withdrawn, owing to the fact that some Scottish firms have taken advantage of it to establish a permanent trade south of the Tweed

The Price of Beer.—A public meeting took place on Monday night, at the Ship Inn, Long-lane, Bermondsey, to adopt measures for the purpose of procuring a reduction in the price of beer. Resolutions were passed to enforce members of a league to agitate the question for the benefit of the working man. The advantage of the repeal of the Corn Laws had not been extended to the people by the reduction in the price of barley, as the cost of beer now was as much as in 1847

Termination of the Strike of Mr. Myers' Workmen.—On Saturday night a general meeting of the masons and other workmen on strike took place at the Temperance-hall, Broadway, Westminster, to consider the latest terms offered by Mr. Myers through the deputation which had waited upon him. These terms were, that the men should be allowed to lose as much as one day, or ten hours, per week, without being liable to forfeit the four o'clock privilege on Saturdays, but not to take any further time to themselves without previously applying to their respective foremen for permission. After a long discussion the resolution was unanimously adopted that the terms offered should be accepted, and a deputation was appointed to carry the resolve to Mr. Myers. The strike lasted upwards of five weeks.

Apprehension of a Bank-note Stealer in Hungary.—On the 4th of last October a robbery of English bank-notes, to the amount of £1620, was perpetrated in the house of Mr. Seelig, of No. 4, South-parade, Manchester, by a foreigner, named Jacob Alter. The owner of the property is a foreigner, who has been in the habit of travelling about with mercantile engagements of an extensive description, and was a lodger in the house above mentioned, where Alter also resided, and the latter availed himself of the absence of his former, opened his trunk, fingered the notes, and safely disappeared. John and Daniel Forester were communicated with, and the latter, afterhaving made inquiries at Manchester and Liverpool, proceeded to Hungary, where he received the most zealous assistance from the police authorities, which assistance was no doubt the more promptly rendered in consequence of the aid given to the Austrian Government some time ago in the case of a forgery committed in Hungary, but

ASCENT OF M. POITEVIN'S BALLOON FROM NANTES.

M. POITEVIN'S BALLOON ASCENTS AT NANTES.

(From a Correspondent.)

Two beautiful aërostatic ascents have recently been made at Nantes, by M. Poitevin, who has ascended repeatedly from Paris with horses and carriages attached to his balloon.

The first of the above ascents took place on the 16th ult., about four in the afternoon, from the Abattoire in Nantes, in the presence of an immense assemblage; when M. Poitevin mounted on horseback into the air, supported only by the horse (which was suspended to the balloon) and by the stirrups, as any rider of any other kind of steeple-chase would be. The horse did not appear at first to relish much, if at all, the sudden and unexpected loss of *terra firma*, but, after recovering from its first surprise at losing the accustomed support for its legs, it began to employ them actively in capering and capriolling in the higher regions to which it was transferred. M. Poitevin mounted afterwards into the car, and descended in a short time in perfect safety near Saint-Flacre, about seven English miles and a half to the south-east from Nantes, and appeared in the theatre the same evening.

M. Poitevin made his second ascent on Sunday, the 23rd ult., about half-past two in the afternoon, from the Abattoire. He was accompanied by six Frenchmen and his assistant. The balloon contained about 2200 cubic feet of gas, and was filled with admirable punctuality, so as not to disappoint, on this occasion, the expectation of the city of Nantes, which seemed to have poured forth its 80,000 inhabitants to witness the ascent. After some little oscillation from contrary gusts of wind from between the lofty buildings of the Abattoire and Rue de Bel Air, the balloon mounted slowly, majestically, and perpendicularly into the air to a moderate height; and, as it there appeared to be not quite filled, and very heavily laden, much ballast was thrown out, and the balloon, with its car, and the parachute, and the car thereto suspended, continued to rise perpendicularly, and then took a direction to the west of the magnetic south. It was one of the fine autumnal days of *le belle France* which are unequalled, but it was very cloudy. The clouds, however, were high, and did not for half an hour hinder the sight of the balloon; presently it ascended through a break in the clouds, and appeared magnificently gilded by the rays of the sun. This unusually large party of aëronauts, we are happy to say, terminated, after a cruise of about two hours, their delightful voyage as safely and successfully as the former one had been accomplished, except that M. Louis, who leaped out of the parachute at some few feet before it touched the earth, sustained in consequence some bruises.

We must add, that, as all objects of science are already answered by past aëronautic ascents short of obtaining the power to guide the balloon in any direction, we cannot consider such attempts otherwise than as a rash risking of human life on the part of those who make them. They are, however, profitable to the aëronaut, who receives the fees of admission to the inclosure in which his unwieldy machine is filled and whence it starts, and the freight and passage-money of his fellow-travellers, at the rate, it is said on this occasion, of 50 francs, or £2 sterling each.

In a letter addressed to the *Courrier de Nantes*, M. Poitevin gives the following details of his voyage:—

"Messieurs Henry Liton, Jules Lagrange, Gustavus Lévêque, Emile Courtoux, Philip Gastineau, with my assistant and myself, were in the aërostatic car. M. Louis was in that of the parachute. The cars, the ballast, the grappling-irons, the cordage, and the rest of the apparatus, formed with the balloon a weight of 500 kilogrammes (or about 1102 lb. avoirdupois, English). The persons and the material together weighed 1100 kilogrammes (or about 2427¾ lb. English avoirdupois, or nearly 1 ton 1 cwt, and 3 quarters).

"The descent from the parachute did not take place on the site whence we took our departure. Some gusts of wind, which at the instant of quitting the earth in some degree disturbed the good order of the ascent, prevented this. Afterwards, on account of the houses and the rivers, it could not be effected with safety (it is at this period that the situation of the balloon is represented in the accompanying Sketch) until very near the Three Windmills (on the road to Bordeaux). During this course we saw the most extensive and entire horizon, perfectly representing a panorama of inexpressible magnificence. On our right we perceived the sea; whilst the lake Grand-Lieu appeared to us like a little pond. Behind us was the city of Nantes and its environs; and on every side of it the country divided into myriads of polygons under cultivation. When I apprised M. Louis that the vicinity was propitious for his descent, he courageously cut the suspension cord The parachute burst open with a loud report; but, quickly making a calmer and progressively less rapid descent, it deposited its intrepid passenger safe and sound in the middle of the road to Bordeaux. Some persons who had followed on horseback and in carriages, brought him back to the Hôtel de Commerce.

"As soon as the balloon was freed from the weight of the parachute and its occupant, it mounted rapidly, and traversed the clouds which covered the celestial vault. We experienced amongst these a certain sensation of cold; but no sooner were some bottles of excellent liqueurs opened and tasted, than the temperature appeared delightful. Arrived above the clouds, we were below a pure dry blue sky. We speedily effected our descent by again traversing the clouds; and at half-past four we reached the earth again near the hamlet of La Planche, in the commune of Montbert, near Geneston (four leagues or ten English miles due south of Nantes). The emptying of the balloon was effected in the midst of a crowd of people attracted to the spot. I packed it up, and, after having loaded it and all its apparatus on a cart drawn by oxen, we took the road to Nantes, and arrived there in the evening about nine."

M. Poitevin, on this occasion, ascended to the height of 4300 metres, or 4686 yards 1 foot, or 2 miles, 5 furlongs, 58 yards, 1 foot English measure; and at this elevation found the cold 2° below Zero of the thermometer of Celsius or the Centigrade, which is between 28° and 29° Fahrenheit

The accompanying Sketch of the balloon before the descent of the parachute is taken from the Escalier de Sainte Anne, a noble staircase of some hundred stone steps ascending from the quays at the west end of Nantes to the new church of Sainte Anne, whose statue, and that of her daughter, modelled by M. Amedée Ménard, were cast at the foundry of M. Voruis last spring. The inscription on the pedestal is—"Sanctis Anna, Britannorum patrona, navibus et nautis nostris semper favens." Sainte Anne is said in the traditions of the Roman Catholic Church to have been the mother of the Blessed Virgin Mary. The inscription ascribes to her, though dead some nineteen centuries ago, power to help the shipping and sailors of Nantes, because she is the patroness of the Bretons.

THE RHINE VINTAGE.

THE Vintage of the Rhine formerly took place in the middle of October, but by the present system it is delayed in many vineyards till November indeed, it is put off to the last moment the grapes will hang.

One of the most interesting of the Rhineland vineyards for its historic associations is that immediately below Worms, which produces the very pleasant wine, called after the adjoining church, *Liebfraumilch* (our lady's milk). Its history is briefly as follows:—

In the ancient city of Worms, on the Rhine, there existed, in former

THE LIEBFRAU VINTAGE.—GATHERING GRAPES.

times, a convent of Capucines, called the "Liebfraustift." To this was attached a nunnery (having a separate church), which has been pulled down, and its site converted into vineyards. The church, dedicated to the Blessed Virgin, is an extensive edifice, having considerable pretensions to architectural beauty. Originally it had two steeples, one of which was battered down by a besieging army in the famous Thirty Years' War.

Immediately on the south and south-eastern sides of the church lie the celebrated vineyards where the *Liebfraumilch* is grown; and, by a curious contrivance, the edifice is turned to account in the culture of the vines. The body of the church forms a reflector for the sun's rays, so that the grapes ripened nearest to its walls yield the choicest quality of wine. The best of the vineyards thus lying close to the church, and sloping to the south, is in extent only an acre and a half English measure. Formerly it was a courtyard, surrounded by buildings; the latter, however, have been pulled down, and the entire area converted into vineyards. In the garden of the Capucines, which comprises several acres on the south-east of the church, and extends almost to the margin of the Rhine, the grapes are grown from which is made the second best wine. On the south-west, inclined towards the road, and extending to some thirty acres, the wines of least value are grown. In short, it is found that in proportion to distance from the church the quality of the wines deteriorates; the choicest, as above stated, growing close to its walls. The grape which yields this delicious wine is a variety of the Riesling vine.

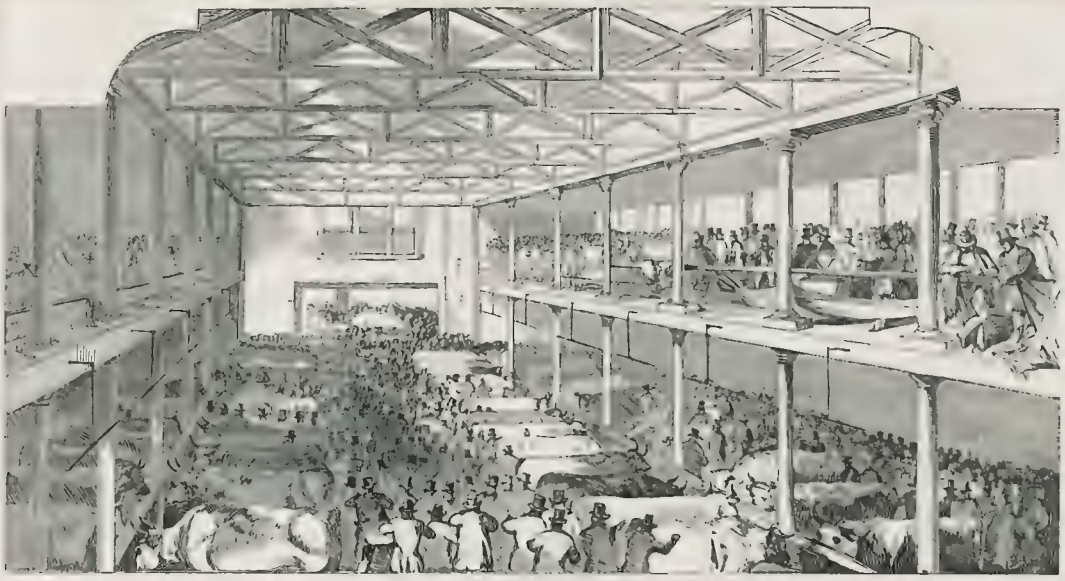
The land on which the finest wine is produced was formerly the property of the Attorney-General Parcus, at Mainz; but in the year 1845 it became, and it still remains, the property of the house of P. J. Valckenberg, at Worms; which house owns, altogether, 20 acres of vineyards adjoining the church. Near the centre of the vineyards is a farmhouse, which, in the olden time, formed the residence of the friars

The *Liebfraumilch* of the first quality is a fine table wine, of delicious flavour and aroma.

VIEW OF THE LIEBFRAU VINEYARD THE CATHEDRAL OF WORMS IN THE DISTANCE.

PRESENTATION OF THE FREEDOM OF DUNDEE TO LORD DUNCAN, M.P. Agreeably to a resolution unanimously passed at a recent meeting of the magistrates and council of Dundee, the corporation met in the Thistle-hall, Union-street, on the 28th ult., and presented Lord Duncan, M.P. for Bath, with the freedom of the city, as a mark of "their approval of his public conduct, and particularly of his exertions in bringing about the repeal of the window-tax."

GARDEN WALLS OF GLASS.—Till Sir Joseph Paxton proposed his Crystal Palace, little had been done in the application of glass to garden structures beyond what had been in practice for half a century. The combination of wood and iron, which was so happily hit upon in Hyde-park, has, however, now suggested to Mr. Charles Ewing, gardener to O. F. Mayrick, Esq., of Bodorgan, in Anglesea, the idea of constructing garden walls also of glass and iron, viz. The plan is to have iron uprights firmly fixed into the ground, and fixed with glass on both sides, the space between the two faces being occupied by trees planted and trained in the usual way. The glass is all moveable, so that perfect ventilation, as well as perfect shelter, is secured. This novel mode of construction seems likely to cause a complete revolution in the manner of managing plants under glass, provided, as we understand to be the case, the price at which the glass walls can be put up is less than that of common brick walls.—*Gardeners' Chronicle.*



THE SMITHFIELD CLUB CATTLE-SHOW.—THE NEW DEPARTMENT FOR EXTRA STOCK, ETC.

THE SMITHFIELD CLUB CATTLE SHOW.

SATURDAY last was the last day, as prescribed by the rules of the Smithfield Club, for the entries of cattle and other stock, as well as for implements; and, as was anticipated, they exceed—more especially the cattle and sheep classes—those of former years. His Royal Highness Prince Albert has already been announced as a considerable contributor; but it is understood that on this occasion the animals selected for the ensuing exhibition, from the Flemish Farm, will not be confined to the inferior classes of cattle, but an aim will be made by his Royal Highness to secure a position as a successful competitor in the first class.

The agricultural implements were received from six o'clock on Monday morning until three o'clock on Thursday afternoon; after which hour, by the rules of the Club, no further implements of any description whatever were received.

The reception of the cattle and other stock commenced on Tuesday morning, and continued until six o'clock this day, the 6th inst.; and any animals arriving at the yard after that time will, by the rules of the Club, be refused admission. In consequence of the increase of the building, a large addition of gas lighting has been required, the piping for which, it is stated, would, if placed in a direct line, reach a distance of nearly two miles. The judges, who have not the opportunity, in any instance, of knowing to whom any of the cattle belong, will go round and examine the specimens and make the awards of the prizes on Monday, December 8, and in the evening the private view will take place. On Tuesday, the 9th, the Show will open to the public, and continue open the three succeeding days, from eight in the morning till ten at night, finally closing on Friday evening, so as to enable the butchers who have purchased stock to remove them on the Saturday, with a view to preventing the desecration of the Sunday which formerly occurred. It is stated that more noblemen and gentlemen have entered stock for competition on the present than on any former occasion.

We mentioned, last week, the great alterations which have been made at the King-street Bazaar. The improvement we have engraved is in the Riding School, the places allotted to the Southdown Sheep and Pig Classes; by running a wall, this place, the roof of which has been considerably elevated, is thrown into, and now forms a part and parcel of, the main building on the western side, and presents an avenue, from end to end, of something like 500 or 600 feet.

THE STEAM-SHIP "PEKIN" IN A TYPHOON.

THE Typhoons of the China sea are proverbially awful phenomena; and rarely has their fury been so successfully withstood as in the following instance:—

The Peninsular and Oriental Navigation Company's steam-ship *Pekin*, of 1200 tons, and 400 horse-power, Captain Baker commander, encountered a terrible typhoon on the morning of the 2d of October, on her passage between Hong-Kong and Singapore. We extract the following particulars from her log:—

WEDNESDAY, OCTOBER 1, 1851.—P.M. Wind increasing, and barometer falling. In topgallant-sails and reefed topsails; sent down topgallant-yards. 2 P.M. Still increasing (steady, N.E.); furled maintopsail at 3h., blowing a fresh

THE PENINSULAR AND ORIENTAL COMPANY'S STEAM-SHIP "PEKIN" IN A TYPHOON IN THE CHINA SEA.

gale; furled all sails as soon as possible; got spare gaskets on the sails; unbent the outer tib, and sent the topgallant m. 4th. Increasing to a strong gale (steady, N.E.); sent down all studding-sails; booms off the yards; sent top carpenter below to see all the ports were secured below. 5h. Increasing; heavy sea getting up; battened down the companion of the skylights, and did all we could preparatory to encountering a heavy gale during the night. 6h. Blowing very hard indeed; the ship with the greatest difficulty kept running; a reefed foretopsail set; the main spun close reefed and furled. 7h. Ship came up to S.S.E., in spite of the helm being hard aport; found it necessary to heave the ship to as quickly as possible; took the fore-tyrsail in, and brought ship's head to about E.S.E.; the gig and starboard quarter-boats washed away, carrying the iron davits with them; ship keeping to the wind nicely; working full power with the engines below (when power saved the ship). At 8h. blowing a furious hurricane, the gusts being frightful. At 9h. the port quarter boats were likewise blown and washed away from the davits. 10h. Blowing a frightful typhoon, the violence of the wind preventing any one standing on deck without holding on; the fore-topmast blown away by the cap, the wreck, with the topsail-yard, flying into the lee fore-rigging, carrying away one shroud and the starboard fore-lift, the fore-yard coming a cock-bill; both fore-stays gone; the masts working dreadfully; at midnight, the maintopmast blown away just by the cap, the wreck falling into the lee main-rigging, and—

Oct. 2, A.M.—fortunately doing no injury, carrying away starboard mainlift, mainyard a cock-bill, the main-stays jammed in the wreck; the starboard aft-stays of the wheel ropes carried away; got large tackles on the tiller; the officers steering and conning the ship; crew frightened and not to be found, excepting about six and the Europeans, from midnight until 9 A.M.; blowing a tremendous hurricane; the ship taking in large bodies of water fore and aft, on both sides; coms washing below; sounded the well very often; found the ship making no more water than might be expected; washed all the tarpaulins off the hatches, did all in our power to secure them. At 9 A.M., in a sudden lull, the ship paid off to S.W., and before we could bring her to the wind shipped a heavy sea over the starboard quarter, carrying away binnacle compass, fortunately managed to bring the ship to the wind again; saved the binnacle compass. 4h. 30m. Wind beginning to veer south of east; the mercury in the barometer and aneroid began to lift; still blowing furious; kept the ship's head to sea, and commenced at daylight securing the lower yards, which were knocking about frightfully; and we fully expected to see the lower masts go by the board; but, after the greatest exertion on the part of the officers (one and all), we managed to secure the masts and wreck; crew knocked up and frightened; found the fore and main trusses gone; nearly all the awning stanchions; the horse and cow dead, eight sheep, and nearly all the poultry.

POSITION OF THE "PEKIN," 1st OCTOBER, 1851.

At noon	.. ..	Lat 16° 45′ N	.. Long. 110° 45′ E.
Run 59 miles S.by W	..	58	11
Position at 8h. P.M., hove to,		Lat. 15° 47′ N.	.. Long. 110° 34′ E.

We are indebted to Lieut. Lloyd and the secretary of the Peninsular and Oriental Steam-packet Company for the preceding communication.

Captain Baker, in a letter to the Singapore *Straits Times*, states that "great praise is due to the engineers for their exertion in keeping the steam up, as the wheel was sometimes brought to a stand-still for a minute, from the force of the wind and waves, although working up to *full* power; but only for a time, as the force of the gusts took off the fans for about three to four pounds. Had the vessel got into the trough of the sea, I should not hesitate to say there was great fear of everything being wa-hed away, or probably foundering."

Mr. Blake, chief engineer, and his staff, were in close attendance during the whole of this trying night; although they also suffered from the defection of part of their crew, who fled simultaneously with the Lascars on deck, thereby throwing the work on those whose attention was required elsewhere.

Captain Baker has received a letter, signed by the twenty-one male passengers, expressive of their unqualified admiration of the active, zealous, and persevering manner in which the perilous duties of this ship were performed

CALENDAR FOR THE WEEK.

SUNDAY, December 7.—2nd Sunday in Advent. Sidney beheaded, 1683.
MONDAY, 8.—Mary Queen of Scots born, 1542
TUESDAY, 9.—Milton born, 1608. Gay died, 1732.
WEDNESDAY, 10.—Charles XII. killed, 1718.
THURSDAY, 11.—Grouse shooting ends.
FRIDAY, 12.—Cromwell declared Protector, 1653.
SATURDAY, 13—Dr Johnson died, 1784.

INFANT ORPHAN ASYLUM, WANSTEAD. Open to Bereaved Children from all Parts of the Kingdom.—SPECIAL NOTICE.—Public attention is earnestly solicited to the important arrangement recently adopted by this Charity, with a view to its extension at the same time during which the Asylum is maintained, until they reach the age of Fourteen, or Fifteen years

Of the Elderly Children received in the year (80), Twenty will be retained to the age above specified; and it is proposed, that, as soon as the necessary funds are provided, the whole of the Children thenceforth admitted shall remain, the Boys until Fourteen, and the Girls until Fifteen, years of age.

Many of these bereaved little ones are received from the very cradle; and when it is considered that they must be maintained and educated through a long term of years, until qualified to pursue for themselves some path of industry in such station as the providence of God may assign them, the committee feel assured they confidently appeal to a Christian public for their liberal support which is essential to the accomplishment of so important an undertaking

The Asylum which now maintains Three Hundred and Eighty-one Children) is designed more especially for such as are peculiarly destitute from the many causes of Orphanage, of officers in the Army and Navy, and other highly respectable classes, have found no provision in its walls

The next Half-yearly Election will be held on the 31st of May, 1852. Forms for nominating Candidates, together with any further information, may be obtained by addressing the Secretary, at the Office 66, Lombard-street, London Subscriptions or Donations most gratefully received three or by Messrs Hanbrard, 187, Piccadilly; Messrs. Nisbet, Berners-street, or Messrs Seeley, Fleet-street, or Hanover-street, Regent-street.

JOHN BUCKLER, Sec.

Office 66, Lombard-hill. Now, 28, 1851.

P.S.—The Infant Orphan Asylum receives Children of either sex, wherever resident, who have lost both parents, or the father only. The factor being the subject of confirmed unsoundness for more than six months; Children are admitted from earliest infancy, if needful, but not after seven years of age. The Asylum is delightfully situated at Wanstead, six miles from London.

Annual Subscription, entitling to One Vote at each E ection, £5 10s 6d; to Two Votes, £1 1s 6d Life Subscription, entitling to One Vote at each Election, £5 5s 0d; to Two Votes, £10 10s 6d (The Votes increasing proportionably with the Subscription)

ESTABLISHED 1841.

MEDICAL, INVALID, and GENERAL LIFE ASSURANCE SOCIETY. Offices: London, 25, Pall-Mall; Dublin, 22, Nassau-street.

DIRECTORS.

Benjamin Phillips, Esq., F.R.S., Chairman	Thomas Stevenson, Esq., F.S.A.
Edward Doubleday, Esq., F.L.S	R. Stanley Todd, M.D., F.R.S
Sir Henry Bowyer	Alfred Wm. Thrupp, Esq., D.C.L.
George Gun Hay, Esq	James Whishaw, Esq., F.S.A
Chas. de Rechaerdes, Esq	

At the TENTH ANNUAL GENERAL MEETING of this Society, held on the 27th day of November 1851

Benjamin Phillips, Esq., F.R.S., in the chair,

The following Report was read, showing the progress of the Society since its establishment.

The Directors beg to refer the Shareholders to the following table, which shows the speedy increase of the business of the office —

Year	Number of New Policies issued each year.	Sums Assured by New Policies in each year.	Annual Premiums payable on New Policies issued in each Year	
		£ s. d.	£	s. d.
1842	129	55,745 1 9	1,382	13 7
1843	208	87,830 16 11	2,922	12 6
1844	197	80,415 8 6	4,120	4 8
1845	258	102,014 11 6	3,581	17 0
1846	199	85,700 14 6	4,085	3 0
1847	313	113,343 4 6	4,337	3 0
1848	418	154,456 17 6	4,593	2 0
1849	475	201,712 15 6	5,409	0 6
1850	589	218,469 16 11	6,163	13 7
1851	613	263,162 1 5	10,527	17 2
Total	3374	1,526,632 8 1	57,949	18 8

"From this it is found that the business done during the last year is larger than that of any preceding year, and that 613 Policies were effected, yielding annual Premiums to the extent of £10 527, while the whole business of the first three years of the Society's existence was confined to the issue of 535 Policies, assuring but to the amount of £244,288.

"The deaths during the year ending 1850 were much under the number expected It was reasonable, therefore, to suppose that to the following year they would have equalled or even exceeded the number expected; and the Directors have satisfactory to find that the number of deaths in the present year is still somewhat below that provided for by the Society's tables

"It is also a source of much satisfaction to the Directors to be enabled to state that the peculiar features which originated with the Society, and which have from the first constituted its principal claim to public support, viz the assurance of unusual lives on strictly scientific and sound principles, is fully appreciated by the public, and that the experience of ten years has completely shown the correctness of the opinion originally expressed, that such business can be conducted with safety and utility to the assured but to the assurers. The assurances of unusual lives is now very generally practised by other offices as well as this, but the principle upon which such business is done are by no means uniform. In this office, however, the principles are being acted from data quite as accurate as those used for ordinary lives, while in other offices the premium is fixed without any accurate tables or data.

"The Directors going out by rotation are Thomas Stevenson, Esq., F.S.A., and Alfred Wm. Thrupp, Esq., D.C.L.; and the Auditors going out of office by rotation are John Stirling Yar, Esq., and Joseph Whishaw, Esq., all of whom being eligible offer themselves for re-election.

The Directors and Auditors retiring from office having been duly re-elected without opposition, the business of the meeting terminated by the usual vote of thanks being given

Prospectuses, containing very full tables of rates, forms of proposal, and every other information, will be forwarded, postage free, on application to any of the Society's agents, or to the Secretary at the principal office, 25, Pall-Mall

F. G. P. NEISON Actuary
C. DOUGLAS SINGER, Secretary.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, DECEMBER 6, 1851.

"ENGLAND and the United States of America are the only nations in the world whose receipts exceed their expenditure:" such was the fact recalled to the memory of the merchants of Liverpool, last week, by Mr. Walker, late secretary of the Treasury to the Government of the United States. The fact is a suggestive one, more especially when coupled with the other fact, also dwelt upon by Mr. Walker with much eloquence, and supported by statistical and other details, that Great Britain and the United States of America owe their high and enviable position in this respect to the enlightened commercial policy of their respective Governments. It has hitherto been a kind of forlorn argument among the fast-decreasing body that owes allegiance to the Protectionist doctrine, that Free Trade, though possibly right in theory, and if all the world agree to its principle, was suicidal policy for us to adopt, as long as other nations would not act with reciprocal liberality towards us. But the history of Great Britain since the memorable year when Sir Robert Peel prepared the way for the total abolition of the Corn-laws by his wise and comprehensive reductions of the Customs Duties, and chalked out for his country the course in commercial legislation which her interests and her duty alike commanded her to pursue, is but a history of commercial triumphs. We have done right, heedless whether other nations did or did not choose to follow our example—certain that the gain would be ours and the loss theirs, if they did not see that freedom of trade was alike the civilizer and the enricher of all nations, and that the peoples of the earth were linked together by the subtle but most powerful bonds of a common interest. Under this system, the deficit which threatened our annual revenues has been transformed into a surplus, so handsome in itself, and likely to increase so rapidly, were it not for such drawbacks as our unlucky Kaffir war, as to promise the fulfilment at no distant period of the promise held out to us by Sir Robert Peel and the eminent statesmen of the three great parties who supported him in his vital reform—of the repeal of all taxes interfering with the due development of the national industry. The history of the United States of America, for a similar period, offers the same results; due in a great measure to the very same causes—the abolition of those unwise restrictions upon trade which had been instituted by previous and by less enlightened Governments. Mr. Walker, to whom that great change in American commercial policy was principally due, detailed to his Liverpool hosts, and through them, by means of the press, to the public, both of Great Britain and America, a few facts, each of which is worth whole reams of mere argument in support of the principles of Free Trade. That policy, though it has still opponents in the American Union, is, as Mr. Walker reminds us, "to be regarded as the settled policy of the Union," and is sustained by ever-increasing majorities. The following extract from his important and able speech places the question in the clearest possible light:—"In 1842 a highly-restrictive tariff was passed by the American Congress. In 1846 that policy was changed, and the duties were reduced in the aggregate one-half. The revenue received during the last year of the high tariff of 1842 was 26,712,000 dols. The revenue from the tariff of 1846 (under which the duties were reduced one-half) during our fiscal year just passed was 50,000,000 dols. While we reduced one-half the taxes imposed on the people, our revenue was nearly doubled. *Our tonnage, which, in* 1846, *had only reached* 2,562,000 *tons, rose, on the* 30*th of June*, 1851, *the close of our last fiscal year* (when the weight had been lifted from our commerce), to 3,780,000 *tons*. Our miles of railroad in operation, denoting, in part, the progress of our internal commerce, rose from 1562 miles in 1846, to 10,287 miles in 1851. In 1846 our gross exports was about 20,500,000; in 1851 it was about 24,500,000. This change in our policy shows, in the last five years, the following results:—Our population increased, from 1846 to 1851, 19½ per cent.; *our revenue from the reduced tariff increased* 87 1-5*th per cent.*; *our tonnage*, 47½ *per cent.*; our railroads in operation, 452 per cent. *Our average annual revenue from duties under the high tariff of* 1842 *was* 23,895,000 *dols.*; *our average annual revenue from duties, when reduced one-half, under the tariff of* 1846, *was* 36,145,000 *dols.* In this last fiscal year, the revenue, increasing in a constant and extraordinary ratio, under our reduced tariff rose to 50,000,000 dols."

Did America tell one story of the results of Free Trade, and England the reverse, we migh. doubt the wisdom of the change as regarded ourselves; but, when in two nations so dissimilar in their circumstances—the one without debt, and with elbow-room sufficient to lodge and to feed all the population of Europe, and the other with huge liabilities, and with a narrow island immensely overpeopled as many allege, and with all ranks and degrees of men scrambling over one another for the means of subsistence—we find the same prosperity daily increasing, and dating from the same relaxation of the old commercial policy which treated foreign nations as foes, we are bound on the evidence of our senses, on the evidence of arithmetic and mathematics, to believe that the two foremost nations in the world have pursued the right course, and to treat the old system of Protection as one that never ought to be, and never can be, revived. Individual interests temporarily suffer by the open ion of the most beneficial changes; but general prosperity cannot, in the long-run, be attended with permanent mischief to any section of the community that has eyes to see, and ears to hear, and intelligence to profit by the events of the time and the necessities of society. We commend Mr. Walker's speech to the earnest attention of those who still waver. They cannot fail to derive both comfort and instruction from the lesson which it will convey to them.

PRINCE ALBERT'S BIRTHPLACE.—The *tableau* of plastic work, extending about 18 feet in front, and 10 feet wide, and representing a rural *fête* at a suburban *château* belonging to the Duke of Saxe Coburg Gotha, the birthplace of Prince Albert, and the residence of her Majesty the Queen Victoria when on her visit to the Duke, exhibited at the Crystal Palace, in the Fruterich department, was sold by auction, in Leadenhall-street, by order of the Zollverein committee. The *tableau*, that will be well remembered from its being one of the general attractions in the Exhibition, contains about four hundred moveable figures grouped in dances, bands of music, and festive parties, all set in motion by some complicated machinery, the cost in the construction, as authoritatively asserted, being more than £800, subscribed by an association of manufacturers at Sonneberg, in the Duke of Saxe Coburg Gotha. The object, it is stated, was to present it to Prince Albert, who, however, declined it, but proffered to purchase it on a price being named. From some cause not explained, the model *fête* remained with the Zollverein committee, who, since the closing of the Great Exhibition, obtained its passing the Customs at the low estimate of £7 10s. At the sale, on the 23th ult., it was sold for the comparatively trifling sum of £20.

The last number of *Punch* was taken away from all the clubs and coffee-houses of Vienna on the 22d ult., by order of the Government. Several Italian journals had also been forbidden, such as the *Fermi*, and others.

COURT AND HAUT TON.

THE COURT AT OSBORNE.

The Queen and her Royal Highness Prince Albert, with the youthful members of the Royal Family, continue in retirement at Osborne. Her Majesty and the Prince have taken their accustomed walking exercise in the park and grounds daily.

On Sunday divine service was performed within the Palace before her Majesty, his Royal Highness Prince Albert, the Prince of Wales, and the Princess Royal, by the Rev. T. Protheroe. The suite and Royal household attended.

On Tuesday the Earl of Listowel, Lord in Waiting to the Queen, and Lieut.-Colonel F. H. Seymour, Equerry to Prince Albert, arrived from Hanover, where they had proceeded to attend the funeral ceremony of the late King on the part of her Majesty and his Royal Highness.

On Wednesday her Royal Highness the Duchess of Kent, attended by Lady Anne Maria Dawson and Sir George Couper, arrived at Osborne from Frogmore, on a visit to her Majesty and the Prince Consort.

Lieut.-General Wemyss and Colonel Mourerie have relieved Lord Charles Fitzroy and Lieut.-Colonel the Hon. A. Gordon as Equerries in Waiting

His Excellency the Russian Minister, the Baroness Brunnow, and Mdlle. Elise de Brunnow, were honoured with the presence of the Royal Highness the Duke of Cambridge at dinner, on Saturday evening, at Ashburnham House. There were present to meet his Royal Highness—his Excellency the Prince Carini (the newly accredited Neapolitan Minister at the Court of St. James), his Excellency the Marquis Cagnanini, the Marquis Calcagnini, Lord Fitzroy Somerset M. de Oznofari, Count Perponcher, Baron Kilbeck, Baron Bielke, Count Trautmaysdorff.

Viscount and Viscountess Palmerston entertained at dinner, on Saturday, the Minister for the Netherlands, the Sardinian Minister, the Earl and Countess of Malmesbury, the Countess Flahault and Mdlle. Flahault, Lord Stanley of Alderley, Sir Henry and Lady Bulwer, Mr. Fleming, and the Hon Spencer Cowper. In the evening the noble Viscountess received a numerous circle of guests, among whom were—his Royal Highness the Duke of Parma, most of the foreign ambassadors and their ladies, and a large circle of the aristocracy.

The Duke and Duchess of Montpensier arrived on the 22d ult. at Madrid, and were received affectionately by the Queen and Royal family.

Immediately on the arrival of the Grand Duke of Hesse in Vienna, he had the honour of receiving a visit from the Emperor, who insisted that he should take up his abode at the palace. His consort, the Countess of Schaumberg, has put up at the hotel. According to the German papers, the object of the visit of the Elector of Hesse to Vienna is to have his children by his morganatic marriage declared princes; but the Elector's family protests against it.

The Grand Duke Constantine intends to winter at Venice. Several noble Russian families have likewise taken residences in the palaces along the gulf for the winter season. Count Demidoff has purchased the Palace of Pisa. Count Chambord (Duke of Bordeaux) and the Duchess de Berri were expected. Don Carlos likewise is there.

The Duke and Duchess of Somerset intend to continue their select dinner parties at Somerset House, Park-lane, three or four times a week during the winter.

The Duke of Grafton is at Wakefield Lodge, Northamptonshire, where his Grace and family intend to pass the winter. Lord and Lady Charles Lennox Fitzroy are expected to join the circle on his Lordship going out of waiting on her Majesty at Osborne.

Lord De Blaquiere sailed on the 28th ult, in his new schooner yacht, the celebrated American clipper, for Gibraltar and other ports in the Mediterranean, intending to return to this country in the spring.

On Wednesday evening Lord Lansdowne arrived in town.

The Earl of Cardigan has left town for the head-quarters of his regiment, the 11th (Prince Albert's) Hussars, at Nottingham, whence his Lordship will proceed to his hunting-lodge at Melton Mowbray, where he will receive a succession of visitors during the winter.

The Princess Montleart, mother of the late King Charles Albert of Sard nia, has just died in Paris, at the age of 72. Her remains will be conveyed to Vienna for interment.

The Duke of Northumberland has lately been suffering from indisposition at Sion House. The Duchess Dowager is passing the winter at her villa at Twickenham.

The Earl and Countess of Arundel and family have arrived in Paris from a tour. The Earl and Countess intend to remain in the French capital until after Christmas, when his Lordship intends to visit his constituents at Lostwick

The Duchess of Sutherland and the Lady Constance Leveson Gower arrived at Trentham Hall, Staffordshire, on the 28th ult., from Dublin, and on Monday left the same seat on a visit to the Countess of Carlisle and Lady Howard, at Castle Howard, Yorkshire. The noble Duke joined the family circle on Tuesday, from Dunrobin Castle, N.B. The youthful Lords Albert and Ronald remain at Trentham Hall until the return of their noble parents.

The Court of Turin has gone into mourning for four months, on account of the death of the Princess Marie Christine Albertine Caroline of Saxony, mother of the late King Charles Albert.

The marriage of the Hon. Frederick Cadogan, youngest son of the Earl Cadogan, with the Lady Adelaide Paget, youngest daughter of the Marquis of Anglesey, was solemnised on Saturday last at St. James's Church, in the presence of a select circle of the friends of both noble families. The service was performed by the Rev. Mr. Wellesley Tower. Early in the afternoon the happy pair left town for Folkestone, *en route* to Paris.

A marriage is stated to be about to take place between Captain Sir Cornwallis Ricketts, Bart., R.N., of the Elms, Gloucestershire, and of Beaumont Leys, Leicestershire, and the accomplished Lady Caroline Augusta Pelham Clinton, third daughter of the late Duke of Newcastle.

GOVERNMENT EMIGRATION TO AUSTRALIA.—On Wednesday Mr. William Bowles, agent to her Majesty's Colonial Land and Emigration Commissioners, embarked 41 emigrants at Granton (Scotland) on board the steamer *Clarence*, for London, to join the ship *Sir George Seymour*, for Sydney.

CLOSING OF THE LAW COURTS IN THE CHRISTMAS HOLIDAYS.—Notice was issued on Wednesday at Guildhall, that the adjournment day in the city of London for the Court of Queen's Bench is fixed for this day (the 6th Instant), the Court of Common Pleas on Monday next, the 8th instant, and the Court of Exchequer on the 10th inst.

AMERICAN FIREARMS.—The Lords of the Treasury have caused Sir Charles Trevelyan to communicate with the Customs authorities, authorising the freight, for scientific purposes two cases of model firearms, which have arrived by the steamer *Niagara* from New York, and addressed to Colonel Colt, containing one short gun, bowling-piece, one rifle, one bowie-knife, and two pair of pistols, two of which are subsequently intended to be sent to the Continent; and the authorities have given the necessary directions to ensure an obedience to their Lordships' wishes in the matter.

SMITHFIELD CLUB CATTLE SHOW.—A very important change is about to take place in the regulations under which the prizes are given by this club. Up to the present time animals of all breeds have been put into indiscriminate competition with each other. This is now altered, and the following classes shall compete with short-horns—Herefords with Hereford and Devons with Devons, &c.; and that finally all the winners in the different sections shall be then brought together, and a gold medal given to the animal which, in the best, irrespective of breed. At a meeting of the members, to be held on Tuesday next, the opening day of the Exhibition, the subject of this new classification of animals will be considered, and the report of the committee appointed to prepare a preliminary prize-sheet will be read.

EASTERN COUNTIES RAILWAY.—On Thursday a special general meeting of the proprietors of this company was held at the London Tavern; David Waddington, Esq., M.P., in the chair. Several resolutions were, after a very long discussion, passed, approving the different schemes for joining with the London and Blackwall Company in the con-truction of a railway to Tilbury and Southend, for powers to use the whole or any portion of the East Anglian Railways for a junction with the East and West India Docks and Birmingham Junction, with branches to the northern and eastern line of the Eastern Counties Railway; and an agreement for working a portion of the line of Fenchurch-street Observed Railway with an option of purchase of such portion

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY.—On Thursday the annual meeting of this company was held at the offices in Leadenhall-street—Captain Samuel Hall, R.N., in the chair—when a dividend for the last six months of four per cent. was declared, together with a bonus of £1 per old share, and is. per new share, out of the underwriting account. The net profits of the last half-year were £84,606 16s. 10d. The accounts will now stand as follow:—Balance in hand to be carried to next account and meet contingencies, £8216 10s. 1d.; guarantee insurance fund, after writing off one moiety of the cost of the *Pacha*, £9 7s. 2d.; depreciation fund, after writing off the other moiety of the cost of the *Pacha*, £271,084 10s 3d.; balance on underwriting fund, to be carried to next account, £9825 3s. 8d. The company have contracted for a new steamer, to be called the *Himalaya*, of upwards of 3000 tons, to be propelled by engines of 1200-horse power.

ARMY AND NAVY PAYMENTS.—The Customs authorities have approved a form for a monthly letter of advice of the transmission to the Receiver-General from the several outports of the United Kingdom of the lists and vouchers for army and navy payments. The vouchers, with the lists, are to be transmitted to the Receiver-General of Customs immediately after the 5th of each month

Lieut. R. Lloyd, R.N., Admiralty agent, has returned to England from China, on six months' leave of absence.

The *Ville-de-Grasse* steamer, which was run down a few days since, is still at about 600 yards distance from the little island called the "Grand Ribeau" It is at a depth of about 130 feet It will cause great difficulty to get it up. The body of a young lady, very richly dressed, has been washed ashore.

CHURCH, UNIVERSITIES, &c.

JUBILEE.

On Sunday last, being the first Sunday in Advent, according to the previous arrangements of the Archbishops of Canterbury and York, the third Jubilee of the Society for the Propagation of the Gospel in Foreign Parts was celebrated throughout the dioceses of England, alms on behalf of the objects of the society being very largely collected, both in cathedral and parish churches, on the occasion, which was also solemnised by the preaching of the suffragan bishops in their respective churches.

The exertions of the society are at present directed chiefly to British North America, the West Indies, the Cape Colony, and British India. The number of clergy in connexion with the society in British North America is nearly 300, distributed over Canada West, or the diocese of Toronto—Canada East, or the diocese of Quebec—Canada Lower, or the diocese of Montreal Nova Scotia, Cape Breton, Prince Edward Island, New Brunswick, Newfoundland, and the Bermudas. In the West Indies the society had upwards of 30 missionaries in Jamaica and the Bahamas, Barbadoes and part of the Leeward Islands, Antigua, Demerara, Berbice, and Essequibo. The society will assist in aiding missions among the new immigrant population, consisting of coolies from India, Portuguese, and Africans. The operations of the society in India are necessarily costly, as the field is large and the local resources small, though increasing. The number of missionaries maintained by the society in India is about 40. To the Australian dioceses, Tasmania, and other newly-formed sees, upwards of 80 clergymen have been sent out since 1837, many of whom are still, in part, maintained by the society. The total number of missionaries maintained in whole or in part by the society is just upon 400, in addition to upwards of 300 divinity students, catechists, and schoolmasters. In the metropolitan churches the collections were of a liberal character.

The Dean and Chapter of Durham have given £50; viz. £30 directly to the society in London, and £20 through the Diocesan Society, in acknowledgment of the commemoration of the Jubilee.

OXFORD.

In a full convocation, holden on Tuesday afternoon, an augmentation to the stipends of certain professors and public readers in the University, whose professional duties will probably be called into more active service in consequences of the new statute for examinations, was unanimously agreed to, after a few words from Mr. Marriott, of Oriel, who stated his entire concurrence with the increase of stipend as now proposed, but expressed his hope that the University would hereafter devote a portion of its funds to the support and education of poor scholars, instancing the success of an institution established at Durham for that purpose, under the title of Bishop Hatfield's Hall, which he considered to be an example worthy of imitation in Oxford. The sums voted are as follow:—£150 per annum to the reader in mineralogy (making the entire stipend £250); £150 per annum to the reader in geology (making the entire stipend £250); £71 10s. to Dr. Aldrich's professor of music (making the entire stipend £300); £160 to Camden's professor of ancient history (making the entire stipend £300).

CAMBRIDGE.

LE BAS PRIZE.—A sum amounting to about £1920, 3 per Cent. Consols, having been accepted by the University for the purpose of founding an annual prize, sanctioned in the interest of the above-mentioned fund, to be called the "Le Bas Prize," for the best English essay on a subject of general literature, such subject to be occasionally chosen with reference to the history, institutions, and probable destinies and prospects of the Anglo-Indian Empire, the subject for the present year is—"A view of the routes successively taken by the commerce between Europe and the East, and of the political effects produced by the several changes." The essays must be sent in to the Vice-Chancellor before the end of the Easter Term, 1852.

The *Guernsey Star* states, as if upon authority, that Government have no idea of constituting a Channel Islands bishopric.

The Lords of the Admiralty have granted £20 towards the repairs of Stoke Church, which was some time since damaged internally by fire.

The Dean and Chapter of Durham, at their meeting on the 20th ult., made grants of £200 towards the building of a parsonage-house at Muggleswick; of £100 towards the building of a parsonage-house at Wallsend; and of £100 towards the building of a parsonage-house at All Saints', Monkwearmouth

BISHOPRIC OF SIERRA LEONE.—Sir Edward North Buxton, Bart, M.P., of the firm of Truman, Hanbury, and Buxton, has given the munificent sum of £250 towards the establishment of the proposed new bishopric of Sierra Leone, of which diocese the Rev. O. E. Vidal, M.A., incumbent of Trinity Church, Arlington, Sussex, is to be the first Bishop.

The Rev. Augustus Brooke, M.A., incumbent of Avebury and Monckton, Wilts, has been presented by his parishioners with a handsome cruciform, pinnacled, tinopiece, having on a plinth a suitable inscription expressive of their esteem and respect.

THE NEW BISHOPRIC OF BORNEO.—It is generally stated that the Rev Mr. M'Dougall, the senior missionary at Sarawak, will be appointed first Bishop of the proposed new diocese of Borneo, Sir James Brooke being strongly in favour of the new appointment. Mr. M'Dougal was educated for the medical profession, and, before becoming a clergyman of the Church of England, was Lecturer and Demonstrator of Anatomy in King's College, London, of which institution he had formerly been a student. It is believed that a commission will be issued to the Bishop of Calcutta, empowering him to perform the ceremony of consecration with due formality at the approaching consecration. Under the present arrangement Borneo forms part of the diocese of London.

PREFERMENTS AND APPOINTMENTS.—The following preferments and appointments have been made:—*Preferments*: The Rev Robert Sanders minor canon, to be precentor and sacrist of Worcester Cathedral. *Rectories*: The Rev. Thomas Littleton Wheeler to St Martin's, Worcester; the Rev. E. Boothby to Whitwell, Derbyshire; the Rev. Frederick B. Poyer (and not as Proctor, as misprinted last week) to Bennington. Herts; the Rev. Robert Barry to North Tuddenham, with West Tuddenham, Norfolk; the Rev. John Crosier Hilliard to Cowley, Middlesex; the Rev. William Denison to Hinton, Northamptonshire; the Rev. James Edward Dalton to Seagraves, Leicestershire. *Vicarages*: The Rev. Samuel Penrose Downing to South Elmham, with Rumburgh, Suffolk: the Rev. John Hamilton Bullivant to Pytchley, Northamptonshire; the Rev. F. Thompson to Llanfechain, Montgomeryshire; the Rev. Allan Wheeler to Chipping Sodbury, Gloucestershire; the Rev. William Dews to Weybread, in Suffolk.

TESTIMONIALS.—The following clergymen have recently received testimonials of esteem and affection:—The Rev. W. C. Davis, of Yarmouth, from the pupils of the Proprietary Grammar School, of which he is the Head Master; the Rev. G. Walters, from the parishioners of Litchurch, Derby; the Rev. Stephen Westbrook, assistant curate of Cheltenham, from the congregation, upon his resigning the incumbency of Sandford district, in that town; the Rev. W. T. Whitehead, from the congregation of the temporary church in Clarence-street, York; the Rev. W. Holloway, from the ladies of the congregation of St. John's Church, Stratford.

IRISH CHURCH MISSIONS.—On Thursday a public meeting of the friends and supporters of this society was held at Hanover-square Rooms, the Right Hon. the Earl of Shaftesbury in the chair—when a series of resolutions were pass d acknowledging the success which has attended the operations of the society, and calling for increased aid in its support.

A NEW COTTON PLANT.—The editor of the New Orleans *Orleanian* has seen a boll of cotton which deserves the attention of cultivators, on account of its growth and early maturity. On the 21st of June last a lady planted in her garden a few cotton seeds presented her by a gentleman. On the 26th of July a boll was ready for picking, and at the end of sixty days from the time of planting the cotton had arrived at maturity, being in less than one-half of the time it takes the species now raised by our planters to do so. The boll was finally matured and tested with the cultivation of the great southern staple. The seeds were introduced by Mr. Hayams, from Yucatan, and are styled the Alicia

DISCOVERY OF COPPER MINES IN GREENLAND. — The scientific expedition which was sent out from Co e hagen to explore the great mountain chain which divides the whole of Greenland into two equal parts arrived at the Danish colony of Julianshaab, in Greenland, on the 4th of July, and perhaps the following day the work of investigation was commenced in the mountains. The very first blow of the pickaxe exposed vast quantities of copper lying almost at the surface. It form three distinct branches, and, to all appearance, is of great depth and vast extent. As the miners proceeded wick their labours they dislodged masses of mineral of from 200 lb to 300 lb. weight each, and containing pure copper ore of 60 lb., 70 lb., and 100 lb. weight. The engineer at the head of the expedition state that, from the analogy which subsists between the conformation of the mountains of Greenland and the Ural chain in Russia, they have every expectation of discovering mines of gold and platina, and perhaps also of silver. Further interesting accounts from the expedition is looked for with great interest at Copenhagen.—*Moniteur*, Dec 1.

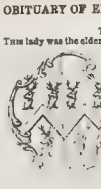
ENGLISH REWARDS TO FRENCH NAVAL MEN.—The *Moniteur* says:

"The Ambassador of her Britannic Majesty has transmitted to the Minister of Foreign Affairs—1. A telescope and gold medal, offered by the English Government to Captain Pierre Bernard, commander of the *France et Bréal*, of Havre, for having saved and brought to France, with all his crew, upon sea the crew and twenty-seven passengers of the English vessel *Lady Lilford*, and conveyed them to Valparaiso, refusing to accept any compensation for the maintenance of those persons during the thirty-nine days they passed on board in a ship.

The *Mark-Lane Express* of Monday records fourteen incendiary fires in the preceding week.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

THE HON. MRS. COLLINGWOOD.



THIS lady was the elder daughter and co heiress of one of our great naval heroes, Cuthbert Lord Collingwood, of Coldburne, who was second in command at Trafalgar, and whose courage resulted from the part he took in the achievement of that victory. Admiral Lord Collingwood married Sarah, eldest daughter of John Erasmus Blackett, Esq., of Newcastle, by whom he had two daughters—Sarah, the subject of this notice, and Mary Patience, married to Anthony Denny, Esq. His Lordship died in 1810, and, as he left no male issue, his title became extinct. His elder daughter was married to George Lambton Newman Collingwood, Esq., F.R.S., of Hawkhurst, in Kent, and became a widow by that gentleman's death, the 4th July, 1841. The hon. lady herself died on the 26th ult., at Dover, in the 59th year of her age.

REAR-ADMIRAL HENRY GAGE MORRIS.

THIS gallant and distinguished officer entered the navy at the early age of twelve, and served as midshipman throughout the French and American wars, in the *Maidstone*, *Centurion* (Lord Anson's ship, which sailed round the world), *Princess Royal*, *Camilla*, *Drake*, *Courageux*, *Lizard*, *Niger*, *Martin*, and *Queen*: *Princess Royal*, *Camilla*, *Drake*, *Courageux*, *Lizard*, *Niger*, *Martin*, and *Queen*: from which frigate *Sybille*, in 1783, and at the attack on Martinique, in 1793. He was promoted to post rank August 12, 1812, and was made rear-admiral in 1847. He died at Beverley, 24th ult., aged 82.

Admiral Morris was younger brother of the late Captain Amherst Morris, being second son of Colonel Roger Morris, a member of the Governor's Council at New York, by Mary his wife, daughter of Frederick Philipse, Esq. This family of Morris is one of great antiquity, deriving its descent from Elystan Glodrydd, a famous chieftain of Wales in the 11th century.

The Admiral married, in 1805, Rebecca Newenham Millerd, third daughter of the late Rev. Francis Orpen, B.A., vicar of Kilgarvan, county Kerry, and had six sons and as many daughters. Of the former, the eldest is the Rev. Francis Orpen Morris, B.A., vicar of Nafferton, county York; and the second is Captain Henry Gage Morris, R.N, who took part in the victory of Navarino.

BASIL MONTAGU, ESQ., Q.C.

BASIL MONTAGU, an eminent philosophical and legal writer, was the illegitimate son of the well-known statesman, John fourth Earl of Sandwich, many years First Lord of the Admiralty, by the unfortunate Miss Margaret Reay, who was assassinated, in 1779, by her affianced lover, the Rev. Mr. Hackman. The tragic affair, which excited immense interest at the time, and gave rise to various romantic stories, is to be found in most series of judicial investigations, and especially in a collection of celebrated trials recently published. Basil Montagu was born in 1770, and received his education at the Charter House. He was called to the English bar by the Honourable Society of Gray's Inn, the 19th of May, 1798, and soon obtained considerable practice as a conveyancer. It was, however, by his learned authorship and reporting that Mr. Montagu became particularly distinguished in the profession. His various works and reports on the subject, principally, of the Law of Bankruptcy were of high estimation and lasting utility. His fame in this branch of forensic learning procured him the appointment of a Commissioner of Bankruptcy. Mr. Montagu wrote also on philosophical subjects. Among his productions of this tendency were "Thoughts of Divines and Philosophers;" "Selections from Taylor, Hooker, Bishop Hall, and Bacon." He edited a superb edition of Lord Bacon's works, in 17 volumes. Another bent which the mind of Montagu took placed him by the side of Romilly and Mackintosh in the great cause of humanity. Basil Montagu had in his nature an abhorrence of depriving any living thing of life, and with regard to his own diet he totally abstained from animal food. This led him to bestow his active attention towards putting a stop to the judicial slaying of his fellow-creatures. He published "Opinions of Different Authors on the Punishment of Death." The work was so well received, that he added a second and third volume to it. In 1811, when the important question occupied Parliament, he edited "The Debates on a Bill for Abolishing the Punishment of Death for Stealing in a Dwelling-house." In 1815 he reprinted a tract originally published in 1701, called "Hanging not Punishment enough for Murderers." Mr. Basil Montagu, who had some property, became made a Queen's counsel, died at Boulogne on the 27th ult., in the 82d year of his age.

MR. SAPIO.

THIS once celebrated tenor singer was born in London, in 1792. In his early life he was page to Queen Caroline, consort of George IV. His made his first appearance on the metropolitan stage at the Lyceum, in the year 1816, as the *Serasbier*, in the "Siege of Belgrade," and he soon attained and long preserved a high practical reputation. Sapio's career was chiefly in Ireland and the provinces, Braham and Vaughan occupying the metropolitan field. Mr. Sapio sang at the Lyceum and Drury-lane Theatre: he had a good stage presence; his voice was of good quality, and his style was declamatory and energetic. We regret to learn that he died in distressed circumstances, and has left a widow unprovided for.

WILLS OF EMINENT PERSONS RECENTLY DECEASED.

The will of the late Lord Viscount Bolingbroke has been administered to and probate granted to Henry, Rt. Hon. John, now Viscount Bolingbroke, to whom he has left the whole of his estates, real and personal. The will bears date Jan 20, 1849. His Lordship died at Elgin, N.B., on the 1st October, 1851, aged 65, leaving six children. He was Baron St. John of Lydiard-Tregoze, 1716; and Baron St. John of Battersea, Surrey; and an English Baronet. He succeeded his father in 1824. His ancestor, Sir John St. John, the first Baronet, had seven sons; three fell fighting under the banner of Charles I.; Oliver, created Lord St. John of Bolingbroke, was a celebrated philosopher, and Secretary of State to Queen Anne. The creation of Baronet was in 1611, and of Baron and Viscount in 1712.

The will of the late Sir John Graham Dalyell, Knt. and Baronet, an advocate of the city of Edinburgh, has been proved in Edinburgh and London. He has left to the Rev. Dr. John Fleming, of Edinburgh, and to Dr. W. B. Carpenter, of London, who had some pecuniary claims against the deceased, an annuity of £20 for life. The rest of his property of every description, in England and Scotland, he leaves to his sister, Miss Elizabeth Dalyell, who is also sole executrix.

The wills of the following persons have also been proved; viz. the late Rev. J. E. Tyler, B.D., Canon of St. Paul's and Rector of St. Giles-in-the-Fields—personal property, £20,000; John W. Crispin, Esq., of Richmond-green, Surrey—£18,000, leaving many legacies; Captain E. Fenwick, R.N.—£10,000; also the wills of Sir Robert Tarling, Sir Roger Keith, Bart., and Lady Buller.

The will of the Dowager Countess of Maryborough and Countess of Mornington has just been proved by her son-in-law, Lord Fitzroy Somerset, and John Parkinson, Esq., the executors. The personalty valued at £16,000. Her Ladyship, by a codicil, leaves many annuities to her servants and others, and a legacy to her friends. After providing for these, her estates in England, Ireland, or elsewhere are to be divided between her daughters, the Countess of Westmoreland and Lady Fitzroy Somerset, and the children of her late son Lord Charles Wellesley. The will is nowise interesting, save that the disposition of the property under the will of the late Lord Maryborough, over which her Ladyship had a disposing power. The will, with two codicils, was made in 1845.

One of the most distinguished chiefs of the war of Greek independence, old General Jarvis, is just dead (at Athens). He was one of the pirnates of Mycone, his family, as his name indicates, have for many generations back been famous for their hereditary medical talents, and the tradition exists among them that a branch of their family formerly presided over the Asclepiad at Italy; translated their names into Medici, and gave rise to the celebrated family of that name.

SANDOWAY, IN ARRACAN.

THE station of Sandoway, in Arracan, is famed for its tobacco, and has a considerable trade in rice, timber, and other products. Its romantic and beautiful scenery is also very striking. The building to the left in the View is the residence of the principal assistant commissioner, Captain A. Fytche, who holds, in his own person, the responsible duties of civil judge, collector, magistrate of the district, and commandant of frontier police. The structure on the hill is a Buddhist Pagoda, called Nan-dan (Royal sidebone), from its shape, in the shape of a tri Buddh Gaudama being supposed to be buried beneath it. The bridge that makes so prominent a figure in the landscape has just been created; it is a lattic., composed of ironwood, a species of mahogany, one of the hardest and most durable woods in the world. The spans between the piles, where the chief strength of the work lies, are 64 feet in clear breadth, to allow of the immense timber trees, &c., which are washed down from the landslips in the mountains, to pass through. The river, which most tropical streams, is an insignificant one in the dry season; but in the rainy one a perfect torrent, rising occasionally from 15 to 20 feet in 24 hours. The total length of the bridge is upwards of 600 feet, with a roadway of 14 feet, and certainly reflects great credit on the principal assistant commissioner, by whom it has been designed and constructed. In the left foreground is the Court-house; and the curious craft on the river are Burmese boats.

A new gaol, new bazaars, and many improvements in drainage, new roads, &c., have lately been made; the people of the town and district are happy and contented; and the great immigration that takes place yearly from the neighbouring territories of Burmah speaks well for the government of the Company, and that of their representative in charge of the district.

LAUNCH OF A FRIGATE AT NEUILLY.

LAUNCH OF A FRIGATE AT NEUILLY.

THE sight-loving people of Paris have recently witnessed a spectacle such as the oldest among them has never before seen, and which the youngest may never see again—the launch of a frigate pierced for 40 guns, within the distance of a pleasant walk from the centre of the capital.

The spectacle took place on the 23d ult., when, for some hours before the time announced for the launch, every road leading to the spot was thronged with vehicles and foot passengers. The bridge of Neuilly was one mass of living heads, and the opposite side of the river was thronged with tens of thousands of spectators, whilst scores of pleasure-boats crowded the river. One o'clock was the hour fixed for the affair to come off; but it was nearly half-past four before the vessel touched the water. Fortunately, there were two fine military bands present, who beguiled the time; and a large number of the Orphéonists sang a variety of glees. A few minutes after four a bustle at the entrance-gate announced to the company in the galleries, among whom were a number of elegantly-dressed ladies, the anxiously-expected arrival of the President of the Republic. He came on horseback, dressed in plain clothes, and only attended by two grooms. On arriving, he was greeted with a unanimous and hearty shout of "*Vive le Président!*" "*Vive Napoléon!*" which was loudly repeated by every one in the galleries as he advanced to the seat prepared for him. In the same tribune were Admiral Dupré de Villeneuve, MM. Gasc, Etienne, Abattucci fils, Emile de Girardin, Estancelin, Larochejacquelin, Ancel, and the Mayor of Neuilly; Delaunay, Director of the Frigate School; Metayer, captain of the new frigate. The President appeared much gratified by his reception, and bowed repeatedly as he passed along. Previous to his arrival, the clergy of the parish of Neuilly had gone through the usual ceremony of benediction, and the moment the President reached his place the last operations were proceeded with.

To nautical men the launch was one of more than ordinary curiosity, from an innovation on the usually adopted plan of sending the vessel into the water stern foremost. The part of the river on the banks of which she was built, and which is the inlet running between the borders of the park attached to the late Royal Château of Neuilly and the small island opposite, is very narrow, scarcely wider than the vessel is long, and it was therefore necessary to adopt the plan of launching her "broadside on." The principle is the same, though doubtless more complicated. Instead of two "ways," there were seven, whilst greater mechanical means was necessarily required to move the vessel. That first of all levers, the wedge, however, soon did the business; and, as soon as the "dog-shores" were knocked away, a few heavy strokes at the wedges placed at the inner or "shore" end of the ways soon set the mass in motion.

The vessel, which bears the name of the *Ville de Paris*, is a very pretty craft, and is a perfect model of a 40-gun frigate minus the keel and about five feet below the bends, thus giving her a flat bottom, a plan of building which was necessary to lessen her draught of water. When afloat, however, this deficiency is not visible. Her length on deck is about 150 feet, with a breadth of beam of 40 feet. Her upper deck is flush fore and aft, and her height between decks is a little more than six feet. She is to be lightly rigged as a frigate, and have the necessary number of guns on board for the purpose of teaching gunnery. When complete, her draught of water will be about three feet and a half.

This vessel, which has been built by M. Baudet, by a joint-stock company, with the authorisation of the Government, is intended as a practical and theoretical preparatory naval school, and is under the patronage of M. C. Dupin; Admirals Dupotet, Halgan, and de Villeneuve; Generals Lauriston and Tartas; and MM. Bouhier de l'Ecluse, Frémy, Heckeren, &c. Boys will be herein prepared for the merchant service, and also for the superior naval schools at Brest, Toulon, &c. The practical part of the education of the pupils will be given by the officers and crew of the frigate, which is composed of men who have already served in the navy. She will be commanded by a *lieutenant de vaisseau*. The pupils, in addition to the necessary instruction to qualify them for sea, will go through the usual routine of general education under proper masters. It is expected that the school will be opened in the early part of 1852.

SANDOWAY, IN ARRACAN, BENGAL.—(SEE PRECEDING PAGE.)

REVOLUTION IN FRANCE.

DISSOLUTION OF THE NATIONAL ASSEMBLY BY THE PRESIDENT OF THE REPUBLIC.

The long-existing dissensions between the President, Louis Napoleon, and the Legislative Assembly, have at length resulted in a crisis of the gravest character, which tends towards a fundamental change in the constitution and institutions of the Republic and in the position in the State of the President himself.

Tuesday last, the 2d of December—the anniversary of the coronation of the Emperor Napoleon in 1804, and of his most glorious of victories, Austerlitz, in 1805—was the day selected by Louis Napoleon for the bold stroke of policy—the *coup d'état*, as the French themselves call it—which he expects is to free him from those counter-plans and intrigues which the political leaders of the Assembly, acting under the inspiration of the wily, restless, unscrupulous Thiers, have opposed to his own manifest, and almost avowed, schemes of personal policy and selfish aggrandizement. The movement was planned and the preparations made with such perfect secrecy and consummate skill, that those most intimately interested were as much taken by surprise as the general public; and the calm manner and impassive features of Louis Napoleon, who gave one of his usual state receptions on Monday night, at the Palace of the Elysée, betrayed nothing to give the slightest indication of an approaching departure, of the most commonplace kind, from the ordinary course of things—much less an impending revolution on the coming day, of the most vital nature, in the Government of the State, and in his own immediate prospects, both personal and political.

It is said that he had received certain intelligence that his opponents in the Assembly, headed by M. Thiers and General Changarnier, were at the time engaged in a conspiracy for his own immediate deposition, the dissolution of the Assembly, and the restoration of Monarchy, and that Tuesday last was the day fixed on by them for the *dénouement*. He anticipated them; and in a few hours brought about the most comprehensive changes, which, in other countries, and in times less pregnant with startling events than the present, would have required months perhaps years, to have accomplished.

In the course of the night (between Monday and Tuesday) Louis Napoleon commenced his hazardous exploit, by writing to M. Thorigny (the Minister of the Interior), and also to the other Ministers, declaring that his mind was made up—that he could not allow himself to be sacrificed by his enemies, who were conspiring at that moment; but that, as he was unwilling to compromise them in any way by implicating them in his acts, he thought it better they should resign. The request was complied with at once, and by five o'clock on Tuesday morning the following new Ministers were installed in office; viz. M. de Morny, Interior; Fould, Finance; Rouher, Justice; Magne, Public Works; Lacrosse, Marine; Casabianca, Commerce; St. Arnaud, War; Fortoul, Public Instruction; Turgot, Foreign Affairs. This Ministry was subsequently modified on Wednesday morning as follows:—M. Theodore Ducos, de la Gironde, was nominated to the Marine in the place of M. Lacrosse, withdrawn; and M. Lefebvre Duruflé retained the portfolio of Commerce, to which M. Casabianca had been named originally. At the same time a new Consultative Commission, in the room of the Council of State, dissolved, was appointed by the President of the Republic till the re-organisation of the Legislative body and a permanent Council of State. The *Moniteur* says they were selected because Louis Napoleon wished "to surround himself with men who enjoy, by a just title, the esteem and confidence of the country." The list of its members is given on the next page.

MAZAS, THE PRISON OF M. THIERS AND THE REPRESENTATIVES.

At an early hour the people of Paris found the streets filled with soldiers of all arms—artillery, cavalry, and infantry; and the six decrees of the President, and the proclamations addressed to the people and the army, given below, posted on all the conspicuous places throughout the city.

The decrees of the President are as follows:—

"IN THE NAME OF THE FRENCH PEOPLE.

"The President of the Republic

Decrees:

"Art. 1. The National Assembly is dissolved.

"Art. 2. Universal suffrage is re-established. The law of the 31st of May is abrogated.

"Art. 3. The French people are convoked in their respective districts from the 14th to the 21st of December.

"Art. 4. The state of siege is decreed in all the extent of the military division.

"Art. 5. The Council of State is dissolved.

"Art. 6. The Minister of the Interior is charged with the execution of the present decree.

"Given at the Palace of the Elysée, the 2d December,

"Louis Napoleon Bonaparte.

"The Minister of the Interior, De Morny."

The proclamation to the people complains that the Assembly, "which ought to be the firmest support of order, had become a *centre of plots*;" calls upon the nation, if they are dissatisfied with the conduct of the President, to relieve him from his responsibility by choosing some other ruler in his place; proposes the details of a new constitution, which include a President for *ten* years, and a second Chamber composed of "all the illustrious of the country;" and sums up all the changes recommended by proposing for a model the constitution established by Napoleon in 1804.

The document is as follows:—

ARREST OF REPRESENTATIVES.

"PROCLAMATION OF THE PRESIDENT OF THE REPUBLIC.
APPEAL TO THE PEOPLE.

"Frenchmen! —The present situation cannot last longer. Every day which passes aggravates the dangers of the country. The Assembly, which ought to be the firmest support of order, has become a centre of conspiracies. The patriotism of 300 of its members has not been able to check its fatal tendencies. Instead of making laws for the general interest, it forges arms for civil war—it attacks the power which I hold directly from the people—it encourages all bad passions—it compromises the repose of France. I have dissolved it, and I make the people judge between it and myself.

"The Constitution, you know, was made with the view of enfeebling in advance the power that you were about to confide to me. Six millions of suffrages were a striking protest against it, and yet I have faithfully respected it; provocations, calumnies, and outrages have found me impassible. But now that the fundamental compact is no longer respected, even by those who incessantly invoke it, and that men who have already ruined two monarchies wish to tie my hands, in order to overthrow the Republic, my duty is to baffle their perfidious projects, to maintain the Republic, and to save the country by invoking the solemn judgment of the only Sovereign I acknowledge in France—the people.

"I make, then, a loyal appeal to the whole nation, and I say to you, if you wish to continue the state of disquietude which degrades us and compromises our future, choose another in my place, for I will no longer retain a Government which is powerless to do good, which renders me responsible for acts I cannot prevent, and binds me to the helm when I see the vessel driving towards the abyss.

"If, on the contrary, you have confidence in me, give me the means of accomplishing the great mission which I hold from you.

"This mission consists in closing the era of revolutions by satisfying the legitimate wants of the people, and protecting them against subversive passions. It especially consists in creating institutions which shall survive men, and which are the foundations on which something durable can be placed.

"Persuaded that the instability of the Government, and the preponderance of a single Assembly, are permanent causes of trouble and discord, I submit to your suffrages the following fundamental bases of a Constitution, which Assemblies will develop at a later period:—

"1. A responsible chief, named for ten years.

"2. Ministers dependent upon the Executive power alone.

"3. A Council of State, composed of the most distinguished men, preparing laws, and maintaining their discussion before the legislative body.

"4. A legislative body, discussing and voting the laws, named by universal suffrage, without scrutinising the list, which violates the electoral principle.

"5. A second Assembly, composed of all the distinguished men of the country—a preponderating power, guardian of the fundamental compact, and of the public liberties. This system, created by the First Consul at the commencement of the century, has already given to France repose and prosperity; it would still guarantee them. Such is my deep conviction. If you share in it, declare it by your votes. If, on the contrary, you prefer a Government without force, monarchical or republican, taken from I know not what past, or from what chimerical future, reply in the negative. Thus, then, for the first time since 1804, you will vote with your eyes open, knowing for whom and for what you are voting. If I do not obtain the majority of your votes I shall call for the meeting of a new Assembly, in whom I will deliver the mandate I have received from you. But if you believe in the cause of which my name is the symbol that is, France regenerated by the revolution of '89, and organised by the Emperor—if you believe that cause to be still yours, proclaim it by consecrating the powers I ask of you. Then France and Europe will be preserved from anarchy; obstacles will be removed; all rivalries will have disappeared; for all will reflect on the decision of the people—the decree of Providence.

"Given at the Palace of the Elysée, this 2d day of December,

"LOUIS NAPOLEON BONAPARTE."

The proclamation to the army recounts with much sympathy the wrongs which it alleges have been inflicted upon the soldiers by the late system of government; exhorts to the observance of discipline and implicit obedience; and concludes with a most politic allusion to the memory of the Emperor. It runs thus:

"PROCLAMATION OF THE PRESIDENT OF THE REPUBLIC
TO THE ARMY.

"Soldiers,—Be proud of your mission—you will save the country; for I count on you not to violate the laws, but to cause to be respected the first law of the country—national sovereignty, of which I am the legitimate representative.

"For a long time you have suffered, like me, by the obstacles which opposed themselves both to the good I wished to do you, and to the demonstrations of your sympathy in my favour. These obstacles are broken down (*brisés*). The Assembly has endeavoured to attack the authority which I hold from the whole nation. It has ceased to exist.

"I make an honest appeal to the people and the army, and I say to them, 'Either give me the means of assuring your prosperity, or choose another in my place.'

"In 1830, as in 1848, you were treated as if conquered (*en vaincus*). After having branded your heroic disinterestedness, you were not considered worthy of having your sympathies and your wishes consulted, and yet you are the *élite* of the nation. To-day, in this solemn moment, I am resolved that the army shall be heard.

"Vote, then, freely as citizens; but as soldiers do not forget that the passive observance of the orders of the chief of the Government is the rigorous duty of the army, from the General down to the soldier. It is for me, responsible for my actions before the people, and before posterity, to take the measures which seem to me indispensable for the public good.

"As to you, remain immovable within the rules of discipline and honour. Aid, by its imposing attitude, the country to manifest its will in calm and reflection. Be ready to repress any attack on the free exercise of the sovereignty of the people.

"Soldiers, I do not speak to you of the *souvenirs* which my name recalls. They are engraved in your hearts. We are united by indissoluble ties; your history is mine. There is between us in the past community of glory and misfortune. There will be in the future community of sentiments and of resolutions for the repose and grandeur of France.

"Given at the Palace of the Elysée, this 2d December,

"LOUIS NAPOLEON BONAPARTE."

Proclamations and circulars urging the preservation of the public peace by all means were also posted up, signed by the Prefect of Police, M. Maupas. They were as follows:

"PROCLAMATION OF THE PREFECT OF POLICE TO THE
INHABITANTS OF PARIS

"The President of the Republic, by a courageous initiative, has just baffled the machinations of parties, and put an end to the agony of the country. It is in the name of the people, for their interest, and for the maintenance of the Republic, that the event has been accomplished. It is to the judgment of the people that Louis Napoleon Bonaparte submits his conduct. The grandeur of the act will make you sufficiently understand with what imposing and solemn calm the free exercise of popular sovereignty should be manifested. To-day, then, as yesterday, let order be our flag; let all good citizens, animated like me by the love of the country, afford me their co-operation with the firmest resolution.

"Inhabitants of Paris, Have confidence in him whom six millions of votes raised to be the first magistrate of the country. When he calls on the whole people to express its will, the factions alone can wish to throw an obstacle in the way. Any attempt at disorder will, therefore, be promptly and inflexibly repressed.

"Paris, Dec. 2." "MAUPAS.

"CIRCULAR TO THE COMMISSARIES OF POLICE.

"Monsieur le Commissaire.—The more circumstances become serious, the more important do your functions also become. Watch with courage and with unflinching energy for the purpose of supporting and maintaining the public tranquillity. Do not tolerate the slightest assemblage on any point of the capital; do not permit any meeting the object of which may appear to you to be suspicious. Let no attempt at disturbance take place without immediately putting a stop to it by inflexible measures of repression. I rely on your devotedness; rely on my support.

"DE MAUPAS."

Throughout the whole of Tuesday the greatest tranquility was observed in the capital: the people were collected in crowds at various points of interest, but no disorder took place. A large number of arrests were made of eminent military and political leaders, and others who might be able or desirous to resist the *coup d'état*. Amongst those arrested were Generals Cavaignac, Changarnier, Lamoricière, Bedeau, Lefo; Perrot, ex-Commander-in-Chief of the National Guards; MM. Thiers, de Berryer, Colonel Charras, &c.

All the obnoxious journals were suspended; viz. *L'Opinion Publique*, *Le Messager*, *La Presse*, *La République*, *D'Ordre*, and *L'Assemblée Nationale*. The *Débats*, the *Constitutionnel*, the *Patrie*, and others were allowed to appear, but some of them were subjected to the condition of making no comments on passing events.

At eleven A.M. the President of the Republic, on horseback, accompanied by his uncle Jerome, the ex-King of Westphalia, and surrounded by a numerous staff and military escort, commenced a promenade of the quays and principal streets, and continued all through the day, without, however, eliciting any considerable number of expressions of approbation or disapprobation, either favourable or unfavourable, however, predominated.

Meanwhile the Opposition members of the Legislative Assembly, though deprived, by flight or imprisonment, of their leading men, resolved not to yield without at least some show of resistance. At eight o'clock A.M. a large body of them assembled at the house of M. Odilon Barrot, and thence proceeded to the house of M. Daru, one of the Vice-Presidents of the Assembly, where by eleven o'clock not less than 200 were collected. Having decided that they ought to proceed to the Legislative Palace, and formally maintain their right to hold their sitting, they accordingly marched in a body to the Palace and advanced towards the usual gates of entrance. They were there refused admittance, the officer of the troops on guard at the gate informing them that the Legislative Assembly no longer existed, having been dissolved by a decree of the President of the Republic. Some of the representatives expressed themselves strongly at such language, and even attempted to force their way in, in doing which one of them, M. de Larcy, was wounded with a bayonet. The representatives, after formally summoning the officers in guard of the entrance to afford them admission, left the place, and were about to return to M. Daru's residence, when they received an invitation from M. Lauriston, the Colonel of the 10th Legion of the National Guards, offering for their service the Mairie of the 10th *arrondissement*. Thither they repaired, and went through the ceremony of appointing General Oudinot Commander-in-Chief of Paris, formally deposing the President of the Republic, releasing from their allegiance to him the army, navy, and public functionaries, and creating a High Court of Justice for his trial. Their proceedings, however, were interrupted by the intrusion of a body of the Chasseurs of Vincennes. M Berryer immediately made his appearance at one of the windows of the Mairie, wearing his representative scarf, and declared to the crowd which stood outside, that the Legislative Assembly, being in sufficient numbers to deliberate, had passed decrees to the effect stated. Just as he said this, M. Thamisier, another representative, appeared behind M Berryer, and raised the cry of "*Vive la République!*" This cry was most coldly received by the crowd. "What is Berryer," said one, "but the servant of Henry V.?" "And what is Oudinot," said another of the persons standing near, "but the man who went to Rome?" The chasseurs then attempted to clear the room, but, finding that the representatives would not disperse when summoned to do so, they took the whole body, upwards of 200 in number, into custody, and marched them first to the barrack of the Quay d'Orsay, and subsequently conveyed them to the prison of Fort Valérien. Some also were said to have been transferred to the prison Mazas. Amongst the more important persons arrested on this occasion were MM. Odilon Barrot, de Tocqueville, Berryer, &c. M. Dupin, the President of the National Assembly, was not arrested, but *gardé à vue* (kept in his own house under surveillance), as also was M. Dufaure, a member of whose family is ill; and the Duke de Broglie, on account of his suffering from gout.

General Changarnier was arrested this morning, at four o'clock, in his own house. Some other representatives, who were in his room, were arrested at the same time. General Changarnier attempted to harangue the troops at the moment, but they refused to listen to him. General Cavaignac was also arrested after, it is said, a fierce resistance. The following are the more important arrests:—MM. Changarnier, Baze, Thiers, Charras, Lamoricière, Oudinot, Roger (du Nord), Cavaignac, Bedeau, Lefo, Baune, Greppo, Miot, Nadaud, Valentin, Crémieux, and Ch Lagrange. Rumour adds M Marc Dufraisi and M. Michel (de Bourges).

It is said that Generals Cavaignac, Changarnier, and Bedeau, and M. Thiers have been transferred to the *châteaux* of Ham, where Louis Napoleon himself pined away so many of his days in captivity in the reign of Louis Philippe, for his attempt to excite an insurrection at Boulogne.

General Bedeau suffers severely from a wound which he received whilst resisting his arrest.

The only attempt at opposition to the measures of the President was made in the sixth *arrondissement* by a few Montagnards, but was speedily suppressed; everywhere else the *faubourgs* were perfectly tranquil.

In the course of the day the temporary hall, called the Salle de Carton, in which the Assembly generally met was demolished by order of the President.

During the night the streets were perfectly tranquil, the President gave his usual reception, the shops were open, and the theatres were attended as usual. The *Constitutionnel* thus describes their aspect:—"The theatres are open. At the Francais they gally applauded the 'Demoselle de Saint Cyr.' At the Italiens an elegant house assembled to applaud the tenor Gueseo in *Ernani*. The Opéra Comique was not less filled. The minor theatres had their usual complement."

From the departments telegraphic despatches were received announcing that the tranquillity was not disturbed.

The following decree was issued by the President relative to taking the opinion of the nation at large on the maintenance of the supreme authority in his (Louis Napoleon's) hands —

"DECREE.

"Considering that the sovereignty resides in the universality of the citizens, and no fraction of the people can attribute to itself the exercise thereof;

"Considering the laws and decrees which have hitherto regulated the mode of appeal to the people, and particularly the decrees of the 5th Fructidor, year 2, the 24th and 25th Frimaire, in the year 8 of the Republic, the decrees of the 20th Floréal, year 10, *Senatus Consulte* of the 28th Floréal, year 12;

"The President of the Republic decrees as follows:—

"Art. 1. The French people are solemnly convoked in their respective districts for the 14th of this present month of December, to accept or reject the following *plebiscite*:

"The French people wills the maintenance of the authority of Louis Napoleon Bonaparte, and delegates to him the powers necessary to frame a Constitution on the bases proposed in his proclamation of the 2d December.

"Art 2. All Frenchmen, aged 21, and enjoying their civil and political rights, are called upon to vote. They must justify their being inscribed on the electoral lists, in conformity with the law of the 15th March, 1849, or having fulfilled the conditions required by the said law since the formation of the lists.

"Art. 3. On receipt of the present decree, the mayors of each commune will open two registers, one of acceptation and the other of non-acceptation of the *plebiscite*. Within 48 hours of the receipt of the present decree, the *juges de paix* will repair to the communes of their respective cantons, to superintend the formation and opening and establishing of the above-named registers. In case of the absence of the mayor, or his refusing or abstaining from complying with the above decree, the *juges de paix* will delegate either one of the members of the municipal council, or a notable inhabitant of the place, to receive the votes.

"Art. 4. These registers will remain open at the secrétariat of every municipality in France during eight days, from 8 in the morning till 6 in the evening, from Sunday, the 14th of December instant, to Sunday, the 21st of the same month, inclusively. The citizens who are unable to write will signify their vote on the registers by declaring their names and surnames.

"Art. 5. At the expiration of the delay fixed by the preceding article, and within 24 hours of the moment, the number of votes delivered will be verified; each register will be sealed up, and transmitted by the person in charge thereof to the sub-prefect, who will immediately forward it to the prefect of he department. The counting over the votes, the closing of the registers, and their transmission by the mayors, to be done under the inspection of the *juges de paix*.

"Art. 6. A commission, composed of three members of the Council-General, named by the prefect, will immediately sum up the whole of the votes taken in the department, and transmit the result by the most rapid mode of communication to the Minister of the Interior.

"Art. 7. The general summing up of the votes by the French people will take place in Paris before a commission, which shall be named by a subsequent decree. The result will be promulgated by the Executive power.

"Art. 8. The expenses incurred, and the advances made, by the central and communal administrations, and the travelling expenses of the *juges de paix* for the establishment of the registers, will be reimbursed on presenting their receipt, or on the declaration of the functionary, by the receivers of the *enregistrement*, or the receivers of the direct taxes.

"Art. 9. The Minister of the Interior is charged with the execution of this decree.

"Done at the Palace of the Elysée, the 2d December,

(Signed) "LOUIS NAPOLEON BONAPARTE.

"Countersigned by the Minister of the Interior, DE MORNY."

The following circular of the Minister of War was also despatched to all the generals and chiefs of corps:—

"General,—I transmit to you the proclamations of the President of the Republic, addressed to the French people and to the army. You will cause them to be immediately posted up in the barracks, and you will give orders to each commanding officer to have them read aloud at the head of each company. I likewise transmit to you the decree of this day, in virtue of which the army is called on to express its will in forty-eight hours after the reception of the present manifestoes. You will, consequently, without delay, have registers prepared in the various corps, according to the accompanying models, and you will invite the officers, non-commissioned officers, and soldiers to mark their votes down in them, or get marked down, with the least possible delay. As soon as the votes of corps under your orders shall have been collected, you will forward them to me, with statements connected with the same, certified by the different chiefs of corps or detachments and by yourself, setting forth the whole number of votes of acceptance or of rejection. The President reckons on the support of the nation and of the army; and, in what regards the division which you command, on the energy of your demeanour, and on the prompt and severe repression of the slightest attempt at disorder.—Accept, &c.,

"DE ST. ARNAUD, General of Division."

Accompanying the above circular were the following models of acceptance or rejection:—

"Acceptance. In virtue of the order of the ———, the officers, non-commissioned officers, and soldiers, whose names are affixed, have replied 'affirmatively' to the resolution presented to it in the following terms:—'The French people desires the maintenance of the authority of Louis Napoleon Bonaparte, and delegates to him the powers necessary to make a Constitution on the bases set forth in his proclamation of the — '".

"Rejection.—In virtue of the order," &c. [The rest being precisely the same as the preceding, with the single exception of the word "negatively" substituted for "affirmatively."]

"The Minister of the Interior sent the following circular to all the prefects, accompanied by five copies of the proclamations:—

"Monsieur le Préfet,—The parties who agitate in the Assembly menaced France with the compromise of its repose, by fomenting plots against the Government, the object of which was to overthrow it. The Assembly has been dissolved amidst the applause of all the population of Paris.

"On the receipt of the present, you will cause the proclamations of the President of the Republic to be affixed in all the communes, and you will send to the mayors and *juges de paix* the circulars which I address to you, with the models of the register of votes.

"You will see to the strict execution of the measures prescribed by these circulars. You will immediately replace the *juges de paix*, the mayors, and the other functionaries, whose co-operation may not be assured to you. With this object, you will demand from all public functionaries to give you in writing their adhesion to the great measure which the Government has just adopted.

"You will immediately cause to be arrested every individual who may attempt to disturb tranquillity, and you will cause to be sustained every journal whose polemics may place it in danger.

"I count, Monsieur le Préfet, on your devotedness and your zeal to take all the precautions necessary for the maintenance of public order; and you will come to an understanding on this subject both with the general commanding the department and with the judicial authorities.

"You will acknowledge by telegraph the receipt of this despatch, and you will send me, until new orders, a daily report on the state of your department. I have no need to recommend to you to send me by telegraph any news of gravity.

"Receive, &c.,

"DE MORNY, Minister of the Interior."

WEDNESDAY.

Early in the forenoon an attempt was made in the Faubourg St. Antoine to raise barricades, but it was speedily suppressed, and the barricades demolished. M. Baudin, a representative of the Mountain, who had excited the attempt, was killed at the first fire; other accounts say he was only wounded. The affair occurred about 10 o'clock A.M. "M. Baudin suddenly," says an eyewitness, "appeared on horseback in the Rue St. Antoine. He wore a travelling-cap, and carried a naked sword in his hand. He was followed by six other representatives, and they all wore their insignia of representatives. The hour he appeared was that at which the workmen of the *faubourg* leave their workshops to breakfast. M. Baudin's appearance attracted a great many groups, whom he harangued, and summoned to take up arms for the delivery of such of the representatives arrested yesterday who are still at the prison of Mazas, which is in the neighbourhood. He was aided in his efforts by his colleagues, and soon the cry of '*Aux armes!*' was heard. A great deal of agitation was the consequence, and many of the workmen ran about to look for arms. The first attempt was made against the guardhouse of Montreuil, which they surrounded, and soon succeeded in disarming the few soldiers that were there, overpowered as they were by numbers, and at a distance from all aid. Others of the insurgents set about making barricades. They succeeded in making two, which, however, were very fragile. One was composed only of a furniture dry-vessel, and a cabriolet. The moment these indications of hostility were observed, expresses were despatched for aid, and in a very short time the insurgents were caught between two detachments of the troops—one from Vincennes, headed by General Bedeau, and the other from an opposite direction, under the orders of General Courtiges. The troops had received orders not to fire unless they were attacked. They advanced, *l'arme au bras*, up to the face of the barricade, when they were fired at. One officer was killed, and four or two wounded. The troops returned the fire. M. Baudin, the representative, was killed on the spot; and, it is said, six or seven of the other insurgents wounded. A woman who happened to be passing near the place was, it is feared, mortally wounded. The insurgents, who were not in very large numbers, fled in all directions. The barricade, such as it was, was taken, and the soldiers advanced to the second, which they as quickly took and removed. Detachments continued to arrive, and soon the whole of the Rue St. Antoine was occupied by the troops.

The whole operation of taking the barricades, which were at the corner of the Rue St. Marguerite, did not occupy more than seven minutes. The second barricade was so slight that only six men were sent to take it. The insurgents fled, some in the direction of the heights of Menilmontant, by the Bridge of Austerlitz, and others by the Faubourg St. Marceau; others escaped by the cross streets, and succeeded in reaching the Boulevards in the direction of the Rue Montmartre, where they divided into different small parties to escape notice. In a short time a regiment of dragoons moved from the Champs Elysées along the Boulevard to the Bastile; they were soon after followed by a regiment of lancers, who descended the Boulevard in the same direction at full trot; they were again followed by a battalion of infantry; and about one o'clock another regiment of the line, with a battery of artillery and a corps of engineers, moved in the same direction. The whole of the space between the Porte St. Martin and the Bastile was occupied by the military during the day, and no one was permitted to go beyond the Porte St. Martin—at least in the line of the Boulevards. Though it was not believed that any attempt at insurrection would be made during the day, yet, as the workmen of the Rue St. Antoine had not returned to their workshops, and as they presented themselves in numbers on the Boulevards, it was considered necessary to take precautions so as to prevent any attempt at barricades during the night."

The military force in Paris was overwhelming; and it was said 150,000 men of all arms could be collected in the streets within a few hours.

The High Court of Justice, before which, according to the terms of the Constitution, Louis Napoleon should be summoned to answer for

any act of high political misdemeanour, assembled in the morning, and was immediately summoned to break up. The members obeyed the injunction, and its dissolution may be regarded as settled

In the course of the day (Wednesday) upwards of 100 representatives sent their adhesion to the President of the Republic. Amongst those who presented themselves at the Elysée at an early hour on that day are specially noted MM. de Beaumont (Somme), De Rancé, F. Barrot, Lucien Murat, General Vast Vimeux, M. Bonaparte, P. Bonaparte, General de Grammont, General d'Hautpoul, Berger, Gavini, Colonel Laborde, Bataille, De la Moskowa, Baraguay-d'Hilliers, Godelle, Echassériaux, De Cassabianca, Fortoul, Dariste, Mimerel, Fould, Bérard, Vaisse, Dumas, De Grouchy, de Girardin, Leverrier, Vieillard, Ségur-d'Aguesseau, De Salis, Abbatucci, fils., Abbatucci, père, &c.

The votes of the public functionaries on the question of the election of Louis Napoleon for ten years were already begun to be taken on Wednesday. All the *employés* in the public offices, the post-office, &c., had been called on to sign, and they were all in favour of the President. The order of the Minister of War, directing the registers to be opened in every regiment in France, for the officers, non-commissioned officers, and men to declare within forty-eight hours whether they accepted or refused Louis Napoleon as President of the Republic, had also begun to be acted on in Paris. In the 49th Regiment of Infantry the registration of the votes was first brought to a close, and not one man was found to inscribe his name against Louis Napoleon. The result is expected to be pretty nearly the same in the other regiments. In fact, so far as had been ascertained, the soldiers of all the corps voted for him

The following is the decree of the President of the Republic, referred to on a former page, relative to the

PROVISIONAL CONSULTATIVE COMMISSION.

"IN THE NAME OF THE FRENCH PEOPLE.

"The President of the Republic, being desirous, even in the reorganisation of the Legislative Body and of the Council of State, to surround himself with men deservedly enjoying the esteem and confidence of the country, has formed a Consultative Commission, composed of the following persons :—

M. Abbatucci (de Loiret)	M. Du Tagrange (Gironde)
D'Argout, Gouverneur de la Banque	Granier (Vaucluse)
Aubernon, Le Comte (Moselle)	Giraud, Agenais (d'Angers)
De Bar, Le Général (Seine)	Girod, Charles (de l'Ain)
Baraguay d'Hilliers, Le Général (Doubs)	Godelle (Aisne)
Bernadou (Les Basses-Pyrenées)	De Goulard (Hautes-Pyrenées)
Baroche (Charente-Inférieure)	De Beaucaron (Hautes-Alpes)
Barthe, Premier Président de la Cour des Comptes	Lacaze (Hautes-Pyrenées)
Barrot, Ferdinand (Seine)	Laboulaye (Finistère)
De Beaumont (comte)	De Larabourdere (Ille-et-Vilaine)
Bonaparte (Pierre-Charles-Napoléon)	Leboeuf (Seine-et-Marne)
Bérard (Lot-et-Garonne)	Lefebvre Duruflé (Eure)
Bineau (Maine-et-Loire)	Lemarois (Manche)
Boinvilliers, s'(le Iné)	Le Verrier (Manche)
J. Boulay (De la Meurthe)	Magnan (Dordogne)
De Cambacérès (Aisne)	Meynard, Président de Chambre à la Cour de Cassation
De Casabianca (Corse)	De Morogues (Nord)
Ceas in l'Aimant	De Morvin embert (Doubs)
Chadenet (Meuse)	De Mortemart (Seine Inférieure)
Chantelauze-Goyon (Puy-de-Dome)	De Montalembert (Doubs)
De Chasseloup-Laubat (Prosper)	De Mortemart (Seine Inférieure)
Chasseigne (Indre)	De Moulin (Eure)
Colas (Gironde)	De Mosselier (Doubs)
Dariste (Basses-Pyrenees)	Murat, L. (Lot)
Delpuy (Gironde)	D'Ornano, Le Général (Indre-et-Loire)
Desjobert (Seine-Inférieure)	Papin-Labadie (Seine-et-Marne)
Desgrands-Pilleys (Seine-et-Marne)	Perrier, J (Negotiant de la Banque)
Dumas, Theodore (Seine)	De Persigny (Nord)
Dumas (de Lowlet)	Randon, Le Général
Duvau, Mesrico	Rouher, Puy-de Dome)
Excelmans, le Maréchal (Grand Chancelier de la Légion d'Honneur)	De la Rochefoucauld, Général
D'Hautpoul, Le Général, Aude)	Ségur d'Aguesseau, (Hautes-Pyrenées)
Fauchet, Léon (Marne)	Seydoux (Nord)
De Flahault, Le Général	Sachet d'Albufera (Eure)
Fould, Achille (Seine)	De Turgot
Fortoul, H (Basses-Alpes)	De Thorigny
Freslon (Maine-et-Loire)	Troplong, Premier Président de la Cour d'Appel
Gas sade (Manche)	Vuillard (Manche)
D. Grouchy (Le Général)	Vil sel ogy
D. Lagrange, Frédéric (Gers)	De Wagram

Le Président de la Republique, LOUIS NAPOLEON BONAPARTE
Le Ministre de l'Interieur, DE MORNY.

The night of Wednesday passed over quietly.

THURSDAY.

On Thursday Paris retained its quiet aspect; but, owing to the circumstances of the preceding day, it was thought proper to take further precautions. Accordingly, the following decree of the Minister of War was posted up :—" Every person in the act of erecting or defending a barricade, or bearing arms, shall suffer according to the most rigorous laws of war."

Another decree of the Prefect of Police prohibits the assembling of groups. All seditious cries, all placards of political import, &c., were also forbidden.

The groups were to be dispersed by the armed force, and without previous notice.

The circulation of public vehicles was likewise prohibited, as well as of waggons loaded with provisions and materials.

During the day it became known that M. Baroche had accepted the Presidency of the new Council of State.

The news received from the departments was satisfactory. At Orleans the Ultra Republican party assembled to invade the Town-hall; they had been energetically repulsed by the National Guard and the troops. Forty-five of the principal promoters had been arrested, and, amongst others, the representatives Martin, Michaut, Tavernier, and Pereira.

M. Léon Faucher on Wednesday addressed the following letter to the President of the Republic :—

Paris, December 3, 1851.

M. le President, -It is with astonishment, mingled with pain, that I see my name inserted amongst those of the members of an Administrative Commission on which you have just constituted. I did not think I had given you the right to do me such an injury. The services which I have rendered to you, believing I rendered them to the country, authorised me, perhaps, to expect from you a different return ; my character in every instance merited more respect. You know that in my career, already long, I have neither belied the principles of liberty nor my devotedness to order. I have never participated, directly or indirectly, in the violation of the laws; and in refusing the mission you confer on me, I have only to remember that which I held from the people, and which I still hold

Please to accept, M. le President, the expression of my respect.

(Signed) LEON FAUCHER.

THE TWO PREFECTS OF POLICE IN PARIS.—The *Siècle* says—" For some days past there has been in circulation, in the *barrières* of the Prefecture of Police, a letter which has much amused the *employés*. It is from M. Carlier, the ex-Prefect, who has seen himself successively followed by two police agents, and as is fitting—Monsieur le Prefect,—I have the honour to announce to you that I leave to-morrow to have a few days' shooting in the country. It is, therefore, perfectly useless to send your agents charged to watch my house and to follow me. I will do myself the honour of informing you of my return. Accept, &c., CARLIER."

THE WEATHER IN FRANCE.—A letter from St. Etienne, of the 26th ult., states that the battalions of the 84th regiment, which left Puy on the 18th and 22d ult. for Langogne, were obliged by the snow and cold of the mountains of the Lozère, to turn back and take re ute in the lower ground. The quantity of snow on the mountains of the Lozère is so great as to render them almost impassable, and these troops, which are bound for Avignon, are obliged to proceed there by St. Etienne

THE MOSCOW RAILWAY.—The advices from St. Petersburg state that the railway was opened on the 18th ult. for public. The first train with passengers started at eleven o'clock in the morning, and a train was henceforth to leave daily from St. Petersburg and Moscow respectively The fares were—First class, 19 silver roubles (about £3); second class, 13 silver roubles (£2 is. 6d.) ; and third class, 7 silver roubles (£1 2s.). The time occupied was to be 18 hours, and passengers were limited to one pood (36 lb.) weight of luggage, for which they were to pay 80 copecs (about 2s. 6d.) The trains for goods were to con mence running on the 27th, and the charges would be, for grain and flour, about 2 is. per ton ; hemp, flax, &c., about 32s. per ton ; and other articles about 48s. per ton. Bulky goods would be taken by measurement, and separate waggons, holding about 600 poods, were to be let at £12 12s. These trains would occupy 45 hours.

Accounts dated Frankfort, November 28th, announce that the constitution of the duchy of Nassau, promulgated after the events of 1848, has just been abolished by an ordinance of the Grand Duke The Chamber Assembly will be replaced by two chambers. The election will take place according to the Prussian law.

FUNERAL OF THE LATE KING OF HANOVER.—The funeral of the late King of Hanover took place on the 26th ult. On the previous evening a solemn service was celebrated, amidst the tolling of all the church bells, in the chapel of the Palace. At midnight the coffin, accompanied by that containing the remains of the late Queen, who died in 1841, was conveyed to the Palace of Herrenhausen, escorted by the first dignitaries of the kingdom, and by detachments of the Royal Guard. The inhabitants of Herrenhausen were assembled in the avenue leading to the Palace bearing torches. The public were not admitted to the ceremony of interment.

CHESS.

TO CORRESPONDENTS.

A S—That Mr Staunton has taken part in some of the largest games recorded it was his misfortune and not his fault. The question is, how far he was the occasion of their protraction? In the 3d to contest with Mr Williams, to which you allude, we have the important testimony of Mr Löwenthal that Mr W *systematically* sacrificed time three times at least as his adversary; and that, but for the exhaustion consequent on the undue prolonged sittings, Mr S would have won every game in the match, as he certainly will Mr W some long two) In further proof that Mr S is no advocate of the Parisian strategy which we condemn, he offers to give Mr W the same odds, viz. *three games out of seven or five out of eleven*, and play him for a hundred guineas—" provided always that neither player shall be permitted to exceed *thirty minutes* in considering a move, and that no sitting shall exceed six hours.

FESTINA LENTE.—You are fully justified in taking your own time to the examination of moves and your opponent's must accede to your wishes in future he played without hesitation and were it to minutes or a quarter of an hour in considering an intricate combination We know many fine players who think nothing of taking an hour, or even a longer, in situations of great difficulty

T G I You may advance seven two steps for his first move, but never more than one step at a time afterwards. 2. See notice to M A, or gas Johnson's " Amusements in Chess "

The King would, of course, take the Castle

F H B —There is no difference whatever, except in the designation

R B C—Make yourself conversant with the best openings, and get as much practice with good players as you can

CLERGYMAN and Others—The number of communications we have received on the subject from players of all grades induces us to hope that no Chess will in future be played without some stipulation as to the maximum time a player shall be permitted to consume in the consideration of a single move, and s so as to the detail, in of each sitting

E S K. The solution is given below

JUVENIS—Amidst the hundreds of letters addressed to the paper weekly, some, of course, unsavory; knowing this, you should have rqnaded the question How can we possibly guess what it was ?

QUERY We are not prepared to decide which is White's *best* move at the point of the Q B 4 Pawn opening where you place. He may play 5. Q to Q R 4th without any danger of loss—Pray repeat the " Observations " to which you allude

F D, Piazza del Ciagno, Florence—Very acceptable. Another budget is looked for anxiously

A S High Wycombe—1. It is not allowable for a player to cast in order to get out of check 2. The problem shall be exam ned

A L. West Indies The solution you propose is well known here, but is not lifted so well as that adopted And we cannot at all agree with you in preferring the method of arranging the pieces in the Spanish paper you send, to our own

F W D No. 607 one, as you and several correspondents suggest, be solved in four moves

SOLUTION OF PROBLEM No. 410 *

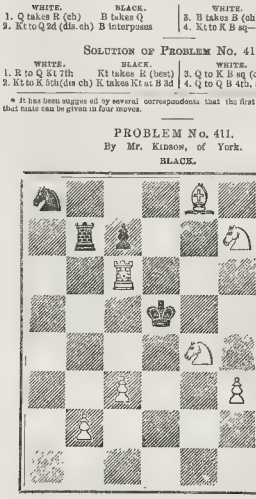
WHITE.	BLACK.	WHITE.	BLACK.
1. R to Q Kt 7th	Kt takes R (best)	3. Q to K B sq (ch)	K takes Kt.
2. Kt to K 6th (dis ch)	K takes Kt at B 3d	4. Q to Q B 4th, and mates next move.	

* It has been suggested by several correspondents that the first move is superfluous, and that mate can be given in four moves.

PROBLEM No. 411.

By Mr. KIDSON, of York.

BLACK.



WHITE.

White to play, and mate in four moves.

CHESS IN THE METROPOLIS.

MR. ANDERSSEN GIVES MR. DEACON THE Q Kt. (a)

(Remove White's Q Kt from the board.)

(Allgaier Gambit.)

WHITE (Mr. A.)	BLACK (Mr. D.)	WHITE (Mr. A.)	BLACK (Mr. D.)
1. P to K 4th	P to K 4th	17. P to Q 5th	Q Kt to K 2d
2. P to K 5 4th	P takes P	18. K to Q sq	P to K R 5th (c)
3. Kt to K B 3d	P to K Kt 4th	19. Q to K B 2d	B to Q B 6th (ch)
4. P to K R 4th	P to K Kt 5th	20. B to Q Kt 3d (d)	B takes B (ch)
5. Kt to K 5th	P to K R 4th	21. P takes B	K Kt takes P
6. B to Q B 4th	Kt to K R 3d	22. P takes Kt (e)	Q takes K B P
7. P to Q 4th	P to Q 3d	23. Q to Q 2d (f)	Q takes Q P
8. Kt to Q 3d	P to K B 6th	24. Kt to Q B 2d	Kt to K B 4th
9. P takes P	B to K 2d	25. K R to K sq (g)	P to K R 6th (h)
10. B to K Kt 5th	B takes B	26. Q R takes Q R P	Kt to Q 5th (ch)
11. P takes B	Q takes P	(i)	(k)
12. P to K B 4th	Q to K Kt 3d	27. P takes Kt	P to K R 7th
13. P to K B 5th	Q to K Kt 4th	28. Q to K 2d	R to K Kt sq (l)
14. Q to K 2d	Kt to Q B 3d	29. K K to Q R sq	P to Q Kt 3d
15. P to Q B 3d	B to Q 3d	30. Q to K 7th	Q to Q B 3d (ch)
16. P to Q Kt 4th	Castles on Q side	31. Kt to Q B 5th (m)	P queens
(b)		32 P to Q Kt 8th	

And Black gave Mate in seven moves.

(a) It is hardly necessary to say, that, improved as Mr Deacon has already become, it would be out of the question for Mr. Andersson to give these odds with any hope of success.

(b) Presuming to take the K B P pawn, and then, if Black may regained to play Q R to K sq, &c.

(c) This move is not characteristic of Mr. Deacon's usual consideration, and occasions him some little embarrassment. His proper play was, perhaps, to take off the K B P at once For example

WHITE.	BLACK.	WHITE.	BLACK.
18.	Q Kt takes K B P	20. B to Q Kt 3d	Q R to K sq
19 P takes Kt	Kt takes P	21. Q to R 3rd	Kt to K 6th (ch)

and he has an irresistible attack.

(d) His best move, apparently.

(e) Taking the Q if P with his Q would have been very unwise.

(f) If Q to K 5d, Black might have taken the Q P with his Kt, and fo lowe with Q R to K sq, &c.

(g) If he had taken the Q R P, the following variation is possible—

WHITE	BLACK.	WHITE.	BLACK.
25. Q R takes Q R P	Q takes K R	27 Kt to K 5th (ch)	K to K 3rd.
26. Kt to Q 8 8 (ch)	R to Q 2d		has the best of it

(h) Kt to Kt sq, or P to Q 3d, seems safer and equally effective.

(i) Inveracious to play Kt to Q 3 8th (ch), and Kt to K 5 th (ch), &c.

(k) Giving up the K with perfectly sound, and the most decisive move at his command

(l) Better than queening the Pawn

(m) Instead up, if Black on his next move played Q R to K sq to take the Q B P with Q (ch) and then quietly to mate next move by Q R to Q Kt 8th.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

CHELTENHAM, December 1, 1851.

Sir,—Permit me to suggest, for your consideration, that Chess-playing in general would be accelerated by a stipulation on your part, that to every game sent for publication should be appended the period occupied in the contest, viz. from the beginning to the end, whether successful or defeated, and so on the perfect understanding that it would appear with the game when published.

This spur would keep players more to the qui vive, I think.

Your obedient servant,

A READER AND ADMIRER OF YOUR PAPER.

WHISHAW'S CHESS ENVELOPES AND CARDS.—To facilitate the playing of chess by correspondence, and the transmission of interesting problems between friends who are at a distance from each other, Mr. F. Whishaw has introduced what he terms "chess envelopes and chess cards." An oblong chessboard is engraved inside the envelope of on the card, and, by means either of letters or geometrical figures inscribed on the proper squares on the card and red ink respectively, each player's move is distinctly shown. And when writing to his acquaintance upon other matters, he has only to mark his move upon the envelope, and he may forward it by post to the most remote parts of the kingdom.

CONFERENCE OF REFORMERS AT MANCHESTER.

On Wednesday a numerous conference of the leading Reformers chiefly from Lancashire and Yorkshire, but also including gentlemen from various other counties, was held at the Spread Eagle Inn, Manchester, to which an adjournment had taken place from the rooms of the association, in consequence of the largeness of the attendance, to consider what steps should be taken by the great Reform party, in consequence of the intimation of the Prime Minister that it was his intention to introduce some measure of reform during the ensuing session of Parliament. The chair was taken by George Wilson, Esq ; and there were also present Messrs. Cobden M.P., Bright, M.P., Sir J Walmsley, M.P., Sharman Crawford, M.P., Right Hon. T. M. Gibson, M.P., James Hargreaves, M.P., G. Thompson, M.P., L. Heyworth M.P., J. B. Smith, M.P., John Williams, M.P., and several manufacturers and delegates from various towns.

After some introductory observations by the chairman, a series of resolutions was submitted to the consideration of the meeting by Mr. Bright, M.P., the principle of them being to the effect that the right of voting should be widely extended, and that the franchise should be made more simple, with a view to the easy formation of an honest register of electors ; and it recommends that the elective franchise be based upon occupation and liability to the poor-rate, with such limitation as to period of residence shall be necessary to afford a guarantee that the occupation is *bonâ fide*. In addition, the conference would urge the extension of the 40s. franchise, and its extension to the owners of property in the United Kingdom of that annual value, whether derived from freehold copyhold, or leasehold tenures, with the view to open a way to the right of voting to many who, from various causes, was d not be in the direct occupation of premises that fix the franchise. The poor, but whose claims to the franchise from industry, character, and station, are undoubted. The whole constituency of the United Kingdom would thus consist of occupiers rated to the relief of the poor and of owners of property, freehold, copyhold, or leasehold, of the annual value of 40s. ; also, that, where practicable and convenient, small and neighbouring boroughs be united and form one borough ; that, where such arrangement is not practicable, small boroughs cease to return members, and that their existing constituency form part of that of the county in which they are situate.

The resolutions also recommend the adoption of the ballot, and concur in the view expressed by his Prime Minister during the last session of Parliament, that the property qualificat on for Members of Parliament ought to be abolished.

After considerable discussion, and some warm observations from Mr. George Thompson, who had proposed an amendment, and consented himself to be rather cavalierly treated by Mr. Bright, the resolutions were agreed to.

In the evening a public meeting, numbering 7000 people, was held in the Free-trade Hall. The proceedings were of a most enthusiastic character. Mr Wilson was in the chair. Mr. Bright, M.P., Mr. Milner Gibson, M.P., Sir Joshua Walmsley, M.P., and Mr. Cobden, M.P., spoke, and were loudly applauded. The resolutions agreed to at the morning conference were submitted, and carried with great cheering, and without a single dissentient voice

Two hundred live hares were despatched a few days since from a domain in the neighbourhood of Woodbridge, Suffolk, to Paris ; whether for the purpose of feasting, or being hunted, we are not informed.

The King of Prussia returned to Berlin on the 27th ult. from Hanover. The Prince of Prussia went from Hanover to Frankfort, from whence he was to proceed to Baden and Coblentz.

FASHIONS FOR DECEMBER.

DAMAS, lampas, Ottoman velvet, watered silk, antique watered silk plain or figured, merinos, cashmeres, woollen cambric, and woollen poplin are in fashion. Cloth is no longer worn for dresses; but it is used to make cloaks, round bonnets, very full, and so cut out that when the arms are raised it forms two points in front, like a shawl. This cloak is very warm and comfortable, but the shape is scarcely yet decided for engraving. We should also mention a novelty, a long shawl of black velvet, folded in four like a cashmere ; instead of the palm branches, there are five rows of black watered silk, as wide as three fingers, and two round the edges. The fur which is still most in fashion is the sable, from its exorbitant price, increased this year.

The taste for ornaments is decidedly in favour of jet ; lace, which hitherto was worn alone, and seemed rich enough with its splendid patterns, is now chiefly worn for the jet with which it is embroidered.

With evening dress lace scarfs are worn ; hitherto ladies were contented with a piece of square or long lace. This year they acquire a more graceful form, by rounding the scarfs behind, adding flaps in front much narrower. This is more *dressy* than the shawl shape, which is not in keeping with an evening *toilette*.

Evening head-dress is not yet decided, and all kinds of shapes are made such as wreaths of sweet peas, with four bunches ; a head-dress of double corn poppies, with velvet leaves, and black jet, called the Andalusian wreath, quite short, is much in vogue. A new flower has just assumed a brilliant place. This is a lilac, called *Cerise*, with the heart of small ostrich feathers. The slight white down covering the flower, which can be made of any colour, is charming in effect.

We have nothing new to say about the shape of bonnets.

THE ILLUSTRATIONS.

Head-dress *a la Marie Stuart*, trimmed with ribbons called *pompadours* ; dress of plain *reps*, trimmed with quilling grandmamma fashion in ribbons of the same shade as the dress ; body open in front, and closed by three knots of ribbon ; high *fichu*, open down the middle, and fastened by diamond buttons ; the groundwork of the *fichu* is of embroidered India muslin, trimmed with Malines lace ; pagoda sleeves, trimmed with lace of the same ; skirt plain.

Head-dress of *ambigue guipure*, with two lappets falling on each side ; little *pardessus* of black velvet, fitting rather close to the waist, which is only worn in-doors. Close-fitting body, waistcoat-shaped ; high *guipure* collar and frill, in front of the same ; the sleeves are also trimmed with a *guipure* frill. Skirt of Italian taffetas, pearl grey, quite plain.

Boy's Dress. Dark green velvet blouse, trimmed with velvet ribbons a shade darker ; sleeves wide, and fixed to the waist by a belt of the same stuff ; paletot of the same velvet, trimmed like the blouse ; under sleeves of jaconet ; short trousers, made of English embroidery ; striped stockings, and button cloth boots.

Men's coats are worn quite after the English fashion, slight in front, with the tails not very wide, and rather short ; the trousers are cut straight round at the foot, with or without straps. Waistcoats are of watered velvet, with large patterns, or of plain cashmere, with a figured band all round.

M. BERRYER.

PIERRE ANTOINE BERRYER, the celebrated advocate, the glory of the Parisian bar, the eagle of the French tribune, and the standard-bearer of the Legitimists, as he has been alternately styled, was born in Paris on the 4th of January, 1790. He was the son of the famed jurist Berryer, one of the counsel of the doomed family of Louis XVI. Pierre Berryer was educated at the College of Juilly, and was destined for the Church His piety at school was more remarkable than his classic learning ; and it was not without difficulty that he was persuaded to abandon his religious impulses, to resign the predictions for the pulpit, and to study the code instead of Bossuet. He went through the regular courses of instruction in the legal profession, beginning at the desk of the *avoué*, or attorney, until he was called to the bar. At twenty-one years of age he married Mademoiselle Gauthier, by whom he had one son, now a director of a railroad. M. Berryer has been a widower for the last ten years. His career as an advocate has been pre-eminently successful ; he not only possessed the gift of extraordinary eloquence, but he was thoroughly acquainted with accounts and with the details of business. His administrative talents, which are of the highest order, have been frequently called into play in the Chamber as reporter of financial or of abstruse fiscal questions. In political opinions he was in his youth dazzled with the Emperor's brilliant career ; but, from the first Restoration, became a confirmed royalist, like his father, and has remained so to this day. After the Hundred Days he was associated with the elder Berryer and Dupin in the defence of Marshal Ney. He pleaded for General Debelle before a court-martial, and, although he could not win an acquittal for his client, procured for him a partial pardon from the King. In April, 1815, he saved the Imperialist General Cambronne by his eloquence.

In the much-agitated affair of the Generals Donnadieu, accused of conspiring against the Duke de Berry's life, Berryer distinguished himself by his fearless denunciations against the Minister, the Duc Decazes, Grand Referendary of the Chamber of Peers afterwards under Louis Philippe. M. Berryer has always maintained that Decazes was the instigator of the Lyons and Grenoble insurrections in the time of Louis XVIII. M. Berryer took an active part in the formation of the Sociétés des Bonnes Lettres and of the Société des Bonnes Etudes. The Minister, M. de Villèle, offered him the position of Procureur-Général, but M. Berryer declined the honour. M. Berryer joined the Polignac party, and was elected Deputy for Puy (Haute Loire), in place of M. Lafayette, who, by the influence of M. Laborde de Mereville, had been created a Peer. At this period he bought the estate and Château of Augerville for his parliamentary qualification. His first appearance at the tribune was on the 8th of March, 1830, on the discussion of the famous address of the 221, which he opposed as unconstitutional and factious, maintaining the Royal prerogative

FASHIONS FOR DECEMBER.—(SEE PRECEDING PAGE.)

tive. He was offered a place in the Ministry; but refused, as the Polignac will was too positive for his independent notions. The Revolution of July, 1830, took place, and M. Berryer spoke powerfully but uselessly on the deposition of Charles X., the elder branch of the Bourbons, and against the impeachment of the Polignac Ministry. Under the Citizen-Royalty, Berryer was elected deputy for Marseilles, and steadily refused all offers from Louis Philippe during the reign of that Monarch, struggling on in the Chamber as the defender of the banished branch of the Bourbons, without cessation, but not without hope; for the conviction of M. Berryer, that the dynasty of the Orleans family would cease before the death of Louis Philippe, was constant, and the events of 1848 proved that his foresight was right. In 1832 he visited the Duchess of Berry, to endeavour to persuade her to abandon the rising in La Vendée, for which he was tried at the Court of Assizes at Blois, October 16th, and acquitted. In 1833 he was in Switzerland for some time, for the re-establishment of his health, affected by the exciting events of his perilous mission to the Duchesse de Berry. M. Berryer was counsel in the prosecutions against M. de Lamennais and Chateaubriand, and in almost all the cases against the Royalist journals. Such was the fame acquired by his oratory at the bar and in the Chamber, that he was elected deputy in four electoral colleges; but he has always remained faithful to the electors of Marseilles. He visited the Royal exiles of Goritz in 1836. In 1839 he joined the Thiers-Guizot coalition against Molé. His various speeches on home and foreign affairs on behalf of French interests secured for him universal popularity. Personal enemies Berryer has never had: his fascinating manners, his freedom from personalities, and his various accomplishments rendered him a favourite with men of all shades of public opinion; he has been always on intimate terms with the leaders of all parties, whatever was the line of opposition he took in the Chamber against them. He has been more at issue with his own political party than with his opponents; and the Legitimists have been much divided on his account—a fraction considering that M. Berryer has not gone sufficiently far in overt acts to produce a restoration of the Duc de Bordeaux. In 1843 he joined with Chateaubriand in the "pilgrimage" to Belgrave-square, to visit the Count de Chambord. His advice to the Prince, to abstain from intrigues, insurrection, and conspiracy, but to wait for the course of events, has been religiously followed; and at the last visit, in 1850, paid to the Duke, at Ems, Berryer's counsels again prevailed over those of Larochejacquelein. In 1848 he was elected one of the Deputies for the Bouches du Rhone, by 44,159 votes, to the National Assembly. M. Berryer, who defended Prince Napoleon, in 1840, before the Court of Peers, for the Boulogne attempt of the 6th of August, and whose eloquence, it has been generally considered, saved the Prince and his associates from condemnation to death, was a warm advocate for the repeal of the law of universal suffrage. M. Berryer supported the Prince and his Ministries in the maintenance of order; but, from the moment that he considered the Prince intended to go beyond the pale of the Constitution, he joined the "party of Order," as it is termed. Cormenin, in his "Book of Orators," declares that Berryer, next to Mirabeau, is the greatest of French orators; and those persons who have heard Berryer, either at the bar in some exciting cause, or at the tribune on some great occasion, will not dispute the criticism of Cormenin. Berryer is just above the middle height, with a moderately broad and muscular figure. When he stands at the tribune, with his head raised and thrown back, his chest forward, his arms uplifted, and he is pouring forth a torrent of eloquent words, nothing can be superior in style, or more graceful in action. He electrifies his hearers by masterly outbreaks of passion. Possessing one of the most musically toned voices ever heard, and thoroughly gifted with every oratorical resource, he is listened to with profound silence, only interrupted by vehement applause at the end of some fine period. Woe be to the representative who interrupts Berryer! he is as quick as lightning in improvisation, and falls upon his foe with a fertility of language that overwhelms the incautious interrupter.

It has been always regarded as wonderful, how Berryer, who is a man of the world, fond of society, of pleasure, and of dissipation, can find time for the public calls on his oratory; but it is his astonishing aptitude for business, his quickness in mastering the details of the most complicated questions, his readiness to reject the specious and detect the solid, his thoroughly logical mind, in fact, which enable him to achieve his destined task of the day.

M. BERRYER.

DEATH OF MARSHAL SOULT.

The death of this celebrated Marshal, which has just occurred, is an event in French history. Marshal Soult, a hero of the Grand Army, and one of the greatest, if not himself the first, of those who toiled in victory under Bonaparte, was every way a soldier fit to stand by Cæsar. He was a true paladin of the Empire, and most largely and unceasingly throughout his career did he participate in the glories and the griefs—the laurels and the cypress, of Napoleon Nicolas Jean-de-Dieu Soult, Duke of Dalmatia, Marshal-General of France, and Knight Grand Cross of the Legion of Honour, was a native of Saint-Amans-la-Bastide, a small town in the department of Tarn, and the province of Languedoc. He was of humble parentage. His birth occurred on the 29th March, 1769, a month before that of Wellington, and little more than four months before that of Napoleon. From his sixteenth year Soult served his country. His military rise progressed almost as rapidly and as wonderfully as that of his mighty leader himself. It stands thus recorded in the archives of the French War Ministry: Jean-de-Dieu Soult, a common soldier in 1785, Corporal in 1787, Sergeant in 1791, Adjutant-Major in 1792, Captain in 1793, Chef-de-Bataillon, Chief and General of Brigade in 1794, General of Division in 1799, Lieut.-General of the army of Italy in 1800, of the army of the South in 1801, and a Marshal of France in 1804. In 1807 he was created Duke of Dalmatia. To detail the whole military career of Soult, would far exceed our limits, and would amount, in fact, to a mere repetition of the great warlike events of the Republic and the Empire. At most of the battles of that stirring period Soult either assisted or led. His superior powers as a general were continually asserted by Napoleon, and more than once admitted, when commanding against him, by Wellington. The most remarkable occurrences in Soult's career, were briefly these:—At the battle of Fleurus, Lefebvre preferred the advice of Soult, then the chief of his staff, to that of General Marceau, and won the victory. The heroic Marceau acknowledged the value of the counsel before he left the field, in a manner worthy of him who amid such scenes "had kept the whiteness of his soul." Soult was with Napoleon at Marengo, at Austerlitz, at Eylau, and at Bautzen. On the field of Austerlitz Napoleon thus gave his directions to Soult when the engagement was about to begin:—"Marshal, my only instruction to you is, act as you have always done." In 1808 Soult entered Spain with a victorious power. Sir John Moore and his exhausted forces retreated before the invader. How Moore turned on his pursuers, and heroically fought, conquered, and fell at Corunna, is known to all; and so should it be also known how Soult, to his own immortal honour, treated the memory of him who had been left alone in his glory, and how he raised a monument at Corunna to the man who had just made him taste the bitterness of defeat. Soult was the hero of the French side in the Peninsular war. With him that side first flourished; in his absence the cause was lost; and on his return the final ruin was protracted by him against the overwhelming efforts of England's best commander. Beaten at Orthès, Soult was still able to fight the terrible battle of Toulouse, where both parties claimed the victory, but where Soult's credit was marred by the imputation that he had no occasion to engage, and that he had caused a useless shedding of blood. The news of the peace proclaimed in Paris should have reached him before the battle: whether it did or not, is a question he has now to answer before an awful and unerring Tribunal. Though Soult gave in his adhesion to the restored Bourbons, and though he, for a short time, was their Minister of War, the news that Napoleon was come back proved irresistible; his faith and his love were with the Emperor. Soult joined him again, and stood at his right hand throughout the fatal day of Waterloo. For this, at the second restoration, the Duke lost his *bâton*, and had to reside away from France for three years. In 1819 he received permission to return, and in 1820 he regained his Marshal's rank; but until 1830 the Duke of Dalmatia remained in kind of wary retirement.

THE LATE MARSHAL SOULT.—FROM THE PORTRAIT BY ROUILLARD, IN THE GALLERY OF VERSAILLES.

With the monarchy of Louis Philippe he became closely allied, and all active again. He was Minister of War from 1830 to 1834, and President of the Council in 1840. In 1838 a remarkable event occurred in his life. He came to England to the coronation of Queen Victoria as Ambassador Extraordinary from France. The splendour of his equipage on that occasion; his cordial and brilliant reception (Moore and Corunna were not forgotten); his riding about with his former mighty opponent, the Duke of Wellington; his own evident gratification and enjoyment, are still fresh in public memory, and will last as of pleasing record in future history. In 1843 the Duke of Dalmatia was named Marshal-General of France. During his latter years, the Duke, enfeebled by age, but still intellectually vigorous, and ready to advise on momentous occasions, lived in quiet retreat in the enjoyment of fame, fortune, and domestic happiness. The Duke had married a German lady, a native of Berg, by whom he leaves issue—besides a daughter, Florense, married to the Marquis Jules de Mornay—one son, born in 1801, his successor, now Duke of Dalmatia, deputy formerly for Tarn, and a member of the Legislative Assembly, who has been twice married—first to a daughter of General Saligny, and secondly to a daughter of General Despans; by the latter alliance he has two daughters.

Marshal Soult died at the place of his birth on the 26th ult, at his favourite residence, the Château of Soult-Berg, a name recalling himself and his wife. With his death—Marmont alone excepted, and he is no longer on the roll—passes away the last of those Marshals who had their *bâtons* from the Emperor. Their conquerors still survive—Beresford, and Anglesey, and Wellington; but when they, too, and their deeds become mere matters of history, there is no name which will more gracefully appear in warlike juxtaposition to theirs, than that of this now departed wise and gallant soldier of a revolution which made both him and them.

SIR H. R. BISHOP.

WHETHER the quantity or the quality of the compositions of Sir Henry Bishop be taken into consideration, he must be pronounced to be one of the most remarkable musicians of his age, in this or any other country. And in the biographical details of his career we are about to submit to our readers—our Artist presenting the portrait of the distinguished composer—ample proof will be found of his popularity for upwards of 40 years.

Sir Henry Rowley Bishop was born in London; and having, at a very early age, evinced a remarkable talent for music, was placed under the tuition of the celebrated Francesco Bianchi. His general education, in the meantime, was not neglected, and he passed through the usual course of study at one of the public schools, acquiring a polished taste in literature and considerable proficiency in languages. He began his career as a musical author when only fifteen, and from that time, for many years, wrote almost only for the theatres. The early works which brought his name into note were the music for two ballets for the Italian Opera-house; but it was the production of his first opera, on the 28rd of February, 1809, at Drury-lane Theatre, called the "Circassian Bride," that developed the extent of his capabilities. Unfortunately, the theatre was burnt to the ground on the following night, and the score of his new opera was destroyed. The proprietors of the Covent-garden Theatre engaged him, after this calamity, as composer and musical director—a post which he held from the season 1810-11 to the close of 1824. No composer in any country—not even the prolific Rossini or the fertile Donizetti—has contributed more to the lyric stage than Sir Henry Bishop. We supply the list of his operatic productions and adaptations, with the names of the localities where brought out, and the dates of the representations, not only that a correct notion may be entertained of his wondrous facility and rapidity of composition, but also that amateurs, in glancing at this list, may remember how much the musical public have been indebted for such delightful entertainments, over so large a period:—

SIR HENRY R. BISHOP.—FROM A PHOTOGRAPH BY KILBURN.

KING'S THEATRE.—"Tamerlan et Bajazet," ballet; and "Narcisse et les Graces," ballet, in 1806; and "Mora's Love," ballet, in June, 1809.

LYCEUM.—The "Maniac," opera, in March, 1810.

COVENT-GARDEN THEATRE.—"Knight of Snowdon," February, 1811; "Virgin of the Sun," in January; the "Xiblop," in October; the "Lord of the Manor" (additional music), October; and the "Renegade," in December, 1812. In 1813, "Harouu Alraschid," in January; the "Brazen Bust," May; "Harry le Roy," July; the "Miller and his Men," October; and "For England Ho," in December. In 1814, the "Farmer's Wife," and "Wandering Boys," in February; "Sadak and Kalasrade," in April; the "Grand Alliance," in June; "Doctor Sangrado," and "Forest of Bondy," in September; the "Maid of the Mill," in October; and "John of Paris," in November. In 1815, "Brother and Sister," in February; the "Noble Outlaw," in April; "Telemachus," in June; "Magpie, or the Maid," in September; "John du Bart," in October; "Cymon and Sidonia," in November. In 1816, "Midsummer Night's Dream," in January; "Guy Mannering," in March; "Who Wants a Wife," April; "Royal Nuptials" and the "Slave," November. In 1817, "Humorous Lieutenant" and the "Libertine," in January; the "Bar of Veroni," in February; the "Duke of Savoy," in September; and the "Father and his Children," in October. In 1818, "Burgomaster of Saardam, Zuma," and the "Illustrious Traveller;" in February, "December and May;" "operatic piece," in May; and "Barber of Seville," in October. In 1819, the "Marriage of Figaro," March; "Fortunatus," the "Heart of Mid Lothian," and "A Rowland for an Oliver," in April; "Swedish Patriotism," in May; the "Gnome King," in October; and the "Comedy of Errors," in December. In 1820, the "Antiquary;"* and "Battle of Bothwel Brig," in January; "Henri Quatre" and "Twelfth Night," in April. In 1821, "Don John" and "Two Gentlemen of Verona," in April. In 1822, "Montrose," in February; the "Law of Java," in May, and "Maid Marian," in December. In 1823, "Clari," in May; the "Beacon of Liberty," in October; and "Cortez," in November. In 1824, "Native Land," in February; and "Charles II." and "As You Like It," in December. In 1823, "Yalva; or, the Orphan of Russia," in February; "Home, sweet Home," in March; and the "Night before the Wedding," in November. In 1830, "Ninetta," in February. In 1831, the "Romance of a Day," in February. In 1834, "Manfred;" and in February, 1840, the "Fortunate Isles."

DRURY-LANE THEATRE.—"Caractacus," ballet, March, 1808; and "Love in a Tub," ballet, in November. In June, 1808, the "Mysterious Bride" (composed and selected). In February, 1809, the "Circassian Bride" (first opera) In 1825, the "Fall of Algiers," "Faustus," "William Tell," "Masaniello," and "Coronation of Charles X." In 1826, "Aladdin," in April, and the "Knights of the Cross." In 1827, the "Englishmen in India," January. In 1828, "Edward the Black Prince" and "Don Pedro." In May, 1830, "Holer." In March, 1832, the "Alchymist," and the "Demon," adapted from Spohr and Meyerbeer; in May, the "Tyrolese Peasant," the "Doom Ship" in October, and "Don Giovanni," from Mozart. In 1833, the "Somnambula," adapted from Bellini, and the "Maid of Cashmere," from Auber. In 1838, the "Maid of Palaiseau," and "Guillaume Tell," adapted from Rossini.

THE HAYMARKET.—The "Vintagers," in August, 1809. In July, 1827, the "Rencontre." In June, 1834, "Rural Felicity."

VAUXHALL.—In June, 1830, "Under the Oak;" and in July, "William and Adelaide." In June, 1832, the "Magic Fan," the "Sedan Chair," and the "Bottle of Champagne."

In addition to the above formidable list of compositions, the majority of which were original and unassisted productions, he supplied the music of three tragedies, the "Apostate," "Retribution," and "Mirandola." In 1820, during a visit which he paid to Dublin, he received the freedom of that city, which was unanimously voted to him; and it was about this time he combined with Moore, the poet, to continue the series of "Irish Melodies," the object of which was to rescue from oblivion many of those national airs whose intrinsic merit entitled them to a better fate. Upon a similar but more important task, in relation to the old English airs, Sir Henry Bishop is now engaged. He has published a multiplicity of single songs, duets, glees (several volumes), arrangements of oratorios, sacred cantatas, &c. For several seasons he superintended the oratorios at both Covent Garden and Drury Lane. On the institution of the Philharmonic Society he became one of its members, and was frequently elected a director and conductor. He long took a warm interest in the welfare of that society, and not less in the

* Perhaps the most elegant compliment ever paid to Sir Henry bishop was that of Sir Walter Scott in the following extract:—

"The maid of the little turret, of the veil, and of the lute, sung exactly such a little air as we are accustomed to suppose flowed from the lips of the high born dames of chivalry, when knights and troubadours listened and languished. The words had neither so much sense, wit, nor fancy as to withdraw the attention from the music; nor the music so much art as to drown all feeling of the words. The one seemed fitted to the other; and if the song had been recited without the notes, or the air played without the words, neither would have been worth noting. It is, therefore, scarce fair to put upon record lines intended not to be said or read, but only to be sung. But such scraps of old poetry have always had a sort of fascination for us; *and as the tune is lost for ever, unless Bishop happens to find the notes*, or some lark teaches Stephens to warble the air, we will risk our credit and the taste of the lady of the lute by preserving the verses—simple, and even rude, as they are."—*Quentin Durward*, vol. i, *chap.* 4, *page* 91, *Constable's Edition*—1823.

SCENE FROM THE NEW COMEDY OF "TENDER PRECAUTIONS," AT THE PRINCESS' THEATRE—(SEE NEXT PAGE.)

foundation and management of the Royal Academy of Music, of which shortly after its establishment he was appointed one of the Professors of Harmony and Composition. In 1839 he took his degree of Bachelor in Music at Oxford, and in December, 1848, was appointed the Professor of Music at that University. In 1839 a gratifying compliment was paid to him "as a tribute of respect from the musical societies of Manchester." A concert, the programme of which was selected entirely from his works, and at which two hundred persons assisted gratuitously, was performed in the theatre there to an audience of upwards of two thousand persons. During several years, and until their final close in 1848, he held the appointment of conductor of her Majesty's Concerts of Ancient Music, the Directors of which were the King of Hanover, his Royal Highness Prince Albert, his Royal Highness the Duke of Cambridge, his Grace the Archbishop of York, his Grace the Duke of Wellington, Earl Howe, the Earl of Cawdor, and the present Earl of Westmorland. During this period he had the honour to receive from his Royal Highness Prince Albert a splendid piece of plate, "as a mark of his Royal Highness's approbation."

In 1842 her Majesty was pleased to confer on Mr. Bishop the honour of knighthood—the only instance of that distinction having been conferred by the British Sovereign on one of the musical profession.

Sir Henry Bishop has officiated as director of many great provincial festivals. In 1843 he conducted the performances at the great musical gathering in Edinburgh, at the opening of the new Music-hall. At that period he was Professor of Music to the University under General Reid's will—an appointment which Sir Henry Bishop resigned, finding his sphere of utility so impeded by the other professors.

On the establishment of the Great Exhibition, Sir Henry Bishop was appointed Chairman of the Local Committee for the class comprising musical instruments, and subsequently undertook the onerous duty of Chairman and Reporter of the Jury for awarding prizes. He has greatly distinguished himself as a public lecturer on music.

Sir Henry Bishop's operatic career was not passed in the palmy days of musical taste and knowledge on the part of the general public. He had to contend also with the ignorance and bigotry of managers wedded exclusively to the drama. The race of stage poets in Bishop's days

THE TYROLESE MINSTRELS.—FROM A PHOTOGRAPH TAKEN BY BEARD, BY DESIRE OF H. R. H. THE DUCHESS OF KENT.

THE TYROLESE MINSTRELS.

THE company of *artistes* who sing the music of the Tyrol comprise Mdlle. Margreiter, Simon, Holaus, Veit, Ludwig Rainer, and Kler. Their performances commenced on the 28th ult. at the St. James's Theatre, under the patronage of the Duchess of Somerset. The Tyrolese Minstrels have sung at Windsor Castle and Frogmore House, in the presence of her Majesty, Prince Albert, and the Duchess of Kent; and recently at the Pavilion, Brighton, before the Duchess of Gloucester. Testimonials of the Master and Comptroller of the Royal Households, expressive of the gratification of the Queen, Prince Albert, and the Duchess of Kent, have been granted to the singers, and they are also bearers of testimonials from the Emperors of Russia and Austria, the Kings of Bavaria, Saxony, and Wirtemberg, the Duke of Saxe-Coburg, &c. Nothing can be more picturesque than the costumes of the Tyrolese Minstrels, and nothing can be more curious and original than the harmonised melodies which they interpret. Amateurs who are curious in studying musical nationalities, will find suggestive matter in listening to the music of the Tyrol.

This singing *troupe* are natives of the valley of Tullerthal; they came to England to see the Great Exhibition. Two of this company belong to the Rudeman corps of the Tyrol, and are decorated with silver medals from the Emperor of Austria. The bass singer, Herr Holaus, has travelled with the celebrated Rainer family through the United States of America, where they have met with the greatest success. M. Rainer, the son of the celebrated Rainer family, is in possession of a Tyrolean belt presented from George IV. to his father. The belt has in front the Royal arms, and is of the most handsome workmanship.

would not be now tolerated. There was no uniformity of design in the libretto, and the composer had to battle with the irregularity of the English mode of connecting the diction of the melodrama with the music. The transition from speak ng to singing in English opera impar's a shock not experienced at the Italian Opera; singing being accepted as the representative of speech, the passage from single to accompanied recitative, and again to air, is felt to be natural. In our Engl sh opera days nothing could be more absurd than the sudden changes from simple speech to song. In estimating, therefore, the attributes of Bishop as an operatic composer, we must take into consideration the obstacles or bones of the figure upon which he had to lay the outward and more visible parts, construc ing, indeed, the prominent features. The alternations of speaking and singing in the plays for which Sir Henry Bishop composed the music were marked with monstrous violations of good sense and taste. He lived in the infant days of opera, and was the pioneer who has prepared the way for a better state of things in art.

The individuality of Sir Henry Bishop's style was strongly develope d in the music he composed for various plays of Shakspeare. The words being selected from the works of the most universal of poets, musical g enius rose with the dignity of his subject: he essayed to blend the purity and character of music of an earlier time with the beauty of the modern school, in order to produce compositions according with the antique greatness of the poetry. The composer was signally successful in these charming productions. The grace, elegance, and fertility of ideas in the mus.c to the "Comedy of Errors," "Twelfth Night," "Two Gentlemen of Verona," &c., are everywhere conspicuous. The lovely air, 'By the simplicity of Venus' doves-y,' is a perfect gem. "Bid me discourse," and its twin sister duo, "Should he upbraid," the duos, "As it fell upon a day," "Orpheus," and "On a day," abound in elegant and expressive passages.

From the period of Sir Henry Bishop's music for the Shakspearian plays the forms of the composer assumed more palpable signs of originality. He appears to us to have based his school on the ancient madrigal.sts and our earliest dramatic writers. He seemed to advance with the intellectual requirements of his time; and it is to be deeply deplored that the modern Purcell has as yet not found an adequate scene for the actual epoch. The enormous quantity of opera music given to the world by Sir Henry Bishop proves that in fertile fancy he has never been surpassed. He composed too rapidly, there can be no doubt, for strength and brilliancy, to make room for the more profound and overwhelming emotions; labour and constraint inevitably produce exhaustion enthusiasm; but what a glowing imagination must Sir Henry Bishop have been endowed with, to compose in such overflowing abundance!

The bank of continuous adjudgers, so impetuously exacted by the operatic rulers of the day, caused inevitable similitudes in many of Bishop's melodies. Of the refined models he has been accused of imitating, the names of Mozart, Haydn, Rossini, and Weber are the most reiterated, so that there can be no imputation on his taste at all events. Weber thought highly of him; and in Adelaide, with the wretched libretto, Bishop was pitted against the "Der Freyschütz" compo-e When Rossini was introduced to Bishop, the Italian musician met the English composer by humming aloud the theme of the famed round, "When the wind blows"—a most grateful compliment indeed.

Sir Henry Bishop was generally very successful in his choruses—those in the "Maniac," the "Miller and his Men," the "Virgin of the Sun," and many other operas, might be cited. As for his glee writing, who can tire of "When the wind blows," "The winds whistle cold," "The Chough and Crow," or "Blow, gentle gales;" or who would not wish again to drink deep with the thirsty Dutchman, Van Dunck? If we have one regret, it is that Sir Henry Bishop has not lately furnished us with more of those glees, which could not be excelled to heap a Pelion upon the Ossa of his fame, and to give renewed pleasure to the musical public.

Sir Henry Bishop has now undertaken to re-set and arrange for the ILLUSTRATED LONDON NEWS those old English airs which the clouds of time have overshadowed, or which had become lost to us with r from that cause or from the carelessness of being wedded to unworthy or unsuitable words. Sir Henry's extensive knowledge of these hidden sources of melody peculiarly fits him for the task. As an adapter, his symphonies and accompaniments are exactly what they should be—neither a note too much nor too little—the former are expanded or contracted according to the claims of the subject in all cases in perfect keeping with the poetry and the melody—and the elegant propriety o the latter is indisputable; the stamp and impress of an artist-o mind are evident in every line Sir Henry Bishop arranges. From the well-established fame of his coadjutor, Charles Mackay, everything may be expected which can tend to deserve, and, as we feel, to command, success.

THE THEATRES.

HAYMARKET.

The "Two Bonnycastles" continues to justify its claims to extreme farcical power. The simple machine of the story is, as usual with the heaped-up measure of modern p.ycraft, corroborated by accessory accidents. One in this piece has been chosen by the Artist. The steam *Bonnycastle* having arrived, and the servant being dispatched to announce the news, the real *Bonnycastle*, now domesticated in the lawyer's establishment, makes himself extremely useful. He consents, in fact, to provide luncheon for the new comer. Returning to the stage with a well-filled tray, he is encountered by his wife, who has just arrived to advise with his master on the subject of his own mysterious disappearance. Their surprise is mutual. In his agitation, *Bonnycastle* drops his tray and its contents. This incident, of course, practical as it is, produces the most uproarious merriment on the part of the audience.

PRINCESS'

The farce of "Tender Precautions," with all its faults, gives large opportunity for the exhibition of Mr. Keeley's peculiarities. The culminating point, so far as the actor is concerned, is the scene in which the unfortunate *Gosling* describes to *Sparkes* the manner in which he had been kicked. Keeley's imbecility of expression came out admirably. No one can delineate like him the essential weakness of a character; the contest between will and power was never more humorously portrayed. This point our Artist has selected for illustration.

We find that the management of the Princess' Theatre is now wholly in the hands of Mr. Kean, though it is understood that Mr. and Mrs. Keeley will still remain for some time as members of the company. We have reason to believe that the new arrangement was on all grounds desirable.

ADELPHI.

Mr. Wright, who has long been seriously indisposed, returned on Monday to his theatre, and was enthusiastically received by the audience. He appeared in the character of *Fred Fry*, and performed it with a vigour that was of itself sufficient proof of his restored health.

MARYLEBONE INSTITUTION.—On Monday Miss Glyn read the tragedy of "Macbeth." On the occasion Miss Glyn judiciously subdued certain portions of the play, and brought out others in prominent relief. By the skilful adjustment of light and shadow, the whole was felicitously preserved within the boundaries of good taste. It was, indeed, a great artistic reading, and met with the universal approbation of a crowded audience.

DRURY-LANE.—Mr. Bunn has engaged Mr. Anderson to support Miss Glyn; and other arrangements are in progress of considerable promise.

COLOSSEUM.—The equestrian statues of her Majesty and Prince Albert, by James Wyatt, have been removed from the Great Western Road, and are now placed at the Colosseum, Regent's-park. The fine collection of statuary at this establishment has recently received many other additions from the Great Exhibition.

MUSIC.

LONDON SACRED HARMONIC SOCIETY.

Last evening, at Exeter Hall, the amateurs commenced their twentieth season with Haydn's oratorio, the "Seasons," performed for the first time by the society under the direction of Mr. Costa. This work was first executed at the palace of Prince Schwartzenberg, Austria, 24th, 1801. Baron Von Swieten, librarian of the Imperial Court of Vienna, who arranged the book of the "Creation" for Haydn, also adapted the subject of Thomson's poem for the great composer. The Baron had a favourite theory, as to oratorio and descriptive music, based, as he affirmed, on a "system of nature and imitation in art," and on this theory did Haydn give to the world his descriptive oratorio, the "Creation" (1798) and the "Seasons" (1801): the theme of the former being biblical, although the words were taken from Milton; unquestionably comes under the category of sacred oratorios, but it may be doubted if the latter can be classed in the pastoral dialogues of *Simon*, the farmer (bass), *Jane*, his daughter (soprano), and *Albert*, the young countryman, with peasants and hunters, can be truly termed an oratorio—more fitly should it be described as a cantata. Von Swieten, however, conceived that "to look through nature up to Nature's God" was strictly within the province of sacred composition. Despite, however, of the graceful melody, variety, and purity of sentiment in Haydn's music to the "Seasons," he never keeps the imagination on the stretch, and the work is destitute of the awful and sublime solemnity and towering sublimity of the Handelian and Mendelssohnian oratorios. Beethoven's opinion of the "Creation" and "Seasons" was that the former was the best, and the latter the worst of Haydn's works; adding that he would pass six weeks of the term in solitary confinement. On hearing the sentence she almost fainted away, and was led from the dock by the turnkeys.

so much of fancy and invention, of elegance and of modulation, are found in his style.

The last time that the "Seasons" was heard in London was at Exeter Hall, May 17th, 1850, for the benefit of the Choral Fund, under the direction of Benedict, with Miss Birch, Messrs. Lockey and Phillips, as chief vocalists. The same singers appeared last night. Costa had taken especial pains in the rehearsals of the work, but we cannot submit any remarks on the execution until our next Number.

MUSICAL EVENTS.

Miss Dolby gave her second *soirée musicale*, at her residence in Hinde-street, on Tuesday. She sang Mr Henry Smart's beautiful air, "Estelle" a ba lad by Mr. Hovey Leslie, and Rosavly's "Hostrel in asc." Miss Eliza Birch rendered Spohr's romance, the "Rose softly blooming;" and Miss Birch gave two German *Lieder*. Mr. Swift, a new tenor, who is attracting attention, Mr. Hegcott, the contrabassist, Miss Hale Loder, the pianiste, Manques and Blagrove, the violinists, and Lucas, violoncellist, were included in the arrangements of a well-balanced programme.

The Cecilian Society performed Mendelssohn's "Elijah" on Thursday The director of the Musical Union proposes to enter the field, during the winter, with a series of classic chamber concerts.

The Liverpool Classical concerts will commence on the 23d instant, under the direction of Mr. Edward Thomas, the violinist. Miss Kate Loder, Mr. Charles Hall, Mr Brinley Richards, and Mr. Sterndale Bennett are engaged as pianists for the series

The Duke of Letta has produced an opera, "Maria Giovanna," at the theatre Carignano, in Turin.

Miss Kate Hickson, the vocalist, has announced an evening concert for Tuesday, the 16th instant, at the Hanover Rooms, under the patronage of Lord Dudley Stuart, M.P., in aid of the funds of the Hungarian Committee and of the Literary Assoc ation of the Friends of Poland. A committee has been formed to carry out the arrangements, and Mr. C Salaman will conduct the perfor mance. Our most eminent vocalists, with a great array of foreign talent, have kindly promised their gratuitous assistance, and the concert bids fair to be brilliant as well as profitable.

Next Monday the third concert of the Society of British Musicians will take place. On Wednesday, at the Whittington Club, Mr Perry's "Belshazzar's Feast" will be performed. On Thursday the *soirée musicale* of the Royal Academy of Music will be given.

REFORM OF THE CUSTOMS.

An important meeting of the bankers, merchants, and traders of London was held on Wednesday, in the London Tavern, to consider the resolutions and report of the committee, and to adopt steps for obtaining a thorough reform of the Customs department of the public service. The large hall was crowded. Deputations attended from Hull, Aberdeen, Southampton, and other important ports. Amongst those present were Mr. Masterman, M.P., chairman; Sir James Duke, M.P., Mr. Thomas Baring, M.P., Mr. T. A. Mangles, M.P., Mr. William Williams, M.P., Mr. C P Grenfell, M.P., Mr. Matthew Forster, M.P., Mr. Alderman Thompson, M.P., Mr. John Macgregor, M.P., Sir J. Lubbock, Mr D C. Guthrie, Mr. J. D. Fowles, &c. Apologies for non attendance, but accompanied with offers of parliamentary support, had been received from Mr. Bright, Mr. Moffat, Baron Rothschild (detained by the revolution at Paris), Mr. W. Brown, Mr. Henry, Mr. Hastie, and Mr. Hume; and offers of hearty co-operation had been received from Stockton-on-Tees, Dundee, and other important shipping and mercantile ports.

A report of the committee, signed by Mr. John Ingram Travers, chairman, Mr. R W Crawford, deputy chairman, and Mr. Sidney Smith, secretary, recommended, for public consideration, the following prominent points for reform :—

1st. The number of commissioners may be considerably reduced from five to five, wherof one should be in Parliament, and, therefore, moveable with the Government, as the Secretaries of the Treasury, Admiralty, Presidents of the Board of Trade, Poor-law Commissioners, &c., are in other departments 2d. One member of the board, at least, should be taken from the commercial body, and one or more drafted from the superior practical officers of the Customs. 3rd. Promotions should be not only open but certain to all meritorious officers; nor should there be any restriction which would prevent useful officers in one department from being removed to another. 4th Higher qualifications may be required than have been usual hitherto, and a more practical and systematic training of all officers, should be required than are at present exacted; and a strict examination of every permanent officer should be made by a board of officers called for the purpose. 5th *All sinecures* and offices should be abolished; and such duties as must be retained to meet equiva ent excise imposts or fixed duties on other arts es of a like class, should be converted into specific duties. 6th. The appointment of officers should not be confined to sons of a merchant or trader should, in all cases, be bound to hear him personally on demand; and all questions at issue between the merchant and the board should be submitted to him in writing with a formal statement of the cause of seizure, detention, or as the case may be. 8th. The Crown should not be exempt from costs; and every subject should have the right to defend his person or property against the suit of the Crown, without being called upon as *Bonine* to find security either for costs, fines, or penalties. 9th. Merchants, shipowners, and others should not be made responsible for the crimes or offences of their servants or crews, except where guilty knowledge, or the most culpable negligence, should be proved in each case. 10th. The system of fines and satisfactions to the officers, and the infliction of excessive penalties, should be entirely abolished. 11th. Prescription should run against the Crown, equally as subjects, and be devised in reference to goods passing of goods from bond under duty certificate should be final as to the claims of the Crown, unless fraud on the part of the merchant be proved. 12th. All detentions, fines, and penalties should be subject to appeal to a court of equitable jurisdiction, and not involving questions of revenue, should be henceforth prohibited; the examination, entry, and delivery of free goods should be simplified; and such a system should be devised in reference to goods passing through this country in transit as shall remove trade of the difficulties and loss to which the present provisions for transhipment subject it."

Resolutions, moved and seconded by Mr. Travers, Mr. Crawford, Mr. W. Williams, M.P., Mr. W. S Lindsay, Mr. Gassiot, Mr. M. Clark, Mr. Grenfell, M.P., Mr. W Hawes, Mr. J. D. Fowles, Sir J. Duke, M.P., Mr. Macgregor, M P., were unanimously agreed to, adopting the report of the committee, expressing the strongest disapprobation of the costly prosecutions against the London and St. Katharine Dock Companies by the Board of Customs, and appointing a deputation to wait on Lord John Russell, to urge upon the Ministry the necessity of the re-appointment of the select committee of the House of Commons to continue the inquiry, begun last session, into the management of the Customs department.

SOCIETY OF ARTS.—On Tuesday evening the second of this series of Great Exhibition lectures was read to a crowded audience by Sir H. De la Beche, C.B., on mineral productions. It was interesting to hear to how great an extent the Exposition had already been productive of improvement in the arts and manufactures, by making known the points in which we fell short of some of our neighbours. The English are justly proud of their metallurgic treasures, and the lecturer especially was here long ago believed ourselves to be unequalled; but a neighbouring country, for example, has sent a specimen of sheet iron better than ours; the English, in consequence, directed their attention to the improvement of their sheet iron manufacture, and applied themselves in such good earnest to the task, that, before the Exhibition closed, sheet iron was made in England equal to that forwarded from the Continent. The lecturer proceeded to consider that portion of his discourse to an enjoyment coal and stated that the excessive cheapness of coal in England was not favourable to the richness of our iron ore, but to the fact of its occurring so immediately in connexion with coal. In this respect Britain was particularly fortunate, so country except Belgium enjoying so many advantages. He concluded his audience with a condensed but highly lucid description of the mineral treasures in the Great Exhibition, Sir H De la Beche offered a well-merited compliment to the genius of the Prince President, and concluded amidst the marked congratulations of the audience. At the close of the lecture, Sir W. Snow Harris inquired how long our coal stores were to last? to which Sir Henry De la Beche answered that we were using the astounding quantity of 35 000 000 tons per annum, but that recent investigations had lessened rather than increased our anxieties as to the probable duration of coals

RAILWAY ACCIDENTS.—The customary return relative to railway accidents has been published. It extends over the half year ending the 30th of June, 1851. During this period the number of persons killed on all railways open for public traffic in Great Britain and Ireland has been 105, and the number of those injured 173; the total number of passengers conveyed being 37,841,703. The above accident are divided into such as were beyond the control of the sufferers, and such as arose from their misconduct or want of caution. Under the former head are 11 passengers and 34 servants of companies killed; 142 passengers and 31 servants of companies injured. Under the latter 8 passengers and 21 companies' servants killed; 6 passengers and 10 companies servants injured. In addition to these, 28 cases of fatal accident and 5 of injury are enumerated as having occurred to trespassers crossing or walking on the railway, and 3 are attributed to suicide. The length of railway open on the 31st of December, the same document informs us, was 6621 miles; and on the 30th of June, 1851, it was 6698 miles, being an increase of 77 in the half-year

CONVICTION OF MISS AGLIONBY, THE LADY INCENDIARY.—At the Sussex Quarter Sessions, Miss Eliza Maria Amphlett, the lady who patronised several Brighton tradesmen, under the assumed name of the fictionable Mrs. Colonel Bipon, and obtained by fraud silks, satins, &c., of Messrs Hannington, of the value of nearly £30, was brought up for trial and convicted. The prisoner is represented to be worth considerable property. She was in the habit of mising in fashionable circles, both in London and the different watering-places on t e coast; and when captured on the present charge was keeping a first-rate establishment in the neighbourhood of Lowndes-square, Pimlico. She pleaded guilty, and the chairman (Mr. Derby) sentenced her to twelve months' imprisonment, with such hard labour as she could undergo, adding that she

LAW INTELLIGENCE.

WHAT IS A NEWSPAPER?

The judgment of the Court of Exchequer was given on Monday last in the case of the Attorney-General v. Bradbury and Evans; the question being whether Charles Dickens's publication, called the *Household Narrative of Current Events*, came within the meaning of the Newspaper Stamp Act, and is thereby liable to duty. The Chief Baron, Barons Martin and Platt, delivered their opinions, that the defendants were entitled to the judgment of the court, and Baron Parke thought that Mr. Bradbury was entitled to judgment in his favour The non-liability of the *Household Narrative* to the stamp duty, by this decision of three judges against one, is therefore established. Baron Parke's reasons for his view of the law were based on the interpretation to be given to the first and third of three clauses in the schedule of 6 and 7 Will. 4, c. 76, by which the stamp duty is imposed on any paper containing public news, intelligence, or occurrences, printed in any part of the United Kingdom, to be dispersed and made public, this being the repetition of the definition of a newspaper contained in the statute first imposing the duty, 10 Anne, c. 9, s. 101; in the subsequent acts increasing the duty, and in the acts 44 Geo. 3, c. 98, and 55 Geo. 3, c. 185, for the consolidation of the stamp duties. If these provisions had been stated alone in the schedule of the 6 and 7 William 4, c. 76, there would have been no doubt that the publication in question was a newspaper. It had been contended that the subsequent clause, which was as follows, "And also (words clearly cumulative, not restrictive) any paper containing public news, intelligence, or occurrence (or any remarks or observations thereon), printed in any part of the United Kingdom for sale, and published periodically, or in parts and numbers at intervals not exceeding twenty-six days between the publication of any two such papers, parts, or numbers respectively, that is to say, all such sheets of the same form and size as used (exclusively of any cover or blank leaf upon which any advertisement or other notice shall be printed), or shall be published for sale for a less sum, exclusive of duty by this act imposed thereon," neutralised and limited the previous definition. He (Baron Parke) insisted that this clause extended the limits of taxation, being taken with those selected from the acts of Geo. 3, and 1 Geo 4, c. 9, restraining the publication of papers on political subjects, and making them liable to the stamp duty. "Three descriptions of publications are newspapers. First, a paper whose main object is to give news or intelligence of recent events and which is printed to be dispersed and made public. Secondly, any paper printed weekly or oftener, or at intervals not exceeding 26 days, containing only or principally advertisements. Thirdly, any paper which contains any news, intelligence, or occurrences, or any remarks or observations thereon, though its chief object be not the giving of news of recent events to the public, or any remarks on such news, if it is printed for sale and published in any way, provided such publication is at intervals of not more than 26 days, and if such paper is two sheets or less, or if such paper is published for sale at less than sixpence, and though such publication may possibly not be construed to be a dispersion and making public in the sense in which that phrase is used in the statute, it appears to be a paper liable to the duty. But it was said that the word 'news' is indefinite, and that the Legislature could not have intended to leave this term undefined, and that the most reasonable interpretation of it in the mind of the Legislature was that it was to contain the news or occurrences of the day immediately preceding the publication. The *Household Narrative* does not fall within the definition of a newspaper, according to the provisions of the statutes from 10th Anne to 6th and 7th William 4. The *Quarterly Review*, and *Gentleman's Magazine*, gave a summary of events of a day of publication, but were not issued to the stamp duty as newspapers. "If Mr Macaulay," argued the Chief Baron, "were to-morrow to publish a continuation of his history up to last Saturday, its news would be as recent as that of any newspaper; but, in the opinion of every one, it would not require a stamp. So the annual registers, if published in the first week of the new year, are not in the nature of newspapers, and do not require a stamp. Some of the monthly magazines have been purely literary, at least many of their numbers are so; but several of them contained regular monthly statements of births, marriages, and deaths, bankruptcies, commercial intelligence, and the like. Now, it is clear that Parliament while they sat, yet they are notoriously unstamped, and no claim that I am aware of has ever been made upon them for the payment of duty, or of penalties for its nonpayment." The Lord Chief Baron considered the stipulation that the interval of more than 26 days had been fixed by the Legislature as the criterion of what was a newspaper; if the interval were less, it was a newspaper; if more, a chronicle or history, the whole question turning on the distinction between news and history.

The case of the Queen *v.* Holder Alleyne, M'Geachy Alleyne, and T. B. D'Arcy, in the Court of Queen's Bench, before Lord Campbell and a special jury, occupied the Court on Wednesday, Thursday, and Friday. Mr. Jarnis, Mr. Bramwell, and Mr. Hawkins appeared for the prosecution; Sir F. Thesiger and Mr. Huddlestone for H. Alleyne, Mr. Humfrey and Mr. Temple for M'Geachy Alleyne, and Mr. Serjt. Byles for D'Arcy. The prisoners are Robert Blair Kennedy, son of Colonel Kennedy, and grandson of Sir R. H. Blair. He is twenty-six years of age, and was possessed of considerable property; and he indicted the three defendants for conspiracy for defrauding him of £7360, whilst he was in the 89th Regiment of Foot. He is now in the East India Company's service. Whilst at Sandhurst he became acquainted with M'Geachy Alleyne, and, through him, with the other defendants. Both the prosecutor and his guardian friends watched the transactions, and Mr. Kennedy, being what one of the witnesses called "very green," was induced to make heavy bets against Pigeon, a trotter, with Holder Alleyne, and was thoroughly "pigeoned," by the defendants. The mare was proved to be quite incapable of performing the feats specified in the bets; but, notwithstanding this fact, the three defendants managed to extract from the prosecutor, as a consequence of the bets, £7360. Amongst the witnesses was Ignatius Francis Coyle, who is now in Newgate under sentence, for uttering to the two Alleynes a bill of exchange for £1150 on Lord Clifden. The jury returned a verdict of guilty against all the defendants upon all the counts in the indictment. Sir F. Thesiger tendered a bill of exceptions to a portion of the evidence, but the judge passed sentence, characterising the transaction as infamous—Holder Alleyne to be imprisoned in the House of Correction for two years, D'Arcy for one year, and M'Geachy Alleyne for six months, to be kept to hard labour. The defendants are out on bail. It was rumoured on Wednesday evening that the sheriffs, Alleyne and D'Arcy left England on Monday last.

The Attorney and Solicitor-General have given their opinion that Queen's Counsel cannot attend as advocates before Masters in Chancery.

James Archibald Murray, Esq., one of the secretaries of the Rolls, has been appointed to the office of Keeper of the Records and Rolls in the Court of Chancery, in the room of John Veal, Esq., deceased.

The Hon. Thomas Montague Wilde has been appointed Registrar in Bankruptcy, in the room of Mr. Wilmot, deceased.

DR. ACHILLI *v.* DR. NEWMAN.—A letter from Rome, of the 20th ult., of the *Daily News* correspondent, states:—On entering the British Consulate, a few mornings ago, I found the passage obstructed by ecclesiastical dress and hats, and a group of persons in the inward height in that latitude, but I discovered, upon inquiry, that they belonged to a body of priests, Jesuits, and inquisitors, who had waited upon Mr. Freeborn for the purpose of making their affidavits of certain documents about to be sent to London, which will doubtless soon cut in the trial or the action for libel brought by Dr Achilli against Messrs. Burns and Lambert, the publishers of Dr. Newman's "Lectures on the present position of Catholics in England." The documents were in Latin and Italian, consisting of extracts from the registers of the Inquisition, and copies of letters from Naples, tending to destroy Dr. Achilli's moral and religious reputation, and the truth of them was sworn to by the parties present—viz. the procurator and notary of the Holy Inquisition, and six or seven Italian and English (and one French) Jesuits and ecclesiastics. What weight these documents may have in a British court of justice, I cannot venture to forecast; I presume the Consul merely received the affidavits of his visitors as a matter of official duty, without entering into the merits of the case, every British Consul having to act as notary public in the legalisation of such documents as have to be sent to England from abroad for judicial purposes."

MR. Joseph Pollock, the successor of Mr. Ramshay in the County Court of London, is not, as has been stated, a member of the family of the Lord Chief Baron. He is an Irish gentleman of highly respectable connexions and the brother of the Rev. and estimable Mr. Pollock, one of the incumbents of Inverness. Mr. Joseph Pollock was called to the bar in 1842, and his rise on the Northern Circuit was rapid and well established. He enjoyed a very extensive practice there, and was of high note for eloquence and skill. A better appointment than his could not have been made.

THE EXILE AND THE PRISON IN ROME.—Mr. Pemberton, an English gentleman, who had engaged a box at the Metastasio Theatre, had been forcibly deprived of witnessing Hdlle. Rachel's performance by a party of French officers, who got previous possession of the box, refused to leave it, in spite of Mr. Pemberton's remonstrances and the representations of the director of the theatre, and subsequently placed a sentry at the door to prevent further application for the original owner. So flagrant a piece of injustice and overbearing conduct on the part of the friends of order was immediately made known to the commander-in-chief, especially as it was enforced by an armed sentry, and therefore became a piece of military service. General Gemeau was extremely irritated against his officers, and gave immediate orders to discover who the offenders were, and made the most ample reparation to Mr. Pemberton He even led upon that gentleman and expressed his sincere regret at the occurrence, and informed him that he had caused the two aides-de-camps, who had taken upon themselves the responsibility of the transaction, in order not to disturb their commandant after he was once seated in the box, to be immediately placed in arrest, as well as the authors of the disturbance.

The *Giornale di Roma* states that during the night of the 20th ult. there fell three inches of rain at Rome.

COUNTRY NEWS.

NATIONAL PUBLIC SCHOOL ASSOCIATION.

At the annual meeting of the council of this society, held at Manchester on Monday: Mr. A. Henry, M.P., chairman; Mr. Cobden, M.P., Mr. T. M. Gibson, and Mr. George Combe, of Edinburgh, being also present, the following resolution was agreed to:—

"Resolved, that the following be adopted as an appendix to section viii. 3 to 6:—

"'3. That the schools already in existence may become free schools under the direction of their present or future managers, and receive per week for each scholar educated in them.

"'4. That the inculcation daily are found in a satisfactory condition.

"'5. That the inculcation of doctrinal religion shall not take place in the afternoon.

"'6. That the attendance of the scholars on the inculcation of doctrinal religion shall not be compulsory.

"'7. That the inculcation of doctrinal religion shall not be a part of the duty of the teachers under this system.

"'8. That no part of the school grant be derived from the rate shall be direct or indirect.'

"'9. That the foregoing shall constitute the whole of the system.'

The meeting was addressed by Mr. Cobden, M.P., and Mr. Milner Gibson, M.P., but no resolution was decided to.

On the following (Tuesday) evening a meeting was held in the Free-trade Hall of Manchester, the Manchester and Salford Education Society (called the Lancashire) presiding. There was a full, but it was by no large and respectable audience, and the platform were the Bishop of Manchester and upwards of thirty of the gentry, leading clergymen of different denominations, manufacturers, and other townsmen.

Resolutions in support of the "local scheme" were agreed to.

THE ST. ALBAN'S BRIBERY COMMISSION.—On Monday the commissioners, Messrs. Slade, Forsyth, and Phinn, re-assembled at the Town-hall, St. Albans, at ten o'clock, with a view to closing the inquiry. A letter was read from Mr. Wilks, one of the former candidates, stating his inability, from indisposition, to attend on the commission. The Hon. Mr. Grosvenor, who was an unsuccessful candidate in 1847, and Mr. Repton, the present Conservative sitting member for the borough, were examined, and both admitted they believed that at their respective elections, though not personally cognisant of all the time-bribery on a large scale had taken place, and that the money had been expended by the [illegible] Mr. Grosvenor said he had a respectable, [illegible] at the time of the election, but Mr. Grosvenor did not believe that any of the [illegible] £2,000 or £3,000 was expended by himself or his friends. Mr. Repton said he was not aware of any expenses as being incurred for his election, but he did not believe that the [illegible] £2,000 or £3,000 was expended on his behalf, or that any [illegible] was paid by himself or his friends. Mr. Roy, [illegible] agent, was examined at great length to the effect that the expenses [illegible] £400 for which he supposed to be the legitimate expenses of conducting the election. The rest of the proceedings consisted in the examination of those inferior local voters who had received bribes, and who were forthcoming at the last election. The inquiry would be adjourned, for any supplemental or subsidiary purpose, to 26th January next.

THE LIVERPOOL COUNTY COURT.—THE NEW JUDGE.—According to adjournment, the Liverpool County Court was opened on Monday by the new judge. The court-room and ante-room were crowded with suitors and others. Mr. [illegible] was a prevailing impression that the late judge would [illegible] the new judge would be more severe, and that it would be [illegible] to be [illegible] necessary to bring the [illegible] inequality in [illegible] Mr. Raikes [illegible] that the Duchy Court of Lancaster [illegible] Mr. Raikes did not make his appearance, but Mr. Pollock entered the court-room shortly after ten o'clock, and, bowing to the court, took his seat on the bench. He made no remark, gave no indication that he was [illegible] on this occasion, but immediately proceeded with the usual business of the court. The following letter was received by Mr. Statham, the clerk of the court, on Sunday, through the post. It was not read in court, however, nor, so far as we could see, was any notice taken of it:—

Temple, Saturday, Nov 29, 1851

Sir, I hereby adjourn the County Court until Monday, December 29, 1851. You will also act, are to the same day, on the pleading undisposed of.

I am, sir, your humble servant,

WM. RAMSHAY.

Judge of the County Court of Lancashire, holden at Liverpool.

To W. Statham Esq., the Clerk of the County Court of Liverpool

Mr. Ramshay, it is said, means to [illegible] the validity of Lord Carlisle's decision by a writ of *quo warranto* in the Court of Queen's Bench.

LANCASHIRE REVISION OF VOTERS.—Whilst the North Lancashire list of voters for this year shows an increase, that for South Lancashire has fallen off to the amount of 1,174. The register of North Lancashire this year has 12,997 names, and at 11,793 names last year, or an increase of 1,204. Register of South Lancashire [illegible] 10,623 and 11,174 [illegible] year [illegible] decrease of 551. [illegible] CLERKENWELL [illegible] Borough.—

DONCASTER A PARLIAMENTARY BOROUGH.—Lord Lowth, it is found have, at the suggestion of Sir Isaac Morley, agreed to petition Parliament asserting that the privilege of sending a member to the House of Commons may be extended to Doncaster.

FARRINGDON AGRICULTURAL SOCIETY.—On Wednesday, at the annual show of this society, which took place at Farringdon, the chairman, Lord Harrington, on giving the toast of "Success to the Farringdon Agricultural Association," said—We have lived upon hope for some years past, and I really cannot help expressing a slight degree of hope that we have seen the worst of the time of agricultural distress. Although I am one of those who, ever since I have had the honour of being your president, thought that protection would be the case sooner, yet I may say, without being misunderstood, that if any of us expect the same protection—mark me—I say, any one who expects a reimposition of the same protection that was extended to the agriculturist, and was accepted by Sir R. Peel, will find himself mistaken; but that there may, and ought to be, a certain system of protection which the British farmer ought to have with his fellow-countrymen—many of whom enjoy profit does, and he does not. I think not improbable.

THE BIRMINGHAM CATTLE SHOW.—The approaching great exhibition of cattle, sheep, pigs, and domestic poultry, which opens on Tuesday next, the 9th of December, and will be held on the three following days, at Birmingham is exciting great interest, not only in the mid and district, but in many parts of the country. Preparations, we understand, on this [illegible] to be made for a much larger and more extensive display than [illegible] of [illegible] [illegible] of poultry, especially, being large as it was last year, we actually be much [illegible] it will be necessary to [illegible] one hundred pens, containing probably from five to two thousand specimens.

NEW MONEY-ORDER OFFICES.—The Postmaster-General has announced that Wednesbury, many of Linlithgow, N.B., having been constituted a post town, the office there will be opened for the issue and payment of money orders on and after the 1st instant and that Ashton-under-Lyne, Bolton, Bury, Oldham, Rochdale, and Stockport, in Lancashire, have been constituted money-order towns at which money orders may be issued and paid on and after the 1st December next. Lord Canterbury has also been constituted a post town, becomes a major money-order office, instead of a minor office, from the same date. Two of the offices of the London district, namely, Kentish Town and Mayfield, Stoke, are opened as minor money-order offices from the 1st December, Wadebridge, Cornwall, will be opened as a minor money-order office.

A SECRET LOCKING HOUSE.—Mr. Sidney Herbert is at the present moment said to be building a large and commodious lodging-house for a number of unmarried ladies, of the same description as that about to be opened to take the benefit of it. The spot selected is in a very fashionable locality, being in the centre of the borough. The house will be furnished with every convenience, and a matron in charge will be provided. The meals will be at stated hours, and the guests will have separate, but plain, and [illegible] fare. A [illegible] bed [illegible] library will be attached; and, as one of the objects of the parish charge will reside in part of the house, he will occasionally deliver a lecture to the labourers. For all these advantages each labourer is to pay 4s. 1d. per week only.

SOUTHAMPTON NEW DOCK.—A disastrous accident occurred on Saturday evening, which must cast a damper upon the splendid new dock for some time [illegible] it was intended that on Thursday last the [illegible] with its spread sail [illegible] should be opened with great ceremony. It had been [illegible] filled with water, and on Saturday [illegible] Mr. Giles, the engineer, superintending the removal of the dam which separates the outer dock, and the tidal basin, from the new close dock. The timbers from the upper portion of this dam had been removed, and it was expected that the lower portion should be [illegible] by the water. The gates, which are constructed of solid planks of timber, appeared very massive, and sufficiently strong to sustain any pressure that might be put on them. Unfortunately, however, the hinges on which they hung were too slight, and the consequence was that, when the pressure of the waters was too great, the gates were forced in, and the dam [illegible] Mr. Giles, the engineer, was [illegible] at the time, and [illegible] was [illegible] [illegible] [illegible]

NEW BOOKS, &c

Now ready, at all the libraries, in 3 vols.
THE NEW NOVEL, RAVENSCLIFFE. By the Author of "Emily Wyndham." "Two Old Men's Tales." &c
"A Reverse life, containing scenes not surpassed in power by those in "The Admiral's Daughter," and exhibiting in addition, a knowledge of character which we should be sorry to see thrown away."—Athenæum.
"Charles and Robert" is a tale of the highest order. Nothing can be more delightful than the whole conception of the story, or more beautiful than the manner in which it is developed."—Spectator.
"Ravenscliffe is a work of great merit. The author has a keen eye for character, and a graphic power of description."—Examiner.
"Ravenscliffe contains scenes not surpassed in power by those in "The Admiral's Daughter," which we ventured to pronounce to be the finest of Miss Pardoe's works. We have to add to the remarks we made on that occasion, that in the present novel the author has given proof of a dramatic power, and a knowledge of the human heart, which raise her to a still higher position among female writers of fiction. No reader can bear the book down, and we cannot help feeling in some degree the same sense of powerlessness to cope with the fascinations of a dark destiny which is conveyed by the stories of Richarlieu's Palace and Vincennes."—Athenæum.
"The story is a tale of deep interest, and the characters are drawn with a masterly hand. The plot is of the most complicated nature, but so much—Athenæum.
Also now ready, in 3 vols.
FALKENBURG. A Tale.
By the Author of "Mildred Vernon."
HARRINGTON. A Novel. 3 vols.
CURRER and ELLIS, publishers 19, Great Marlborough-street.

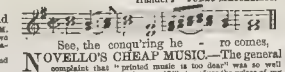
Mourning to any extent at five minutes' notice.
Ladies riding habits, court dresses, naval and military uniforms liveries, &c. Patterns, table of prices, plate of fashions, guide to self-measurement, are sent to all parts of the kingdom, free. Remember the Address, SAMUEL BROTHERS, 29, Ludgate-hill.

NEW MUSIC.

Handel's "JUDAS MACCABÆUS."



See, the conqu'ring he - ro comes,

NOVELLO'S CHEAP MUSIC.—The general complaint that "printed music is too dear" was so well founded as to induce me, in the year 1849, to reduce the prices of my publications full 50 per cent., and the same scale has been accepted in pricing all the subsequent additions to my catalogue; these reduced prices are marked in plain figures. Certain Musicsellers, in town and country, appear to think that this concession is to the public interest only; but I beg to assure them that an increased consumption with their interest, as per centage upon a large amount is more than makes up to them for the change; and they have now various ways to deprive the public of the benefit, if they please." Novello's Editions are out of print," or trying to sell other copies marked at a higher price, and sometimes even by altering the Prices printed on my publications.
THE PUBLIC, FOR THEIR OWN PROTECTION, should therefore—
1st—Insist on having "Novello, Ewer, and Co.'s Edition," which are always in print, and can be obtained by every respectable Musicseller or Bookseller in town and country
2nd.—Compare the price they pay with the Catalogue prices.
3rd.—If other matters fail, address their orders direct to
The Publisher, Berners Street, 1, ALFRED NOVELLO,
69, Dean-street Soho, or 24, Poultry, London.
Catalogues sent post-free for 4 pos age stamps

MR. CRIVELLI begs to acquaint his Friends and the Public that a Third Edition of THE ART OF SINGING, enlarged and newly arranged in the form of a Grammatical System of Exercises and Cadenzas of the Voice, may be had at his Residence, 71, Upper Norton-street, and as all the principal Musicsellers.

HENRY FARMER'S CHRISTMAS QUADRILLES. Issue of the tenth thousand.—The cause of the great popularity of these quadrilles is their great simplicity (being united to much beauty, their striking melody, and being, in fact, the most marked character for dancing. Price: solos, 3s; duets, 3s; sent post free. J. WILLIAMS, 123, Cheapside.

THE SPIRIT of GOOD: Cavatina. Written by E. M. SPENCER, composed by ALEXANDER LEE; sung by Miss Poole at the Hanymarket Theatre and one publicly crowned with the greatest applause. This is the last popular composition of the above celebrated and lamented composer. Price 3s., post free.
J. WILLIAMS, 123, Cheapside.

SONG, "THE OLD CHIMNEY CORNER," as sung by Miss Jolly at Vauxhall Gardens and the public Concerts Composed by J M Jolly. This social comforter of an English home is admirably portrayed in this fascinating ballad, which daily increases in popularity
To be had, price 2s, of C. JEFFERYS, Soho-square; Williams, Cheapside; and all Musicsellers in the Kingdom.

OH! CHARMING MAY. Composed by G. H RODWELL. Sung by all the principal vocalists of the day at which 30 copies have already been sold, is the most popular of any known for a long time, and it seems destined to an enduring popularity. Price 2s, sent post-free. Just published, Arrangements of the Air for piano, flute and piano, guitar, and concertina.
J. WILLIAMS, 123, Cheapside.

NEW GLEE, THE TROUBADOUR. By G. A. MACFARREN (sent post free), price 3s. This elegant and spirited composition, for soprano, contralto, and bass, is decidedly one of the best that has been published for many years: there are beautiful solos for each voice, and the harmony of the ensemble is highly effective.
DUFF and HODGSON, 65, Oxford-street.

NEW SONG.—THE YOUNG LADY'S "NO."—Composed by the Author of "I will you love the Still the Same," "The Secret," "Yes. I have dared to love thee," &c. Price 3s (sent postage free).—This arch and pleasing Ballad, sung with great success recently by Miss Poole, is publicly to become one of the most popular songs of the day: both words and music possess the true ring of originality.
DUFF and HODGSON, 65, Oxford-street.

NEW SONG, "I MET HER in the CRYSTAL HALLS." Price 3s. Sent postage free
"This beautiful and expressive Ballad will come to every frequenter of the Crystal Halls with a force and pathos perfect y irresistible. The words are by J. R. Planché, one of our first Ballad bards: and the music, by Stephen Glover, is equal to any thing from his long-cherished pen. No wonder then that the concert assembly is publicly to become one of the most popular songs of the day: both words and music possess the true ring of originality."—Musical World.
DUFF and HODGSON, 65, Oxford-street.

ILLUSTRATED MUSIC.—The PIANISTA for DECEMBER, Nos. 140, 141, 142, 143, and 144, contain Polkas, Quadrilles, Waltzes, and Sophisticated Airs in three books, each book coloured in the best style of the art. Price 3s., post-free 20 stamps; or the whole five Nos. sent free for 15s in stamps, forming one of the most elegant Christmas presents ever published. Office of the PIANISTA, 164, Argyll-street, Oxford-street, and 67, Paternoster-row.

BEAUTIES of CAMBRIA. By BRINLEY RICHARDS.
1. THE LIVE-LONG NIGHT
2. MARGARET'S DAUGHTER.
3. THE GIRL I LEFT BEHIND.
4. SWEET RICHARD.
5. LADY OWEN'S DELIGHT.
6. MARCH of the MEN of HARLECH.
Price 3s. each.
THE PRINCE of CAMBRIA'S BAND MARCH
The "Beauties of Cambria" by Brinley Richards, were first performed by the Author at Buckingham Palace in the presence of the Queen and Prince Albert, at St. David's Day, at the Freemasons' Tavern on the Prince of Wales's Birthday, and at the Public Concerts of Jullien. The delight and enthusiasm which these beautiful airs produced, induced the Author to write the present March. The "Prince of Cambria's Band March," an original composition, by the Author of "Beauties of Cambria," is now published, and may be had of all Musicsellers.
LEE and COCKRAD, 48, Albemarle-street.

MUSIC for the ORGAN or HARMONIUM. —The AMATEUR PRELUDIST, a collection of preludes, with the organ pedals fully marked, in all the keys. By EDWARD TRAVIS.

It is intended to give the information which should be obtained previous to the purchase of a watch, and to point out the principal characteristics of which should be accuracy and durability. It also contains remarks on the proper mode of winding, &c. A copy may be had of them gratis, on application, personally or by post.
T COX SAVORY and Co., 47, Cornhill, London, seven doors from the Gracechurch-street

TREASURES of NATURE.—It has been well remarked that there is not an imperfection that flesh is heir to for which a remedy is not at hand, to discover which we have only to search the vast laboratory of nature. A more apt illustration can scarcely be offered than in the application of a natural production, of American growth, namely, the Balm of Columbia, in cases where the human head has been deprived of its becoming and natures ornament. As a promoter of growth, strengthener, and restorer of the hair OLDRIDGE'S BALM of COLUMBIA is unrivalled, and in cases of baldness the virtues are inestimable. 3s 6d 6s, and 11s per bottle; no other prices Ask for Oldridge's Balm, and never be persuaded to use any other article as a substitute.—13, Wellington-street North, seven doors e at of the Strand.

SELF-ACTING PORTABLE SPRING-PRESSURE SPECTACLES.—Secures correct vision never slips off the face; but, when removed, immediately collapses, and may be worn with equal ease as any plain Agents appointed everywhere.—PARKINS, ANDERSON, High-street, Gravesend, Kent

Also, simple elastic, as soft as velvet, dur

MUSICAL SUPPLEMENT TO THE ILLUSTRATED LONDON NEWS.

ENGLISH SONGS AND MELODIES.

THE POETRY BY CHARLES MACKAY.

THE SYMPHONIES AND ACCOMPANIMENTS BY SIR H. R. BISHOP, KNT.

PROFESSOR OF MUSIC AT THE UNIVERSITY OF OXFORD.

VOL. XIX. No. 533.—MUSICAL SUPPLEMENT.] SATURDAY, DECEMBER 6, 1851. [NUMBER and MUSICAL SUPPLEMENT, 1s. With Exhibition Supplement GRATIS.

THE NATIONAL MUSIC OF ENGLAND.

IT has been frequently affirmed of late years, that the English, whatever they may be at present, were formerly not a musical people. It has been loudly asserted by many, who claim to be the exponents, if not the leaders, of public opinion, that we have not, and never had, any National Music. "The music of England!" said the Emperor Napoleon to a lady at St. Helena, "it is execrable! They have only one good melody." And he named a Scotch air, "Ye banks and braes of bonnie Doon," as the sole example of English music which he considered endurable. But all this is a misconception. England has as much music as her neighbours—perhaps more. English music is peculiar: it is not simply a music of imitation, but of originality; racy, and of the soil. There was a time when the English were pre-eminently a musical people,—when singing was considered a necessary part of the education of a gentleman,—when music was taught at every public school,—when apprentices and workmen, in almost every kind of handicraft, studied singing as an accomplishment, as the German work-people do at this day,—and when the phrase "merry England" expressed a reality, and not a mere fiction of romance-writers. Some hundreds of the fine melodies that delighted our ancestors in the days of Elizabeth still remain amongst us. Some of them linger in remote country districts, some are more extensively known, while many only exist in scarce books or manuscripts, and are accessible to none but musical antiquaries.

Several causes have operated to consign these beautiful and peculiarly characteristic melodies to neglect, and to banish them from the circles of the educated and refined. To borrow a phrase already employed in reference to this subject, "it has been the misfortune of English music to have been married, in too many instances, not to immortal, but to immoral verse." The manners of our forefathers were rougher and coarser than those of the present time. Our ancestors were not so nice in their language as their descendants are; and they wedded many of their most exquisite popular melodies to words which did not offend the fastidious in their day, but which in ours exclude them from the family hearth. Other songs, again, less offensive than these, are tolerated rather than approved of upon the stage. Among scores of others, we would instance Shakespeare's song, "When daisies pied," as one of this class, which cannot be suffered in the drawing-room, and of which, for this reason, the beautiful music is lost to a large circle who would otherwise appreciate and enjoy it. A third class of songs are objectionable, not for their immorality or their indecorum, but for their vulgarity; a fourth, and even larger class, are obsolete in their allusions, and not easily made intelligible in the present day; a fifth class are devoted to the sensual, and in many instances brutal, pleasures of the table, now happily disaccordant with the improved and improving manners of society; while a sixth class, more numerous than all, are deficient in heart and reality, being mere echoes of school learning, without foundation in truth. The Lesbias and Chloes of English song originated in the college exercises of boys, and not in the heart-feelings of men. Our forefathers seldom sang of wine without introducing Bacchus, whom they degraded into a Silenus; of war without Mars; or of love without allusion to, or celebration of, Venus and Cupid. If a stranger to our literature and our religion should judge of us by the lyrical effusions of a past age, he would almost be justified in considering us a nation, not of Christians, but of Pagans.

In consequence of these causes, and perhaps of many more, the fine old Music of England has gradually fallen into neglect or disrepute, and the people are not generally aware of the existence of such a treasure of melody as really belongs to them. Scotland, which suffered under the operation of similar circumstances affecting the poetry of her old songs, has been more fortunate in the rescue of her national music from oblivion. Allan Ramsay and his coadjutors began the work, which was afterwards continued to better purpose by Robert Burns and the late Mr. George Thomson, assisted in the musical department by Haydn and Beethoven, who arranged the greater portion of the melodies; and the music of Scotland, not superior to that of England, has in consequence become celebrated throughout the world. The same good offices were still more effectively performed for the music of Ireland by Mr. Thomas Moore and Sir John Stevenson, with a result which has charmed the social circle in every part of the empire, and will continue to do so as long as taste, feeling, and refinement, and a love of the arts, exist amongst us. But both Scotland and Ireland, as is now well known, were indebted to the genius of the English for many melodies which they claim as theirs. In support of this assertion, it is sufficient for our present purpose to quote only the names of a few songs, such as "The girl I left behind me," "My lodging is on the cold ground," and "John, come kiss me now," which are unquestionably English, although naturalised in one or other of the two divisions of the kingdom which have claimed an exclusive right to them. "John Anderson my jo," and some other melodies now naturalised in Scotland, were originally cathedral chants common to both countries; while many celebrated Scottish airs, such as "Auld Robin Gray," "Within a mile of Edinburgh town," "Mary's Dream," and others, were composed by Englishmen in imitation of the Scottish manner.

That no one has attempted to do justice to the music of England, and perform for it what has been done for the music of Scotland and Ireland, has long been a matter of surprise; and it has seemed to the gentlemen whose names appear in connexion with the present enterprise, that the time has at length arrived when this great work should be undertaken. Their object may be described, in a few words, as that of restoring the Music of England to the place in the popular heart which it never would have lost, had the morality and graces of the poetry been equal to the beauty of the melodies; to rescue fine music from desecration; to produce new songs to the old tunes, which, whatever may be their deficiencies in other respects, shall not offend decency and decorum, or do violence to the opinions and sentiments of the present age; which shall not pander to coarse bacchanalian excess, or make a jest of womanly virtue; and which shall uniformly make song the handmaid of innocence, and administer to the harmless pleasures of the social circle. The author of the new songs to the old favourite tunes, while he feels that he may possibly fail in reaching those higher excellences of the poetic art to which he would fain aspire, has so much faith in himself as to be convinced that he will not fail in another and far more important portion of the task. His songs, whatever their literary demerits may be, shall at least be inoffensive. If they raise no enthusiasm by their beauty, they shall excite no condemnation

on the part of those who would make literature in every department the ally of religion and virtue.

As regards the genius of the celebrated Composer who has undertaken the Musical Editorship, there needs no eulogy on the part of his coadjutor in the work to testify to his fitness. The name of Sir Henry Rowley Bishop is alone a guarantee that the Melodies of England will receive ample justice, and that this series will recommend itself to the widest encouragement.

The Proprietors of the ILLUSTRATED LONDON NEWS have much pleasure in announcing the publication of this National Work, in a series of Supplements to that Journal. Each Supplement will contain from Five to Six or Seven Melodies, according to the length, and every Song will be illustrated by the most competent Artists; so that the reader will obtain for Sixpence five or six Songs, arranged in a manner that shall render them acceptable to all circles, and produced in a style of beauty and excellence unequalled by publications that usually charge four times as much for a single song. It is proposed that One Hundred of the ancient popular Melodies of England should thus be offered to the readers of the ILLUSTRATED LONDON NEWS; and the Proprietors confidently appeal to their past efforts in justification of the promise they now make, that no expense or exertion will be spared on their part to render the work acceptable to their numerous and daily-increasing readers.

*** Publishers of Music are cautioned against reprinting these Melodies without permission of the Proprietors, the Accompaniments being in every case original, by Sir Henry R. Bishop, and strictly Copyright. The same caution applies to the Poetry. Proceedings will be taken against publishers of any books, and others, who may invade the Copyright of the Songs.

SONGS.

THE CUCKOO.

[AIR—"When Daisies pied."]

I.

WHEN daisies pied, and snow-drops pale,
And young May-blossoms gleaming bright,
And slender lilies of the vale,
Have fringed the robes of Spring with white,
The Cuckoo on the hawthorn tree
Sings all the morning merrily,
Cuckoo! Cuckoo! come forth to play,
The Spring is Nature's holiday.

II.

When children gather wreaths of flowers,
Or plait green rushes into crowns,
And lovers meet, at twilight hours,
In woodland corners, far from towns,
The soft sweet voice re-echoes still
Through grove and mead, o'er vale and hill,
Cuckoo! Cuckoo! and seems to say,
Oh, Life be Love! oh, Love be May!

THE WINTRY WINDS.

[AIR—"The Vicar of Bray."]

I.

THE wintry winds rush howling past,
And whistle through the moorland;
The tall oaks answer to the storm,
Like billows on the foreland;
The windows shake, the chimney groans,
So draw your chairs together;
Pile up the coal, and fill the bowl,
And let's defy the weather.
There's storm without, but love within,
And friendship's pure embraces;
We'll make amends for winter cold
By sunshine of our faces.

II.

Pile up the fire! we'll dance and sing;
But yet, amid our gladness,
We'll not forget the fate of those
Who pine in want and sadness:
The shivering wanderers in the streets
Who tramp the homeless city,
And sailors shipwreck'd far at sea
With none to aid or pity.
May Heav'n protect them, one and all!
And sweeten our embraces,
Both by the raindrops of our hearts
And sunshine of our faces!

THE BOATMAN.

[AIR—"Sally in our Alley."]

I.

THE bridegroom smiled a happy smile,
The bride was sweetly blushing,
And o'er the water's tranquil breast
A sound of bells came gushing.
The bridesmaids laugh'd, or watch'd the light
Upon the ripples quiver;
But shadows dimm'd the boatman's face
Who row'd them o'er the river.

II.

Slow fell his oars; his thoughts were sad:
"'Tis eighteen years in summer
Since o'er the stream I row'd the bride,
New-born, a fairy comer.
The bells rang gaily, as to-day,
As to the font they brought her;
And sire and mother wept for joy
At christ'ning of their daughter.

III.

And now once more across the stream—
May all kind thoughts possess her!—
I row the bride, and bridal guests,
And pray that Heaven may bless her.
The sun shines bright, each heart is light,
The laugh rings loud and merry,
And shouts of welcome from the shore
Come booming o'er the ferry.

IV.

A third time she must cross the flood,
With Death, our lord and master:
May I ne'er see that mournful day!"—
Row, boatman, row us faster!
Row, boatman, row, your oars are slow,
Time flies, and Love is pressing,
And you shall earn a double fee,
Besides your lady's blessing.

THE LIGHT OF LOVE.

[AIR—"Packington's Pound."]

I.

OH! the light of our love, in the Dawn of our day,
Is bright as the sunshine that smiles on our way;
It shews us the dew-drops like gems on the thorn,
And calls up the sweet-ringing music of morn.
The roses of life in its presence unfold.
And the crests of the mountains glow purple and gold.
Oh! the sweet light of love, in our Morning of mirth,
Is the charm and the glory and hope of the earth.

II.

But the light of our love, when the Evening is near,
Is softer and sweeter, more tender and clear;
The stars that were hid in the glare of the noon
Look forth in their beauty, undimm'd by the moon.
The world and its pleasures in shadow may lie,
But pleasures less fleeting appear in the sky.
Oh! the sweet light of love to our Evening is given,
To lead us from earth to the glories of heaven!

OF LOWLY BIRTH, BUT REGAL BEAUTY.

[AIR—"Fair Sally loved a bonnie Seaman."]

I.

OF lowly birth, but regal beauty,
To charm, to dazzle, and surprise,
Men gave her homage as a duty,
And bards drew rapture from her eyes.
Of spirit bold, of bearing proud,
She shone above the common crowd,
A dream of light and glory.

II.

'Farewell!" exclaim'd a sailor, kneeling;
"Thy smile shall light me o'er the sea,
Remembrance of thy tears, appealing,
Shall be my guide to victory.
Two passions only fill my heart,
And ever shall till life depart—
Thy love and England's glory!"

III.

"Farewell!" she said; "the tear-drops starting
Betray my love, and not my fears;
For through the clouds that dim our parting
I see the light of coming years.
My soul rejoices in thy fame;
And when I think upon thy name,
I dream of England's glory!"

IV.

He sought the strife where duty bore him,
He fought and died, but conquering fell;
His country's tears dropp'd gushing o'er him,
And nations peal'd his funeral knell.
But she, alas! of soul so high,
Was left in poverty to die,
Though dear to England's glory!

NOTES ON THE MELODIES BY SIR H. R. BISHOP.

WHEN DAISIES PIED.—"When Daisies pied" forms part of a collection of songs composed by *Thomas Augustine Arne*, published for the author, and, as the title-page informs us, "sold at his House, No. 17 in Craven Buildings, Drury-Lane." A copy of the grant of George the Second to Mr. Arne, of a "Royal Privilege and Licence" solely to print and publish these songs for the term of fourteen years, is prefixed to the collection, and is dated the 29th of January, 1740. It is a proof of the intrinsic merit of this melody, that its popularity has endured for more than a century, although the indelicacy of the original words has banished it from the drawing room. It will continue to be admired by all who appreciate the style of graceful simplicity of Dr. Arne's excellent compositions, and of our national music in general.

THE VICAR OF BRAY.—The original tune to which the old political and satirical song "The Vicar of Bray" was adapted, is to be found in Playford's *Dancing Master*, under the name of "The Country Garden." It is one of those boldly constructed and truly English melodies of which we may reasonably boast, and which have assisted in giving to our music a character peculiarly its own.

SALLY IN OUR ALLEY.—The original air of "Sally in our Alley" was composed by *Harry Carey* early in the eighteenth century. The present version, however, is note for note as I remember to have heard it sung by Incledon. Although to some extent it may have been founded on the original air, the two, nevertheless, are essentially dissimilar. To whom this version should be attributed is doubtful. We are without any evidence that Carey composed *two* melodies to the words of his song, but if he did, I think there can be no question that his "second thoughts were best."

PACKINGTON'S POUND.—"Packington's Pound" appears to have been composed shortly before the accession of Queen Elizabeth. Although written as a country-dance tune, it affords, in addition to the many proofs we possess, that airs of a similar description are often more suitable to poetry of a serious, or sentimental, than of a lively character. From among the numerous versions of this fine old tune, I have chosen the one introduced into *The Beggar's Opera*, as having stronger marks of originality than any of the rest.

FAIR SALLY LOVED A BONNIE SEAMAN.—It must be very obvious, that the beginning of the melody of "Fair Sally loved a bonnie Seaman" is similar to that of Gay's "Black-eyed Susan," of which the music is reported to be by Leveridge, the author of the "Roast Beef of Old England," and other popular airs. The present song, however, was composed by *Dr. Maurice Greene*, who lived at the same period; and was a composer of far greater note than Leveridge, and less likely to be guilty of a plagiarism. The question is not easily to be decided; but from what we know of the general character of the compositions of Leveridge, our doubts ought to incline in favour of Dr. Greene.

PANORAMA OF THE GREAT EXHIBITION.

THE description accompanying our Panorama must of necessity be brief: we neither profess to describe nor enumerate the articles in the several compartments, but merely to give such information as any one well acquainted with the Exhibition might have afforded in passing round with a friend. A short mention of each compartment will serve, as the best guide to the stranger to those who have visited the Exhibition. Our Engravings are from Daguerréotypes; of which the Foreign Side are by Beard, the English by Claudet.

FOREIGN END (NORTH SIDE).

PERSIA, EGYPT, TURKEY, AND GREECE.

Persia might have contributed largely to the Exhibition, but the results scarcely honour us whatever. The cases were occupied by contributions entirely from English gentlemen—Dr. Thompson, recently returned from the East, Mr. Major, a Turkish merchant, and Lieutenant Tyler. Worthy of note amongst them were some curious-headed arrows: a sword called a yataghan, of such wonderful temper, that at a single blow, with not the slightest damage to the edge, it would cut through a broom-stick; rifles with damascene barrels inlaid with gold; an ivory-handled dagger; some scarfs, embroidery, and costume. (See Catalogue, page 291.)

The inscription over Egypt and Turkey is the seal of the Sultan Abdul-Medjid. The saddle and pipes in front, and the alabaster slabs, which were of unusual size and beautiful colour, were Egyptian. The rest of the raw materials and manufactures from Egypt occupied the left side of the court. (See Catalogue, page 217.) The cloak outside the case on the [illegible] of the tomb of [illegible] invented and [illegible] Constantinople. [illegible] to £30 apiece. The amber mouthpieces were some of them of great value, those set with brilliants being worth about £1100: they were of the peculiar pale clouded lemon colour most esteemed in amber in the East, there called by the original Greek name, *electron*, from which we have derived, in the belief of tracing the word electricity; in reality, however, the name was given to amber, from its similarity in colour to a native alloy of gold and silver found in the mines of Greece. The Albanian costumes, embroidered in gold, were worth from £20 to £10.

The silks were the produce of the Imperial manufactory, and cost about three times as much as they could be bought for anywhere else. The muslins embroidered in silk, gold, and silver were mainly the home work of Turkish ladies. The embroidery was the same on both sides: a dress would be the work of from six to eight months; during the whole time they are preserved from the slightest soil, and vary in price from £15 to as much as £70 each. Here were likewise rugs, skins, confections, and perfumes among the latter, attar of roses at £2 10*s.* an ounce.

In the case of silver-work, almost every scarf or coffee-cup holder was of a different pattern, and from a different province of the empire. In the case of silk, pipers were some embroidered in real gold and pearls, and as dear as £40 a pair. The pieces of gold and silver fringe were perfect [illegible] Lastly, a small [illegible] little gold implement for touching the eyelids with henna, and a brush set with [illegible] which were taken from a beautiful marble sarcophagus near Zebail, which contained, also, two other masks in gold, but all crushed and worn. The inscription on the sarcophagus stated them to have been deposited by a man of distinction, as an offering of affection to his wife.

In the compartment marked "Greece" some specimens of Parian marble, a wax figure in Greek full gold costume, a few manufactures and raw materials from the Greek Islands—giving but a poor idea of Greek production and industry—occupied the entrance to the court (see Catal. que, page 288), which once belonged to Turkey, and was set out with embroideries, saddle-cloths in rich gold-work at £26 each, morocco slippers, and, amongst other things, a considerable display of fine silk sheets and silk crape shirts of Albanian manufacture. Several of the former were purchased at from £3 to £4 each, for ladies' dresses. They were most of them white, and were soft, light, and very elegant for summer morning dress. In this part, also, were some pieces of furniture stuff, in cut velvet with gold ground.

Behind these compartments was the lecture-room, on which were hung skins of all the wild animals of the empire, and under which were shown morocco and other leathers tanned in the several provinces, all of which differed in quality and appearance, and varied in price from 2*s.* 6*d.* to 8*s.*; and the novel Albanian winter coats of goat's-hair, worth about £1 each.

The unfinished statue in front of this compartment of Turkey deserves to be thought upon; it is that of Dr. Jenner, whose discovery of vaccination for ever stayed the plague of small-pox, by which, before his time, hundreds of thousands died every year, and multitudes were scarred, scarred, disfigured, blinded, and made miserable for life.

The rugs in this passage—of which very many more were in the collection by various makers—were to be had at from £2 to £5 each; and the pieces of Turkey stair-carpet on the right of the passage deserved note by our manufacturers for the admirable manner in which the colours, though brilliant, were so disposed as never to dazzle or weary the eye. There were several similar pieces of carpet in the compartment; the price was 14*s.* the square yard. The passage led to the Exhibition Refreshment Room, close to which were shown dolls, stuffed birds, models of fishingboats from the several parts of the coast, soaps, perfumes, pencil making in all its stages, by Morell; Westhead's patent wadding quilts, lighter and warmer than blankets, at from 7*s.* 6*d.* to £10 each, according to the work, and whether they be covered in cotton or silk; and soft Astoria cloth, made from the fur of the hare. (For Turkey, see Catalogue, page 316.)

SPAIN AND PORTUGAL.

Scarce second to Damascus itself for the keen temper of its steel was Toledo of old; and, at the entrance of the Spanish department, were two swords from its Royal ordnance factory, the sheaths of which, to show that the old skill of make is still retained, were circles of silver in the form of a coiled serpent. In the same case were several other beautifully ornamented daggers, swords, muskets, and pistols. The prices of all the Spanish arms, considering their excellence of make and beauty of finish, were wonderfully low. A priced catalogue of all the goods was to be had in the department. The balustrade for the choir of the Roman Catholic cathedral at Arequipa, in Peru, is prominently shown in our Engraving. It is seven feet and a half in height, made entirely of silver gilt and gold, and weighs 209 lb. It is worth £5000, without counting the diamonds and precious stones with which it is richly set, and which of themselves must be of great intrinsic value. The two other pillars of the division were the arms of Spain in gold embroidery, the wonderfully-worked baby-linen for the late Prince of Asturias, and several other specimens of costly lace. The guitar-harp of Don Gallegos, of Malaga, a new instrument, was worth looking at for its elegance of form, and hearing for its sweetness of tone. It comprised the wire-strung harp, guitar, and violoncello. The inventor was generally at hand, and was most obliging in playing for visitors. There were several specimens of Spanish lace, one of which, a dress of black blonde, was valued at £416. The kid gloves were a needed competition with our own and the French: high price; they certainly did not seem inferior to the best, and were marked at 1*s.* 5½*d.* a pair. The morocco leathers, of a great variety of tints, were worthy the attention especially of our ladies' shoemakers. For other matters, there was a large show of raw materials, amongst them 150 specimens of various woods from Cuba. There was a model of the Bull Circus of Madrid, with its multitude of spectators; and some details in terra cotta, coloured and gilt, from the Alhambra. Behind the Spanish and Portuguese department, were French chocolate, perfumes, soaps, preserved fruits, meats, flour, sweets, &c. Portugal was especially notable for its beautifully made double row of oval small casks, each with its little sample box for all comers. The fire-arms, gold brocaded silks, and marbles, lace, and various raw materials, also deserved attention.

In the front gallery were two brass and iron bedsteads from Spain, several specimens of Portuguese woods; and an escritoire, in carved ebony, inlaid with carved ivory figures of animals, some of which were done with great spirit; and in the north gallery commenced the stained glass of all nations, which ran nearly its entire length. Portugal is 291, Spain 302, in the Catalogue.

ITALY

Occupied three compartments, under the heads of Tuscany, Rome, and Sardinia, to be found respectively at pages 318, 294, and 301 of the Catalogue. In the Tuscan compartment were to be found three tables in *pietra dura*, exquisitely inlaid: the centre one, with malachite, jasper, lapis lazuli, turquoise, and other precious stones, took five years, it was said for £1000. The octagon table, by P. and J. Della Valle, representing Galileo in the inquisition prison, visited by Milton, has obtained the first prize in scagliola; its price was £200. Here were also the sideboard at which Angelo Barbetti worked for six years [illegible] price of which was 550 guineas; the jewel-case by [illegible] representing in high relief scenes from the siege of Troy, price 250 guineas; and a somewhat similar one by Marchetti, price 200 guineas: Ducci's organ, the twelve lower notes of which were produced from a single pipe placed in the seat of the player, and which had the full power of a common organ [illegible] price of the large was £240, of the small size [illegible] by several producers and manufacturers, flocks of [illegible] merino sheep; the corn which supplies the straw for [illegible] case of bonnets of such exquisite material [illegible] they are from £14 to £18 each. In the passage outside this compartment, and extending also behind Spain and Portugal, were specimens of [illegible] rules, alabasters, quicksilver from several mines, and other [illegible] was a model of a bath, about ten inches long and five [illegible] lazuli: the beautiful mosaic tables and embellishments, which with their history and mode of manufacture are to be found described at length in No. 294 of our Journal; and that, with the views of Italian cities and scenery cost £1000, and is the property of Lord Ashburton, of whom the marble statue near it is a very excellent likeness. Behind this was the Sèvres department, where were the Gobelins tapestries. The Sardinian compartment was notable especially [illegible] of inlaid wood (marqueterie) and wood and metal (pietra dura) mosaics of Genoa silks and velvets, the latter of most exquisite [illegible] richness, and such intense depth and brilliance of colour as makes it easy to understand why so many velvets should be made to bear the name of Genoa. Behind these compartments are French pianos, &c.; and above them in the gallery a case of beautiful silver and gold filigree work, in which the artist, Giacomo Lolo, especially prided himself on a column designed by himself to commemorate the Exhibition, and extremely difficult of execution. The wonder of this filigree work was not only its beauty, but its cheapness. In the passage to the north gallery, were glass and earthenware from Brussels.

FRANCE (NORTH SIDE).

We have already stated that the French comestibles, [illegible] candles, soap, chemicals, &c. occupied the space behind Spain and Portugal; the French musical instruments were to be found at back of Italy, and beyond these the Sèvres wares and Gobelin tapestries, of which the most beautiful was that representing the slaughter of the Mamelukes. Some of the vases are of the purest forms and styles of ornament. One or two, after the manner of the Etruscan, almost make one believe that the old workers have visited the world again. Of sculpture, in this department especially worth note were the bronze negro busts, by Cordier; Eve, with Cain and Abel, as infants, in her arms, by Fradier—one of the finest pieces of sculpture in the whole Exhibition, and which yet strangely received no prize; and the "Bacchanal," by Clesinger, purchased for his house at Florence (for somewhere about £1000) by Prince Demidoff. In the centre were a pair of doors in bronze, an exact copy by mechanical means one-fourth the size of the original of the gates of the Baptistery at Florence. They are intended for library doors, are nine feet high and six wide, and the price is £600. The bookcase on the left was a beautiful specimen of art and art-workmanship; the figure of "Poesie" [illegible] and [illegible] seated [illegible] copied from a tomb of the Medici in a church at Florence. The enrichment on the frieze, the springing lions, the birds, and the column of the central doors, are by Clesinger, the sculptor of the "Bacchanal." The whole is of ebony: the ornaments of bronze. It is 12 feet 6 inches [illegible] the table, its price £1800. (See the ILLUSTRATED LONDON NEWS, Nov. 1.) The sideboard on the right hand, by Fourdinois, contains some beautiful carving. The general idea is to represent the gathering of food in all quarters of the globe; so at top is Peace, and groups of children gathering fruits and grain on the shelf-board a group of still life; at the corners, as terminal figures, a hunter and fisherman; in front, the four quarters of the globe represented [illegible] as [illegible] below it sporting dogs. The value of the sideboard [illegible] its proportions, idea, and workmanship are excellent: the picture in the centre did not belong to it. Opposite these, on the counter and wall, were various goods from Algeria, the list of which is in page 291 of the Catalogue.

The passage up to Italy belonged to France; and just a pair of plate-glass doors, and a large casting of a pair of eagles and a dead chamois, by Eratin, and a new style of [illegible] chandelier, was one of the doors out of the Building towards the Serpentine.

Behind the case of Sèvres and Gobelin tapestry, and excellent in the picture in the centre did not belong to it. Opposite these, on the counter and wall, were various goods from Algeria, the list of which is in page 291 of the Catalogue.

The passage up to Italy belonged to France; and just a pair of plate-glass doors, and a large casting of a pair of eagles and a dead chamois, by Eratin, and a new style of [illegible] chandelier, was one of the doors out of the Building towards the Serpentine.

Behind the case of Sèvres and Gobelin tapestry, and excellent [illegible] of inlaid wood (marqueterie) and wood and metal (pietra dura) mosaics of Genoa silks and velvets, the latter of most exquisite [illegible] richness, and such intense depth and brilliance of colour as makes it easy to understand why so many velvets should be made to bear the name of Genoa. FRANCE (NORTH SIDE).

We have already stated that the French comestibles, [illegible] candles, soap, chemicals, &c. occupied the space behind Spain and Portugal; the French musical instruments were to be found at back of Italy, and beyond these the Sèvres wares and Gobelin tapestries, of which the most beautiful was that representing the slaughter of the Mamelukes. Some of the vases are of the purest forms and styles of ornament. One or two, after the manner of the Etruscan, almost make one believe that the old workers have visited the world again. Of sculpture, in this department especially worth note were the bronze negro busts, by Cordier; Eve, with Cain and Abel, as infants, in her arms, by Fradier—one of the finest pieces of sculpture in the whole Exhibition, and which yet strangely received no prize; and the "Bacchanal," by Clesinger, purchased for his house at Florence (for somewhere about £1000) by Prince Demidoff. In the centre were a pair of doors in bronze, an exact copy by mechanical means one-fourth the size of the original of the gates of the Baptistery at Florence. They are intended for library doors, are nine feet high and six wide, and the price is £600. The bookcase on the left was a beautiful specimen of art and art-workmanship; the figure of "Poesie" [illegible] and [illegible] seated [illegible] copied from a tomb of the Medici in a church at Florence. The enrichment on the frieze, the springing lions, the birds, and the column of the central doors, are by Clesinger, the sculptor of the "Bacchanal." The whole is of ebony: the ornaments of bronze. It is 12 feet 6 inches [illegible] the table, its price £1800. (See the ILLUSTRATED LONDON NEWS, Nov. 1.) The sideboard on the right hand, by Fourdinois, contains some beautiful carving. The general idea is to represent the gathering of food in all quarters of the globe; so at top is Peace, and groups of children gathering fruits and grain on the shelf-board a group of still life; at the corners, as terminal figures, a hunter and fisherman; in front, the four quarters of the globe represented [illegible] as [illegible] below it sporting dogs. The value of the sideboard [illegible] its proportions, idea, and workmanship are excellent:

The carving of some of the articles was, however, admirably executed, and the designs rich. The oak bookcase, in the Gothic style, in the lady's library was, with its richly bound volumes, a present from the Emperor to the Queen. It was far from finished, and had to go back to the workshop from the Exhibition before it has its place in the Palace. The glazed presses of the case revolve. The figures, emblematic of the several orders of books, are some of them right well studied and well worked; but the gem of all these rooms, surpassing all the furniture, was a picture-frame. The flowers and branches were most gracefully entwined; they had all the distinctness and freedom of life, and the frame was broad and rich without the vast, approach to heaviness. In the drawingroom, the base of the small round table was a great improvement on our stiff pillars and claws. In the Front Gallery, over these compartments, were velvet pile carpets of a peculiarly light make, pianos and accordions, by various makers, and prepared piano-wood, by Beinert and Son, of Bonn.

ZOLLVEREIN (NORTH SIDE).

The Zollverein, or German Customs Union, the population of which exceeds 32,000,000, occupied four compartments in front. Our Engraving of the first shows articles from the Royal China Factory of Berlin, and some cases of amber in the rough and polished. Amber is not much in request in Europe; it is found in the mines and fisheries. It is manufactured for export to the East and to Africa. The prices of the ordinary articles are very moderate: for instance, brooches, from 2s. to 9s.; lockets, 9d. to 2s. 6d.; necklaces, of from one to five rows, from 2s. to 24s. Passing down are a large stuffed group of a stag caught by five hounds, in which there is great spirit, and the price of which is £180; a bear attacked by three dogs, price £120; a whole host of kittens, cats, rats, mice, weasles, caricatured in most comical groups, and of various prices, from £1 to £30; next to these were some ingenious pharmaceutical and cooking apparatus, sent by a Mr. Wolf, of Heilbronn; and lucifer matches in all stages of their make. The silver cup in front of the second compartment, by Wagner and Son, the artistic design and execution of which in every part was so admirable, had awarded to it the council prize medal. On the left, in this compartment, was the model, with numerous figures, of the castle and chase of Ehrenburg, the baronial seat of Prince Albert; opposite to which was a piece of wood carving of a drunken Bacchus and Satyrs, intended for a wine-press door, in high relief in silver, the price £52 10s. The centre hall, or octagon room, contained articles of art and manufacture from almost every state: a painted window, copied from that great one of the Church of St. Lorence, at Nuremberg, price £150; the cupid carried off by a leopard, in marble relief, by Michael, a work of real art; statuettes in stone paste, by Paul Gropius, of Berlin; some most elaborately-carved ivory goblets, by Gustav C. W. Hayd, of Darmstadt, has round the base the figures of German emperors, on the cup the battle fought in the time of the Roman Emperor Augustus, in the forests of Jeuteburg, against the Roman general, Varus, by the German Arminius; on the top is the figure of Hermann, crest-triumphant, the price is £100. Another by Hagen, of Munich, representing a procession of bacchanals, very beautifully carved, price £300; a great jug, with most elaborate groups, by Schultz, of Meningen, and several other cups and ornaments by various artists, many of them of great merit, and every one of which was worthy the especial study of our electro-plate manufacturers as models. Close to the first ivory cup was a lady's double writing-table, in ebony, with a centre-piece of four sliding views of scenes on the Rhine, painted by Carl Scheuer, of Dusseldorf, who has won a wide reputation as an artist; the design and carving, by Hilyrs, are also excellent; the price £180.

There was a miniature bronze of the great Amazon, by Kiss, losing, however, in its littleness, the greatness of the original. Porcelain from the Royal Factory of Meissen; miniatures on ivory; articles in papier mechemé; a lady's bureau inlaid, and Weishampe's chess-board of tortoise-shell and mother-of-pearl, with border of gold and silver inlaid, and men of gold and silver ornamented with enamel, and set with emeralds and rubies; the weight 15 ounces, the style Benvenuto Cellini. The pieces are portraits of Charles V., Emperor of Germany, and his daughter, Margaret of Parma, and of Francis I., King of France, and his sister, Margaret of Valois. The pawns are men in chain armour; the knights are mounted on prancing horses, and the kings and queens are arrayed in robes of state. The price was £1029. Of articles from the Royal Porcelain Manufactory at Berlin—the large vase with brass handles and painting of the harvest, after Von Kloeber, is £472 10s.; that with the dancing figures, £240; the other four large vases, £190 each; the one of Persian pattern, with painting of an American forest, £112.

In the passage behind this room were iron castings, statuettes, tables, vases, &c., remarkable for their sharpness and cheapness; for instance, the round open-work table was sold for £3. There were some clever zinc castings for ornaments of doors, cornices, &c.

Two compartments beyond the passage were occupied with carriages, cutlery, tools, implements, and machinery. There was a vacuum-pan in copper, with air-pump, by Beckman, of Berlin, constructed to hold 245 lbs. weight of sugar at 90 lb. weight each, at a single boiling, a very compact steam pharmaceutical apparatus; machine for striking out patterns for the jacquard loom. A mint rolling-mill, such as is used in Paris and Utrecht; and cast steel railway axles, by Krup, of Essen. A screw-cutting lathe constructed of wood, metal pieces in cast iron and of earthenware, of which one in brown pottery deserves attention, as it shows how at small cost there may be great improvement made upon the wood and stone mantelpieces of cheap houses.

In front, passing down the third compartment of the Zollverein, were a variety of ornaments in finely-cut amber, by several exhibitors; cases by Keller and Co. of articles in onyx, jasper, and cornelian, in the latter of which there is a tea service, consisting of teapot, cream-jug, sugar-basin, 12 cups, 12 saucers, 12 plates, 12 teaspoons in white, cut and polished from the solid stone—the price £1200. Villeroy and Bosh's fine stoneware, with silver gilding, deserved examination; and along the passage, narrowed by the octagon room, were guns, swords, pistols, muskets, flowing pieces, and cutlery. In the fourth compartment especially worthy of notice were the exquisitely fine linen damasks by various makers. The price of the fountain of alabaster glass, with gilt ornaments, was £169.

NORTH GERMANY AND HANSE TOWNS.

Our Engraving shows on the left of the North German bay a bas relief in plaster of scenes from the history of Northern Germany, by Englehard; and on the right a phaëton, made entirely of rosewood, varnished, and requiring no paint; it was bought by a Spaniard as a present for the Queen of Spain. In the Hanse Towns Court, in which was the model of Heidelberg Castle, were sumary articles of furniture in deer's horn, by Rumpendahl, of Hamburg, amongst which a sécrétaire is priced at £120. The round table, with figures inlaid in coloured woods and mother-of-pearl, at £200; the piccolo piano, by Hahms, of Hamburg, with the sound, by Schroeder, of Hamburg, and the inlaid leather, tortoiseshell combs, some articles of plate, jewellery, a parlour-game of the kettle-drums, a tastefully arranged circle of whips and sticks, the handles of some of which are very sparingly carved. In front of the staircase, or sixth compartment, our Engraving shows the Prussian cannon, and some specimens of highly burnished steel. On the side walls were embroidered carpets, and at the end of the passage a cast in plaster of Kalidi's "Bacchante," sprawling on a thirsty panther's back (the original, in marble, is gone to America). In the front gallery, above these compartments, were a model of the Cathedral of Magdeburg, with all the ornaments, interior and exterior, scale 1-92, in wood; emblematic designs for the bas reliefs of Northern German history; so no models of geometrical forms, which simplify mathematical problems, especially those in solid geometry, by presenting the learner with a tangible reality instead of a com licated puzzle of lines. These most valuable helps for schools, designed by Schroeder, of Darmstaat, are to be had at De Cuna, 16, Wilson-street, Finsbury: they are per set £30.

RUSSIA.

Russia, as shown in our Engraving, has on this side three compartments. The great candelabra in front, bronze gilt, on the right, were by Chopin, and the large candelabra on the left, by Duval, of Moscow £350 the pair. In the case in front of the first bay was jewellery by Bohm and Jan, jewellers to the Imperial Court, St. Petersburg. The value of the diadem of diamonds, &c., is £4800; the brooch in form of a branch, £840; the bracelet, with vine leaf in diamonds, and grapes of rubies, £370; that by Messrs. Kaemmerer and Zetfigen, also Court jewellers, the diadem of diamonds and emeralds is £3315; the berthe of diamonds, £2841. No price has been set on the Oriental amethyst; it is of immense value. The prize of the large silver centre-piece, which weighs 200 lb. of silver, is £2850; it represents Demitri Donskoi resting under a tree and almost worn tod to death, but revived by news just brought him of victory over the Tartars.

The malachite was the most universally attractive object in the Russian department. Malachite is not marble, but is, in fact, copper ore in form of carbonate. There were some beautiful specimens in the Australian department, which showed also the intensely blue ore of copper from the Burra Burra mines. The malachite doors were 14 feet 6 inches high by 7 feet wide; the price £6000; but no one was found ready to pay £300 a year for going into his drawingroom. The price of the chimney-piece was £1000. The large *rococo* vase which is shown in our Engraving, on the right of the centre bay, has been bought by Prince Esterhazy for £3200; the oval malachite table by Mr. Drew, M.P. for Carlow, for £320. The gilt horses, with green marble pedestals, by Baron Klott, and which are models of the colossal pair for which pedestals, at last given up to Sweden, were so long reserved at the east end of the Main Avenue, have been sold to Lord Ellesmere for £112. The malachite chairs were £140 each, and the arm-chairs £160. The bronze gilt clock, the top of which, at a little distance, had the appearance of a globe, was by Chopin, manufacturer of bronzes at St. Petersburg. The design is the first balloon ascent, that of Montgolfier's great paper fire-balloon, in the reign of Louis XV.; the pedestal represents flames, and has thirty-three figures; the price, in round numbers, £396. The vase of greenish jasper, with cut border, was £457. The case of twenty medallions were well worth careful looking at: they are wax representations of the events of the years in 1813-14; the price of the set was £4 15s.; the dies for medals of the same were also shown—their price was £3166.

UNITED STATES (NORTH SIDE).

Of all modern inventions, the Americans have seized with the greatest avidity upon vulcanized indiarubber. The five compartments of the United States conclude our Panorama of the north side of the Main Avenue, foreign end. The first was occupied with indiarubber goods, in wonderful variety; mass, plain and coloured, of the states of Europe, of the world, printed on indiarubber, so that one can stretch the world a bit, and try how it looks in sundry shapes; harness, whips, bookbindings, boots, life-buoys, mugs, buckets, bottles, carpeting, buffers, &c. The second bay is again indiarubber: there are blown globes of it—useful, certainly, for globes, as they can be made very cheaply, of very large size; fierce-looking whips; Goodyear's metallic indiarubber over-shoes and boots, very elegantly cut and finished, and certainly, of all the vulcanized or fixed elastic indiarubber preparations, the best. A one side of the third compartment was occupied by Keenang, shows a variety of native Indian manufacture, and ladies' work. At the other Bull ng's balances, nautical and other philosophical instruments; within the compartmentare several descriptions of stoves. In the front of the fourth compartment is the case of patent percussion pistols, which, with rifle barrels, have six chambers, and fire six times, as fast as the trigger is pulled; they are also loaded with great rapidity; the price for the pocket size is £4. The price asked for the Dying Indian is £1000. The ploughs, by Messrs. Starbuck and Troy, and Prouty and Mears, of Boston, were in this bay; one of them was so successful as to win the prize medal at the trial: nearly all of them have already been sold, and orders received for twenty or thirty besides to be sent over. The price is about £2 10s. They are very light, and have the handles bent to the right hand. To the right of these ploughs in the same stood M'Cormick's reaping-machine, one of the most important contributions to the Exhibition: in any ordinary country, drawn by a pair of horses, it reaps down sixteen acres of standing corn in a day, thus enabling farmers to save a crop while the sun shines. The consistence in a very simple: a series of wooden blades lay the corn to the edge of a knife, which is kept sawing backwards and forwards by the motion of the wheels. The price is £25. Grant's patent fan-mill (price from four to six guineas) is also spoken of as important, from its compactness, meaning that it was at once passing through. Smith's saut-machine, and Anthony's churn, of which, from its speed in producing butter, and the quantity, numbers have been sold by Burch, of Newgate street, who is sole agent for them here.

There are Eddy's patent toughened iron pump wheels, sundry stoves and cooking apparatus, centrifugal pumps, philosophical instruments, a considerable number of carriages of various shapes, and mostly very high priced.

In the passage beyond the court was a small printing-machine, earthenware, porcelain, and other articles from the Zollverein; English paperhangings by several exhibitors.

In the galleries were American fancy soaps, and a washable window of various coloured transparent soap; a case of barège, crape, lawn, damask, mohair, bonnets, and pieces of knitted wool always like our Scotch wool from Germany; vulcanised indiarubber in all shapes, from water-pipes to zephyr over-coats, by Moulton and Co., of Bradford, Wilts; but the main space of the front gallery was occupied by articles from the Zollverein, specimens of bookbinding, printing, cards, coloured papers, gilt edges, ornamental borders, illustrated works, an album in velvet, gilt by a patent process, which gives great smoothness and brilliance to the gold.

In the lower end of the North Gallery were paperhangings, printed by machinery, by Jeffreys and Co., Mayhood and Co., London; and a dark green flock paper by Jeffreys and Allen, in which a light green leaf was introduced with excellent effect.

FOREIGN END (SOUTH SIDE).

The Illustrations of the South side of the Foreign division of the Great Exhibition appeared in the Gratis Supplement to the ILLUSTRATED LONDON NEWS of November 22.

AMERICA (SOUTH SIDE).

Passing through the first bay of America on this side, in the passage on the left, were a great variety of articles, French and English. Most interesting was the glass exhibition by Messrs. Hartley and Co. There are the raw materials, the melting-pot, which weighed a ton and held a ton of molten glass, crowns or common window glass as it is gathered from the pot, and in the several shapes it passes through in being blown, in all thirteen, until it is a great circle, the size of a carriage wheel, ready for the glazier's diamond; sheet glass, as gathered, blown in a wooden mould, and the wooden mould shape, opened at the end, split for flattening, flattened in all stages. It is with this kind of glass that the Bullring is glazed; its production requires great skill in the workmen; it is cut even at the end so as to make it square when flattened by Chudet's diamond-machine. There were also Hughes's masting shears or crane for lowering the masts of a ship into place; a clock with a globe at top, which revolved on its axis once in every twenty-four hours; a model of York Minster, made by a lamp-lighter at Sunderland; a new style of carpet bag, which opens at both sides to a great extent, for packing; washable granite and marble wall papers, from Fetcher and Co., of Barnsley; transparent window blinds painted by E. Morgant, of Calais, in a new manner, and which gives well the effect of stained glass; carriages from Moutard, of Paris, one of which, with mountings and silver, was most elegant. It is for Jenny Lind, and made rather on an open barouche, a half-shut or close carriage; the price was £430; we would commend it to the Americans for a study, in shape, finish, and price. Returning to the Main Avenue, our Engraving of the first bay shows a stand of genuine American clocks and Indiarubber boots and shoes, very well shaped, but we should rather, for health sake, wear something less airtight. The second gives a view of the Susquehanna Viaduct, 2600 feet long, and a model of one of the arches, whilst the plaster figure is not unknown merit, of Oliver Twist; a bust of Daniel Webster, a miniature equestrian statue of Washington, and the bell telegraph, so contrived that whatever is wanted in any part of the house is notified on a board to the servant, who is at once told by signal the room. On the same stand was a floating barometer, made without seam, by depositing copper by the electro process on a fusible metal, which is afterwards run off a plan that might be adopted, it seems to us, with advantage for making articles of silver or copper to be electro-plated, such as teapots, &c. Within this bay were Hall's sewing machines, which, in every variety, are to be had of the American Chair Company, New Oxford-street; blankets and flannels of unusual lineness, cotton drills, four chronological plates, with events and dates, order of succession, &c., arranged as on the north walls, and pillars of a temple. In front of the third bay our Engraving shows Palmer's artificial legs, both in appearance and use far superior to any that ingenuity has hitherto produced. The inventor, whom loss of a leg above the knee set upon the study of how to mend his case, although a hearty man, walks freely, and, we learn, can scarce a limp. A full-length limb weighs 44 ounces, a short 20 ounces; the surface is wondrously true to the appearance of skin. On the same stand were shown Cornelius and Co's lard lamps. Inside the bay were dental instruments, of which a new description of forceps, for extracting back teeth, seemed an improvement which, from giving a firmer hold and better support to the tooth, may be worthy the attention of our dentists; and artificial teeth from £2 to £4 the 100. Here, also, is Hobbs's nineteen-tumbler lock, and barrels (of Cannonian) improved ignitum rods. The very point is platinum, and the entire top of a metal so compounded that it will not oxidize. The rod, instead of being round, is flanged or twisted, or cross-shaped—presenting one-quarter more surface, with two-thirds less weight. At every ten feet of the rod are gilt pins, stretched out like fingers, to expedite the silent return to the atmosphere of the electric fluid. The rods is fastened to the wall with glass insulators, made on the plan of revolving padlocks; so that any portion of a rod can be taken down without removing the fastenings.

In front of the fourth bay stood the tea-service of unalloyed California gold, made by Ball, Thompson, and Black, of New York. Four months before the plate was shown at the Exhibition the gold was in the diggings. The service cost 1000. The forms, ornaments, and, above all, the colour of the gold, were really beautiful. The plate was a presentation from the citizens of New York to Edward Collins, the establisher of the Collins line of steamers between that city and Liverpool. Our Engraving of this bay also shows a large case of silver-mounted patent leather harness, a small one of tunes, a machine for the blind to print with, and more clocks. Within were portmanteaus, and a case with a muff, &c., of American silver marten, chosen for their richness and darkness of colour from 1000 skins: the appearance is different, from the under down being lighter, but not inferior to Russian sable. In the fifth bay were military rifles, hats, wigs, caps, maps, baby clothes, bonnets, of which a case of white, rejoicing in the name of Pamella bonnets, and to be had at Brown and Co.'s, Wood-street, City, were certainly worth looking at. In the first American court were pianos, among them a double grand, intended for concert-rooms and four players; the price was £250: cotton prints in great variety at 4½d. a yard fine wool tartans in shawls and dresses; glass from Brooklyn, that in colourlessness reminds one of the old Venetian, clear as crystal: pity that materials so excellent were not better worked, for it was all flawed and wavy, but still outshone all other glass in the Crystal Palace; the sand was shown with it, and is about to become an article of import.

There were also the centrepeal spring chairs and music stools, which rock and spring and turn all ways, and are always easy; and an easy chair, that, besides taking any inclination, had a movable rest for each leg separately, so that it seemed as if it would make almost gout a luxury. A traveller's bed—the posts of which let down telescope fashion, whilst the frame folded up like a lazy tongs—the bottom was elastic, and the whole packed into a small portmanteau. For both this and the chair, Burgess and Co., of Westgate-street, are sole agents. The price of the latter is about £4; of the former, £2

In the Second Court was the case of samples of raw materials and their manufactured products; cases of native copper, from Lake Superior, weighing 2544 lb.; crystalline copper, from Isle Royal, gems, shells, Indian relics, diamonds, gold, and petrifactions, shown by Dr. Feuchtwanger; iron ore and manufactured iron, wheat, maize, flour, bread and meat, biscuits, salt beef, sausages, leather, tobacco, sugar, hams, and shoe blacking, crucible, coal, &c. Beyond this court, the South Aisle was occupied by French carriages, tapestry, leather, agricultural implements, mill stones, and the fine silk grace cylinder flour cleaner, said to give its superiority to French flour. In the front gallery over these compartments were a great variety of articles from the Zollverein States, the most notable being unbleached fine damask table cloths, from Bielefield, in Westphalia, ordered by the Kings of Hanover and Wirtemburg, the borders copied from Pompeiian frescoes.

In the back or South Gallery were embossed leather, anatomical models, biliard tables elaborately carved, hollow wrought-iron furniture, surgical instruments, and a series of very beautiful coloured lithograph copies of Grecian, Roman, Merovingian, Carlovingian, Byzantine, Copetian, and German MS. illuminations, to which a better arrangement would have given a better place.

RUSSIA (SOUTH SIDE).

In front of Russia on this side our Engraving shows the square vase of violet-green jasper, and the case of magnificent gold tissues and brocades —some of them more than £1 the yard: they, however, found many purchasers, for ball dresses and court trains. There were also silks and velvets, rich but dear in comparison with those of other exhibiting nations; leather goods; cheap rugs, in the Persian style, but not so bright; boots and shoes, jugs and basins of felt, horse hoo-ings, gold-embroidered caps and slippers, and fleeces in the rough, just opened enough to show the clinging toothed edges of the fibre, which, in the milling, hook together, and make the rich, soft, firm, leather-like-feeling cloth. In the second compartments were sables of both sexes, ermine, fine ore, rough malachite, silver, copper, lead, and gold; Astreohan lamb and other furs and skins, hemp, flax, and silk, raw and manufactured.

DENMARK, SWEDEN, NORWAY.

In Denmark our Engraving shows the "Orestes," the bust of Eros, and the "Fisher-boy," by Bissen, of Copenhagen. There were also the "Adam and Eve," "Hunter and Panther," a bas-relief, and bust, by Jerichau, of the same city; pianos, chronometers, bone manures, statuettes, busts, and bracelets, in bis, after Thorwaldsen, the late world-famous Danish sculptor, whose statue of Byron lay for years in a corner of the Custom-house, refused by the Dean and Chapter a place in Westminster Abbey. The Danes also shewed philosophical instruments, gloves of exceeding softness, boots; an elaborately carved rifle, and for a come-shaped ball; carpets, stockings, model of an electro-magnetic engine, crockery, candles, and various raw materials.

Towards the close of the Exhibition many articles were added to Sweden and Norway, amongst them the great porphyry vase, which occupied a space prepared in the first instance for one of the colossal Russian horses, the bronze gilt models of which were all that ever arrived; the vase, for colour, polish, and perfectness of proportion, had no rival in the Exhibition. Near it was the great ship-cannon, of an entirely new construction, loading from behind, and having a side bolt through the breech to lessen the recoil. This, getting rid of the necessity of rolling back the gun to re-load.

The iron and other raw materials, arms, cutlery, silver, and silks of Sweden and Norway were well represented: there were thirty-two specimens of silver, showing it in every stage from the mine, iron bars of inch and half-inch diameter, twisted in most complex knots, when cold, to show their toughness, for with all the bending they showed no crack nor flaw. There were pearls found on the coast, one being a string of fine thread 4000 deep, weighing no more than half an ounce, woven by a peasant girl; a portrait of the Queen worked in silk; a marble figure of a fisher-boy, by Molin, and a bust of Jenny Lind, in sculptured pasteboard.

ZOLLVEREIN (SOUTH SIDE).

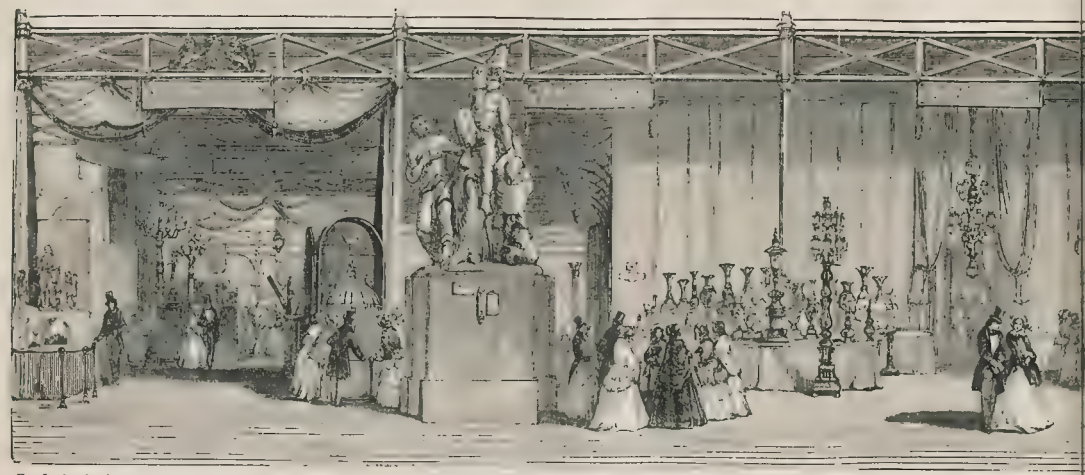
As is shown in our Panorama, the Zollverein occupied on this side five compartments in front; but a larger space belonged to it, for Denmark occupied only the front court of its three bays, and the entire space behind belonged to the great German Customs Union, which, in its main extent, no portion of the Exhibition was more complete, or would, commercially, have been more instructive, but for the original blunder of prohibiting the marking of prices. Towards the close of the Exhibition a piece of gilding of the Zollverein portcullis and unlatcher was shown, showing nearly forty descriptions of blues. Lava millstones, sponges; woollen and cotton cloths, one manufactory of which, that of Messrs. Kolle and Schuele, employs about 1000 hands; fleeces, one set exhibited by M. Rothschild, of Schildesdorff, from a flock of 1200 merino sheep; and, to show the pains taken to keep the excellence of wool, some fleeces exhibited, and which were presents for the Queen, had with them the pedigrees of the flock for several generations. There was also a blood-stock, fine wool, and gold from the Silesian mountains, patent and plain-dressed leather, treacle made from potato starch, iron, ribbons, velvets from 3s. 4d. to 15s. a yard; linen ticken, silk for hats, pigs' bristles, saddles, silk hats from £4 16s. to £6 18s. the dozen; tea-trays in imitation of tortoiseshell, *papier maché* goods, pocket-knives, mounted clocks, from £2 2s. to £3 10s.; whips, sticks, carved ivory mountings and handles, elastic pipe tubes, silver plate, toys, buttons, tools, cutlery, and, in short, everything that Birmingham is proud of.

AUSTRIA (SOUTH SIDE).

Our Panorama next gives a glimpse of the Austrian Sculpture Room, which was about as much as a considerable number of the visitors of the Exhibition ever got to. The space was so narrow, and the crowd at all times so great. It certainly was a strange arrangement that led so

GRAND PANORAMA OF THE GREAT EXH

10

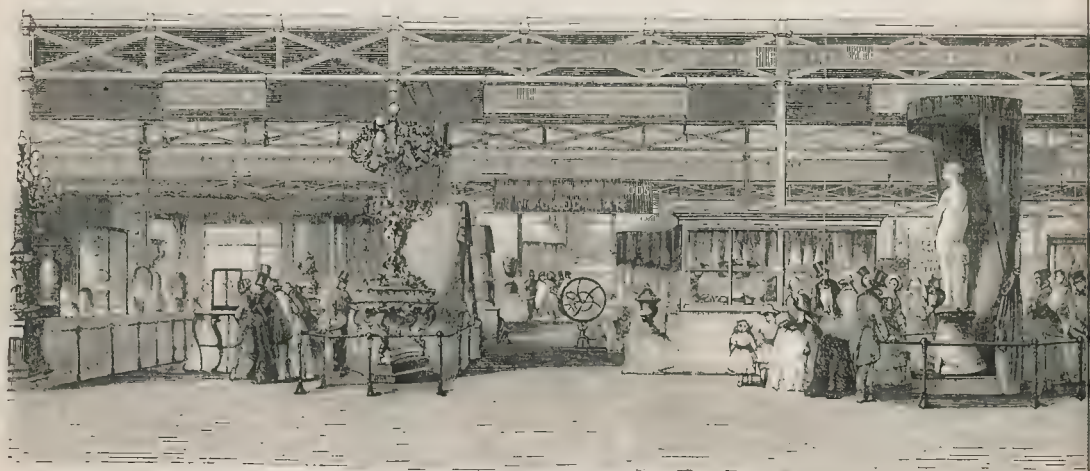


Hope Jewels, value £80,000—Jewelled Hawk, forming Gold Drinking Cup, belonging to the Duke of Devonshire, value £30,000—Chime of Bells &c. | Marble Group of Mazeppa—Bohemian Glass; the Candelabra in Ruby and Gold—Specimens of Type from Imperial Foundry—Printing in all Languages. | Austrian Bed-room, Library, Dining-room, Drawing-room, wit Inlaid Floors—Perpetual Clocks.

11

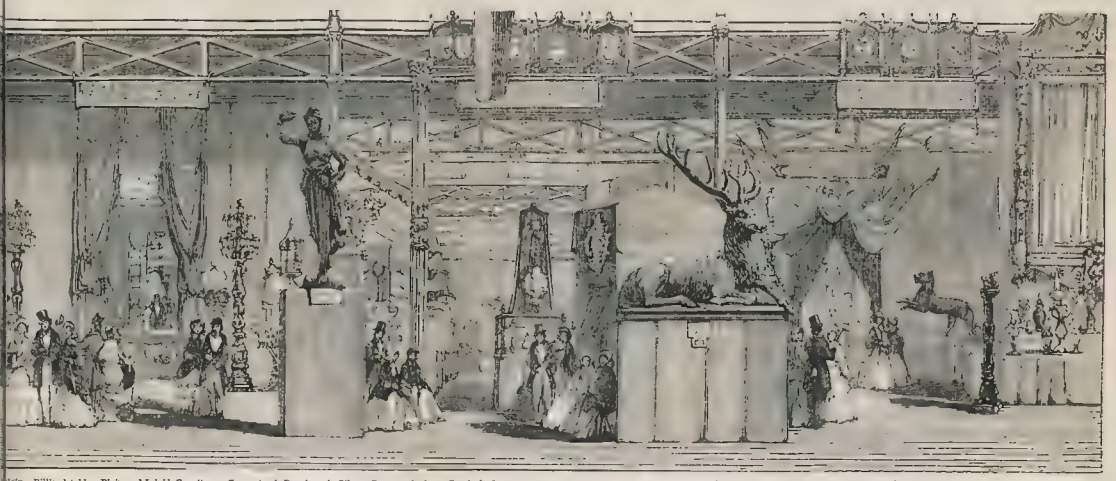
Statue, Cast Iron, 7 ft high, "Lebusa, Queen of Bohemia"—Porcelain—Glass—Fountain of Opal Glass—Ornamental Stone Ware—Carnelian Tea Service—Arms, &c. | Large Vase, with Pedestal—Berlin: Alexander, Bas-reliefs after Thorwaldsen—Linen—Damasks &c. | "The Muse Polyhymnia"—Scenes from the History of North Germa Deerhorn Inlaid Table—Pianos—Hats—Boots—Tortoise

12



China Vase—Silver Plate—Medallions and Dies—Diamond Tiara—Great Centrepiece in Silver, weighing 2 cwt.—Chopin's Clock. | Vulcanised Indiarubber Boots, Shoes, Maps, Harness, Life-buoys, Bottles, Buckets," Buffers. | Case of American Indian and other Hand-made Productions— Slave"—Revolving Cylinder Engine—Sawing Machine,

No. IV.—NORTH-EAST PORTION OF THE NAVE.



lain—Billiard-table—Plain and Inlaid Furniture—Carpenters' Benches Tools—Hardware—Agricultural Implements—Castings in Zinc. | Silver Censer—Amber—Comical Groups of Stuffed Animals—Stag Hunt—Boar Hunt—Machinery—Stoves—Tools—Cutlery. | Model of Castle of Rosenau—Wood Carving, Iron Castings—Octagon Room—Porcelain—Ivory Carving—Plate—Jewellery—Bronzes—Stained Windows—Silver Cup.

d Dog (Bronze Model)—Steel Cannon (Six-pounder)—Shield—Speci- ugh and Burnished Cast Steel— Carpets—Kalid's "Girl and Panther." | Bronze Gilt Candelabra—Jewellery—Jasper Vases—Specimens of Malachite and Gilt Bronzes—Great Malachite Tazza—Paper Hangings. | Great Malachite Doors and Vases—Malachite Mantel-piece—Pianos—Pony Phaëtons and Sledges.

Instruments—Stoves—Ranges—Centrifugal Pumps—Safe with Hobbs' Lock—Guns—Pistols. | Colt's Revolvers—Steam Gun "The Dying Indian," by Stephenson, of Boston, Marble Statue: opposite this was a Model Bridge. | Ploughs—Reaping Machines—Turnip Cutters—Anthony's Churn—Smut Machine—Carriages and Sledges

much sculpture, both British and foreign, in narrow courts and out of the way places, whilst so much of the Nave was occupied by articles that obstructed the view, or belonged to classes of goods in other places. In this Aisle some very beautiful pieces of sculpture, several of which have received and commented upon in various Supplements of the ILLUSTRATED LONDON NEWS. It is but fair to state that the majority of these were not executed for the Exhibition, but were lent by the proprietors to be shown. For the rest, there were of Austria on this side various fabrics, toys, iron goods, stoves, carved ivory, meerschaum pipes, gold trinkets, some models of furniture, chemical productions, soap, stone, raw materials, and cooking apparatus. The front gallery over these compartments was occupied for the greater part with a variety of Zollverein articles—musical instruments, philosophical instruments, flax and linen, chocolate, baskets, bonnets, hats, damasks, pianos, anatomical casts, lace, photographs, carpets.

Austria had silk brocades, furniture damasks, and priests' gold-embroidered vestments; and in the back gallery the United Kingdom occupied the space with stoves, boots, shoes, sail-sea sickness bed for ships, and models of ships, boats, life-buoys, belts, and new propeller, chairs, and paper-hangings.

BELGIUM (SOUTH SIDE).

Belgium [illegible] raw silk, flax, hemp, wool, and various articles of linen, [illegible], wool, mixed fabrics, hosiery, sail-cloth, and saddlery; furs and [illegible] chocolate, chemical productions, soap, and earthenware. The display of firearms, plain and ornamented, from Liège, was very complete. There were heavy cannon and light field pieces, mortars and shells of cast iron made with coke and wood, with [illegible] specimens of charcoal and coal. Some of the clothes, especially [illegible], were exceedingly fine, but with the yarn [illegible] therefore, more napless and glacé than [illegible].

FRANCE (SOUTH SIDE).

France on this [illegible] fancy articles of excellent ornaments; the sculptures, earthenware, porcelain, bronzes, artistic, and decorative furniture, and sculpture in front, we have noted under the several heads. The court behind the first five was devoted to bronzes and porcelain, jewellery, and gold and silver plate; most striking were the three great cases of épergnes, statuettes, prize cups, and other articles in gold and silver plate, by Christofle, Odiot, and Durrand. The bronze statuettes, inkstands, cassets, and clocks by Susse, and others; the entrance case of stones, enamel, &c.; the tea service in silver (Christofle and Co.), remarkable for its richness of chasing; and Barbedienne's vases, for which Messrs. Jackson and Graham, of Oxford-street, are sole agents. The court behind this was occupied by furniture remarkable for its newness of design and richness. There was furniture inlaid with porcelain, carved oak inlaid chairs, wire furniture, Aubusson [illegible] for room papers, and the dressing table [illegible] the Duchess of Parma, and a tool table [illegible] to the Duc de Luynes. [illegible] Jeweller Court, which we have already illustrated and described largely. Behind this was a court of lace, gloves, slippers, parasols, and patent leather, and the south passage was occupied by chimney-pieces, embroideries, oil cloths, transparent blinds, paper-hangings, and relievos.

SWITZERLAND.

The next four bays but one [illegible] to Switzerland: especially remarkable was the case of watches; some, of extraordinary smallness, were [illegible] the handles of eye-glasses, in ticket-cases, pen-holders, purses. A blue enamel watch, set with a bouquet of diamonds, was purchased by the Queen. The gold ticket-case with beautiful enamel of Neufchatel, and watch, was so [illegible] 120; the price of the purse was [illegible].

In the [illegible] smallest watches were not so small as they [illegible] smaller depth than appeared, or else space [illegible] the cheapest timepieces may therefore run on [illegible] the larger kindred. The Swiss silks were worthy of note for their perfect evenness and brilliance of surface, and their fine shades of colour. There were no more perfectly finished silks in the Exhibition, none of such quality so cheap, and from their lightness and softness they would drape beautifully in dresses. "They are not stuff," said one of the Commissioners, "as you sell in your English market; you prefer heavier silks, but we will soon show you what we can do in them; the Exhibition has taught us the way to a true [illegible]." The ribbons, of which there was a long glass, were returned to the makers, who, as well as the exhibitors of the fine-t muslin embroidery, do not wish them sold. Suisse Lace, in all sides best with enormous reputations, has always allowed perfectly free commerce, and under the spur of open competition has thriven in trade, and in its manufacture is not behind any other nation making the same goods. Swiss watches, muslins, prints, stand first in colour, taste, and durability.

CHINA AND TUNIS.

The [illegible] on the [illegible] next the Transept were occupied in front, [illegible] showy shows, by China and Tunis. Brazil had a little space, in which was shown a bouquet of artificial flowers made of feathers; birds, made of the bullock's head, dressed with silvery leather of red-deer hide; model of a raft, and some mats and scarfs. From Chili there was a lump of gold ore weighing three hundredweight. There was no part of the Exhibition more complete than Tunis. The Bey had spared no expense, every manufacture of each article seemed to have had an order, and so there were an immense number of blankets, scarfs, shawls, boots, slippers, cloaks, and baskets of dates. Of burnooses alone there were about a thousand: some of cloth, some of a cos le kind of serge, some of finest Cashmere [illegible] hair mixed with silk, and forming the most elegant [illegible] grey are spun and wove by hand in one piece, and woven perpetually. There was the tent and coarse raiment of the desert tribes, the Arab and Negro silk-mercers' open-work carved doors and trellised windows, and soft rugs, and gold and silver embroidered dresses of the rich man's harem; hard bare mule saddles, and the saddles of Arabian horses, thick worked with gold and pearls, worth from £400 to £800; porous earthenware jars, to keep water, worth a few pence, and hammered block tin pots, fetching £1 or £2; such, probably, as of old the Phœnicians, bartered their raw material from Cornwall, used in Carthage. There were pipes, tobacco, almonds, soap, olive oil, and attar of roses at £14 the oz. Of all these goods, about £6000 worth were sold. A gold medal was awarded to the Bey for his exhibition, and also to the Sultan and Pacha of Egypt.

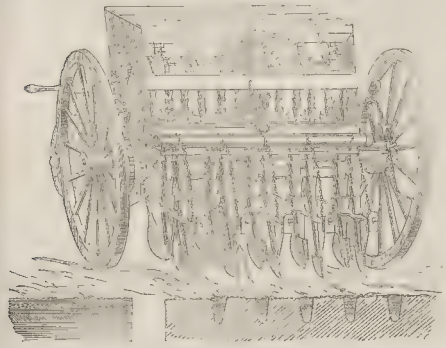
The Cameos portion of the Exhibition, though not so complete, partly from the native exclusiveness of the Chinese, partly from there not having been time to elect a Committee, and to show to the Chinese merchants the project, was still, by help of various merchants, and Messrs. Hewetson, of Fenchurch-street, very full of interest. There was a Chinese mariner's compass, by which, pointing to the east, their ships were guided for [illegible] before Indian and [illegible] Canton harbour, and probably a thousand years more before the Italian re-invention of the Egyptian and Phœnician [illegible] similar to our own, and by which the vessels of the latter found their way to us in the days of the commercial glory of Carthage. There also were engravings, from wood-blocks, of the kind expected from [illegible] carvers, no small skill in everything but perspective. [illegible] shells, skeleton of porcelain as they call it, and [illegible] vases, ten services, &c., having all the [illegible] being in reality stands on copper jars, from 10 inches to 4 feet high, from £2 to £250. Satins, furniture, egg shell porcelain, and in imitation stone the eight immortals who benefit mankind, jewels, porcelain idols, ivory balls, lacquered ware, tea, and (by the East India Company) the finest, dyes used to make it all the shades of green: raw silk—which China, with its 300,000,000 people, can afford so cheap enough to compete with cotton; grass cloth, [illegible] outlandish bronzes, almost as them the whole deities [illegible] from the very pieces for a little opium [illegible].

A MODERN PYTHONESS COUNTESS.—Daily, about noon, the loungers [illegible] ridden," at Bari (a, are struck by [illegible]

at Lanky woman, whose thin limbs are wrapped up in a long black robe or [illegible]. An old crumpled bonnet covers her head, which, continually [illegible] from side to side in all directions. Her hollow cheeks are flushed with a [illegible] colour, and her eyes are of an expression [illegible] of glass, but her other eye shines with a ferocious brilliancy, and a strange and almost awful smile [illegible] [illegible] [illegible]

GARRETT'S PORTABLE STONE MILL.

This mill is for the purpose of grinding wheat and other farm produce. The stones are 22 inches in diameter, and enclosed in a metal and wood framing. The top stone is hung in an upright shaft, and worked by a pair of bevel wheels, from which the attachment may be made to either steam, water, or horse power. Its construction admits of the stones being readily adjusted for grinding wheat, barley, beans, or peas. This mill will be found very convenient on large occupations, where it is desirable to perform all such work on the farm, instead of having to convey it to a mill.



GARRETT'S GENERAL PURPOSE DRILL.

GARRETT'S GENERAL PURPOSE DRILL.

This implement is adapted for performing all the various operations of seeding and manuring land. All kinds of grain and seed may be deposited at any required intervals apart, and at any depth, either with or without compost or artificial manures. They are constructed of various sizes and widths, to suit land ploughed on the flat or in ridges, and suited for all descriptions of soil.

The corn or seeds may be deposited down the same conductors with the manure, if required; but separate coulters are provided for each, by means of which the manure may be buried two or three inches deeper than the seed, and the latter receives an advance of it, and a portion of mould placed between them, as shown in the longitudinal and cross section of the ground in our Engraving.

The patented improvements specially adapted for this purpose: the coulters for scratching up, independently of those for manure, and being pressed into the ground by separate weights; the width of seed and manure to be deposited regularly any depth on all descriptions of land, low or hilly or uneven. The next two improvements consist—First, in constructing the boxes in which the manure and seed are contained so as to be equally suited for drilling on side hills or on level ground. This is arranged by a screw placed at the end of the box, worked up and down by a pair of mitre wheels and crank handle, by means of which the boxes may always be kept in a horizontal position. Secondly, in the application of separate slides to each department of the manure box, so that alteration may be made in one department without interfering with the manure in the other. Thirdly, in fixing the slides which regulate the seed to a horizontal bar, extending the width of the drill, which allows all the slides to be opened more or less at the same time, to admit larger or smaller quantities of seed as required. In the action of the ground under the drill each furrow cut by the coulters will be found to contain four separate strata—the lowest one is the manure; this is then covered with a stratum of earth, and upon it is laid the seed, and above that the remaining earth is brought back.

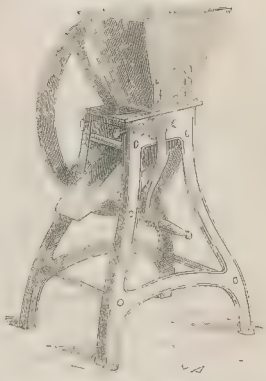
HIGH-PRESSURE ENGINE. BY FAIRBURN.

The distinguishing feature of this engine is that the working parts are all enclosed in a cast-iron column—a plan that at once ensures the most perfect stability, and at the same time occupies the smallest possible space. The cylinder is placed in the bottom of the column and secured to it; the piston-rod is surmounted by a cross-head, which slides in grooves, also placed in the interior of the column; the connecting-rod works through the abacus which supports one end of the crank-shaft and crank; the excentric is placed upon the crank-shaft, and works the slides and valves below; the governor is worked by a pair of bevel wheels, one being placed on the shaft. This engine is a first-rate specimen of its class.

HIGH-PRESSURE ENGINE.—BY FAIRBURN.

PARAGON MILL. BY BARRETT, EXALL, AND ANDREWS.

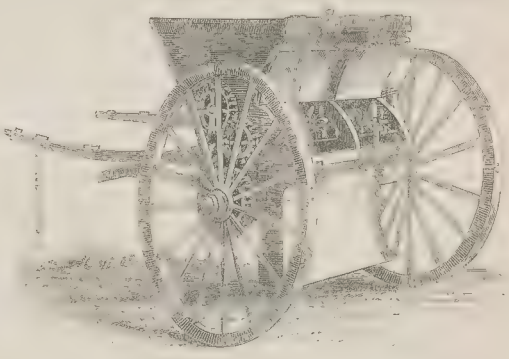
To produce a mill for small farmers that shall in one combine the necessary requisites for grinding, crushing, splitting, &c., has been attempted by most machine makers, but in nearly all cases the effecting any one object well has been sacrificed to doing two or three badly, the ordinary practice being to make the rollers fitted only for one operation play a principal part in another; consequently, nothing was done well. In the Paragon Mill of Barrett, Exall, and Co., the difficulty has been ingeniously overcome by having a double feed of an exceedingly simple contrivance. The mill consists of three rollers, parallel to each other. The two front ones, slightly grooved, are for crushing malt, oats, barley, and linseed, and are adjusted by two hand-screws. The back roller is cut for beans, and works against a plate as in the post mill; thus there are two separate mills in one, each fitted for its particular kind of work, and independent of each other. An iron shifting plate regulates the feed to each opening, as it is required. This mill will crush about four bushels of barley or oats per hour, or about one of linseed, and six of beans.



PARAGON MILL.—BY BARRETT, EXALL, AND ANDREWS.

BROADCAST MANURE-DISTRIBUTOR.

This machine is for the purpose of distributing compost and other manures broadcast. It may be regulated, as required, to deposit from two bushels to any larger quantity per acre, by means of two slides placed one above the other under the depositing barrel, which are worked at the same time by a crank-handle completely under the management of the attendant, so that the quantity may be varied to the requirements of the land as the drill travels.



BROADCAST MANURE DISTRIBUTOR.

WELL ENGINE. BY TYLOR AND SON.

This is a well-engine pump, fixed in an iron frame, intended to raise water to a great height. It is simple in construction, and calculated for hard service. It is worked, as will be seen, by means of a winch-handle playing into a cog-wheel.

WELL ENGINE.—BY TYLOR AND SON.

THE FRENCH REVOLUTION

No. 534.—VOL. XIX.] SATURDAY, DECEMBER 13, 1851. { TWO NUMBERS, 1s. WITH SUPPLEMENT, GRATIS.

THE REVOLUTION IN FRANCE.

NO. 1.—TAKING THE WOUNDED TO THE AMBULANCE.

NO. 2.—WAGGON FOR THE WOUNDED.

HISTORY
OF THE
FRENCH REVOLUTION OF DECEMBER, 1851.

The Constitution of the French Republic of 1848 *is no more.* A great revolution has just been successfully accomplished in France. It differs essentially from the revolutions of 1789, 1830, and 1848, for those three manifestations emanated from the people. The revolution of December 2, 1851, achieved in the name of the French people, has been the act of an army, at the dictatorship of one man, elected in 1848 as the President of the French Republic. In 1789, the feudal system concentrated in the reigns from Louis XI. to Louis XVI., and the struggles between the Parliaments, the clergy, and the court in a nation exhausted by long wars, and worn out with exactions and oppression, terminated by the taking of the Bastile, the pioneer of the movement having been Lafayette, whose aspirations for freedom had been acquired during the war of American independence. The military genius of Napoleon transformed the government of France into a consulate, and then into an empire: his inordinate ambition drove him to Elba, and finally to St Helena, and the arms of the allies caused the restoration of the Bourbons in the person of Louis XVIII. The tact and talent of that monarch preserved him the throne during his life. His successor was less fortunate; in Charles X., with many estimable qualities, there was a bigotry and obstinacy which ultimately led to the third emigration of the Bourbons from the French soil, leaving, however, the cunning head of the younger branch to profit by Charles X.'s perversity for Polignac, and for his attempt to put down journalism. The revolution of 1830 was not one of material interests, for the country was flourishing at home, and successful in its brilliant enterprises (as in Algiers and Spain) abroad. The Duke of Orleans became the citizen-Monarch of the French by the instrumentality of the barricades. For nearly eighteen years did he maintain his throne; but his dynasty ceased in February, 1848, after a thirty hours' weak fight in the streets, and a simple proclamation of a provisional government. There were all the elements of force and duration for the Monarchy of 1830 had it been true to its origin. Louis Philippe refused reform, and his reign was over: the activity of the secret societies trampled over the supineness of the troops, and one of the most corrupt governments that ever ruled on earth was swept away.

It is a mistake to affirm that a power emanating from insurrection must perish by insurrection. Cromwell did not lose his Protectorate; the present House of Hanover sprang from a successful insurrection; the 18th Brumaire of Bonaparte did not cause his fall, or prevent his acquisition of the Imperial diadem. It is public opinion which pronounces ultimately the existence of dynasties and of governments. 1830 was the continuation of 1789, and 1848 was the legitimate consequence of Louis Philippe's oblivion of the revolutionary source from which he had sprung. The Bourbons have fallen by their faults; Bonaparte's star set when he ceased to be the people's Emperor. The Constitution of the French Republic of 1848 has been overthrown by a military usurpation, but not before the Legislative Assembly, by a course of undignified proceedings, had deprived itself of public regard and sympathy. To comprehend accurately the conduct of all parties in Paris, it will be necessary to supply a rapid summary of events since the proclamation of the Republic after Louis Philippe's deposition.

On the 24th of February, 1848, whilst the Deputies, in their own Chamber, proclaimed the Regency of the Duchess of Orleans, M. de Lamartine—speaking to another auditory, the populace, which was taking possession of the Palais Bourbon—asked for the formation of the Provisional Government, prior to the people in France being called upon to decide on their definitive form of government On the 5th of March following, the National Assembly was ordered to be convoked, by universal suffrage, to decree the Constitution. On the 23d of April (Easter Sunday) the representatives* were elected, and on the 4th of May the Assembly of 900 members constituted itself in Paris, amidst reiterated cries of "*Vive la République!*" and began to draw up the Constitution, in the midst of an insurrectional body of workmen, who, on the 15th of May, only eleven days after this National Assembly had met by virtue of universal suffrage, obtained possession of the Chamber, expelled the President from his chair, and for three hours anarchy reigned triumphant. The Assembly acted with dignity, and on the very evening resumed its sittings, after the defeat of the anarchists, and nominated its committee of eighteen to draw up the draft of the new Constitution: these members were MM. Cormenin (Timon), Marrast, Lamennais (who resigned after two meetings), Vivien, De Tocqueville, Dufaure, Martin (of Strasburg), Coquerel (the Protestant pastor), Corbon, Thouret (afterwards Minister), Woirhaye, Dupin, Gustave de Beaumont (ambassador to London subsequently), Vaulabelle, Odilon-Barrot, Pagès (de l'Ariège), Dornès (who died of the wounds he received in the June days of 1848), and Victor Considérant. M. de Cormenin, chairman of this committee, quitted it at the first revision, and wrote a pamphlet against the first project of law, which was ready on the 17th of June. The horrible days of June began on the 23d, Paris was placed in a state of siege, and Cavaignac, materially aided by Changarnier and Lamoricière, and firmly supported by the army and National Guards, conquered the fierce Red Republicans, after torrents of blood had flowed in the streets. The draft of the bill for the Constitution went through the *bureaux*, or monthly standing committees, delegates of which were appointed to discuss the provisions of the bill, amongst whom were Thiers, Berryer, Crémieux, Freslon, Duvergier de Hauranne, Favreu, &c. In twelve consecutive sittings the bill was revised, and ultimately M. Marrast, the reporter or secretary of the committee, presented the definitive project on the 30th of August. The debates thereon began September 30th, and were continued up to October 28th—more than three hundred amendments having been proposed and discussed. The labours of the committee for the revision lasted three days, and, finally, the definitive vote took place November 4th; and out of 769 voters, 739 passed the Constitution of the first Republic, only 30 blank balls being deposited in the urn against the law. During the discussions, the measures for public safety presented by the decrees of the 24th and 27th of June were vigorously enforced by Cavaignac, and order was gradually re-established, the state of siege being taken off on the 19th October. The labours of the committee and Assembly were in troubled times, and there can be no question that the decisions which were come to were influenced by the current events of those momentous days. The political principles laid down in the new Constitution were, first, the solemn ratification of the Republican form of Government; and, secondly, universal and direct suffrage, as given by Lamartine's Provisional Government. The democratic movement was thus extended to its extreme limits; it was impossible to go beyond—any reaction must inevitably be retrograde. Still, the subversive Socialist doctrines were formally excluded in the new Constitution; the majority of the Assembly energetically supporting the committee in all its resolves on this point. The sovereignty of the people was solemnly recognised; all usurpations thereof were condemned in the first article—"No individual, no fraction of the people, can take upon itself the exercise of the sovereignty." In the organisation of the Executive power the first recognised authority is the "Legislative Power," centred in one Assembly of 750 members, or 900 if called upon to revise the Constitution. A Council of State was instituted, and the permanency of judicial positions preserved to a certain extent. The inviolability of the persons of the representatives of the people is specially recognised. *Next* to the Assembly the Executive Power was assigned to the President, elected for four years only: his re-election could only take place after an interval of four years. This election of the President was fixed for the second Sunday in the month of May, by the ballot and by the absolute majority of the voters, the National Assembly reserving to itself the right of electing a President out of the five eligible candidates who have obtained the largest number of votes, provided no one of them had obtained more than half of the votes, or at least two millions of votes. The oath prescribed to the President before the National Assembly in the Constitution, and which was duly sworn to by Louis Napoleon, is as follows:—

In presence of God, and before the French people, represented by the National Assembly, I swear to remain faithful to the Democratic Republic, one and indivisible, and to fulfil all the duties which the Constitution imposes on me.

The Constitution only subjects the President to a special oath, political oaths of fidelity on the part of all other functionaries having been abolished. Article 50 of the Constitution states that he can never command the army in person. By Article 51 he is prohibited from suspending in any manner the empire of the Constitution and laws, either by prorogation or dissolution of the Assembly. By Article 106 it is declared that a special law must determine the case in which the state of siege may be declared. The responsibility of the President for his governmental acts is laid down in Article 68, which adds:—"Every measure by which the President of the Republic dissolves the National Assembly, prorogues it, or puts any obstacle in the exercise of its mission, is a crime of high treason. By this single fact the President's functions expire, the citizens are bound to refuse obedience to him, and the Executive power passes with full right to the National Assembly. The judges of the High Court of Justice immediately are to meet, on pain of forfeiture; they are to convoke the jurics in the places they may designate, to proceed immediately to the trial of the President and his accomplices."

So jealous were the framers of the Constitution as to the President's attributes, that they reserved the right of naming the members of the Council of State to the National Assembly, and of revoking them. Article 91 declares the judgments of the High Court of Justice, in prosecutions against the President of the Republic or the Ministers, to be final, no appeal to any other court being allowed.

In conformity with the special law of the National Assembly, of October 28, 1848, the election for President took place on the 10th and 11th of December, 1848; and Prince Louis Napoleon obtained 5,534,520 votes out of 7,426,252 persons who voted; General Cavaignac having 1,448,302; Ledru Rollin, 371,431; Raspail, 36,964; Lamarine, 17,914; Changarnier, 4687. There were 12 434 votes lost, and 23.219 blank bulletins, or marked with some informality. It may be interesting to mention here, that the great Napoleon, on the three occasions that he took the votes of the French people—viz. the Consulate, year 8; the Consulate for life, year 9; and the Hereditary Empire—obtained 3,012,569, 3,577,259, and 3,524,244. Making allowance for the increase of population, the suffrages won by Prince Louis Bonaparte are enormous. The Royalists voted for him because they considered that with Cavaignac, who is a sincere Republican, the Republic would be of longer duration. The Reds voted *en masse* against Cavaignac, because of his victories over them during the June days.

The Constitution was promulgated in the Place de la Concorde, on the 12th of November, 1848, with grand ceremony, by Marrast, President of the Assembly, in presence of the Archbishop of Paris and clergy, the National Guards, the army, &c.; and "Te Deum" was sung, followed by the "Domine salvam fac Republicam." "How long will it last?" said the writer of this notice to a distinguished advocate. "Oh," replied he, "we shall have to manufacture another before the first President is made Emperor." This was said just a month prior to Louis Napoleon's election as President.

Let it be recorded that General Cavaignac behaved most loyally to the Constitution, in the dignified resignation of his powers as President of the Council of Ministers charged with the Executive power in the sitting of December 20, 1848, of the National Assembly, at which the "citizen Charles Louis Napoleon Bonaparte, born in Paris,"—we quote the *procès verbaux*,—ascended the tribune at the invitation of the fifteen President Marrast, who read the form of the oath, given above, and solemnly swore to remain faithful to the Constitution. In the speech which the President of the Republic made to the citizen representatives, after Marrast had called on "God and man" to bear testimony to the oath, he declared that the path of his duty was traced out, and he would follow it as a man of honour. He would consider as enemies of his country all those who should strive by illegal means to change what France had established. He wished to strengthen democratic institutions, and to re-establish society on its basis. The majority he had obtained not only inspired him with gratitude, but it would give to the new Government the moral force without which there was no authority. He eulogised the conduct of General Cavaignac as worthy of the loyalty of his character, and of that sentiment of duty which is the best quality of the chief of a state. "We have," concluded the President, "a grand mission to fulfil in founding a Republic in the interest of all, and a wise and firm Government, animated with the sincere love of progress, without being reactionary or Utopian. Be the men of the country, and not the men of a party, and, with the help of God, we shall do good, if not great things."

If our readers will refer to the ILLUSTRATED LONDON NEWS of Nov. 22, it will be found that the President, on the occasion of the distribution of the medals to the French exhibitors at our Great Exhibition, made use of almost the same terms as "reactionary and utopian," when he pronounced against "demagogical ideas and monarchical institutions."

On the 15th of December the National Assembly declared the number of organic laws (ten) it would vote prior to dissolution, amongst which were the laws for the Council of State, the Electoral Law, Public Education, the Press, the state of Seige, &c. The famous debates on the Rateau-Lanjuinais proposition, to fix the epoch for the dissolution of the Constituent Assembly, came to an end on February 7, 1849. The new electoral law was passed March 15th; 750 members were to be returned for the departments, including three for Algiers, two for Martinique, two for Guadaloupe, one for Guiana, one for Senegal, and one for the Ile de la Réunion. The law putting down the clubs was voted by the Assembly by 404 against 303.

Twelve days after the promulgation of the Electoral Law the lists of electors were drawn up, and on the 13th of May, 1849, the new elections took place, and the representatives of the Legislature were nominated.

Thus far it will be seen that the Constituent Assembly, convoked after the Revolution of 1848, voted, by an immense majority, the Constitution; that Prince Louis Napoleon, under the provisions of that Constitution, was elected President by an enormous majority in the country; that he accepted the Presidency of the Republic with all the conditions and responsibilities provided in the Constitution; and that he solemnly swore to its maintenance, with the full knowledge, that, at the expiration of four years, he was to resign his position, and make way for his successor. What followed?

On Louis Napoleon's occupation of the Elysée Bourbon, his uncle's favourite residence (and which has been in turn occupied by the Comte d'Evreux, Madame Pompadour, the financier Beaujon, the Duchess of Bourbon, the Government printing-office in the early days of the Revolution; Murat, who sold it to Bonaparte; the Emperor of Russia in 1814, the Duke of Wellington in 1815, the Duc de Berri, and Madame Adelaide, Louis Philippe's sister), the most marked attentions were paid to the Royalists of the Faubourg St. Germain. The policy of the President at home was repressive of the extreme Republicans, and Absolutist as regarded foreign countries. The expedition to Rome to re-establish the authority of the Pope, must be fresh in everybody's recollection—the attack of the French Republic on the Roman Republic, for doing what the French nation did, what it invited all Europe to imitate, in 1848, is written in letters of blood in the book of history. But the elections of May, showing the progress of the Socialists in France, and particularly in the army, alarmed the party of order thoroughly. "Woe to France!" was the universal cry of the Moderates, although universally in a majority; but the Reds and Socialists were stronger than in the former Assembly, elected under the first impulse of the February revolution. And then were first heard the ominous words, "*coup d'état*." A Monarch, an Emperor, a Dictator—anything but the Socialists—were the agonised exclamations of those who had anything to lose. The expiring Constituent Assembly was very violent in its opposition to the Government, emboldened by the result of the elections. On the meeting of the Legislative Assembly affairs did not improve, but it put an end to imperial speculations for the moment, and it is a fact that the President anticipated very different returns. He was heard to declare that he would sooner be at Ham than in Paris. A foreign lady of distinction created no small sensation in the President's *salon* by her reply to his question, "Do you remain long in France?" "No, Prince," she answered; "do you?" Nothing could be more outrageous and violent than the early sittings of the Legislative Assembly. The Montagnards mustered 200 and upwards, the Monarchists under Molé about 300, and the moderate Republicans under Dufaure about 90. The President's message, giving a sad picture of the finances, added to the general gloom. The accession of M. de Falloux, the Henri Cinquist, and the Odilon-Barrot-Dufaure Ministry, created a great sensation. M. Dupin was elected President of the Assembly. The fall of Rome, the successful end of the Russian invasion of Hungary, and the termination of the risings in Italy and Germany, in the summer and autumn of 1849, strengthened the Conservative tendencies of Louis Napoleon's policy; and in September the trees of liberty were cut down in Paris, by order of the Government. In November there was a new Ministry, under Ferdinand Barrot, brother of Odilon Barrot; and General Baraguay d'Hilliers superseded Oudinot at Rome. The popularity of the President gained ground. The Prefect of the Seine gave him a grand banquet on the anniversary of his election, December 10. In the early part of 1850 speculations were again rife as to the President's intentions. Would he play the part of his uncle, of a Cromwell, or of a Monk? In the midst of a complete anarchy of opinions, and the effervescence of parties, the President preserved the utmost coolness and impassability: every party chief claimed him in turn. In March came the return of the three Socialist candidates for Paris—Carnot, Vidal, and De Flotte, followed by that of Eugène Sue, April 29; and universal suffrage was doomed. On the 8th of May M. Baroche submitted to the French Legislative Assembly the new Electoral Law. On the 14th the publication of three Republican papers was stopped, by seals being placed on M. Proudhon's presses. On the 17th, the recal of the French Ambassador from London, on account of the Greek negociations, delighted the Parisians, and General La Hitte's language in the tribune was quite bellicose. At this period MM. Molé and Thiers, although not actually in power, were the most devoted friends and advisers of the President. The new Electoral Law passed on the 31st of May, 1850, disfranchising four millions of voters. Seizures of arms and ammunition took place, and risings were anticipated. The President's Dotation Bill was carried on the 24th of June, after debates in which little or no respect was evinced for the head of the state. On the 10th of July the Assembly was prorogued, and Louis Napoleon commenced his famous "progress" through the departments, and made addresses to the troops, creating much speculation again as to his intentions. On the 11th of November, the Assembly opened the session. It was at this time generally known that the President had resolved either to prolong his power for another term of four years, or to try for the Consulate. General Changarnier, who was in command of the troops, supported by the two monarchical parties, it was equally understood, would oppose any *coup d'état*. Changarnier's designs became very mysterious, and the partisans of Henri Cinq, the adherents of the Orleans family, and the members of the Rouge party, equally looked up to the General as to the President for a *coup d'état*, but neither was fully prepared to make a movement. The President's message on the 12th of November, however, was considered, as far as words went, to be frank and explicit. He declared in this document that he was *bound by his oath to keep within the strict limits of the Constitution, to which he would steadily adhere.* If there was a wish for the revision of the Constitution, that wish must be addressed to the legislative power; and as he was the agent of the people, he should always conform to their desires when expressed in a legal manner. His anxiety was not to know who would govern France in 1852, but to employ the actual time in such a way, that, whenever a change should take place, it might be effected without trouble.

This remarkable message concluded thus:—"The most noble and the most dignified object of an elevated mind is not to seek, when one is in possession of power, by what expedients it may be perpetuated; but to watch without ceasing over the means of consolidating, for the advantage of all, the principles of authority and of morality which defy the passions of men and the instability of the laws. I have honestly opened my heart to you. You will respond to my frankness by your confidence, to my good intentions by your co-operation, and God will do the rest."

Let us pause here, to repeat that the message was delivered on the 12th of November, 1850, and to add that the Constitution and the Legislative Assembly ceased to exist on the 2d of December, 1851!

The great question for the session 1850-51 was the revision of the Constitution. At the *fête* given by the City of Paris, at the Hôtel de Ville, on the second anniversary of his election, the greatest enthusiasm was excited by the President's speech in reply to that of the Prefect of the Seine, although the journals maintained that the Prince's address was a direct attack on the Revolution of February, and conveyed a slur on the Constituent Assembly.

* Prince Louis Napoleon was elected in Charente Inférieure, June 4th, 1848 (receiving 54,240 votes), and the National Assembly verified the return; he was returned also for the departments of Yonne and the Seine.

The year 1851 was inaugurated with complicated difficulties. The incongruous compound of heterogeneous politics, calling itself the "party of order," displayed inherent weakness and manifold contradictions. Interminable intrigues, dwelling discontented, petty plots, and contemptible conspiracies abounded. The affair of the spy Allais, who was convicted of making false and calumnious denunciations, and sentenced to a year's imprisonment, with a fine, developed details discreditable to all parties. The system of espionage would have disgraced even an Austrian *bureau*. M. Yon, the Commissary of Police of the Legislative Chamber, was forced to resign. Out of this scandal a misunderstanding arose between M. Dupin, the President of the Chamber, and the President of the Republic. On the occasion of the New Year the dissension was apparent, for the Prince interrupted M. Dupin, in the midst of the customary flowery address of congratulation, dilating on the mutual "good understanding" between the Assembly and the President of the Republic, and of the attachment of the members to his person, by exclaiming, "I must believe it, M. le Président, because you say it." In his reply, the Prince addressed M. Dupin in the following manner, rendered not a little curious by recent occurrences :—

You and I, each in the limits of our attributes, must endeavour to enforce respect for the laws of the country, and the authority which is given to us by the Constitution, without encroachment by the one power or the other. I do not insist upon the prorogation of my powers, but I do insist, when I shall restore to the people the power which I have received from it, to restore it intact and respected My conviction is, that France wishes for peace and order, and *it would blame the one of the two powers* which would attack the other.

This language was employed by the President of the Republic on the 1st of January, 1851. Another dispute between the Government and the Legislative Assembly arose out of the arrest for debt of M. Mauguin, the well-known orator. The Minister of Justice having supported the decision of the President of the Civil Tribunal of Commerce, that the arrest was legal, inasmuch as the Constitution of 1848 had not re-enacted the provision, in the charter of 1830, giving personal protection to Deputies from arrest during the session, the Legislative Assembly, more out of pique against the Ministry than from a calm view of the law, passed a resolution ordering the immediate release of M. Mauguin. Thus the rascality of a police spy and the debts of a representative brought into collision the Legislative and Executive powers of the State, the unworkable character of the French Constitution being daily rendered more evident. It was clear that the President having no power to dissolve the Chamber, must either submit to its dictation, resign his own functions, or go beyond the pale of the law. A Ministerial crisis was the issue of this state of things in the second week of January, after the various checks the Cabinet had received, especially when a pointed refusal was given to allow the Minister of War a few hours to search for documents, in reply to a question from M. Napoleon Bonaparte, the representative, as to certain alleged unconstitutional standing orders for the guidance of the army in cases of insurrection. General Changarnier emphatically denied that such orders had ever been issued by him, as insinuated by the Minister of War. The President of the Republic displayed firmness in this crisis, by boldly dismissing Changarnier from the command of the army, and forming his new Cabinet. This was a mortal blow to the Parliamentary majority, as events have proved last week. The Assembly first had the notion of appointing Changarnier to command the force for the protection of the Chamber; if such nomination had taken place, there would inevitably have been a *coup d'état* at that period. The notion was abandoned as perilous, as was the one of replacing Dupin in the Presidency of the Assembly by Changarnier, and ultimately a committee to inquire into the state of the nation was resolved upon.

Louis Napoleon, it must be here remarked, made no secret of his positive intention to get rid of the article in the Constitution forbidding his own re-election, by fair means or foul. His Cabinet was then composed of MM. Baroche, Fould, Rouher, Parrieu (in the former Ministry) Dronyn de Lhuys, General Regnault de St. Jean d'Angely, M. Ducos, M. Magne, and M. Bonjean. General Perrot was the successor of Changarnier in the command of the National Guards; and General Baraguay d'Hilliers was nominated, in place of Changarnier, as the commander of the first military division; M. Carlier remained as Prefect of Police. The minutes of the Parliamentary commission which sat in Paris during the recess were expected to prove the existence of a plot to create the President Emperor of the French; but when these documents were published, no evidence was found to confirm the charge. The Assembly having passed a vote of non confidence in the Ministry by 417 to 278, the new Cabinet resigned, and for the second time within ten days France was without a Government. A Socialist conspiracy was discovered at this moment, and nearly 100 arrests took place; but the law courts have left little trace of these alleged plots, the convictions bearing no proportion to the number of arrests.

The attempt to form an administration proved unavailing; and the President, on the 24th of January, sent a message to the Assembly, announcing that he had formed a "Ministry of Transition, composed of special men, not belonging to any fraction of the Assembly, and determined to devote themselves to the business of the country without reference to party." In this state document posterity will have to pass judgment on the following passages, as compared with the proclamations of December 2 :—

To the President of the National Legislative Assembly.

Public opinion, confiding in the wisdom of the Assembly and the Government, has not been alarmed at recent incidents. Nevertheless, France begins to suffer from the want of union, which she deplores. My duty is, to do all that depends on me to prevent disagreeable results. The union of the two powers is indispensable to the repose of the country; but, as the Constitution has rendered them independent, the only condition of this union is a reciprocal confidence. Penetrated with this sentiment, I shall always respect the rights of the Assembly, while maintaining intact the prerogative of power I hold from the people.

France wishes, above all, for repose, and she expects from those whom she has invested with her confidence conciliation without weakness, and tranquil progress and impassibility, while they respect the laws.

The names "unknown to fame" which composed this transition Ministry were MM. Brénen, de Germiny, de Royer, Magne, Waisse, Schneider, and Rear-Admiral Vaillant, many of whom were not even members of the Assembly. Public opinion being, however, in favour of the course pursued by Louis Napoleon, the majority did not make an attack on the new comers, as it had done on the defunct Baroche Cabinet. Still the great dispute between the French Executive and Legislative powers remained in full force, and one by one the leading members of both fractions of the Royalist party and those of the Orleans dynasty withdrew from the President's side. In Paris this was assuredly more a source of satisfaction than of regret, as the people had become tired of the futile negotiations between the two branches of the banished Bourbons. It was palpable that Louis Napoleon's game, to carry his purpose, ought to have been that of strict legality. The Assembly was, in point of fact, acting for his re-establishment as President, by rendering every other candidate impossible. The financial and banking interests seemed to feel the force of this situation, for the funds were higher at this period than at any one since the revolution of February. Taking advantage of his last moves on the political chess-board, the Prince induced his "Transitionists" to propose a new Dotation Bill, in the shape of an additional grant of 1,800,000 francs. The Chamber rejected this bill by a majority of 396 over 294. The report of the committee was drawn up in a mean and narrow spirit, unworthy of a dignified Assembly of the French nation; but it was justly remarked in this document, that the "Presidency was not Royalty; that the President was only the first citizen, and head of the Executive power." Furthermore, the report insinuated that this grant might be used for illegal political purposes. Despite of an eloquent address of M. Montalembert, in defence of Louis Napoleon, the Government was beaten, as we have stated. The next day (February 9) the *Moniteur* announced that the President refused to accept the subscriptions commenced in anticipation of the rejection of the bill, cordially thanking the donors for their imposing act of sympathy. This refusal pleased the Parisians, as the President's generosity and liberality have never been questioned. When he rode out on horseback from the Elysée he was much cheered for his self-denial.

After months of speculation as to the fusion of interests between the elder branch of the Bourbons and the Orleanists, a missive from Claremont was addressed by the Princes of the House of Orleans to the Committee in Paris, stating that they would only negotiate on the soil of France. This division in the opinions of the Monarchists again increased the President's chances of re-election, as he became the only *homme de la situation*. He solved the difficult problem of forming a Cabinet, only in April, after many fruitless negotiations. The new Ministry consisted of MM. Baroche, Rouher, Fould, Léon Faucher, Buffet, Chasselonpe, Laubat, de Crousseilhes, Magne, and General Randon. The manifesto of the new Ministry, as may be guessed from Léon Faucher being a member thereof, contained an emphatic declaration to maintain order. M. de St. Beuvé's motion of a want of confidence was rejected by 327 against 275, and the Assembly, therefore, proved that it was not disposed to continue a factious opposition to the President.

The three questions now before the public were the hackneyed ones of the revision of the Constitution, the prolongation of the President's powers, and the fusion of the two Bourbon families. Journalism had become quite habituated to the severe laws to which it had been subjected under the Republican rule, and the signatures of the writers to the articles deprived them of the advantages, authority, and *prestige* of anonymous communications. At the close of April, it must be mentioned that the mysterious menaces of the writers in the *Constitutionnel* began to excite attention as to the plans of the President. Every *fête*-day was pointed out for an *émeute* of the Reds, or for a *coup d'état* of Louis Napoleon; but the 4th of May, the anniversary of the proclamation of the Constitution, passed off quietly. The negotiations to reconcile the Prince and Changarnier failed completely at this period. It is generally credited that *carte blanche* was offered to the General to induce him to support the revision of the Constitution, and to forgive the revocation of his command of the troops of the capital. The Legislative Assembly, on the 28th of May, entered upon the third and last year of its existence: from that date the Constitution admitted of any motion for its revision, and the tug of war between parties became more furious. To the success in the revision Louis Napoleon looked for the prolongation of his power; the Legitimists, on the other hand, suspected that the Republic might be upset with the revision, and Henri Cinq be placed on the throne; the Orleanists looked forward, on their part, to the advent of the Comte de Paris. In the meanwhile a great number of petitions, particularly in favour of the President, were poured in, praying for the revision. Louis Napoleon, at the opening of the Dijon Railway, threw down a gauntlet of defiance to the Legislative Assembly. General Changarnier thus prophetically attacked this address of Louis Napoleon :—

According to the assertions of certain parties, the army is ready, in its enthusiasm, to act against the laws of the country, and to change the form of Government. In the first place, and to show that such is not the case, it is sufficient for me to say, whose is there any motive for such enthusiasm? (Laughter on the Left.) I may add that the army, profoundly penetrated with the sentiment of its duty, with the feeling of what is due to its own dignity, desires no more than you to inflict on France the wretchedness and shame of the Government of the Cæsars, when Emperors were successively raised to power or hurled to the earth by drunken Prætorian guards. (Great agitation.) Discipline is deeply rooted in the French army. The soldiers will always hear the voices of their chiefs; but no one will ever induce the soldiers to march against the Right—against the Assembly; not a single battalion could be induced to follow for such a purpose, whoever might be the officers whom they are accustomed to obey. Consequently, representatives of France, deliberate in peace. (Agitation.)

M. Léon Faucher, the Minister, in reply, repelled the insinuations of the ex-Commander-in-Chief, as to the complicity of the Government in some dark conspiracy. No Government could exist, he stated, without the discipline of the army being preserved; and all the Government wanted to do was, to maintain military discipline, while it upheld the cause of order by enforcing obedience to the law.

It was in the first week of June, 1851, that the above singular discussion arose. General Changarnier is now at Ham, and M. Léon Faucher is an object of suspicion to the Military Dictator of the day.

The Dijon speech was a most unfortunate one for the President. His position was strong and promising before that address; but the feud between him and the Assembly became irreconcilable, and every calm observer of events felt that a catastrophe was inevitable. However factious had been the conduct of the Assembly, Louis Napoleon was not justified in his reckless onslaught. It was not because the Chamber had displayed Republican antipathies and Monarchical tendencies, that the President should invoke brute force to carry his own views. He was, therefore, imprudent, hasty, and passionate in his diatribe. Lamartine saw the state of things at this crisis clearly. "There is not," he stated, "only the Republic on one side and Monarchy on the other, but there are on the one side two or three detestable anarchies, and on the other three or four feeble monarchies. Out of the detestable anarchies would inevitably surge the strong-handed despotism of the most unscrupulous soldier or most popular name of France; and out of the feeble monarchies would inevitably surge a speedy, and perhaps bloody, revolution."

During the deliberations of the committee of the Assembly respecting the bill for the revision of the Constitution, M. de Broglie, whose independent character is highly respected by all parties, declared that the dangers of 1852 could only be overcome by a revision of the Constitution. He believed that, as regards the motives imputed to the President of the Republic, although he (M. de Broglie) was neither his Minister, counsellor, nor his friend, Louis Napoleon *had no intention whatever of attempting an 18th Brumaire*. Whatever faults might be found in Louis Napoleon, if faults they were, must be attributed, not to the man, but to the Republic which had elected a President with uncontrolled power. Had the object been to create a President with limited power, he should have been elected in quite a different manner. M. de Tocqueville's long report was read in the Assembly on the 8th of July: its chief recommendation was that a Constituent Assembly should be convoked, for the purpose of revising and amending the existing Constitution. M. de Tocqueville affirmed the *absolute necessity of observing the existing Constitution*, should the proposed revision be rejected. If there were one unconstitutional election, the entire Constitution would be violated; that is, if Prince Louis Napoleon were re-elected. M. de Tocqueville pointed at the dangers and inconveniences arising from the Presidency and the Assembly being equally powerful and independent of each other, without any supreme power to decide between them. The discussion began on Monday, July 14th. The most brilliant displays of oratory ever heard in the tribune were listened to with profound attention and emotion in the crowded galleries. A fearful crisis was felt to be at hand. M. Dufaure, M. Falloux, M. Berryer, General Cavaignac, M. Michel (de Bourges), M. Victor Hugo, and M. Odilon-Barrot were the chief speakers. On the division, 446 were in favour of the revision, and against it only 278, thus leaving a majority of 168 in favour of the motion; but, according to the 11th article of the Constitution, three-fourths of the number of voters would only constitute the legal majority, and, as there were 724 voters, it required 543 members to carry the proposition. The "revision" was therefore lost. The Reds and the Republican Left hailed the result as a great triumph. A short Ministerial crisis took place after the vote, arising out of attacks of the Assembly on the Minister of the Interior; but the Cabinet was prevailed upon by the President to remain in office.

The President of the Republic having declared that he was the only person who was not permitted, according to the Constitution, to demand its revision, some surprise was felt during the discussion at the language of M. Baroche, the Minister, who not only attacked the Constitution in its details, but in its origin, maintaining that it was virtually defunct, having emanated from intimidation. This anomalous spectacle of a Minister insulting, as it were, the source of his own mission and authority created a prodigious disturbance in the Assembly, and M. Dufaure administered a severe castigation. General Baraguay d'Hilliers was replaced in the command of the army of Paris by General Magnan.

On the 29th of July a motion for prorogation from August 10th to November 4th was carried in the Assembly, by 420 against 232, with a Committee of Permanence to meet during the recess. The Exhibition *fêtes* in the first week in August will be fresh in the recollection of our readers, who are reminded of the predictions of many of the English visitors, especially those appertaining to the Corporation, as to the apparent durability of the Republican Constitution. The imperial airs and state of the Palais of St. Cloud struck many observers at the time. The gloomy abstraction of the President, and the sad misgivings of the leading political men in their intercourse with the English exhibitionists, did not escape notice; and, on the whole, the convictions of those who knew France and French men well at this epoch were, that the President's career under the Constitution was at an end. In the Committee of Permanence were the names of Changarnier, Didier, Berryer, Passy, De Montebello, Barthélémy, Poujoulat, De Mehun, Rulhière, &c. A manifesto of the Mountain was published, declaring the trite truth, that there was less liberty under the Republic than under the Monarchy. They formally gave notice, that they would place themselves at the head of the people, to oppose any illegality.

A novel feature in the agitation of party feeling in France was the proposition to bring forward the Prince de Joinville as candidate for the vacant Presidency, in May, 1852. In August M. Thiers and his friends were resolved to present him to the nation. Some of the Orleanists contended that a son of Louis Philippe could not, with any dignity, be a rival to the prisoner of Ham, condemned for conspiracy against his father, or to Ledru Rollin, or any blouse-patronising candidate; but it was replied, that, if the ex-French Admiral were elected, he would serve, as he had declared that he would never be wanting to France, if called upon.

Against the Prince de Joinville the Reds had the idea of starting M. Carnot. The Duc de Bordeaux (Comte de Chambord) about this time was compelled to write to his adherents in Paris to be united, and to respect the authority of M. Berryer, as leader. Thus every party was split into sections. A project, put forward by the editor of a Bonapartist journal, suggesting that, in order to "save France," the new National Assembly should be elected, not at the end of next April, according to the Constitutior, but in December of this year, is a key to the present situation. The project was scouted, as, if acted on, stated by opponents, "France would have *two* Legislatures, one in existence, the other in expectancy, and the Constitution declares that the Legislative Assembly can neither dissolve itself or be dissolved." A further inkling of the designs of the President may be found in the ordinance of the Prefect of Police ordering all foreigners, under pain of expulsion, to obtain special licences to remain. Many foreigners were expelled on this occasion, and the motive is now evident. At the meetings of the Councils-General nearly three to one voted for the revision of the Constitution. An Orleanist journal maintained early in September that the Prince de Joinville, in becoming a candidate for the Presidency, "would not violate an oath, and trample under foot the Constitution and the laws," a foregone conclusion of the shrewd writer as to the President's determination to become a candidate *per fas aut nefas*. The press prosecutions in September were unrelenting on the part of the French Government, and such was the general uneasiness at the rickety state of affairs, that no public ceremonial or assemblage of any kind could take place without the most sinister rumours of a *coup d'état*, or of a "Red" rising. The President, however, laid the first stone of the new markets without a demonstration, except from the "Dames de la Halle" (venders of vegetables and fruit), who went up to the Elysée with a large bouquet for the President, who, in turn, treated them, as he did his troops on all occasions, with champagne.

In October the hitherto discordant parties of the two Royalist branches were coming to an understanding; the nomination of the Prince de Joinville was gradually dropping by the Orleanists; and the Legitimists reconciled their differences by a general declaration to oppose the re-election of Louis Napoleon, and to maintain the Constitution. The moderate Republicans evinced signs of coalescing with the Monarchists of all colours to support order and legality. M. Léon Faucher's language at Rheims, when he talked of "breaking down barriers" and "removing obstacles," gave rise to some suspicions; but to the honour of the Minister be it recorded that his conduct last week has proved that he has been no party to any assault on the laws and Constitution. A general feeling pervaded all classes, save that of Louis Napoleon, that the electoral law of the 31st of May should not be repealed for the sake of aiding the Prince's re-election. The refusal to allow Kossuth to pass through France was interpreted as exhibiting the tendencies of the President's Government in favour of the Absolutist powers. The Minister of War was obliged to put a stop to the violent orders of the day of some of the commanding officers of regiments, who did not hesitate to tell the soldiers that they were to slaughter, without remorse, all their countrymen entertaining democratic opinions. A letter from Paris of October 11th mentioned that a *coup d'état*, the repeal of the electoral law of May 31st, and the forcible dissolution of the National Assembly, were resolved upon. It is certain that Louis Napoleon at this date had decided on the restoration of universal suffrage, and his Ministers, being opposed to this course, resigned on the 14th of October, as also M. Carlier, the Prefect of Police. This astounding resolution of the President created a deep sensation throughout the country. The exasperation of the Parliamentary majority was very great, as the leaders considered themselves betrayed by the President, whom they had supported in the passing of the law of the 31st of May repealing universal suffrage.

We are now approaching the *denouement* of this great political drama, the fresh shift in the kaleidoscope, the new move on the board in the game on which the supremacy of France is staked, and the final outbreak of the long-pent-up volcano. On Tuesday, the 4th of November, was the

No. 3.—Mairie of the 10th Arrondissement.—Arrest of Representatives.—M. Berryer addressing the People.

OPENING OF THE NATIONAL LEGISLATIVE ASSEMBLY.

The Cabinet was reconstructed prior to the meeting; the members were MM. Davil, Turgot, Charles Geraud, De Thorigny, Casabianca, Lacrosse, Fortoul, Blondel. Of these illustrious obscurities, who held a month's office, it is unnecessary to speak; the significant appointments were those of M. de Maupas, Prefect of the Haute Garoune, as the successor of M. Carlier as Prefect of Police; and of General Le Roy de St. Arnaud, Commander of the 2d division of the Army of Paris, as Minister of War, in place of General Randon. We must not overlook the fact, that the *Constitutionnel*, the Bonapartist organ, referred *to an appeal to the country at once*, on the subject of the Presidency, as the natural sovereign arbitrator between the National Assembly, which refused revision, and the two millions of petitioners with the eighty Councils-General which demanded it, although the other Government organ, *La Patrie*, denied that such a proposition would be submitted in the message. On the 4th of November this lengthy document was read. It opened with a reference to a vast demagogical conspiracy organising throughout France and Europe. "Your patriotism and courage," said the President, "with which I shall endeavour to keep pace, will, I am sure, save France from the dangers wherewith she is threatened." But the vital portion of the message is that in reference to the restoration of universal suffrage, reproduced *in extenso* in our columns of the 8th November.

The message was followed by the introduction of the project of law, by M. Thorigny, proposing the complete abrogation of the law of May 31, 1850, and re-establishing the electoral law of March 15th, 1849. The demand of the Minister for urgency, equivalent to our suspension of the standing orders to pass a bill rapidly, was negatived by an immense majority, by *assis et levé*, that is, by no formal vote, but "sitting and rising," after the fashion of our show of hands. In the committee the rejection of the project of law was resolved upon, M Daru reading the report to the Assembly, November 11th. On the 13th the debate commenced, and on the division the bill was lost by 355 against 348. This insignificant majority of seven, which vote, by the way, was the first important piece of political information transmitted by the submarine telegraph, was most assuredly a triumph for the President, for a much larger majority had been anticipated. Prior to this decision, on Sunday, November the 9th, Louis Napoleon had a grand military demonstration: all the officers of the regiments forming the garrison of Paris were presented to him at the Elysée; he harangued them to the effect, that, if the gravity of circumstances should cause him to make an an appeal to their devotedness, he was sure *they would not fail him*, for he would ask from them nothing not in accordance with his *right, with military honour*, and with the in-

terests of the country, because he had placed at their head *men* s *whom* he had full confidence; and because, if *the day of danger* should come, he would not, like the Governments that had preceded him, cry "March, I follow you!" but "*I march—follow me!*" So alarmed were the Ministers at this speech, which can now be no longer regarded as extraordinary, that they introduced the words 'recognised by the Constitution" instead of those of "*my right*." At the time, this address was looked upon as singular, inasmuch as the President, by the Constitution, could not even command a corporal's guard. In remarking on the expulsion of the 500 members of the Assembly by 300 grenadiers—the never-to-be-forgotten 18th Brumaire—Mignet, the historian, says:—"L'on ne voyait pas encore dans ce mouvement l'agrandissement d'un homme, d'un seul homme, qui changerait la France en un régiment, et ne ferait entendre dans le monde, si longtems agité par des commotions morales, que les pas de son armee et le bruit de sa volonté." Is the 2d of December to be another 18th Brumaire?

The Legislative Assembly, on the 17th of November, was signally beaten, in an attempt, through the Questors, to obtain the exclusive command of the troops, instead of sending orders through the Minister of War. The proposition was rejected by 408 against 300, although in the minority were Cavaignac, Changarnier, and Lamoricière. The largeness of the majority is ascribed to the knowledge that a *coup d'état* would have been tried at once, as the President had resolved to put down the Assembly, and appeal to the army and people. The scene in the Chamber was frightful, from the violence of the representatives. Louis Napoleon's position by this vote was decidedly ameliorated. On the next day he was well received at the Champ de Mars by the troops; in the evening the military gathering at the Elysée was very great. The foreigners in Paris, however became alarmed at the aspect of affairs, and the panic became evident from the increased departures. Daily did Louis Napoleon review the troops on the Champ de Mars. Some Ministerial changes did not excite the least attention, so absorbed were the people in the expectation of a movement. At the distribution of the Great Exhibition medals, the President attacked the Assembly, the Monarchists, and the Demagogues, and emphatically assured his astonished auditory, that he would maintain order whatever might happen, having the "right which came from the people, and the force which comes from God." The Assembly, in its turn, was not less hostile, as the organic law framed by the Council of State, on the responsibilities of the President and his Ministers, after being dormant for upwards of two years, was suddenly brought forward, and a committee of nearly a

NO. 6.—BARRICADE, BOULEVARD BONNE NOUVELLE.

Montagnards and Legitimists was appointed to report on its provisions, one of which pronounced it to be high treason if the President provoked a violation of the 45th article of the Constitution, declaratory that the President is only re-eligible when four years shall have elapsed from the period of his quitting office. On the 24th of November appeared the famous article in the *Constitutionnel*, from the pen of M. Granier de Cassagnac, charging the leaders of the "party of order" with being engaged in a conspiracy against Louis Napoleon. M. Créton called the writer a wretched scribbler in the Assembly, and was challenged forthwith by Cassagnac; but M. Créton retorted, that, as he (the editor) was no gentleman, he (the representative) would not fight. The Minister of the Interior, being called upon, denied that the Government had any information as to such conspiracy, so as to bring the matter before the tribunals. The funds fell on the Stock Exchange at Cassagnac's article, which derived its chief force from the connexion of the writer with the Elysée.

It is important to state what is the most authentic information as to this alleged conspiracy to send Louis Napoleon to Vincennes. It was a general understanding amongst the leaders of the party of order to arrest the President, provided he went beyond the pale of the Constitution, and to have then taken the government out of his hands and placed it in the keeping of a General. On the other hand, in many clubs in Paris, during the last week of November, it was confidently declared that the plan for getting rid of the Assembly had been resolved upon, and lists of representatives to be banished were mentioned. Whilst the Assembly was displaying weakness and inconsistency, the machinations were maturing to dissolve it. So decidedly was the Legislature playing the President's game, that there can be little doubt, if he had only waited, he might have had the Presidency, from sheer impossibility to bring forward another candidate. On the 27th the committee charged with the examination of the project of law of responsibility adjourned the question of urgency. On the 29th of November (Saturday), on the debate of the electoral law, M. De Larochejaquelin's amendment, to reduce to one year house occupation for voters, was lost. On the 1st of December was the

LAST SITTING OF THE NATIONAL LEGISLATIVE ASSEMBLY.

At the final meeting, M. Léo de Laborde brought in a proposition demanding the pure and simple re-establishment of "Legitimist Monarchy." M. Dupin, the President, refused to accept this proposition as unconstitutional. M. De Larochejaquelin supported the introduction of the motion, but after a short debate the Assembly passed to the order of the day, by an immense majority. After a debate on the Lyons and Avignon Railroad, the third deliberation of the Electoral Law commenced. The discussion turned on the proof of residence. An amendment of M. Chauffour to substitute the evidence of domicile by common law instead of by special process, established in the law of the 31st of May, was rejected by 370 against 220, and the Assembly adjourned. There was not a whisper or a rumour of a *coup d'état*; but before daybreak on the memorable 2d of December troops occupied the Legislative Palace, with orders not to allow any representatives to enter.

MONDAY, DECEMBER THE FIRST.

M. Limnandier's new opera, "Le Château de la Barbe Bleue," was produced at the Opéra Comique on the 1st inst.; the theatre was crammed to suffocation; the musical critics were conning over their future *feuilletons*, "looking as grave and attentive," writes a correspondent of the *Times*, "as though they were going to write their critiques, as usual, and as though, if written, they would be printed, and, if printed, read. General Cavaignac and M. Thiers were among the audience, and, strange enough, by the side of the former sat M. de Morny, Minister of the Interior, the only one who could be persuaded to affix his signature to those decrees of the President which on the following morning awoke the astonishment of the Parisians. General Cavaignac was to have been married on the next day. M. de Morny was at the Jockey Club, Rue Lepelletier, until two in the morning of Tuesday, playing at cards. At the Grand Opera there was not a notion in the *foyer* of coming events. The President of the Republic had a brilliant reception at the Elysée; he was more than usually animated and affable. General St. Arnaud, the Minister of War, was the last to leave; and, although the *coup d'état* had been daily expected for months, Paris was struck as if by a thunderbolt by its appearance. In similar seeming security the Duke of Wellington and his brilliant staff of officers were dancing at the Duchess of Richmond's ball, at Brussels, on the eve of the eventful battle of Waterloo, when the trumpets suddenly sounded the order to march to the field, which many of those gallant fellows never left again. The arrangements of the President were certainly of the most sweeping and comprehensive character. He first wrote letters to the Ministers, stating that his mind was made up—that he would not allow himself to be sacrificed by the Assembly; but that he was unwilling to compromise them, and suggested that they should send in their resignations. These letters were despatched after the reception had broken up on Monday night, and, as a matter of course, were replied to in the affirmative. Meantime the President, who would not trust even the *Moniteur* with his plans, had proclamations printed at a private printing-press in the Elysée, at which the *Napoleon* newspaper used to be worked off.

TUESDAY, DECEMBER 2.

The troops took military possession of Paris between five and six o'clock in the morning. Between the hours of seven and eight those detachments in which the most confidence was placed were stationed in compact masses at the Place de la Concorde, the Pont Louis XV., and in the vicinity of the Assembly. The African Chasseurs (riflemen) took possession of the Palace of the Legislative Assembly. Their positions taken, rations of meat, wine, and brandy were distributed to the men. The melancholy sight was then witnessed of officers touching glasses with the corporals and privates, and exciting their animosity against the Assembly. To conceal the odium of the act they were about to accomplish from these misguided men, the initiated, who had their instructions, spread the report through the ranks that the leaders of the Monarchist factions had been taken in the flagrant act of conspiring against the authority and the life of the President. They were promised, moreover, to be led to battle against the members of the Mountain and the Socialists. The occupation of the Hall of the Assembly was simply a precaution taken that the leaders of the conspirators and insurgents might not form themselves into a national convention.

The Bonapartists affirm, that M. L. N. Bonaparte, having been informed on Monday night that a meeting was held at General Changarnier's house, attended by M. Thiers, M. Baze, and others of the chiefs of parties, at which it was decided that he should be arrested, the Assembly prorogued or dissolved, and no doubt the Republic abolished, resolved to anticipate the blow by arresting his enemies, dissolving the Assembly, and nullifying the Constitution.

"An eye-witness of the facts," writes a correspondent of the *Chronicle*, "I can tell you what I saw. It is not true that MM. Thiers, Changarnier, Lamoricière, Bedeau, &c., were assembled together when they were arrested. Each of these gentlemen was seized in his bed, between the hours of three and five in the morning, in the same manner and by the same individuals who are appointed to arrest criminals. They were arrested by *sergens de-ville*. The agents were ignorant why they arrested them. I know that M. Thiers was led off without being allowed to speak to his wife, or any other member of his family. General Cavaignac was allowed to write a line to the parents of the young lady to whom he was on the eve of being married. It is asserted, and I believe it to be true, that General Bedeau, Vice-President of the Assembly, attempted to defend himself, and that he gave and received wounds in the struggle that ensued. It is also said that General Lamoricière resisted, and was handcuffed. Some of the friends of General Charras state that the General made a formidable resistance."

The walls of the capital at daybreak were placarded with the proclamations and decrees of the President of the French Republic to the French people and to the army, with the proclamation of the Prefect of Police (M. Maupas), his circular to the Commissaries of Police, the decree relative to the taking of the opinion of the nation as to Louis Napoleon's future presidency of ten years, circulars of the Minister of War to the Generals and Chiefs of Corps, and of the Minister's of the Interior, nomination of the Provisional Consultative (M. Léon Faucher protested against his name being inserted therein). All these decrees were published in our last week's impression, with Faucher's letter.

THE NEW MINISTRY.

The following are the names of the new Cabinet:—

Minister of the Interior	M. De Morny.
Minister of Finance	M. Fould.
Minister of Justice	M. Rouher.
Minister of Public Works	M. Magne.
Minister of Marine	M. Ducos.
Minister of Commerce	M. Lefèbvre Durufé.
Minister of War	General De St. Arnaud.
Minister of Public Instruction	M. Fortoul.
Minister of Foreign Affairs	M. Turgot.

MEETING OF THE MEMBERS OF THE LEGISLATIVE ASSEMBLY.

On the first news of the preparations to prevent the legal meeting of the Assembly, a number of representatives belonging to the most moderate party assembled spontaneously at M. Odilon-Barrot's. MM. de Rémusat, Passy, Dufaure, the Duc de Broglie, the secretaries of the *bureau* of the Assembly, signed a first protest against the *coup d'état* which was about to be perpetrated, and against the decrees of the President which were already being posted in the streets. The members present at this first *réunion* then separated, with a view to arouse their friends and the population, and to invite all the friends they could muster to meet without delay at M. Daru's. Vice-President of the Assembly (M. Dupin having been arrested and kept a prisoner at the hall of the Assembly).

The *réunion* at M. Daru's was a numerous one, considering that many of the representatives had already been arrested, that many were not aware that the meeting was to be held, that the Elysées and the Mountain did not attend. Nearly 200 members were present. They resolved to proceed in a body to the Assembly to take evidence of the opposition made to their legally assembling. This procession of men, most of them well known to the population, headed by the honourable members of the *bureau* of the Assembly, having passed through the few streets that separate M. Daru's house from the Palace of the Assembly, without having created any emotion in their favour, presented themselves at the usual entrance. The African Chasseurs hailed their arrival with savage shouts and brutal insults. The representatives insisted upon admission, and some of them having attempted to force their way a struggle ensued, in which the chasseurs made use of their bayonets and the butt end of their muskets, wounding some of the representatives, among others MM. Etienne and Chegarey. Driven back by armed force, and thus prevented, in the face of heaven, from fulfilling the duties of their calling, they returned, as they came, to the house of M. Daru, to draw up and sign an official statement of the facts. This second protest was signed by the *bureau* of the Assembly, and by all the members present, including the signatures of Count Molé the Duke of Broglie, MM. Dufaure, Passy, Odilon Barrot, and others.

These gentlemen, thinking they had not done enough to inform the still passive population of what was really taking place, resolved to proceed forthwith to the Mairie of the tenth *arrondissement*. There another imposing and solemn scene took place.

For the space of nearly three hours a regular sitting was held in the hall of the Mairie. The legal Assembly of the country, unsupported, it is true, by the population, surrounded shortly after by the military, aforce which for a time hesitated how to act, deliberated and voted:—

1. A proclamation to the people, and to the army.
2. A decree deposing the President.

These deliberations took place calmly, and, after *appel nominal*, the vote was passed unanimously.

The Commissary of Police, and the officers in command of the troops, who had meantime surrounded the building, were then admitted. The President then read aloud the following articles of the Constitution:—

1. The article which declares the President to have forfeited his powers, should he oppose the meeting of the Assembly.
2. The article which confers all the powers upon the Assembly, including those of the President, should the latter have recourse to violence against it.

Taking, then, the penal code, the president warned them of the penalties they were liable to incur in lending armed assistance to an authority which was faulty in its origin, and at that moment deposed and brought before a high court of justice. He called upon them in the name of the constitutional law, of which he was the representative and the organ, not to execute the illegal and criminal orders which they had received, but rather to give their aid to the Assembly, the sole representative of the French nation. This appeal embarrassed them somewhat, but did not prevent the execution of their orders; the appeal found no support in the population assembled near the Mairie. The attempts of some of the members, both civil and military, to engage the sympathies of the crowd, were not attended with success. The soldiers evinced an inclination to arrest what they termed the recalcitrants.

It was at this moment that a spectacle took place, which, in other times, and in another country, would have aroused public indignation. The persons already named, all present, to the number of 200 to 250, representatives of the people, elected two years since by universal suffrage, by an immense majority of men of every opinion, were designated to the ill-will of the soldiery. Men with European reputations, such as MM. Odilnot, Montebello, Odilon-Barrot, Duc de Broglie, Dufaure, &c., were seized by the collar like ordinary criminals, and conducted two by two between two files of soldiers from the Mairie of the 10th *arrondissement* to the barracks of the Quai d'Orsay, from whence they were sent in detachments to Fort Valérien, a military prison, and to the prison Mazas, where criminals of the worst description are incarcerated.

Whilst the Assembly was sitting in the 10th *arrondissement*, the nine members of the Court of Cassation, constituting, according to the terms of the Constitution, a high court of justice, met officially to depose the President of the Republic. Respected like the *réunion* at the Mairie, it had time to encroach, that, assembled in the name of the laws of the country, it would only separate if compelled to do so by violence.

Thus, three solemn protests have been made at three different times, and in different places. These protests of right against might were not attended with any result at Paris; they were scarcely known there.

PROTEST OF M. MOLÉ.

Count Molé addressed the following letter to the *Journal des Débats*:—

Paris, Dec. 2, 1851.

Monsieur,—Permit me to ask you to insert this letter, which I send at the same time to the *Moniteur*. After having been this morning expelled from the residence of M. Daru, Vice President of the National Assembly, with all the rest of my colleagues who had assembled there to protest against violence and oppression, I vainly attempted to join the members of the Assembly who had met at the 10th *arrondissement*. Numerous troops prevented me, as well as several other representatives, from reaching the door of the Mairie. I now have recourse to your columns to declare that I join fully in the conduct and acts of my colleagues assembled at the Mairie of the 10th *arrondissement*, and that, if it had depended on me, I should have shared their fate.—Receive, Monsieur, &c., MOLÉ.

DECREE OF DEPOSITION AGAINST THE PRESIDENT OF THE REPUBLIC.

The following is the text of this decree, signed by the Representatives:—

FRENCH REPUBLIC.—NATIONAL ASSEMBLY.

EXTRAORDINARY REUNION HELD AT THE MAYORALTY OF THE TENTH ARRONDISSEMENT.

Seeing the term of Article 68 of the Constitution;

Seeing that the National Assembly is hindered by violence from fulfilling its mandate;

Decrees:

Louis Napoleon (*est déchu*) is deprived of his functions as President of the Republic.

Citizens are commanded to refuse obedience to him. The Executive power passes *de plein droit* into the hands of the National Assembly.

The judges of the High Court of Justice are required to meet immediately, under penalty of forfeiture, to proceed to judge the President and his accomplices. It is consequently enjoined on all functionaries and depositaries of authority to obey to every requisition made in the name of the Assembly, under pain of forfeiture and high treason.

Decreed in public sitting, the 2d of December, 1851.

The representatives of the Left issued a similar decree.

M. L. N. Bonaparte, attended by a large staff, and accompanied by Jerome, ex-King of Westphalia, left the Elysée at about half past ten o'clock in the morning, and went along the Quais. He was saluted with loud cries of *Vive la République!*

It is a curious fact, in connexion with the important events of this day, that the 2d of December is the anniversary of the coronation of the Emperor Napoleon in 1804, and of the battle of Austerlitz in 1805.

Only two journals, *La Patrie* and *Le Constitutionnel*, were allowed to appear on Tuesday without control. The *Débats* and other journals which were published were not permitted to make comments on passing events. Eight morning papers were suspended, including *La Presse* (Girardin), *L'Avenement* (Victor Hugo), *L'Ordre* (Odilon-Barrot), *La République*, *L'Opinion Publique* (Legitimist), &c.

On the evening of Tuesday, although grave forebodings of disaster had already spread themselves throughout the city, the Théâtre Italien was filled by a brilliant and well-dressed audience, to witness the *début* of the tenor Gunsco in *Ernani*. A short calm, a brief suspension of military operations, and unimpeded circulation in the Boulevard des Italiens were enough to quiet the apprehensions of this amusement-loving people, whose elasticity of temperament is one of their most signal characteristics. The *foyer* this time was not in the theatre, but on the Boulevards, where numbers of the audience hurried, between the acts, to inform themselves about the aspect of affairs. Seeing nothing, however, but a moving crowd, hearing nothing but the same monotonous cry of "*Vive la République!*" as the military passed up and down, they returned to the theatre, and for a time forgot the threatened crisis in the singing of Mdlle. Cruvelli, the *Elvira* of the evening. After the opera had terminated most of the *cafés* were still open, and some few of them did not close their doors until an unusually late hour.

WEDNESDAY, DECEMBER 3.

THE FIGHTING.

The public excitement greatly increased to-day. At an early hour the decree of the 200 representatives, headed by M. Berryer, declaring Louis Bonaparte *hors la loi*, for having violated the Constitution, was stuck up in a great number of places; but *sergens de ville* were sent everywhere to tear it down. This they did amid the angry murmurs of the groups who had assembled. The same decree in the course of the night or the preceding evening was slipped beneath the doors of vast numbers of houses. It was printed in the form of a newspaper column, with evident marks of haste. It clearly emanated from the office of a Legitimist or Orleanist journal. It is signed G. M. Benoist d'Azy, a Legitimist, Vice-President of the Assembly; and M. Vitet, an Orleanist, also Vice-President. In a constitutional point of view it possessed all the force of law, although the representatives by whom it was adopted were arrested. In the course of the day copies of it were stuck up in a multitude of places, chiefly, it was rumoured, by representatives of the people. The decrees of the 200 representatives assembled at the 10th Mairie were carried to the Court of Cassation which immediately assembled and proclaimed the deposition of the President in terms of the resolution of the Assembly, but at that moment an order arrived from the Minister of Justice, that the court should proceed no further in the affair, and they immediately adjourned, and a decree for its dissolution followed soon afterwards. During the morning several additional regiments entered Paris, and were cantoned on the Boulevards and various quarters of the city. Appeals to arms in manuscript, some in red and others in black, were posted up early in the morning, signed by leading members of the Mountain, and some of the more energetic commenced harangueing the populace in the Boulevards, and reading the decree of the representatives for the deposition of the President.

On the morning of Thursday a new list of the members of the Consultative Commission appeared in the *Moniteur*. Of the 120 names published the preceding day, eighty-one, whose names were published without their consent, refused to accept.

It will be thus perceived that the publication of the names in the first decree was what the *Times* calls a "political forgery," being unsanctioned by the great majority of the persons who bear them. The second list presents a very different appearance, and scarcely contains any names of note except those of the immediate partisans of the President.

On Wednesday the Minister of the Interior sent a circular to all the prefects of the departments, accompanied by five copies of the proclamations published the day preceding.

In the course of the 5th was issued the address of the Commander-in-Chief of the National Guards of the Seine, signed by Lawoestine, General-in-Chief, and Vieyra, Colonel of the Staff.

The semi-official report of the day's fighting was given in *La Patrie* of Wednesday evening, as follows:—"We are informed that orders were given to the demagogic sections to meet this morning, at seven o'clock, in the Faubourg St. Antoine. The Prefect of Police had pre-

scribed the most energetic and efficacious measures to defeat the designs of those exciters of disturbance, who, emboldened by former successes, had not reckoned on the resolute action of the authorities. The meeting decided on by the committees held here and there during the night did not take place. The *frères et amis* did not respond to the summons. During the first hours of the morning the faubourgs were calm, and the shops were open as usual. The wine-shops of the faubourgs, however, gradually filled, and among the persons who entered were remarked a considerable number of those sinister faces which are seen whenever the enemies of order meet in days of crisis. The Prefect of Police soon ascertained that deliberations were going on. Towards ten o'clock groups were formed in several parts of the faubourg, and in some of the adjacent streets. Several Montagnard ex-representatives, and some men armed with fowling-pieces and poignard-knives, were seen. Soon afterwards were posted up appeals to arms in manuscript, some in red, others in black, signed by Michel (de Bourges), Madier de Montjau, Emmanuel Arago, Schoelcher, Baudin, Deflotte, and other members of the Mountain. Almost at the same time, some persons, most of them armed passed along the Boulevards St. Martin, St. Denis, Bonne Nouvelle, and Montmartre, endeavouring by reading aloud a proclamation of the ex-representatives who assembled yesterday at the Mairie of the 10th *arrondissement*, to rally the crowd to their cause, and excite seditious cries. In an instant these groups, very compact, and assuming an hostile attitude, were dispersed by some *sergens-de-ville*. The placards posted up were taken down without the slightest resistance, and frequently amidst the acclamations of the persons present. At this moment (half-past eleven) three or four bands of men *en blouse* left the Faubourg St. Antoine and the Rue du Temple, and spread themselves in different directions. They had at their head several of the ex-Montagnard representatives. That band which was led on by the ex-representative Baudin began to raise a barricade at the corner of the Rue St. Marguerite. On a battalion of the line advancing a shot was fired from the barricade. The troops returned the fire very vigorously, and the chief of the barricade, the ex-representative Baudin, fell dead, having been struck in the head with a ball. On another point, the ex-representative M. Madier de Montjau was struck by a ball from the troops in defending a barricade erected on the Boulevard Beaumarchais. It is positively stated that the ex-representative Schoelcher was also wounded in an engagement with the soldiers. The rioters had an intention of attacking the prison Mazas, but the measures taken for its defence prevented the execution of the plan. At noon the whole of that part of the Boulevards from the Château d'Eau to the Bastille was cleared and occupied militarily by the regiments of cuirassiers, chasseurs, and the line. The brigade of General Marulaz was stationed on the Place de la Bastile, with twelve pieces of cannon. The houses at the corner of the streets from whence the insurgents were able, in the days of June, 1848, to kill seven generals and the Archbishop of Paris, were occupied militarily from the cellar to the garret. Three mortars were directed towards the Faubourg Saint Antoine, and ready to fire. In presence of the most rigorous orders, executed with promptness, and the excellent conduct of the troops, the rioters retired to the bottom of the faubourg, from whence they were driven in a few minutes by the brigade of General Courtigis, which followed them up close. Several arrests were made; courts-martial sitting *en permanence* will decide on the fate of these persons, most of whom were taken in arms. Several groups of students went through the Quartier Latin, calling to arms. Some vain attempts at raising barricades were made, but a single company of the Chasseurs de Vincennes was sufficient to restore the quarter to its usual calm. The ex-Montagnard representative Delbetx was arrested in the afternoon at the corner of the Rue Richelieu. He was in a cabriolet, and wore his badge as a representative. He was uttering "seditious" cries in the midst of an extremely agitated crowd. The authorities were on the alert, and proper measures have been taken to put down any commencement at disturbance. A student was arrested on the Place de l'Ecole de Médecine, for having struck a *sergent-de-ville* with a cane. He was taken to the Conciergerie. The barricade raised in the Rue du Faubourg St. Antoine, at which the ex-representative Baudin was killed, was carried by Captain Henry, at the head of the first company of the 1st battalion of the 19th Light Infantry, commanded by Chef de Bataillon Pujol. The Faubourg St. Marceau is perfectly tranquil. Towards the middle of the day, some men of disorder, driven from the Faubourg St. Antoine, attempted to get up a demonstration on the Place de l'Ecole de Médecine. General Saul dispersed the persons making this attempt by sending out a strong patrol. As a measure of precaution, the Panthéon will be occupied to-night by the military. The Faubourg St. Antoine, which was exceedingly agitated in the morning, was quite calm in the evening. It was said that some workmen, determined to maintain order in the interest of the labouring classes, whom any disturbance in the street would most probably deprive at once of employment, dispersed themselves in the morning through the faubourgs, and argued with their comrades that Louis Napoleon only wanted to re-establish universal suffrage by conferring political equality. About five in the evening, however, barricades were raised in the Rue Rambuteau. General Magnan ordered some troops to that point, with orders for them to be immediately carried and destroyed. That was accomplished without difficulty by the 9th Foot Chasseurs and a battalion of the Gendarmerie Mobile, the rioters taking to flight on the approach of the troops. About half-past four a band of about 200 persons formed a barricade in the Rue des Vieilles Audriettes, by upsetting some carts. M. de Saint Georges, director of the national printing-office, had a detachment of the gendarmerie directed to the spot. The rioters fired, and the fire was returned by the troops, when the barricade was deserted by its defenders. Another attempt at a riot was commenced in the Cloître St. Méry, but it was immediately quelled. General Leydet, ex-representative of the Mountain, was arrested."

In the course of the day additional proclamations were placarded on the walls, from the Minister of War to the inhabitants of Paris, announcing "that those taken with arms in their hands *will be shot*."

A decree was issued by the Prefect of Police against tumultuous assemblages to the same effect

A correspondent thus describes the

ASPECT OF PARIS ON WEDNESDAY NIGHT.

I went last evening to see the state of the Boulevards. They were somewhat agitated, and groups here and there were collected reading the last editions of the *Moniteur* with the new Ministry. Presently the troops appeared ranged in order for battle, with skirmishers thrown out. They moved up the Boulevards, towards the Porte St. Martin. All sorts of rumours flew in every direction amongst the lookerson. Barricades had been erected in the Quartier St. Marceau, and there was fighting in that direction, but nothing ready serious. After dinner I passed again by the Boulevards, near the Madeleine; they were very quiet. I wandered across the Place de la Concorde, which, with the Champs Elysées, appeared utterly deserted, save by stragglers like myself, wrapped up and umbrella-sheltered, to avoid the wetting with which we were threatened by the thin, mizzling rain. I crossed the bridge of La Concorde just as the clock struck nine. All was still. The long line of the quays shone brilliant with their star-like lamps. The river reflecting them rolled its green waters in dark peace. The lights glimmered from amongst the trees in the Champs Elysées, whilst across the river the white mass of the Chamber looked cold and ominous, the lower part of its tall columns lit up by the glowing red fires of the soldiers' bivouac. In the neighbourhood of the Chamber, and in the Quartier St. Germain, everything was perfectly quiet. When I reached the Ministry of the Interior, whence all telegraphs are sent, the *employés* had just gone. *The Minister would not have let me send anything alarming*, and I did not care to tell you that Paris was tranquil, for I feared in but a few hours it would be far otherwise. I came back by the same route, and presently again passed up the Boulevards. Great agitation now prevailed; groups of people were shouting "*Vive la Republique*," or, "*A bas les Ratapoils!*" (the hero of the *Charivari's* impersonation of the Bonapartist party). On the Boulevard Bonne Nouvelle further progress was stopped—a battalion of the Garde Républicaine and a dozen cannon barred the way. Here the excitement was still greater. It was said that on the Boulevard St. Martin the bodies of two men who had been killed on the barricades were being carried by torchlight amidst the most frightful cries. This was but too true; but the troops quickly dispersed the rioters. As I came homewards after midnight I found the Lower Boulevards deserted. The stillness of night was completely unbroken, which it surely would not have been had firing been going on; and nothing was to be met with, unless now a regiment of cavalry —now of the line—who passed on their way to relieve other troops.

THE ELECTIONS.

In the course of the day the following edict was posted up by the Government:—

The President of the Republic decrees as follows:

Art. 1. The French people are solemnly convoked in their respective districts for the 14th of this present month of December, to accept or reject the following *plebiscite*:—

"The French people wills the maintenance of the authority of Louis Napoleon Bonaparte, and delegates to him the powers necessary to frame a Constitution on the bases proposed in his proclamation of the 2d December."

The President, having discovered that this abolition of the vote by ballot was obnoxious, issued the following decree in the *Moniteur* of Friday:—

FRENCH REPUBLIC.

In the name of the French people:—

The President of the Republic, considering that the mode of election promulgated by the decree of the 2d of December had been adopted in other circumstances as guaranteeing the sincerity of election;

But considering that the essential object of the decree is to obtain the free and sincere expression of the will of the people—

DECREES:—

The articles 2, 3, and 4, of the decree of the 2d December are modified as follows:—

Art. 2. The election will take place by universal suffrage. All Frenchmen are called to vote aged 21 years, in the enjoyment of their civil and political rights.

Art. 3. They must justify either by their being inscribed on the electoral lists drawn up in virtue of the law of the 15th March, 1849, or by the accomplishment, since that period, of the conditions required by that law.

Art. 4. The ballot will be opened during the days of the 20th and 21st December in the capital of each commune, from 8 a.m. till 4 p.m.

The suffrage will take place
By secret ballot;
By yes or by no;
By means of a bulletin, either manuscript or printed.
Done at the Elysée, the 4th December, 1851,

LOUIS NAPOLEON BONAPARTE.
The Minister of the Interior, DE MORNY.
The Minister of War, GENERAL DE ST. ARNAUD.

Probably the change of resolution arose from the following letter, sent by King Jerome to his nephew, Prince Louis Napoleon. It bears the date of December 4, ten at night:—

My dear Nephew,—French blood is flowing; stop it by serious appeal to the people. Your sentiments are badly understood. The second proclamation, in which you talk of *plébiscite*, is badly received by the people, who do not consider it the re-establishment of the right of suffrage. Liberty is without guarantee if an Assembly does not sanction the Constitution of the Republic. The army has the upper hand. It is the moment to complete a material victory by a moral victory; and what the Government cannot do when it is beaten it ought frequently to do when it is victorious. After having beaten the ancient parties, restore the people, proclaim that universal suffrage, sincere, unshackled, acting in accordance with the greatest liberty, will nominate the President and a Constituent Assembly to save and restore the Republic.

It is in the name of the memory of my brother, and partaking his horror for civil war, that I write to you. Believe in my old experience; think that France, Europe, and posterity will well judge you.

Your affectionate uncle,
JEROME BONAPARTE.

The President of the Republic replied on the 5th, that he had partly done what his uncle asked of him, in re-establishing secret ballot; but he added, "Mais il faut que la force ait raison de ces furieux."

The President, in reference to the votes of the army, addressed the following letter to the Minister of War:—

My dear General,—I had adopted the mode of voting with the signature of each voter, because that mode, employed formerly, appeared to me to ensure more effectually the sincerity of the election; but, yielding to serious objections and to just representations, I have, as you are aware, just issued a decree which changes the manner of voting. The suffrages of the army are almost entirely given, and I am happy to think that there will be found but an inconsiderable number against me. Yet, as the soldiers who have given in a negative vote might apprehend that it would exercise an unfavourable influence on their career, it is of importance to set their minds at rest. I beg you, therefore, without delay, to make known to the army, that, if the mode in which it has voted is different from that according to which the other citizens will vote, the result shall be the same for it; that is to say, I wish to be ignorant of the names of those who have voted against me. Consequently, the taking of the votes once terminated and duly verified, I beg of you to order that the registers may be burnt.

LOUIS NAPOLEON BONAPARTE.

INCIDENTS OF WEDNESDAY.

(From Private Correspondence and other Sources.)

Orders were given by the Minister of the Interior to the managers of all the theatres to keep open their houses, and to perform on Tuesday and Wednesday nights, whether they had audiences or not.

On the morning of Wednesday, and up till two o'clock in the afternoon, there was nothing in the *beaux quartiers* but the crowds of promenaders, passing without hindrance, and the groups at the doors of the *cafés*, to indicate that Paris was on the brink of a crisis. In the *cafés* there was a universal game of dominoes, the suspension of so many of the public journals offering the *habitués* but a scanty supply of literary food. In the streets the vendors of the *Patrie* were more than usually numerous, and more than usually obstreperous. Later in the afternoon, however, as rumours of barricades and massacres floated up from the remoter and less fortunate departments of St. Martin and St. Antoine, the dominoes gradually ceased rattling, many persons stole quietly home, and a gloom began to settle upon the faces of the mob, whose cries of "*Vive la Republi que!*" hollow, suppressed, and at rarer intervals, assumed a tone of menace, as though a storm was not far behind. The physiognomy of the military, moreover, worn and fatigued by fast and waking, was more serious, stern, and anxious than it [illegible], no longer the gay and showy pageant in which [illegible], and *guides* were but as glittering effigies of the reality—the [illegible] gigantic puppet-show—but a real military display, a threat and an admonition to the crowd, who, in the features of their army [illegible] patriots on horse and foot, found no sympathy and read no hope.

One noticeable difference was remarked in the aspect of the crowd on Tuesday and Wednesday. On Tuesday a vast number of blouses and *ouvriers* was noticed; on Wednesday the appearance of these ancient abettors of revolution was exceedingly rare. Scarcely any of them, indeed, were observed. To some this brought confidence, to others fear. The latter thought, and not without a show of reason, that if the blouses were absent, almost to a man, it was presumptive evidence they were elsewhere more gravely occupied, and this by no means improved the prospect of what was likely to take place on the morrow —more especially since it was currently reported that the Socialists had been summoned by their chiefs to meet and consult that night.

After midnight large bodies of military invested the Café de Paris, Tortoni's, and the Maison Dorée (one of the principal resorts of those Parisians who turn night into day). The stragglers who were returning home from late *réunions* were ordered off the great thoroughfare, and compelled to gain their domiciles by circuitous routes. Resistance or protest only led to a menace of immediate arrest, which no one was foolhardy enough to set at defiance.

THURSDAY, DECEMBER 4.

SECOND DAY'S FIGHTING.

From an early hour on Thursday morning the communication between the centre of Paris and the quarter of the Halles and of the Faubourg St. Antoine was cut off, and as early as twelve o'clock shots began to be exchanged between the insurgents and the troops. At a late hour the night preceding the people about the Rue Rambuteau commenced the making of barricades. A few of the *sergens de ville* attacked them from time to time, and they immediately took to flight. The usual system on such occasions was, however, adopted. The barricades were made, but there was no defence. As soon as troops approached, the defenders of the barricades took to flight, and the soldiers found nothing but an ill-built wall. Such a system of warfare is the most harassing and the most discouraging to the troops. During the whole morning barricades were being made in different quarters, were taken by the troops without difficulty, and were being again abandoned by the troops to the insurgents. In the well-known district of the Porte St. Denis there was a huge barricade across the corner of the street of that name. At the Porte St. Martin there was another, and from that quarter all the way down to the Place de la Bastile, and probably further, there were hundreds more.

As the day advanced numerous and formidable barricades were raised in the quarters St. Denis, St. Martin, and the neighbourhood of the Rue Rambuteau. Even at the corner of the Rue de la Grange Batelière there was a large barricade, and shots were fired on the troops from Tortoni's coffee-house. Several people were killed in the Rue de la Grammont. M. Sallandrouze's carpet manufactory was riddled by cannon, and thirty people who were in it were massacred. It appears that some shots had been fired from the windows. The Boulevards were swept every five minutes by large bodies of lancers, and orders had been given to the troops to give no quarter. In building the barricades there was no noise, no shouting, no singing of Republican songs; but a solemn silence, only broken by the crash of the materials thrown about. Each man seemed determined to risk the worst. At the part decided upon in the Boulevards the road is upwards of seventy feet broad. There are no paving-stones, the thoroughfare being macadamized. Every cab, brougham, and cart that passed by was seized upon, and the drivers sent home on their horses. Three or four omnibuses were also appropriated; but news soon spreads, and very few of these vehicles dared afterwards to show themselves within half a mile of the Porte St. Martin. Still the barricade was not half finished. A *messagerie* was broken into, and the huge vans of the establishment dragged by the Republicans to their defences. During all this time not a soldier was to be seen. A house that was being built close by was next ransacked, the stones were dragged down, and the scaffolding carried off. "It's good for trade," said one man—a mason. "The house of the people against the house of Napoleon," said another. In less than an hour a formidable barricade, twelve feet high, had been erected.

It was not until two o'clock that the troops were called out. The Republicans had not been idle during the time allowed to them. The Mairie of the 5th *arrondissement* was besieged and taken. Upwards of forty of the National Guards were seized, and their muskets and cartridges taken from them. The drums were also carried off. In several of the streets the gun-shops were broken into. One man who had escaped, wounded, from a barricade, said, "They have plenty of arms; they are giving orders for muskets to the different men who flock in. The captain asks, 'Are you a good shot?' If you say yes, he tells you to go to such and such a place and get a musket; or else he gives you an order for a pike or a sword."

The following narrative is from an eye-witness of Thursday's events:—

"If the Boulevards, thronged by busy and animated crowds, their brilliant array of shops and *cafés* all open, be a sight to raise the wonder and delight of foreigners, anything more desolate and blank than their appearance when completely deserted by their peaceable inhabitants can hardly be imagined. Such was the picture presented to those who ventured within eyeshot of the scene on Thursday, in the afternoon, when every shop was closed, and the interior of the *cafés*, only lighted by a solitary *réverbère*, left scarcely the possibility for those who hazarded to come within their precincts to recognise each other's faces. At the mouth of every street and every passage, a picket of soldiers stayed the further progress of the people, who remained behind the barrier as spectators. But, while the open thoroughfare of the Boulevards was abandoned, the windows and balconies of every house, from top to bottom, were alive with anxious faces, eagerly watching the growing numbers and inexplicable evolutions of the military, who soon filled up the space as far as the eye could reach, from the point of the Boulevard des Italiens, at which I was situated. That something of consequence was about to be enacted, was evident to every looker-on. Circulation, which at first had been partially allowed, was at length imperatively forbidden, and the half-opened doors of the *cafés*, from which the unemployed *garçons*, and even the *cuisiniers*, had been furtively pearing, were shut by command. Unconscious of what was going to happen, however, the inhabitants remained at the windows and in the balconies, their curiosity outweighing their fears. The rapid passage to and fro of heavy artillery, directed to unknown points; the sound of distant cannon, which told an undeniable story; the *croque-morts*, as those members of the *ambulances* are called whose business it is to carry away the dead and wounded; the various [illegible] in their regimental guise; the incessant departure and return of the *guides*, all at the gallop—these and other appearances not less significative

NO. 7.—THE MONSTER BARRICADE OF THE PORTE ST. DENIS.

were insufficient to drive the people into their houses; the windows and the balconies continued to be busily occupied. At length, however, two or three successive motions of the hand from the general who was superintending the manœuvres of the troops gave warning that danger was at hand, and the greater number of the curious retired from the windows, although those in the *balcon* of the Café du Cardinal failed to take the hint; and it was not till two tremendous volleys of musketry made the Boulevards ring again, that they became aware of the peril to which they stood exposed, and scrambled through the windows of the *première étage*. Those who have been to Paris will remember that the Café du Cardinal forms the *rez de chaussée*, or ground-floor, of an enormous house, half of which faces the Boulevards and the other half the Rue de Richelieu. The remainder of the house, from the first floor upwards, belongs to M. Brandus, the most extensive music publisher in Paris, who has recently leased the premises, and constructed, perhaps, the largest and handsomest *magasin* of its kind in Europe. It was in the *balcon* which appertains to this *magasin* that I was stationed, in company with seven or eight others, watching the evolutions of the troops the magnitude and variety of which surprised everybody, in a quarter of the Boulevards from which usually little danger is anticipated in revolutionary times. To our astonishment and no small discomfort, our escape from the balcony of the music-shop of M. Brandus had only interposed the walls and windows between our persons and the threatened danger. The fire was now immediately directed against the house in

NO. 8—BARRICADE OF THE FAUBOURG ST. ANTOINE.

LOUIS NAPOLEON BONAPARTE.

FROM A PHOTOGRAPH BY KILBURN.—(SEE MEMOIR AT PAGE *683.)

which we were; and the smashing of windows speedily incited to a move up stairs, where it was imagined we should be out of immediate peril. No such thing, however. Musket shots penetrated even the bed-room of M. Brandus. The consternation was as general as the cause of the aggression was incomprehensible. In a short time, while every body was doing his best to get out of reach of the shot, the screams of the female servants in the lower department of the house announced a fresh event, and the shouts of a hundred voices outside, crying '*Ouvrez, ouvrez!*' declared the intention of the military to enter the building. No one daring to descend to obey the mandate, after a short period the door was broken open, and a number of soldiers rushed up stairs, and, demolishing every obstacle, searched each room in succession, until they approached the *quatrième étage*, where M. Brandus and his friends had repaired for safety. There information was given that a shot had been fired from the house upon the troops, and that the business of the invaders was to visit every apartment and examine the persons of all present. The scrutiny proved unavailing; but the soldiers insisting upon the fact of the shot having proceeded from the house, the whole party was forthwith arrested and taken before the General on the Boulevards. One of them happened, luckily, to be M. Sax, the well-known inventor and manufacturer of the instruments that bear his name. Being recognised by the General, the protest of M. Sax was accepted, and the party allowed to escape into the Passage de l'Opéra, but not to re-enter the house. In that agreeable *locale* we were compelled to wait, penned up like beasts of burthen, until the military had evacuated the Boulevard des Italiens, when each was allowed to find his way home as well as he might amid the bustle and confusion. It afterwards appeared that the suspected shot was attributed to the house next door to that of M. Brandus, and subsequently to the Café Anglais, which was in its turn almost demolished. It is scarcely necessary to add, that the theatres, as well as the shops, were closed on Thursday. I cannot conclude without complaining of the conduct of several of the hotel-keepers, who declared that all the railroads would suspend business, when, on the contrary, every train left and arrived at the usual hour. Sceptical about this fact, I left my luggage at the hotel, and went on foot in search of a cabriolet, to convey me to the *Chemin de fer du Nord*. After much difficulty I succeeded in finding a *coupé* on the Boulevard des Capucins, the conductor of which, for the small consideration of 15f., with the proviso that he was not to go to the hotel for my lug gage, consented to take me to the station. On our way to Calais we heard at the various *relais*, not, as had been reported, that the "provinces were marching upon Paris," but that two men had been instantly put to death for attempting to cut away the wires of the electric telegraph somewhere near St. Denis—for the truth of which report, however, I cannot pretend to vouch, although it was stated with confidence by my informant."—*Correspondent of the Times.*

The Bank was blockaded the greater part of Thursday, as by some accident the communication with the main body of troops had not been kept up. The *employés* of the Bank had no provision, and the only guard consisted of 150 men. The barricade erected in the neighbourhood had entirely cut them off. The commanding officer, however, attacked with vigour the barricade, and carried it in a very short time without any loss, except two or three men wounded. The *garçons* of the Bank aided in the operation.

The following passage from the *Constitutionnel* will give an idea of the enormous military force by which the *coup d'état* was supported:—"In the combats of the 4th, and in the military demonstration of yesterday, only one-half of the army of Paris was employed. Not a battalion from any of the neighbouring garrisons has been sent for. One may judge, from the powerful reserve at the disposal of the Government, with what vigorous repression any attempt at a new insurrection would be met. Every one has been able to convince himself of the splendid arrangements made by General Magnan, and of the rare precision with which the movements have been executed by the generals under his orders."

Additional proclamations of martial law by the Prefect of Police to the people were issued.

FRIDAY, DECEMBER 5.—TERMINATION OF THE INSURRECTION.

Tranquillity was restored this day. "The Boulevards," writes a correspondent of the *Daily News*, "present a most dismal appearance. Scarcely a window above the Rue Richelieu that is not riddled through and through with musketry; and occasionally a shattered wall or a portentous perforation, executed very often with great neatness, marks where a cannon ball has entered a house. The road is occupied with squadrons of cuirassiers, drawn up in battle array against the footpath, their formidable horse-pistols presented against the passengers, who creep along uttering scarcely a word, hardly venturing to breathe. As for any demonstrations, any cheers either for Napoleon or the Republic, they are out of the question. There is no spirit left among the passers by. As for the conquering troops, they have by no means a triumphant air. One big dragoon, who looked like a very ferocious Bacchus, I saw dismounted and chattering familiarly with a grisette; for the rest, they are all stern and all sad. They are under orders, however, and are evidently prepared to obey. Everybody, however, even in the vicinity of the Bastile, is not on revolutionary thoughts intent. I came across a large crowd of persons more or less in a state of blouse this morning on the Place de la Bastile. This must surely be a political demonstration, and might perhaps be a barricade if it was customary to make barricades in open places. Where was the guard? I approached presently with some caution, and found a most good-humoured congregation of spectators amusing themselves with the antics—not of a Socialist orator—but of a juggler!

"Passing again along the Boulevards des Italiens, I was amused by the fact that one of the houses that had suffered most from the peppering and salting of Thursday was that of a company entitled the 'Fraternelle,' and exhibiting the inscription, '*Assurance Mutuelle contre Incendie et l'Explosion.*'"

Proclamations were on Friday placarded of the Prefect of Police to the Police Commissioners, stating that the insurrection was put down.

The *Moniteur* of the morning contained a decree rendering the ballot, which is to take place on the 20th and 21st of December, secret instead of public, as was fixed by the decree of the 2d.

Other proclamations were issued, denouncing the disseminators of false news, and decreeing that every individual spreading false reports should be immediately arrested and given up to the courts-martial as an accomplice of the insurrection.

A proclamation was also issued by the Minister of the Interior, stating that the whole of France associated itself with unanimous approbation to the events just accomplished.

In the course of the afternoon the Minister of War issued to the army a proclamation of thanks.

A proclamation of General Lawoestine, posted up on Friday, betrayed, in a certain measure, the misgiving of the new Commander-in-Chief of the National Guards for not calling them out to service.

SATURDAY, DECEMBER 6, TO WEDNESDAY, DECEMBER 10.

The following were the variations of the Bourse during the past week:—

					Cents. closed at 91f. 60c.
Monday, 1st	December,	Five per	Cents.	closed at	89 70
Tuesday, 2d	..	..	..	..	91 80
Wednesday, 3d	..	..	..	..	91 30
Thursday, 4th	..	..	..	..	92 65
Friday, 5th	..	..	..	..	96
Saturday, 6th	..	..	..	..	

Count d'Argout, Governor of the Bank of France, has published a letter denying the calumnious reports of 25 millions of francs having been taken out of the Bank by order of the Government. He further declares, that up to the date of his letter (Saturday, the 6th) no portion whatever of that sum has been touched.

From Saturday to Wednesday public tranquillity was not disturbed. The *Moniteur* of Tuesday published a decree announcing that all individuals placed under the *surveillance* of the high police, who shall be proved to have quitted the place assigned them as their residence, may, as a measure of general safety, be transported to Cayenne or Algeria, for a *minimum* of five years, and a *maximum* of ten. The same measure shall be applied to individuals found guilty of forming part of a secret society. The prefects of the places under the *surveillance* of the high police will in future give the Government the right of fixing the place the convict shall reside in after having undergone his punishment. Paris and its suburbs are interdicted to these persons, who are bound to quit in ten days after the promulgation of the present decree.

The Bourse at Paris continues well attended. The Five per Cents on Tuesday opened at 95f. 75c., rose to 96f. 70c., and closed at 96f. 60c., for the end of the month. The Three per Cents closed at 58f. 85c.

Colonel Negre, Commandant at Havre, has declared, in an order of the day, that the Chamber of Commerce of that town has violated the constitutive law of its existence, by expressing its opinion upon the acts of the Executive. He intimates that, if the Chamber of Commerce mixes itself up with politics, he will dissolve it.

Government announced on Wednesday that the last accounts from the departments were satisfactory. In some parts, however, disturbances had occurred.

On Monday, the 8th inst., the *Moniteur* published the following proclamation of the President of the Republic to the French people:—

Frenchmen,—The disturbances are appeased. Whatever may be the decision of the people, society is saved. The first part of my task is accomplished. The appeal to the nation, for the purpose of terminating the struggles of parties, I knew would not cause any serious risk to the public tranquillity. Why should the people have risen against me? If I do not any longer possess your confidence—if your ideas are changed—there is no occasion to make precious blood flow; it will be sufficient to place an adverse vote in the urn. I shall always respect the decision of the people. But as long as the nation shall not have spoken, I shall not recede before any effort, before any sacrifice, to defeat the attempts of the factious. That task is, besides, made easy to me. On the one hand, it has been seen how foolish it is to struggle against an army united by the bonds of discipline, and animated by the sentiment of military honour, and by devotion to the mother country. On the other hand, the calm attitude of the people of Paris, the reprobation with which they condemned the insurrection, have testified with sufficient clearness for whom the capital pronounced itself. In the populous quarters in which insurrection formerly recruited itself so quickly among *ouvriers*, docile with respect to such matters, anarchy, on this occasion, was able to find nothing but repugnance for these detestable excitations. I thanks be rendered to the intelligent and patriotic population of Paris! Let it persuade itself more and more that my ambition is to assure the repose and prosperity of France. Let it continue to lend its aid to the authorities, and the country will be able soon to accomplish, in tranquillity, the solemn act which must inaugurate a new era for the Republic.

Done at the Palace of the Elysée, the 8th Dec., 1851,

LOUIS NAPOLEON BONAPARTE.

The fifth legion of the National Guards had been dissolved, on account of many of them having posted notices over their doors that arms would be given up to the insurgents, in order to save their houses.

Arrests from Saturday to the 10th inst. continued without intermission. The law courts were reopened on the 6th.

The correspondent of the *Morning Herald* writes on Sunday evening:—

I alluded in my letter of this morning to a statement of the *Patrie*, that two London newspapers had been interdicted, and their correspondents ordered to leave. As yet nothing has taken place to confirm this piece of intelligence; but a circumstance has occurred which is probably not unconnected with the rumour in question. The London papers, both morning and evening, have been detained for examination. They are, in fact, submitted *à la censure* without exception. The aspect of Galignani's celebrated reading-room would at this moment furnish a capital cut for *Punch*, or the more sober but not wiser ILLUSTRATED LONDON NEWS. On the French table there are the *Moniteur*, the *Constitutionnel*, and the *Patrie*, Government papers all. The *Univers*, rejoicing in the *exeat* to M. de Montalembert of the Pantheon, from whose walls, *par parenthèse*, are to be scraped the names of the heroes of 1830: then there is the *Gazette des Tribunaux*, with its harmless accounts of trials of pickpockets, and a few country papers. The *Débats*, *Assemblée Nationale*, and *Pays* appear for form's sake, but they contain nothing but stale accounts from Government papers of the night before. Thus all the Paris journals contain the same thing. It is *toujours perdrix*. On the English table there is a great blank space waiting for the English papers of yesterday, and blanker faces looking on from breakfast to now dinner time.

The following is an extract from a letter from Paris of the 8th in the *Times* on Wednesday:—

After I despatched my packet last evening, a friend called who ought to be well informed, and assured me that a list of suspected persons has been made, which included all the English in Paris who are supposed to have any engagement in connexion with the press and especially with the newspapers, and that a person who saw that list affirmed that *my name is on it*. It is said to be decided to order any one to quit France who is *suspected* of writing articles or letters hostile to the Government. Another friend called last evening, who is the chief judge of one of the high tribunals, and also a member of the *soi-disant* "Consultative Council," to whom I mentioned what I heard about the *suspected list*, but did not allude to my own name being on it. He replied that he had not any knowledge of such a list, but that in the present state of things it was very probable, and that he conceived such a measure to be dictated by motives of wise precaution and prudence; that it gives France trouble enough to manage her own affairs, without being embarrassed by the meddling of foreign journals. As I think there is a danger even in sending letters through the *bureau* of your correspondent, and as letters addressed to the *Times* (not proceeding from the usual correspondent) would (as I am assured) be opened at the Post-office, I think it best to enclose this to a friend, who will forward it. We are now literally living under the reign of terror. Not one word that appears in the French journals can be relied on; indeed, it may be in general taken to be false.

KILLED AND WOUNDED IN THE INSURRECTION.

The following article, signed "Communiqué," appears in the *Moniteur*:—"We affirm that the troops have suffered but little in the repeated engagements which have taken place.

Among the killed is found the name of Lieutenant-Colonel Loubeau, of the 72d Regiment of the Line. Colonel Quilico, of the same regiment, received a musket ball in the fleshy part of the thigh.

A barricade constructed in the Rue Montorgueil was taken by the troops. Three soldiers were killed; the others rushed on, killed eight insurgents, and shot fourteen prisoners. M. Gaston, who was a member of the Constituent Assembly, was, it appears, amongst the insurgents of the Boulevard St. Martin. His dead body was recognised on Sunday morning.

A number of prisoners who made an attempt to escape from their escort on Thursday evening were shot. A prisoner who attempted to escape from the Conciergerie was also shot.

Interments of persons killed in the insurrection were taking place in various quarters. A gentleman named Du Barque, a Conservative, killed by accident on the Boulevard Poissonnière, while standing at his window, was buried on Saturday morning in the church of Bonne Nouvelle. His political friends wished to profit by the occasion to make a pacific manifestation by attending the funeral in considerable numbers. The police, being informed of their intention, ordered the funeral for eight o'clock instead of twelve, and it consequently went off without any incidents.

"I think it right," says the *Times* correspondent, "to warn you against the exaggerated rumours that will no doubt reach England of barbarities on the part of the troops. There is no doubt that deplorable accidents occurred, in which many innocent and inoffensive persons perished. I have already recorded some of them. But the fault was not with the army. An order had previously been posted up in all Paris, and published in the papers, warning all idle spectators from the streets, with the double object of leaving the troops and the 'insurgents' alone to their deadly combat, and also for the prevention of such calamities as those deplored. Independently of those shot down on the barricades before they were taken, there were many captured with arms in their hands when their defences were won; and many, yet not all, of these men were shown little mercy."

Dr. Hoffe, an English dentist, residing at the Cité Vindé, was among the persons killed on the Boulevards on Thursday, who were mere spectators of the operations. His body was said to be pierced with twelve balls.

M. Madier de Montjau's wounds are said to be going on well. The representatives MM. Etienne Chegaray and Talhouet are also much better. They received their wounds on the 2d December, at the moment when the representatives quitted the house of M. Daru to enter the Assembly. A battalion of Vincennes Riflemen charged upon the representatives who endeavoured to force open the doors of the Assembly, and wounded some of them with their bayonets. In attempting to enter the Assembly by the side door in the Rue de Bourgogne, M. de Kedrel narrowly escaped a bayonet thrust. Admiral Lainé gallantly laid hold of the musket which was directed against M. Kedrel. In thus protecting his brother representative, the admiral's arm was caught in shutting the door, and it was some time before his friends could release him.

The firing which took place at a late hour on Thursday night was not, as was supposed, a renewal of hostilities, but a still more melancholy act. It was the noise of the musketry at the execution of a number of unfortunate men who were taken prisoners and shot at the Champ de Mars.

M. Baudin, the representative, was buried on Friday. The precautions of the Government prevented any disturbance at his funeral.

M. Peter Pariss, the well-known apothecary of 26, Place Vendôme, was proceeding to an establishment which he possessed in the Faubourg St. Denis, and had reached the corner of Rue Rougemont, when the firing took place on the Boulevards on Tuesday. He was desperately wounded in two places, and died three hours afterwards. A professional gentleman who went to a temporary hospital established in the Cité Bergère, in the hope of finding M. Peter Pariss alive, counted thirty-two dead bodies in the place, besides a much larger number of wounded. Several evidently belonged to the upper classes of society, but, with the exception of M. Pariss, he did not recognise any of them.

To give any idea of the killed on one side or the other, would be difficult. The loss of the insurgents was said to be about 800. Many dead bodies were left in the streets. They were next morning seen in many places in the Rue Montmartre, the Faubourg Poissonnière, the Rue Trevise, and other adjacent streets. The slaughter was also great at the Porte St. Michel, near the Hôtel Dieu.

The *Patrie* gives the following account of the death of M. Dussoubs, the representative of the Haute Vienne, who was shot at the barricade in the Rue Neuve St. Eustace on Thursday:—M. Dussoubs was seen from an early hour recruiting adherents in the Rues St. Denis and St. Martin. He carried a red flag in his hand. When the troops arrived at the barricade that he defended, M. Dussoubs marched up to the officer in command, protested against the violation of the Constitution, and cried "*Vive la République!*" The officer called upon him to retire. "But I am a representative of the people," said M. Dussoubs; and then waving his red flag, he cried with all the force of his lungs, "*Vive la République démocratique! Down with tyrants!*" At the same time he rushed to place himself at the head of his barricade, and immediately afterwards fell.

During the affair which took place in the Rue de Cléry, on Friday, several persons totally unconnected with the "insurrection" lost their lives, in consequence of a butcher's boy having cried out, "*Vive la République! A bas Napoléon!*" as a detachment of lancers and infantry were passing. The infantry fired and the lancers charged. The boy escaped unhurt, but several persons standing at their shop doors were wounded. A wholesale cotton-merchant, who went up to a garret to see what was passing, was shot through the head. Another, a wealthy merchant, who was in the act of giving orders to his *concierge* to shut the gates, was wounded by a lancer, who singly pursued the mob into a courtyard. Four National Guards were shot dead by the Chasseurs de Vincennes.

On Sunday morning General Magnan, the Commander-in-Chief of the garrison of Paris, visited the military hospital of the Val de Grace. The general entered the different wards, and spoke in the kindest manner to the wounded men, promising them the notice and protection of the President of the Republic. Before he left the hospital he thanked the medical men attached to the establishment for their attention to the men under their care. From the Val de Grace the general proceeded to the Hôtel Dieu, and afterwards to the other hospitals and ambulances where wounded soldiers were lying.

Two hundred and ten of the *ex-gardiens de nuit*, who are known to be devotad to Ledru Rollin and Caussidière, have been arrested and are to be tried. One of these guardians, who was arrested during the fighting the other day for threatening some sentries, was found to have two poignards and some cartridges upon him. He resisted the arrest, and, when overpowered, continued to cry out against the agents of the Government, whereupon, upon the order of the officer commanding the guardhouse to which he was taken, he was shot in the Rue de Jerusalem.

M. Reims, of the *Ordre*, an eminent journalist of Orleans politics, was among the killed on the Boulevard Montmartre in the affair of Thursday. He was a warm supporter of MM. Thiers and Changarnier. M. Reims was formerly editor of the *Courrier Français*, and was at one time secretary to the Northern Railway.

The *Constitutionnel* of Monday states the loss of the army to be:—Killed, 1 officer and 15 soldiers; wounded, 3 officers and 104 soldiers.

During the firing of the troops on Thursday an inoffensive Frenchman was killed in a room at 19, Boulevard Montmartre. Colonel Stuart and family, of New York, narrowly escaped from the balls that entered their apartments in the same house. A captain of the staff, sent out with orders, was shot dead on Thursday by a young man, aged sixteen, in the Rue de Paradis Poissonnière.

The following is an extract from a surgeon's letter, dated Paris, December 5:—

I narrowly escaped being shot in the street, as many were; and having entered my hotel on the Boulevards, which were filled with thousands of troops, a sudden discharge of musketry took place along the whole line—volley after volley; not a house, scarcely a window, was spared, whether containing combatants or not. Before I could rush from my room, musket balls entered by the window from which I had retreated but a step or two. In another room was a Russian family, the brother, a fine young man, and his sister were both struck by balls while hastening from the room with their mother. The lady had her hand shattered, the brother was shot in the chest. I have spent quite a more intense pleasure in my profession than in being able to give immediate assistance to these poor persons, for which, otherwise, they must have waited many hours. They displayed a beautiful and generous devotion, each begging me to attend first to the other. There is a house opposite our's that is breached by cannon-shot fired into it at a few feet distance. The loss of life, whether will never be published, must have been awful. With characteristic peculiarity, after the troops had performed their unworthy task, the military surgeons, at night, went from house to house to see after the wounded. One of them told me he had just seen sixty dead and eighty wounded in our immediate neighbourhood. The greater part of the injured are non-combatants, suddenly surprised in the streets, or struck down, unsuspecting danger, in their own homes. Such scenes—fit enough, perhaps, for the storming of an Arab town—with an indiscriminate attack on unresisting houses, were never before known, even in Paris

The following is an extract from a private letter, dated Paris, Dec. 8, 1851:—

One of our female servants is married to a non-commissioned officer in one of the regiments of civic troops which are employed more especially in the arrests and executions now going on. We learned from her that her husband was engaged with his company the entire day yesterday in making arrests. He does not know how many hundred were lodged by his company in the prisons. He says they are ordered out to the Champs de Mars to-day to shoot a number—reported to be 150—of those condemned by the court-martial.

From the language used by the wife, we infer that the soldiers, at least of that regiment, now thinking their enormous extra pay, are thoroughly disgusted with their work. All the usual vocabulary of abusive epithets is showered on the President.

The correspondent of the *Morning Herald* writes on Monday evening thus:—

If upwards of 100 soldiers have been badly wounded in consequence of the insurrents having come to close quarters, showing the desperate character of the fight made by the latter, the number killed in the streets and on the barricades must have been immense. I mentioned to you the terrific appearance of the Rue Bergère, I should have said the Cité Bergère, which is a sort of courtway near it, enclosed at both ends by two gates, the one in the Faubourg Montmartre, the other in the street in which is the famous Conservatoire, in which Blanqui held his dangerous club during the early days of 1848. Failing in their efforts to seize a public building, the members of the secret societies attempted to convert this long court into a citadel, and those engaged in its defence fell, it is supposed, to a man. When it is considered that besides the numbers killed here—killed at the Porte St. Denis, and on the Boulevard between the Porte St. Denis and the Porte St. Martin killed on various other barricades, killed in the house from which they fired—and executed subsequently according to the laws of war, the whole presents a fearful total. It is related to me that the soldiers fired upon from a club or circle on the Boulevard Bonne Nouvelle entered the place and put all found therein to death. The soldiers who did so had been greatly excited by previous fighting, in which they had lost an officer, and had several men severely wounded. It is told, too, that several young urchins having, as usual, mingled in the fray, the soldiers with wonderful tact, considering such a moment, flogged them with straps and let them off. There is an instance given of a woman having been killed, but she was in the act of beating a wounded soldier to death.

SUMMARY OF THE EVENTS OF THE LAST WEEK.

On Monday the French Constitution of 1848 was in full force. On Tuesday it had ceased to exist by the *sic volo, sic jubeo*, of the President of the Republic, who proposed to the army and people to re-elect him for ten years, and to accept such a Constitution as he would frame. On Wednesday some of the members of the Mountain got up an insurrection, but the mass of the working classes did not rise. The Faubourgs St. Antoine, Montmartre, La Chapelle, Belleville, Charette, Montreuil, Montrouge, St. Maude, St. Muerer, St. Denis, Chatillon, Boulogne-sur-Seine, St. Cloud, &c., did little or nothing for the movement. The withdrawal of the first decree relative to the voting, and the re-establishment of the vote by ballot, unquestionably did much to prevent the spread of the insurrection on Thursday. In this instance the President was compelled to yield to the force of public opinion. Had he not made this concession, he would not now be at the head of a triumphant military dictatorship.

The locality of the severest fighting was quite changed during the *émeutes* of Wednesday and Thursday. The Boulevard des Italiens had hitherto been spared the spectacle of a street struggle, but it shared on this occasion the fate of the Boulevards Montmartre, Poissonnière, and Bonne Nouvelle, and at these points the soldiers suffered most, and the insurrectionists fell in greater number than in any other quarter. The macadamisation of the streets added greatly to the difficulty of constructing solid barricades.

The numerous arrests of representatives have been succeeded by as rapid releases. M. Thiers' opportunities for studying the philosophy of history in prison were very short. The President is evidently not a malicious man, or he might have seized the opportunity to clear a score with the historian of the empire, in regard to his incarceration at Ham. It is understood that the African generals will soon be, if not now, at liberty. The President has appointed a committee to make indemnities to parties innocently injured during the *émeutes*, so that the citizen National Guards, who neither turned out, nor were called out, are mollified for so no rough usage. The want of arms and ammunition has been pathetically lamented by the "Red" partisans in this country, but it is generally understood that the most shrewd men of this party were quite opposed to any attempt at rising, feeling conscious that the army was with Louis Napoleon. He has beaten the National Legislative Assembly, but the people, on the other hand, have gained the vote by ballot and universal suffrage. Who will be the ultimate winner, must be decided by the electors of December the 20th. The liberated representatives will certainly not be idle, whether in Paris or in the departments; but, under military law, it is not so easy to convene a meeting as at our Exeter Hall or London Tavern. Journalism is extinct; nay, to a certain extent, the very correspondents of the London papers are gagged, for they write under the threat of expulsion from the country. Not an article can appear in a Paris paper before it has been approved of at the Ministry of the Interior. The *Cabinet Noir* at the Post-office is in full force; suspicious letters are opened, read, and withheld, and obnoxious foreign journals stopped. In the meanwhile, a *bonne bouche* is extended to the troops who have just rendered such important services, by their pay and promotion being put on the war footing. In 1830 journalism made the revolution, and beat the army. In 1851 the army has made the revolution, and beaten journalism. M. Thiers was a hero in the days of July, 1830; but now, in the days of December, 1851, he is laughed at in Paris as an "imbecile." The shade of Charles X. would smile grimly at this turn in the wheel of fortune; and what would Louis Philippe now say to his prisoner of Strasbourg and Ham?

What is the real condition of the departments at this crisis it is impossible to guess. There have evidently been riots and commotions in many towns, despite of the assurances of the French telegraph that order reigns everywhere, and that the acts of the President have been received with the most lively sympathy. Where martial law reigns bayonets supersede pens—despotism crushes opinions. The *Jacquerie* in the valley of the Loire may be turned to account by the enraged representatives. The many changes in the prefectures look as if the Executive at Paris was ill at ease. We read constantly in the despatches that "the most complete measures are adopted to secure tranquility;" "that some demagogues are moving about;" "that there is much emotion, but no agitation;" "considerable crowds, but no riots;" large groups who are not anarchists;" "arrests of Socialists;" "useless endeavours of the Red leaders to agitate the workmen," &c.

It has been stated that the President of the Republic holds proofs of the intentions of his opponents in the Assembly to send him to Vincennes. The sooner such evidence is forthcoming the better disposed will be public opinion in this country to palliate, if not to excuse, the recent *coup d'état*. England, it is true, has no desire to interfere with any form of government which France may choose to adopt—no, not even if it be a political usurpation and a military despotism. The Tory Government of 1830 recognised the Royalty of the barricades—an act which the French Legitimists have never forgiven. The Whig Cabinet of 1848 acknowledged at once the Republic—an act at which the Orleanists were very wroth. Lord Normanby, it is given out, has lost no time in assuring the army of Paris—we beg pardon, the President's Government—that events would make no change in the relations between the respective countries. But the principles of truth are eternal, and every right-thinking mind in the nation shrinks with horror from perjury, treason, and violence are constitutional rule in civilised countries. The events of the last week are of another age and another hemisphere. That Soulouque should make himself emperor amongst the blacks is easily comprehended, because his country is Hayti; and that a parody of this event may be essayed in the centre of civilisation, who will now affect to disbelieve? Unless the Imperial diadem has been dazzling the eyes of the President of the Republic, his acts have been those of a madman. We have shown in our summary of his advent to Presidential honour that his game was sure if he only aimed at re-election. Now his fight is only beginning. His success so far has been by a *coup-de-main*, or rather a *gust-à-pens*. He did that in the night what Cromwell and the Napoleons did in the day. Louis Napoleon gave not his Parliamentary opponents a chance; every man he feared was manacled before the Prætorian bands occupied the capital according to the rules of war. And when the soldiers fired on all groups that cried "*Vive la République!*" the key to the real situation is found. Cabals, and even conspiracies of Chambers, do not justify Presidents of Republics in using brute force, and no amount of success can alter the morality of the *coup d'état*. He has now against him the Monarchists of both branches of the Bourbons, the *bourgeoisie*, the moderate Republicans, the Reds, and the Socialists. He has on his side, as far as we know at present, the army and the peasantry, looking only to the *prestige* of the name of Bonaparte. Here are fearful elements of discord and disorder for France; and the vote of the 20th of December, be it what it may, will be no solution of the difficulties. Louis Napoleon has looked to the *parti-prêtre*, since he restored the Pope, in conjunction with Austria: but the clergy exercises little influence in France; and he must find more powerful allies in journalism than the *Univers*, to sustain the *Patrie* and the *Constitutionnel*. He has had two great checks—first, in the indignant refusal of almost every eminent person to be enrolled in the list of the Consultative Council; and, secondly, in having been forced to restore the vote by ballot. The Stock Exchange invariably sides with the uppermost party of the day, and the rise in the funds is, therefore, of no significance.

We are assured in some quarters that there can be no fears of a military despotism in France. At all events, the present state of things is as close an imitation of martial law as we can find in history; and, if it be permanently established in France, we may have to look to the safety of our own coast. Ravenous eagles are hovering about us, and the lion must not sleep. Is the prophecy of Napoleon, on the rock of St. Helena, as to the war of Cossack and Republican, so far distant?

THE ILLUSTRATIONS.

Nos. 1 and 2. *Taking the Wounded to the Ambulance, and Waggon for the Wounded.*—At periods of insurrection, temporary hospitals, or *ambulances*, are established at the houses of the apothecaries and chemists; the wounded are carried on waggons and litters, and the assistance of the Sisters of Charity is speedily tendered to them.

No. 3. *Mairie of the 10th Arrondissement, where the Representatives were Arrested.* The window from which M. Berryer and other Deputies addressed the people is shown in the Engraving; after the deposition of the President had been agreed upon, the representatives were arrested with great roughness, and conveyed in hackney coaches, cabs, &c., to the barracks at the Quai d'Orsay.

No. 4 *General Aspect of the First Erected Barricade.*—The insurgents erected this street defence at the corner of the Rue des Grandes Audriettes and Rue du Temple. A *marchand de vin* is on the left; on the right is written "*Rousseau, Pharmacien*;" and further on there is an open space; on the right is an optician's shop, with a pair of spectacles as a sign, and a lot of illegible placards. The barricade was made of carts, &c., the *pave* having been removed; the foreground is a pool of water. High old-fashioned houses at the end of the street lead to the quays.

No. 5. *Boulevard Montmartre, showing the Rue Montmartre.*—The immensely elevated houses of this quarter display marks of the conflict. The glass windows are pierced in all directions; the blinds are wide open, some of the sides of the *persiennes* being nearly shot off. Cavalry line the streets; some of the cuirassiers are dismounted, and are in groups near their horses. A great crowd of men in blouses is coming down the Boulevard; some wounded and dead are carried by, in the foreground, on litters borne by their comrades. "Nothing could be more striking and picturesque," writes our Artist, "than this scene—the space being so great, and the groups of soldiery and people so varied in costume and colour."

No. 6. *Barricade of Boulevard Bonne Nouvelle.*—A great deal of perspective is shown in the Engraving: the near portion goes up hill, then down, and up again into the distance. Several artillery waggons with hay, piled up very high, are coming along the street. As usual, cavalry is seen in force. The house on the right was completely riddled and smashed in all directions with shot, and the entire *façade* was defaced—shutters falling and hanging. The well-known columns on which theatrical and other bills were stuck were pulled down for barricades, or crumbled into bits by the cannon.

No. 7. *The Monstre Barricade of the Porte St. Denis, at Six in the Morning of Friday.*—The barricade was taken by assault by the 72d regiment of the line, the President's pet corps, with detachments of lancers at their front and on their flanks, supported in the rear by two battalions of Gendarmerie Mobile on foot, and two regiments of cuirassiers and dragoons. The Porte St. Denis had been recently whitewashed. Our Engraving represents the people looking at the ruins of the barricade; the artillery are seen at the foot of the monument with pointed cannon. The soldiers are seen bivouacking round fires, and crowds in every costume are gathering. On the left is the white stone house from which the stones were used for the barricade, and an immense cart-wheel is partially seen.

No. 8. *Barricade of the Faubourg St. Antoine. Death of M. Baudin, the Representative, and M. Madier de Montjau Wounded.*—This barricade was formed at the corner of the Rue St. Marguerite, by about 300 individuals, with MM. Baudin, Madier de Montjau, and Requiros at their head, at about noon on Wednesday, the 3d. Vehicles were upset and stones and other materials raised into a barricade, which was attacked by the Colonel of the 19th Light Infantry, but the troops did not fire until the insurgents discharged their muskets and a soldier fell mortally wounded. The infantry fired a volley in return, and M. Baudin was killed, and Madier de Montjau wounded. The insurgents then fled in all directions. M. Madier de Montjau is in custody, but is recovering from his wound.

No. 9. *Reading the Proclamations.*—Various groups of the kind depicted in our Engraving were seen in every direction—the sullen and horrid-looking men in caps and blouses, the prominency of whose jaws and cheekbones develop the unmistakeable physiognomy of the professional *émeutier*. The soldiers—with their little caps, wide trousers, and Arab cloaks—looked on unconcernedly at the proclamations.

No. 10. *Interior of the Prison of Mazas.*—The Maison d'Arrêt, Mazas, where Thiers and other representatives were taken after their arrest, is entirely a new prison, on the Pennsylvania Penitentiary principle. It is situated on the Boulevard Mazas, Faubourg St. Antoine, just opposite the Lyons Railway station. It consists of six large naves, each three stories high, and containing about 180 cells each. Mazas was built in place of the old prison, La Force, which is coming down. Mazas is called La Nouvelle Force by the population. There are, generally, upwards of 1000 prisoners therein, the majority committed for trial. After sentence these are removed to other prisons. The internal arrangements of Mazas are of a superior order. There is a plentiful supply of water on every floor, and the cells are warmed by hot air, and lighted with gas. The bedding of the prisoners is good, and the allowance of food sufficient, if not abundant. At nine o'clock the gas is turned off. Government inspectors visit the prison to ask if there be any complaints. The Faucher Ministry, in their *grand coup* against the foreign residents in Paris, took about 700 into custody, on the pretext of a conspiracy, who were sent chiefly to Mazas.

No. 11. *Barricade of the Rue de Rambuteau and Rue Beaubourg.*—At the corner is a workshop with four balconies, the windows all smashed with bullets, and occupied by soldiers when this drawing was made by our Artist last Saturday. The sentinels, with bayonets fixed, are at the door. The remains of the barricade, broken wheels, &c., are seen in the foreground, with soldiers bivouacking around a wood fire, and their muskets piled. Groups in caps and blouses are gazing at the scene. Some of the infantry have on their Arab cloaks.

No. 12. *Aspect of the Boulevards.*—All the cavalry, cuirassiers, and carabineers are drawn up in squadrons in battle array, with piquets in advance. Four cuirassiers are posted, pistol in hand, looking towards the street; they have their naked swords attached to the wrist. The commanding officers, dismounted, are seen around the fire, and the only persons allowed to pass were the venders of *La Patrie*, the Napoleon organ.

No. 13 *Clearing the Streets.*—Here is depicted the mode of clearing the streets, and of ordering the inhabitants of the houses not to look out of window, on pain of being shot. The bugle is heard in advance of the skirmishers. The commanding officer, sword and pistol in hand, is calling out, "Open the blinds" (the Venetian blinds or *persiennes* of the windows of Parisian houses, through which insurgents fire). "Shut your windows, or I will fire!" The skirmishers are thrown out, as if on the field of battle; the mob is running away, and the troops *en masse* are in the background.

No. 14. *La Conciergerie.—A Bivouac of the Municipal Guard (Foot).*—This passes at the grand flight of steps of the court of the Palais de Justice. On each side of the steps are the arcades leading to the Conciergerie and Tribunal of Police. The Conciergerie is a prison of great historical interest; it is under the Palais de Justice. Louis XVI; the Princess Elizabeth, the King's sister; Marie Antoinette, Robespierre Lavalette; Louvel, the assassin of the Duke de Berry; Malesherbes, Condorcet, Lavoisier, &c., have been in turn the occupants of the dungeons. The Municipal Guards are round an immense fire, the smoke of which partially obscures the grand staircase. The soldiers are waiting for orders, and the iron gate is half open ng to receive a prisoner.

No. 15. *Bivouac of Troops at the Hôtel de Ville.* The division under General Levasseur defended this point. How different the aspect presented by our Engraving to that displayed during the *fêtes* in August last, in honour of the English visitors! (*See front page of Number.*)

POLITICAL CAREER OF LOUIS BONAPARTE.

Whilst these extraordinary and exciting events are enacting in France, and their issue is yet uncertain, one naturally pauses to inquire into the antecedents of the individual who has, of his own will, thrust himself into so much questionable notoriety, and the motives by which he is actuated. Upon the latter point we apprehend there is little room to doubt. The establishment of "law and order," about which the ex-President so freely but so vaguely discourses, means nothing else than the establishment of the law of the sword and the order of imperial succession.

The only incident wanting to make the position of M. Louis Napoleon Bonaparte clear in the last-named particular is, that he should be the lineal representative of his family—which he is not, although he pretends that he is. Charles Louis Napoleon Bonaparte is the only surviving son of Louis, the second younger brother of Napoleon Bonaparte. Louis was King of Holland from 1806 till 1810, and afterwards retired into privacy, as Comte de St. Leu—dying in 1846. Lucien, the first in order next to Napoleon, and consequently Louis senior, died in 1840, leaving a son, the present Prince of Canino, who is really the head of the family. Moreover, this Prince is united in matrimony to Zenaïde, the daughter and only descendant of Joseph Bonaparte, Napoleon's elder brother, and the head of the family; consequently, his son Joseph, Prince of Musignano, born 1824, will in reality inherit the titles of the first and third branches of the Bonaparte family (counting Napoleon as the second), whilst the present occupant of the Elysées Bourbon represents the fourth. We believe that the ground upon which the latter pretends to represent the head of the family is, that Lucien was not recognised as a Prince of France until the year 1815—long after his other brothers. But this is a plea which would go for nothing in a case of succession, which is always regulated by primogeniture amongst those deriving from a common ancestor. Nevertheless, and disregarding the obvious construction of law, the hero of the late *coup d'état* has always put himself forward as the representative of the Bonapartes; inasmuch that, in 1831, upon the death of his elder brother (killed in the unavailing struggle of the Italians against the house of Austria), he adopted the signature Napoleon Louis Bonaparte, in compliance with the wish of the Emperor Napoleon, who, constantly cherishing the hope of a continuance of his dynasty, had imperatively commanded that the head of the family for the time being should always bear the name of Napoleon. And this formality, which

NO. 9.—READING THE PROCLAMATIONS.

of itself at the time seemed to be of no meaning, he followed up by some overt acts, which, though so weak in device and appliance as to end in ridicule, were doubtless intended to keep alive the pretensions of the Imperial family. The foolish affair at Strasburg in 1836, and the still more stupid affair at Boulogne, when *les bottes de mon oncle* and a tame eagle were the only "properties," seemed to many rather to entitle the perpetrator to an asylum in a *maison de santé* than in a gaol; and there were many sympathisers with the prisoner of Ham, who little dreamed that there was method in his madness" after all. The hero of Strasburg and Boulogne was wiser in his generation than the men of the schools: he had a right appreciation of the weak and frivolous character of the French; he knew with what trumpery display of tinsel they were to be captivated for the time. By his recent acts he appears to entertain an equally low estimate of their moral character in other respects. In what other country would the sanctity of an oath, the commonest forms of civic liberty, and the claims of character, be so unblushingly violated and trampled under foot?

Those who wish for further details of the earlier career of the elected of 1848 we refer to the ILLUSTRATED LONDON NEWS for December 23, 1848. The memoir therein published brought his history down to the day when, after two years' exile in hospitable England—the least splendid, but also the least offensive, passage in his strange, eventful history—we find him inaugurated as President of the French Republic. Let us now take a hurried glance at the principal acts of his brief political career from the month of June, 1848, when he was elected by several departments—Charente Inférieure, the Seine, Yonne, and Moselle—as a representative; and when, though the act of proscription against the Bonaparte family was still unrepealed, the National Assembly, (June 13) recognised him in his capacity of deputy. "If the French nation impose duties upon me, I shall know how to fulfil them," was the somewhat suggestive reply of the future dictator to the President of the Assembly.

Things went on till the time arrived for the election of the President of the Republic, the issue of which astonished everybody, except those who knew the weaker points of the French character. To repeat our own expression in the memoir previously referred to, "the votes were summed up—the *name* Bonaparte acquired upwards of five million votes—the *man* Cavaignac little more than one million." And how nobly did that "man," that stern patriot, demean himself in this unlooked-for, and certainly unmerited, defeat! Having held absolute dictatorial power over the destinies of France for six months, having fought the terrible fight of order against anarchy, and re-established the confidence of the French nation in the protective power of authority, General Cavaignac prepared at once to surrender the powers with which he had been entrusted by the French nation; he even hastened the inauguration of his successor (!), apprehensive, from information which he had received, that "demonstrations calculated to provoke insurrection were meditated, both by the Socialists, and by those ultra-Napoleonists who dream of the restoration of the Empire." To quote the report of this day's proceedings:—

General Cavaignac, having ascended the tribune, said—"I have the honour of informing the National Assembly that the members of the Cabinet have just sent me their collective resignation, and I now come forward to surrender the powers with which it had invested me. You will understand better than I can express the sentiments of gratitude which the recollection of the confidence placed in me by the Assembly, and of its kindness for me, will leave in my heart."

Cavaignac thanked the Assembly for the confidence they had placed in him; they had got on together, sy, in troublous and agitated times, in comparison with which the atmosphere of that day was glorious and cheering sunshine. M. Louis Bonaparte also promised to be on as good terms with the collected representatives of the nation during his period of office.

Having mounted the tribune, the President read to him the oath of fidelity to the Constitution, to which M. Louis Napoleon replied, "*Je le jure.*" He then

NO. 11.—BARRICADE OF THE RUE DE RAMBUTEAU.

asked leave to address a few words to the Assembly. The suffrages of the nation and his personal sentiments, he said, commanded his future conduct, and imposed upon him duties which he would fulfil as a man of honour. *He would treat as enemies of the country whoever should attempt to subvert the Constitution*, and between him and the Assembly would exist the most perfect harmony of views. *He had called around him men distinguished for talent and patriotism*, who, notwithstanding the differences of their political origin, would assist him *in consolidating the new institutions of the country*. He then eulogised the becoming conduct and loyalty of which General Cavaignac had given so many and such signal proofs, and pledged himself strenuously to labour to accomplish the great mission of founding the Republic, without recurring to reactionary or utopian means; and, with the assistance of God, he trusted to achieve useful, if not great, things.

This speech was received with unanimous cries of "*Vive la République!*" and M. Louis Bonaparte, having descended the tribune, went up to the seat of General Cavaignac, and cordially shook him by the hand. The new President was then met by M. Odilon-Barrot and his friends of the Right, who escorted him out of the hall.

NO. 10.—THE PRISON OF MAZAS

It seems like a dream to read these brief but teeming sentences, and to contrast the picture they present with the reality of what has since occurred. Every promise, every vow, made upon that occasion has been

NO. 12.—ASPECT OF THE BOULEVARDS.

No. 13.—TROOPS CLEARING THE STREETS.

successively and flagrantly broken, and all, as it would now seem, with premeditated design to subvert the Constitution, by virtue of which he was placed in power. The "men distinguished for talent and patriotism," whom, in the first instance, he had called around him, he soon discovered were not the men for the work he had in hand, and which he had only a limited time to get through, and before the end of the year the Odilon-Barrot Ministry was summarily dismissed, and that system of puppet-ministration commenced, in which neither genius, experience, patriotism, nor honesty of purpose can interfere to temper or qualify the absolute will of the dictator. It is notorious that the intermeddling policy in Italy, where the arms of Republican France were brought to restore an effete ecclesiastical absolutism, was the first stroke of policy by which the President sought to ingratiate himself with the Church party, and by which he shook the confidence of the Assembly, enraged the Republicans, and rendered arduous and thankless the duties of a responsible Ministry. M. Louis Bonaparte saw the difficulty of his position, but did not hesitate to take this opportunity to free himself from the control and supervision of "men distinguished for talent and patriotism," who had still some latent hopes of "consolidating the new institutions of the country." On the 31st of October, 1849, he addressed a message to the Assembly, in which he says:—

"The good understanding between the different authorities of the State cannot be maintained unless, full of mutual confidence, they explain themselves with frankness. The French Ministry ought to be composed of men capable of great political devotedness, appreciating the necessity of a steady and sure march—of men who will not compromise the Government by their hesitation, and who never lose sight of their own responsibility and that of the President, as well in their deeds as their expressions."

And with such generalities the Assembly and the French nation were blinded, and the Ministry of Rayneval and d'Hautpoul appointed. To go through the story of successive warming-pan or "transition" Administrations would at this moment be a mere loss of time. All that they achieved towards the "consolidation" of the institutions of the country was to gag the press, and to prohibit the expression of public opinion, under any shape or form. There was but one ruling mind to be left in France!

The Church party having been propitiated and military ardour gratified by the bombardment of Rome, saussges and champagne were called in to requisition still further to test the *bonhommie* and devotedness of the army. The result was perfectly satisfactory, so far as that point went; but it cost the capital of France the services of a Changarnier, and the Treasury an extra credit to the President of two millions of francs to defray the cost of his *largesse*, although the Assembly refused the extravagant vote as a permanent allowance, for which M. Louis Bonaparte never forgave them.

Then came the ostentatious progresses through the provinces, the feastings, and the speechifying, in which "the consolidating of the new institutions of the country" was forgotten in the perpetual recurrence of a "great name," and the policy and institutions of a "great ancestor," the elements of which had in reality been scattered and destroyed in the convulsions of three successive revolutions. Can anybody with the commonest powers of perception reflect upon these proceedings, in which the brief allotted period of service of the head of the State was wasted in extravagant conviviality, and apparently meaningless verbiage, and doubt the end to which they were intended to lead? And, with conviction upon this point, can any one read without blushing—blushing for the honour of humanity—the following passage in the President's address to the Assembly, made but last winter namely, on the 12th November, 1850:—

"The uncertainty of the future," writes M. Louis Bonaparte, "excites fears on one hand, hopes on the other. Every one ought to sacrifice his particular wishes, and occupy himself only with what may conduce to the happiness of the country. If you decide that a revision of the Constitution ought to take place, a Constituent Assembly will occupy itself with the fundamental laws of the country, and will fix the attributes of the Executive power. If not, the people will again express its will in 1852. *That which now occupies me is not to know who is to govern France in* 1852; *I will employ the time which remains to me, so that the transition shall be made without any disturbance.*"

It is a remarkable fact, and one not without significance, that in this very session, namely, on the 5th Dec., 1850, the President, just entering upon his last year of office, obtained from the Assembly a vote of 40,000 additional troops, upon the ground of the "state of affairs existing in Germany."

The rest is fresh in all our memories. The Assembly, upon being appealed to in the session 1851, did not think proper to revise the Constitution so as to admit of the re-election of the President of the Republic; whereupon the President tore the Constitution to tatters, and dispersed the Assembly, imprisoning the most influential members. Let us recur to the promises of December, 1848: "*He would treat as enemies of the country whoever should attempt to subvert the Constitution.* Well: and has he not acted up consistently to his engagements? When such men as Cavaignac and Lamoricière (Cavaignac who inducted him to office, and whose hand he shook so warmly) and Changarnier are thrown into dungeons, how should "the enemies of the country" be "treated?"—where should they be found, if not in palaces and high places?

No 14.—LA CONCIERGERIE.—BIVOUAC OF TROOPS.

THE INSTITUTE OF FRANCE AND THE GREAT EXHIBITION.

At an early stage of the Great Exhibition, the Institute of France deputed two of its members, the eminent political economists, MM. Michal Chevalier and A. Blanqui, to examine and report upon that great undertaking. The following is a digest of the report drawn up by M. Blanqui

PART I.

The task has devolved upon us to report to the Institute the peculiar features of that of the nations summoned to the Great Exhibition, to point out the industrial features which distinguish them, and to set forth the practical consequences of this great event. Never was a finer opportunity offered to philosophic minds for the study of the phenomena of production and the distribution of wealth throughout the world. Having for its avowed object the promotion of the free circulation of raw materials and manufactured products throughout the world, the means employed for this end, in a genuine comparison of the assembled products of the whole human race, were certainly the most efficacious that could be devised.

The arrangement of the Exhibition and the distribution of the products left little to be desired. The most curious of all is decidedly the Building itself, composed, in reality, of three or four principal portions repeated many thousands of times, in which the light penetrates in waves through a glazed enclosure, whence it has obtained the name of the Crystal Palace. The English nation has allotted to itself one-half of the space contained in this magnificent transparent two-decked vessel; the other half has been distributed among all the other nations, in proportion to the probable extent of their contributions, and the different rank nations are thus fraternally seated one beside another, in such a manner that they can all be visited without fatigue and almost without interruption by the aid of polyglot catalogues of moderate price

One important matter alone was wanting in the Catalogues, viz. the prices of the objects exhibited, which would have been of great assistance to us in responding to the wishes of the Institute. But in this case, as in many others, the mercantile spirit has prevailed, and it was only after many discussions that this last veil of commercial routine and selfishness was maintained. We cannot refrain from noting, that the result of this has been to leave a gap in the instruction that might to have been derived from the Universal Exhibition. Publicity of prices is *often* an incitement to the purchaser, but it is always the surest element of information and then unprofitable visits to special knowledge. Thus, for example, the low price of an article is sufficient to prove that it has been manufactured by a different process from the usual one, or from different materials from those commonly employed.

The first fact which has struck us, and of which the evidence has appeared to us to be every day more clearly demonstrated, is, that in the great contest opened in the Crystal Palace the only two principal champions are France and England. All the other and initial nations, in spite of their special merits, have secured only to be present as witnesses in this memorable tourney. China, Persia, Turkey, Spain, and Italy only represent the past. The United States, Russia, Australia, and Van Diemen's Land represent the future. Prussia, Belgium, Austria, Switzerland, Spain, Italy, gravitate more or less in the orbits of France and England, between these great leading centres the progress of the arts every day developed there with amazing fruitfulness.

Such is the general aspect of the Universal Exhibition, when once during only the distinctive characteristics of the different nationalities; but, on casting more profound glances into the immense panorama, new horizons are opened to the view, predictions but little known are discovered, and raw materials destined, it may be, to exercise an influence equal to that of cotton. Thus Australia displays wools of prodigious quantity in nubium as quantity, and at so low a price that they can be sold at less than 75 centimes per French pound, delivered in bond, after having made the voyage from the antipodes. The number of the sheep increases upon the other side of the sea, in a rapidity and an economy which are truly marvellous. It is a real *wool mine*, which England has added to her coal and iron mines

Another species of textile materials appears again to be opening for her in the heart of her Indian possessions, and promises to become upon her, under the as yet but little known name of *jute*, a species of hemp, which unites the properties of flax and cotton, and which, if we may trust to its fine and delicate specimens of some Scottish manufacturers, would be destined to super-add those substances. At the same time the richest collection of oleaginous seeds comes from the other side of the sea, to compete with the olive and poppy of Europe; and we have counted more than a thousand specimens of new cabinet woods, natives of Canada, Australia, and India, which already show a tendency to supplant mahogany and ebony.

The productions of British India are highly interesting to the technological student, as well as to the philosopher and the economist. There is truly an Indian art, which, as does French art, dictates the mode, and, more than that, an originality which is often elegant and of good taste, such as that of the shawls, which have become the models of ours, and that of the numerous tissues exhibited by the East India Company. The weapons, the pottery, even the furniture, do not in any way resemble those of the Chinese, which are fantastical and frequently monstrous, and which it is necessary to go and guard ourselves from admiring with the Oriental style. But Indian art is a thing of days of the past. The Indian of the present day are but servile imitators of their predecessors.

The Chinese even more so. Their collection, imperfect though it is, bears witness to the wonderful instinct of this race for the most delicate and difficult manual work. But their porcelain, their works in lacquer and ivory, known from time immemorial, are made at the present day exactly as they have been from time and remote ages. We have before us, in fact, the very same objects, and the East—but even immobility. There is to be found in these countries the same weakness or tinsel, the same richness of material and poorness of workmanship, but the taste and the art are absolutely the same as that of origin. Thus Arabian they bear the impress of the West. We have, however, been happy to discover two remarkable facts in this region so long unfavoured: they are the revival of industry, properly so called, in Turkey, and that of the exhibition of the arts in Egypt. The Turkish collection alone comprises more than 3300 articles belonging to three natural kingdoms, and arranged with much order and method

A this curious cluster of the supreme natures of the past more only a purely historical interest in the presence of the decisive instruction furnished by the contemplation of the actual state of production in the great manufacturing countries of Europe. It is there in reality that the Exhibition must be studied in an economic point of view, in order properly to appreciate its general effect The principal struggle between these countries is carried on in certain great branches of industry, which are worked by the aid of immense capital, and which give employment to thousands of hands, such as the cotton, woollen, linen, and silk manufactures, the metal factories, the construction of machinery, the ceramic art, leather manufactures, &c; but a careful examination of all the chief branches of human labour has shown how much the smaller branches of trade try prevailed over the greater, and how necessary it was to take account of these in order to show exactly the productive power of each nation.

Thus the manufacturing genius of England and France is strikingly manifested in the great mechanical features of the two countries; their private industrial character, if I may so term it, appears only in their smaller manufactures. Cotton, flax, and wool are woven by the same machines and by the same processes in both countries The most skilful judge would find it difficult to distinguish a linen or cotton cloth woven by machinery on the other side of the Channel from a similar one on the same frames made on this side with French yarn. It is the same with the woollen cloths from Leeds, which are often as beautiful as those of Elbeuf or Louviers.

But, when we quit the domain of the mechanical arts to enter that of taste, the differences and the genius peculiar to each nation immediately begin to be felt. The Universal Exhibition has brought to light the fact to the honour of France, and has furnished us with new arguments in favour of commercial freedom. It has been demonstrated by the most conclusive evidence, by the comparison of the different products, that the total value created by the smaller branches of industry exceeds that created by the large ones, and that the smaller branches of industry are those which give employment to a greater number of hands, develop a greater amount of intelligence, and produce more comforts, with fewer social complications, that the process of the manufacture organized under the dominion of machinery and division of labour, pushed to its extreme point

It is in the former branches of production so faithful and so varied, that France has shone with an unrivalled glory in the general assembly of civilized nations, and has established her supremacy in an incontestable manner. The French exhibition has held pre-eminence by its taste, without any exception in any part of the world, as revealed as to contain, but we will not say that it has acquired by the statesmen of our country, that of knowing that design and form, with no other exp nditure than that of the imagination, greatly enhance the values of the articles to which they are applied.

This is, in our opinion, the chief fact of the Great Exhibition of the present year. Is it not, therefore, evident, that the most simple means of insuring the success of the French manufacturer is to encourage and develop in him the qualities of his production, would be to emancipate him from all the artificial charges with which upon his labour, and especially from the duties on the raw material? Is it not impossible to think that he would be will regret an incontestable superiority over all his rivals? But what is the case under our present system? For one single branch of metallic manufacture, that of iron, for example, which is carried on on a scale, and which is subjected by duties of almost cent. per cent., we reckon thousands of trades paralysed in their development, and often in their mere exercise, by the artificial dearness of iron and steel. Whoever has seen the truly splendid exercise of the industrial works of Sheffield, composed of nearly a thousand different articles, from the finest penknife to the most gigantic circular saw, and that innumerable variety of tools as ingenious as they are powerful, thoroughly understands the decisive influence of the cheapness of the raw materials upon industrial work

We have seen Prussia victorious on many points, and even Belgium in the way of becoming so, on account of the low price of the metallic element in these two countries. And we cannot too often repeat it—and a thousand voices will repeat it after us—the great fact of the Exhibition is the demonstration of the immense power created by a low price of metals. It is sufficient to cast a glance at the collection of English ironmongery, which forms a veritable arsenal, to appreciate the importance of this power.

These much ness are equivalent to a supplementary population of many millions of men, in the service they render Great Britain. They are the principal source of her public and private wealth; they constitute a fund from which, under the empire of Free Trade, our manufacturers might draw the same elements of prosperity as England itself. It was owing to the low price of cast iron, that the very large machines, in which all these works were assembled was enabled to be reared; and it would suffice to calculate what this palace would have cost in France in order to appreciate the loss which we experience from the rigour of our economic system in this respect.

This inferiority is revealed still more evidently in all that concerns the agricultural interests in the two countries. None could believe, without having seen it, how much power agriculture derives from manufacture by the use or more it is employed by nearly every agricultural work; and experiments are now being made for its still further extension. In all the other branches of English industry the observer is equally struck with the superiority of mechanical work, with the felicitous employment of iron, and with the perfection of the tools But this superiority disappears as soon as artistic applications and elegant forms are brought into question. Here France resumes the advantage, and the laws of our future are revealed to every eye. The Englishman excels by the quality and the cheapness of the material; the Frenchman by the ingenious taste of the work.

Everywhere else the same striking contrasts found. Look at Austria, so renowned for her Bohemian glass: these glasses excel by means of the material, by the colour, by their cheapness; but they offend by their bad taste. Our great glass-works of Saint-Gobain

rifles for a long shot; everything that is essential to a rude society which has commenced in the heart of forests and on the margins of lakes and great rivers. In all that relates to art and taste the Americans of the United States have not been successful. Their pianos, their mahogany furniture, their woven and printed fabrics and their cloths, their geographical maps, and their bookbinding, all bear witness to their backwardness in this respect. They have sent, together with some specimens of minerals and machinery, a host of Daguerreotype pictures, which are unexceptionally successful; some indiarubber portmanteaus, saddles, hats, wigs, works in hair, and tooth powder. Strength and whimsicality, utility and futility, appear to occupy the same rank in their estimation. In the collection exhibited by them are to be found guns with four barrels, almost unlimited heaps of ten-barrelled pistols, and some specimens of ears of Indian corn, cereals, and vegetables of all kinds of the richest growth. Altogether the American exhibition is quite incapable of giving any adequate idea of the gigantic development of this people, whose industry overcomes the great rivers, mountains, and other formidable obstructions of nature, as the only adversaries worthy of them.

The Russians, who arrived late in consequence of the difficulties of the spring navigation of the Baltic, have paid a more solid tribute to the common festival of all manufactures than have the North Americans. Most interesting will be remarked are their beautiful works in malachite, their rich furs, their odorous feathers, their beautiful specimens of copper and iron work, and the collection of their hemps, which supply all the markets of Europe. The Emperor has sent some magnificent porcelain vases from the Imperial manufactories. Several cotton, woollen, and silk stuffs bear witness also to the impulse given to manufacture.

Such is the general character of the principal nations who have figured at the assembly of the workers of the whole world. The Exhibition of 1851, by partially raising the veil which hangs over the future, will at least have shown the most urgent necessities of the present. Every one, henceforth, will know the surest means of increasing public wealth is to promote the imports ion of the raw materials of manufacture, and the cheapness of the food of the manufacturer. It is not by the brilliancy and splendour of their productions that nations prosper, but by the abundant circulation of articles of common utility.

When the details of the productions of so many different people are studied, as they are revealed by the products themselves, and by the information under which these nations have grouped them, we are struck by the simplicity and inflexibility of the economic laws which govern them, notwithstanding the great variety in the aptitudes, the climates, their geographical situations, and their political constitutions. Whatever be the forms and requirements of these Governments may be, provided the fundamental laws of labour are respected, their material prosperity is inevitably developed; when these laws are misunderstood, or stifled in their germ, perturbation and misery are the result. The fact has been placed beyond all doubt by the Universal Exhibition, that no nation can hope for a manufacturing future unless it walks forward with a firm and continued pace towards the lowering of the cost of production, and the amelioration of the condition of the producers.

Without entering here into details of figures, we can affirm with the certainty that we shall not be contradicted by any competent judge, that the superiority, general or special, absolute or relative, of every nation which has appeared at the Universal Exhibition, is especially manifested in the price of armies of large manufactories. If we add to this remarkable comparison the results of the census which she has met with this year at the London Exhibition, we shall have the means of forming, in every case, high juries the consequence of Protection, and low prices that of Free Trade. England, Spain, Germany, Belgium, the Zollverein, offer us a thousand examples of this, no human fortune a single exception of it. Other causes, doubtless, have added to this reduction of price, but the starting-point has been the same in all nations; and all other advantages are rendered impotent, or weakened, if the chief of all be wanting – that of commercial freedom and moderate taxation.

France has borne a remarkable example of this, notwithstanding all the success which she has met with this year at the London Exhibition. Never, perhaps, have her manufacturers shown with more brilliancy; never have the nations rewarded her with more unanimity the palm of taste. But, when we come and go cavefully into the matters, and to calculate the price of so many admirable articles, the truth has not been long discovering itself, and we have learnt to know what our history has cost us. The primary and characteristic fact of the Exhibition, and of the whole Exhibition, has been the following :—" England excels all nations, and several nations excel in the *low* price of articles made by the aid of machinery; such as the spinning and weaving of cotton, flax, and wool; in a word, in all that admits of production by machinery and requiring immense markets. These are precisely the manufactures in which the workman's wages are the lowest, and the chances of creating the dearest. France, on the contrary, reigns supreme, both by low price and quality, in all that depends upon individual, regular, and continual production, in which competition is less active and wages higher."

The true prosperity of our country is, therefore, that which rests upon the progressive development of her natural industries, that is to say, of manual arts on which skilfulness of hand and purity of taste are able to exert their influence.

To these alone France owes the high position she has taken this year at the Universal Exhibition. They only require air and light for their development. They form the foundation of the unassailable power of France, and rest upon the firm, imperishable bases of the nations, genius, instead of existing by fuel and artificial like those under the control of machinery and capital.

GORGEY AS HE IS.—The following details upon the present situation and mode of life of the once formidable and unhappy Hungarian chief have been gleaned from a letter dated Klagenfurt, and addressed to the *Wiener Zeitung*. Arthur Görgey, the former Commander-in-Chief of the Hungarian army, had resided in Klagenfurt for three last two years, without the people having taken the slightest difference to the quiet course of events in the town. The man who shook first the throne of his Sovereign, and afterwards the revolutionary government of his country, now begrudges his poor and unhappy fellow-citizens a few kreutzers in paper and duplicates. His sumptuous companion is an Englishman, who scarcely ever stirs from his side, but with the exception he is almost estranged from society; and the only family with whom he has been known to visit, is that of the cloth-manufacturer, Mr. Mayer, whose acquaintance he made during his residence at Prague, ten years ago, when, having left the Irish linnaere, he applied himself diligently to chemical pursuits. Every now and then a number of his best customers receive a present of chemical works in the town. He suffers no lack of money, but draws from our (the Austrian) Government a yearly pension of 3000 florins, while the Russians have already given him a yearly pension of 10,000 florins, and the sum of 20,000 and the sum of 40,000 roubles; so at least say those who pass for the initiated. It is generally believed that he is commanded by the Government with the preparation of a military history of the Hungarian war, for several Imperial officers qualified to assist him in such a work have leisury taken up their residence here, and visit him very frequently, to whom, also, he dictates by the hour. He was, a month ago, very ill, and was for some days confined to his bed; he had not the least fit of vexation, on account of a slight he met from our authorities, to whom he was paying his addresses. His household is placed on the simplest footing. He keeps a cook, a butler, and a man-servant, and, therefore, nearly a footman, which is the usual thing with the rich. Among the common people his appearance awakens rather aversion than sympathy; indeed it is said that latter several attempts have been made here upon his life. However, it is but simple justice to say, that he will remain in the town for a long time to come, unless compelled by our tear-in untruthes of his wife to take a walk in the pre-cincts of the town. At such times the young man (he was only born in 1819) presents a most respectable appearance. He takes his arm, and supports her, while she totters on as far as and tallies in, his walk is weary, and he stoops as he goes. He usually wears a blue pantoot, into the under pockets of which his hands are thrust. His hair, of a dark brown, is cut straight at the back of the head, and bushes if omitted. In a whole exterior suggests the unhappy condition of a man to whom life is a burthen. Very recently his wife has presented him with a fine boy, our first-born child. Just even, usually so unmanned in public, appears to her she has no joy of his domestic happiness. Who should see him in the forest creatures the hero who, three years since, commander and dictator of Hungary, dispensed the destinies of millions at once?

THE DISTRIBUTION OF THE EXHIBITION REWARD TO THE POLICE.—On Monday the Commissioners of the Metropolitan Police paid over to the superintendents of the various divisions that portion of the reward granted by the Royal Commissioners of the Great Exhibition, which is intended for personal distribution among the superintendents, inspectors, sergeants, and constables—detective, special, and ordinary—who were employed during the time the Exhibition was open in the manner as well as before and since that period. The apportionment of the money is as follows:—10 superintendent Peaves, of the I division, who had the chief command of the men during duty in and the building, £300. To Inspector John Field, of the reserve, and Inspector Ogborne and Lacey, who attended Mr. Pearce, the sum of £25 each. To Inspector Field, of the detective, £10, and to the detective officers under him the sum of £6 each. To the superintendent, Mr. Superintendent John Martin, of the G division, and Mr. Superintendent Hughes, of the D division, who had the arrangement of the men doing duty outside the building and in the approaches itself—three), the sum of £75 each, and to the sergeants doing duty under them—namely, ranging from £7 10s. to £20. The sergeants and constables doing what is termed ordinary duty at the exhibition have been divided into three separate classes. The first class consists of those who were employed on duty at the exhibition 130 days and upwards before its close; the second class, 100 days and upwards; the third class, any number of days less than the above periods. To first-class sergeants, £2 10s. each; to second class, £1 15s. each; and to third-class, £1 5s. each, were paid. To first-class constables, £1 10s. each; second-class ditto, £1 5s. each; third-class ditto, 19 each. The whole amount thus distributed among the police force employed is £1600 and upwards. The remaining portion, amounting to £2,500, and been disposed of in this way:—£500 gave to the "reward fund," which is a separate and distinct fund from that distributed among the "police fund," and is for the sole and express purpose of rewarding actions of personal merit and good conduct. The £700 out have, it is said, been appropriated for those constables who had been sent from the various towns in the United Kingdom, and whose presence at the late was of eminent service in checking the depredations of the knaves of their respective neighbourhoods.

By an order of the Belgian Government, travellers will not be allowed to enter Belgium unless their passports have been signed by a Belgian consul in the country from which they proceed.

THE ARCTIC COMMITTEE.

THE Committee, consisting of Rear-Admiral Bowles, Rear-Admiral Fanshawe, Captains Parry, Beechey, and Back, appointed by the Lords Commissioners of the Admiralty to inquire into and report on the recent Arctic Expedition in search of Sir John Franklin, have drawn up their report, which is addressed to Sir Francis Baring, M.P., Secretary to the Admiralty. The opinions of Rear-Admiral Sir J. Ross, the Rev. Dr. Scoresby, Captains Austin, Kellett, Ommanney, Sir John Richardson, Lieutenants M'Clintock and Osborne, Messrs. W. Penny, A. Stewart, Bradford, and Brooman, were taken, as to expediency and mode of a search in Wellington Strait. The committee recommend to their Lordships that an expedition should be despatched next year to Barrow's Strait, consisting of the same ships which composed Captain Austin's division—namely, two sailing ships and two steamers, with orders to proceed direct to Beechey Island, and to consider that harbour—beyond which they think one sailing ship and one steamer should on no account be taken—as the base of future operations. They consider any further exploration in the direction of Melville or to the south-west of Cape Walker wholly unnecessary; and therefore propose that all the strength and energy of the expedition should be directed towards the examination of the upper part of Wellington Strait; and they are of opinion that, by the adoption of the same careful and well considered arrangements which were attended by such satisfactory results on the late occasion, this examination may be effected without any serious risk of loss or danger. If, on arriving at the proposed rendezvous early in August, the barrier of ice at the entrance of the Strait renders any attempt to penetrate it unsafe or imprudent, it may perhaps still be possible to convey boats on runners or sledges, or by any small "lanes" which may offer, and launch them into the water above, and by this means depôts of provisions may be advanced to the most convenient point, and such further information obtained during the remainder of the navigable season as might very materially facilitate the operations of the spring. Those opinions must, in that case, be communicated as early as possible in the season of 1853, and pushed forward with as much rapidity as is consistent with prudence, it being clearly understood by all the conducting parties that they must return to the depôt at Beechey Island in good time for their embarkation by the middle of August at latest. The object in view would be to examine the upper part of Wellington Strait, as far beyond Mr. Penny's furthest position as possible; and, if Sir John Franklin had really proceed in that direction, it appears high improbable that some traces of his expedition should not be discovered by the exploring parties in their search. It, on the other hand, Wellington Strait is found open and navigable in the early part of the expedition in the summer of 1852, they think one of the sailing ships, with a steamer, might proceed at once to take advantage of this opportunity, if the other commanding should judge such a measure safe and prudent, and have passed in winter quarters in a more favourable position for commencing the sledge search in the spring of 1853, but with the most distinct injunctions not to advance to such a distance as to endanger their return to the depôt, or their communication with it, in that year; and it should be enjoined with equal strictness that, in the event of any irreparable disaster to the ships so proceeding, or if they should be too early forced in the ice to be extricated during the season of 1852, they are to be abandoned, and the crews brought down to the depôt. Further contingencies are provided for in the report, which disposes also of the Adam Beck deposition to which Sir J. Ross attached so much weight, on the document being translated by a Moravian missionary, who understood the Esquimaux language, it proved not to contain a single word relating to the alleged murder of Sir John Franklin of the *Erebus* and *Terror* in Baffin's Bay.

So important and vital a subject could not fail to engage, sooner or later, the attention of the late Arctic Committee, and accordingly we find, that, on the eleventh day, Nov. 8, 1851, all the members of the committee being present, together with Rear-Admiral York, the Esquimaux interpreter, the Rev. F. Latrobe, secretary to the Moravian missions; and the Rev. Christian Beck, interpreter –

" A paper containing a deposition by Adam Beck, an E. Quimaux, who professed to have received the information it conveyed from his countryman Erasmus York, was put in by Captain Ommanney, and translated into German by the Rev. Christian Beck; Mr. Latrobe giving the sense in English. It was as follows:—

" While I have been here there have been many ships. There were also many people upon the land. On the islands there were but few native people. A good many were spinning and weaving. I played. (The Rev. Mr. Latrobe explained this to mean that when anything occurred to interest or please them a great number showed themselves.) There were birds, such as eider fowl (and there was another word, which is, the Rev. Christian Beck did not understand, signifying a particular kind of bird, which he did not know). There were also other birds, that look white, that are found in the country, and also ravens—little ravens and great ravens—and various birds mixed together. There are other words, evidently names of birds, but incorrectly written, probably coal names for birds, which the Rev. C. Beck did not understand. (There is a little bird with red at the top of the head. The people here are few. And this is written by me from my heart.'

(Signed) " JOHN ROSS, witness to the above being written by Adam Beck, on board her Majesty's ship *Assistance*, this 17th day of August, 1850, in my presence.

" Erasmus Ommanney, Captain of her Majesty's ship *Assistance*, this 17th day of August, 1850, witnessed the above being written in my presence by Adam Beck."

At the meeting of the Royal Geographical Society, on Monday evening, Sir Roderick Murchison in the chair, the following important letter from Captain Penny was read :—

" Pulmair, Aberdeen, Dec. 3, 1851.

" Sir, –I beg to lay before you, and the scientific body to which you belong, a few observations which have occurred to me on my return from the search of Sir John Franklin, which I consider of great importance at the present critical moment.

" On the 25th of August, 1850, having joined Captain Ommanney on the west side of the Wellington Channel, and seen the traces for a day or two of the missing ships, I could not in my proper course to return to the eastern shore of the channel, with the view of examining those parts more closely than had been done before.

" It is result of my return was most satisfactory, for not until then were the winter quarters of the missing ships discovered; and what is of still more importance in my estimation as regards the route of the missing ships, a watch kept upon a height about four miles north and west from the position occupied by the ships. The tent was evidently for the purpose of watching very more of it use in Wellington Channe. We made use of a rate of sledges going and returning from making observations upon the channel, and in the tent we found a small piece of paper with the words, 'to be cached.' The other part of which have been torn off, thus evidently showing that a regular watch had been kept.

" On the 5th of September, 1850, from the top of Cape Spencer, a height of at least 730 feet, open water was observed beyond Cape Riley to the north-west. The strong easterly gale which we experienced some time previous to the above date had counteracted the prevailing current from the westward, and had driven the ice through Queen Victoria Channel into the Arctic Basin.

" On the 9th of September the ice began to be brought away fifteen miles of ice down Wellington Channe., leaving only about fifteen miles of ice between the two seas.

" Having commenced our travelling on the 13th of April, 1851, I came upon water and reached us on the 18th of May, in the channel between Cornwallis Land and Baillie Hamilton Island, obliging me to return by the east of the said island, and to travel a month's journey to get round it. On the 6th of May I took 90 deg. 55 min. The water washed the Point at my feet, and extended 20 miles west. The sky indicated water to the north round Barlow Island.

" The moment I could get away for that purpose, which was the 1st of May, I exclaimed, 'Through this channel sir John Franklin has gone in clear water.' On for a boat.' With this conviction on my mind I returned with the determination at the very earliest moment to push up to the west.

" On the 29th of the same month Messrs. Goodsir and Marsha l, advancing with their party along the shore of Cornwallis Land, were forced to return for water until a fall of snow should enable them to use sledges.

" Again, on the 31st May, Capt. Stewart, having advanced as far as Cape Becher, by the east side of the channel, and along Albert Land, came to water, and from a height of 700 feet found nothing but open sailing ice as far as the eye could reach, to the west and nor.h-west.

On the 6th of June a boat was fully equipped, and a journey commenced for Victoria Channel, some of the party having only returned 36 hours from a journey of 31 days. On the 17th of the same month the boat was launched on the water in long. 96 deg. west, and continued to contend for 33 days with adverse winds and rapid tides, which brought the drifting ice in such quantities to the eastward as to lock up the various channels, and prudence forced us, on the 20th, to return to the depôt at Beechey Island in good time for their embarkation by the middle of August at latest. The object in view would be to examine the upper part of Wellington strait, as far beyond Mr. Penny's furthest position as possible; and, if Sir John Franklin had really proceed in that direction, it appears high improbable that some traces of his expedition should not be discovered by the exploring parties in their search. It, on the other hand, Wellington Strait is found open and navigable in the early part of the expedition in the summer of 1852, they think one of the sailing ships, with a steamer, might proceed at once to take advantage of this opportunity, if the other commanding should judge such a measure safe and prudent, and have passed in winter quarters in a more favourable position for commencing the sledge search in the spring of 1853, but with the most distinct injunctions not to advance to such a distance as to endanger their return to the depôt, or their communication with it, in that year; and it should be enjoined with equal strictness that, in the event of any irreparable disaster to the ships so proceeding, or if they should be too early forced in the ice to be extricated during the season of 1852, they are to be abandoned, and the crews brought down to the depôt. Further contingencies are provided for in the report, which disposes also of the Adam Beck deposition to which Sir J. Ross attached so much weight, on the document being translated by a Moravian missionary, who understood the Esquimaux language, it proved not to contain a single word relating to the alleged murder of Sir John Franklin of the *Erebus* and *Terror* in Baffin's Bay.

So important and vital a subject could not fail to engage, sooner or later, the attention of the late Arctic Committee, and accordingly we find, that, on the eleventh day, Nov. 8, 1851, all the members of the committee being present, together with Rear-Admiral York, the Esquimaux interpreter, the Rev. F. Latrobe, secretary to the Moravian missions; and the Rev. Christian Beck, interpreter –

" A paper containing a deposition by Adam Beck, an E. Quimaux, who professed to have received the information it conveyed from his countryman Erasmus York, was put in by Captain Ommanney, and translated into German by the Rev. Christian Beck; Mr. Latrobe giving the sense in English. It was as follows:—

" While I have been here there have been many ships. There were also many people upon the land. On the islands there were but few native people. A good many were spinning and weaving. (The Rev. Mr. Latrobe explained this to mean that when anything occurred to interest or please them a great number showed themselves.) There were birds, such as eider fowl (and there was another word, which is, the Rev. Christian Beck did not understand, signifying a particular kind of bird, which he did not know). There were also other birds, that look white, that are found in the country, and also ravens—little ravens and great ravens—and various birds mixed together. There are other words, evidently names of birds, but incorrectly written, probably coal names for birds, which the Rev. C. Beck did not understand. (There is a little bird with red at the top of the head. The people here are few. And this is written by me from my heart.'

(Signed) " JOHN ROSS, witness to the above being written by Adam Beck, on board her Majesty's ship *Assistance*, this 17th day of August, 1850, in my presence.

" Erasmus Ommanney, Captain of her Majesty's ship *Assistance*, this 17th day of August, 1850, witnessed the above being written in my presence by Adam Beck."

At the meeting of the Royal Geographical Society, on Monday evening, Sir Roderick Murchison in the chair, the following important letter from Captain Penny was read :—

" Pulmair, Aberdeen, Dec. 3, 1851.

" Sir, –I beg to lay before you, and the scientific body to which you belong, a few observations which have occurred to me on my return from the search of Sir John Franklin, which I consider of great importance at the present critical moment.

" On the 25th of August, 1850, having joined Captain Ommanney on the west side of the Wellington Channe., and seen the traces for a day or two of the missing ships, I could not in my proper course to return to the eastern shore of the channel, with the view of examining those parts more closely than had been done before.

" It is result of my return was most satisfactory, for not until then were the winter quarters of the missing ships discovered; and what is of still more importance in my estimation as regards the route of the missing ships, a watch kept upon a height about four miles north and west from the position occupied by the ships. The tent was evidently for the purpose of watching very more of it use in Wellington Channe. We made use of a rate of sledges going and returning from making observations upon the channel, and in the tent we found a small piece of paper with the words, 'to be cached.' The other part of which have been torn off, thus evidently showing that a regular watch had been kept.

" On the 5th of September, 1850, from the top of Cape Spencer, a height of at least 730 feet, open water was observed beyond Cape Riley to the north-west. The strong easterly gale which we experienced some time previous to the above date had counteracted the prevailing current from the westward, and had driven the ice through Queen Victoria Channel into the Arctic Basin.

" On the 9th of September the ice began to be brought away fifteen miles of ice down Wellington Channe., leaving only about fifteen miles of ice between the two seas.

" Having commenced our travelling on the 13th of April, 1851, I came upon water and reached us on the 18th of May, in the channel between Cornwallis Land and Baillie Hamilton Island, obliging me to return by the east of the said island, and to travel a month's journey to get round it. On the 6th of May I took 90 deg. 55 min. The water washed the Point at my feet, and extended 20 miles west. The sky indicated water to the north round Barlow Island.

" The moment I could get away for that purpose, which was the 1st of May, I exclaimed, 'Through this channel sir John Franklin has gone in clear water.' On for a boat.' With this conviction on my mind I returned with the determination at the very earliest moment to push up to the west.

" On the 29th of the same month Messrs. Goodsir and Marsha l, advancing with their party along the shore of Cornwallis Land, were forced to return for water until a fall of snow should enable them to use sledges.

" Again, on the 31st May, Capt. Stewart, having advanced as far as Cape Becher, by the east side of the channel, and along Albert Land, came to water, and from a height of 700 feet found nothing but open sailing ice as far as the eye could reach, to the west and nor.h-west.

On the 6th of June a boat was fully equipped, and a journey commenced for Victoria Channel, some of the party having only returned 36 hours from a journey of 31 days. On the 17th of the same month the boat was launched on the water in long. 96 deg. west, and continued to contend for 33 days with adverse winds and rapid tides, which brought the drifting ice in such quantities to the eastward as to lock up the various channels, and prudence forced us, on the 20th, to return to the depôt at Beechey Island in good time for their embarkation by the middle of August at latest. The object in view would be to examine the upper part of Wellington strait, as far beyond Mr. Penny's furthest position as possible; and, if Sir John Franklin had really proceed in that direction, it appears high improbable that some traces of his expedition should not be discovered by the exploring parties in their search. It, on the other hand, Wellington Strait is found open and navigable in the early part of the expedition in the summer of 1852, they think one of the sailing ships, with a steamer, might proceed at once to take advantage of this opportunity, if the other commanding should judge such a measure safe and prudent, and have passed in winter quarters in a more favourable position for commencing the sledge search in the spring of 1853, but with the most distinct injunctions not to advance to such a distance as to endanger their return to the depôt, or their communication with it, in that year; and it should be enjoined with equal strictness that, in the event of any irreparable disaster to the ships so proceeding, or if they should be too early forced in the ice to be extricated during the season of 1852, they are to be abandoned, and the crews brought down to the depôt. Further contingencies are provided for in the report, which disposes also of the Adam Beck deposition to which Sir J. Ross attached so much weight, on the document being translated by a Moravian missionary, who understood the Esquimaux language, it proved not to contain a single word relating to the alleged murder of Sir John Franklin of the *Erebus* and *Terror* in Baffin's Bay.

So important and vital a subject could not fail to engage, sooner or later, the attention of the late Arctic Committee, and accordingly we find, that, on the eleventh day, Nov. 8, 1851, all the members of the committee being present, together with Rear-Admiral York, the Esquimaux interpreter, the Rev. A CONSTANT READER.—The Authorship of the National Anthem is a vexed question; we believe the evidence is sufficient to establish Dr. Arne had as the composer, and that it was first performed at Haymarket Theatre in 1740, on the occasion of King James I.'s visit after the Pasquinade

SUBSCRIBER. If applied to the title of musical societies, professional men attach no distinction to words used in various senses

ALPHA.—The term " Mountain " was at the time of the first French revolution, and was applied to the most ultra-democratic members, who occupied the highest benches in the Convention, the red flag was the symbol of this party

Augur.—Apply to Messrs. Spencer, Beale, and Co. for the address

ENQUIRER.—The " east-book " system in mining is confined to Cornwall and Devon, and is explained to, and has stated by, the laws of the stannary courts. It is briefly as follows:— The whole of every mine is divided into a number of equal parts called shares or adventures, the number of which is fixed by custom, and not by the deed of the mine. Each share is owned by a number of persons, who are called adventurers, and their names are entered in the " cost-book," which is kept by the purser of the mine. Whenever any assessment is made, each adventurer is called upon to pay his proportion of the amount, according to the number of shares he owns. The cost-book system is peculiar to England from the effect of the Bubble Act, and has existed from a very early period, by custom only, and not by statute

NICOLL'S REGISTERED PALETOT is now ready at 114, 116, 118, and 120, REGENT-STREET, and 22, CORNHILL, for winter wear, at the moderate price of Two and Three Guineas each. It is made of a new material, which has been found only the most fashionable, but also the cheapest and most durable garment ever offered to the public. The intrinsic value of Nicolian Cloth being, within the last few months, reduced nearly One-third in price.

A NEW INVENTION, whereby much improvement in the preparation of Winter Trousers, at very moderate prices, has been lately effected; specimens of which are ready for inspection.

It is impossible to detail in an ordinary advertisement the many advantages appertaining to the Paletot from Messrs NICOLL'S spacious premises. One fact will alone suffice—

Messrs NICOLL'S business premises, purchasers of the new materials, but at all times they make such arrangements with the firms who manufacture for them in the West of England, so that in all kinds of goods produced for the Paletot, Messrs NICOLL'S connexion secures a profit does not exist between the producer and the consumer.

The Wrapper, Petersham, and Codrington are 114, 116, 118, and 120, REGENT-STREET, and 22, CORNHILL.

FOR STOPPING DECAYED TEETH, price 1s 1½d per box. By Appointment to Her Majesty and her Royal Highness Prince Albert.—Mr. HOWARD'S WHITE ODONTALGIC POWDER, for stopping decayed teeth, however large the cavity. It is placed in the tooth in a soft state, and hardens under pressure or pain, and immediately hardens into a white enamel, it will remain in the tooth many years, rendering extraction unnecessary, and arresting further progress of decay, and is far superior to anything ever before used, as it will never become discoloured in the tooth. All persons use it themselves with ease, as full directions are enclosed. Prepared only by Mr. HOWARD, 33, George-street, Hanover-square. Sold by the wholesale agents in the country free by post. Sold by Sanger, 150, Oxford-street; Sanger, 4, Belgrave-place, Pimlico; and Hannay, 63, Oxford-street; Butler, 4, Cheapside; Prout, 229, Strand; Savory and Moore, 143, New Bond-street; and all medicine venders in the kingdom. Price 1s 6d. Mr Howard continues to supply the loss of teeth on his system of Self-Adhesion without springs or wires. This method does not require the extraction of any teeth or roots, or any painful operation whatever. 17, George-street, Hanover-square. At home from 10 till 5.

ELEGANT TOILET REQUISITES.—ROWLAND'S MACASSAR OIL is highly and universally appreciated for preserving the human hair in its natural colour. ROWLAND'S KALYDOR is a preparation of unparalleled efficacy in improving and beautifying the skin and complexion; and ROWLANDS' ODONTO, or Pearl Dentifrice, is invaluable for its purifying and preservative properties on the teeth and gums. The genuine of these articles bear the name of "ROWLAND" on the wrapper or label. Sold by all Perfumers and Chemists.

SELF-ACTING PORTABLE SPRING-PRESSURE SPECTACLES.—Assist natural vision, renew sight of the face; but, when removed, immediately collapse, and may be worn with a guard as an eye-glass. Agents appointed ed everywhere.—PATENTEE, ANDERSON, High-street, Gravesend, Kent.

COCKERELL & CO.'S BEST COALS ONLY. Purfleet Wharf Earl-street, Blackfriars; Eaton Wharf, Lower Belgrave-place, Pimlico; and No. 1, Coal Exchange. Cash price, 20s per ton.

BOND'S PERMANENT MARKING INK.—The original, and by far the best, requiring no preparation, offers the utmost security for protection for every variety of household linen and wearing-apparel against loss or mistake; for which reason be careful to see that the genuine article, prepared by the inventor, JOHN BOND, 28, Long-lane, West Smithfield, City.—Sold by most Chemists, Stationers, and Medicine-venders. Price 1s a bottle.

ALSOPP'S EAST INDIA, PALE, and other BURTON ALES.—The public is respectfully informed the Ales of this season's brewings are now ready for delivery, and may be obtained genuine in casks of 18 gallons and upwards, either singly or in any quantity, at their respective stores, as under, where also a list of the bottlers may be had:—The Brewery, Burton-on-Trent; 61, King William-street, City, London; Cook-street, Liverpool; High-street Birmingham; 10, Exchange, Manchester; Royal Brewery, Dudley, 23, Virginia-street, Glasgow.

HEAL & SON'S ELDER DOWN QUILTS are made in three varieties.—The BORDERED QUILT, the PLAIN QUILT, and the SATEEN QUILT. The Bordered Quilt is the usual form of bed quilts, and is a most elegant and luxurious article. The Plain Quilt is smaller, and is useful as an extra covering on the bed, or as a wrapper in the carriage, or on the couch. The Sateen is a loose down filled with the same quality as the former, and is generally used on the Continent.
Lists of Prices and Sizes sent free by post on application to HEAL and SON'S Bedding Factory, 196 (opposite the Chapel), Tottenham-court-road.

BLANKETS for CHARITY.—HEAL and SON beg to offer BLANKETS for the purposes of Charity of the following sizes and prices:—

THE FRENCH EVOLUTION.

In the sixty-two years that have elapsed since the memorable period of 1789, France has experienced many strange revolutions, and tried many different and contradictory forms of Government. Until the 2d of December, 1851, it might have been said of her that she had suffered every kind of calamity, made every possible experiment in liberty and in anarchy, and been subjected to every kind of despotism, from that of the most sanguinary of mobs to that of the most merciless of single tyrants. But strange and deplorable as her previous revolutions have been, with the sole exception of the first, they all sink into utter insignificance when compared with that astounding revolution which has been operated by the cool head and iron hand of M. Louis Napoleon Bonaparte. History offers no example of such audacity as that with which the accepted heir and representative of the Bonapartes planned his *coup d'état*, or of such [illegible]city, cold, inflexible, comprehensive, and unpitying, as that with which he executed it. Having resolved upon the act, and calculated to the minutest fraction what it would cost, having made himself sure of his instruments, and resolved that failure was impossible, he never allowed himself to hesitate. There were moments last week when one atom of fear or of mercy might have led to results which would have consigned him to the dungeon or the scaffold; but he remained stern and unyielding as fate, and did his work with as total an absence of feeling as if he had been a steam-engine and not a man. Compared with his despotism, that of his imperial uncle was mildness itself. European history offers no parallel to it. If we wish to find anything like it, we must look to Persia or to Morocco, where human heads may roll from the shoulders that bear them at the nod and caprice of an irresponsible autocrat, whose word is law, and whose slightest burst of anger or of spleen may be death to myriads.

For the present France is completely in his power. There is not a particle of liberty of speech or action remaining, and the press is as mute under the *régime* of the bayonet as if the art of printing were not invented. Yet there can be no doubt, or at least there is none to our minds, that the result of the appeal to the people, which is to be made between the 14th and the 21st of this month, will be an acquiescence in the dictatorial power which M. Louis Napoleon and his unscrupulous and obedient army have assumed—and that five or six millions of votes will be recorded in favour of the President's retention of office for the ten years which he demands, or for life if he insists upon it. Indeed there is no choice left. It is Louis Napoleon and comparative repose on the one hand, or the most fearful anarchy and civil war, and a train of calamities which might appal the boldest imagination on the other. If so—and while adding our feeble voices to the general indignation that is heard throughout Europe—we, in common with others, may well ask, whether, after all, the French nation are not rightly served? They invited despotism, and they have got it.

NO 15.—THE REVOLUTION IN PARIS.—[illegible] DE VILLE.—(SEE PAGE 805.)

They have got it, and they flatter it. Already the symptoms of adulation are abundant, and the *bourgeoisie*, as well as other classes, prove that in the full blaze of his success they will not only strew flowers in the pathway of the conqueror, but that they are ready to crouch beneath his hand, and to grovel in the dust at his feet. Their present subjugation would almost seem a befitting retribution for the choice which so many millions of people so blindly made of Louis Napoleon as their ruler. A man who had shown no wisdom, who had given no proofs of genius or patriotism, or even of talent, who was only known as the representative of a great military conqueror and a mighty civil despot, and as one who had committed two most reckless, and to all outward appearance, insane, acts—was suddenly invested, for his name's sake, with the chief power and authority in a country that believed itself to be free. It is scarcely to be wondered at, that this man, who really had talent, though nobody knew it—who was sagacious and far-seeing, as well as daring and self-confident—should have interpreted the choice thus made to amount to approbation of that military tyranny from which his name derived its greatest if not only splendour; and that he should have imagined that the French nation had wilfully put its head into the noose, and asked no better than to be tethered as he willed it, or led whither it pleased him. When we reflect coolly upon the events of the week, we are inclined to believe that this astounding tyranny was but the necessary and inevitable result of all previous revolutions, and an experience which France was fated to undergo. The French, as we all know, are pre-eminently a military people. Nothing flatters them so much as "glory." Their men of all classes strut for half their lives as soldiers, leaving work and business to the women. They are, moreover, trained to habits which make them the veriest despots over the weak, and the most abject of slaves when they find they have got a master. Another deplorable circumstance in the recent history of France should not be forgotten, and it is one for which that unhappy country must yet suffer long and keenly. It has no religion, no faith, no abiding principle of any kind. The tone of public opinion is low. Louis Philippe degraded the people by the sordid selfishness of his system of government. He acted upon the principle that every man had his price; that no virtue or genius was proof against a clever corruption; that honesty was a farce; that the people about him were all knaves, and that the only mode of governing such knaves, as he imagined them and all other men to be, was to rule them by cunning more acute than their own, and by a knavery more subtle and calculating. He acted upon this principle, and he fell; but the unhappy seeds which he sowed in the national mind produced their fruit. There is scarcely a public man of any note in France who has not shown that he would intrigue and re-intrigue for his own interests, oblivious of the higher interests of the nation. Even those who inveigh most loudly against the acts of M. Bonaparte, have no sympathy for such men as M. Thiers, and those, who, under his unlucky guidance, provoked the aggression of the President. Had there been ten honest men in the Assembly, had there been a fair and just public opinion in the country, had the French people understood what true liberty means, had they been a nation that could discuss a great principle without thinking it necessary to knock down or murder a conscientious opponent, M. Bonaparte might have tried his *coup d'etat* in vain. Such success as his would have been impossible among a sober-minded and really free people.

But France is not all rotten. The great ideas of 1789, 1830, and 1848 are not dead. The President has found it comparatively easy to make a conquest of the Legitimist and Orleanist factions; but his work has only begun. The youth of France are more noble-minded than their progenitors, and there is leaven in the mass, which sooner or later will pervade it all. In the meantime there are the sincere Republicans yet to be dealt with—possibly a minority in France, but the only minority that is likely to become a majority, and to be a thorn in the side and poison in the cup of the conqueror. Sincerity breeds fanaticism; and it needs no power of prophesy to be able to predict, that Louis Napoleon will form no exception to the great rule of compensation—that his dangers will increase with his power; and that his one life—which is the obstacle to the fulfilment of a thousand hopes—will be daily and hourly exposed to the dagger or the bullet of the maniac and the assassin. Louis Philippe—whose offences against the freedom of the French people were mere peccadilloes compared with the gigantic crime of Louis Napoleon—walked for seventeen years "in the shadow of death." The fate of the President will be the same. Henceforth he will not, if he be wise, show himself abroad without an escort; he will have to employ a taster at his meals, and to wear armour under his doublet, if he will not incur the risk of premature removal from the scene of his perilous splendour. This is a sad prospect for any man, even although, like poor Louis Philippe, he escape, as if by miraculous interposition, from the blows that are aimed at him by the insanity the revenge of individuals. The Imperial crown and the robes of Cæsar are unspeakably dear at a price like this; but such is the necessary penalty of unscrupulous ambition; and Louis Napoleon, though he may escape so sad a catastrophe, can scarcely hope to escape from the danger and the dread of it.

But what will be the next move in this mighty game, supposing that the peasantry of the provinces, the old and unreasoning worshippers of the name and deeds of Napoleon, shall record for him the five or six millions of votes which he requires? In the first place, the army must be rewarded. But how is that to be done? The expenditure of France already exceeds her income, and the army cannot be maintained even on its present footing without the risk of a national bankruptcy at no distant period. And if France herself can afford no field for the employment and reward of this army—not likely to be less rapacious of pay and honours after such events as those of the last ten days than it was before—where and how is the President to dispose of it? The monster is made and must have its work to do, or it will turn upon its master. There must be many aspiring and embryo marshals in its ranks. Ney and Bernadotte are names of power to stir the ambition of the soldier. The bâtons and the dukedoms, the principalities and the splendour that were showered upon the generals of Napoleon, are charms that yet evoke ambition, or human nature is changed since the days before Waterloo.

Judging from the past, and from the character of Louis Napoleon, we should dread the danger of his flattering the passion of the French for foreign conquest, and of his seeking the support of the Red Republicans by some scheme of propagandism for their ideas—not in France, where he will be the despot, but out of it, where he will be contented to play the part of the friend of liberty. Let the Italians look to it. Napoleon the First was King of Italy. Napoleon the Second will possibly aspire to the same dignity, the more especially if the struggle to obtain it would employ his army, keep out of mischief the extreme Republicans, and flatter the military madness of his nation. We must own that we look to the future with apprehension; and so far from anticipating what Louis Napoleon, when he was yet true and unperjured, called "the close of the era of revolutions," we imagine that he has inaugurated an era of new revolutions, more frequent, longer continued, and more disastrous than the old. Men cannot commit such acts, nor nations acquiesce in them, with impunity.

FOREIGN AND COLONIAL NEWS.

FRANCE.

An uneasy calm—dreary, dark, desolate, oppressing men's minds with an undefined fear of some impending evil hidden in the future—has succeeded the murderous storm which swept with such unrelenting fury over Paris last week.

The ascendancy of Louis Napolean and military violence is complete, and, in the capital at least, the French people succumb in sullen silence to the overbearing influence of that despotic power, the least opposition to which brings death, imprisonment, or exile.

In the provinces, however, where the blow has not been struck with such prompt violence, submission has not been so ap[illegible]bited; and it has been found necessary by the authorities to [illegible]under martial law the greater number of the central, the [illegible], and south-western departments, where the Socialists ar[illegible]icans (with the countenance and support of the Legitim[illegible]d, although this allegation appears to be but mere remou[illegible]nt the standard of resistance to the *coup d'état* of Louis Napoleon.

Amongst the departments named as being thus in a state of siege," are the Nièvre, Var, Gard, Allier Lot, Lot-et-Garonne, Basses Alpes, &c.

As all the accounts which are published of the state of matters in these districts come through the hands of Government officials, they are to be little trusted, for everything unfavourable to the cause of Louis Napoleon is suppressed, and anything which can present his opponents in an odious light is assiduously selected and given forth to the public, who are unable to form an estimate of its truth or accuracy, since no provincial newspapers are suffered to be circulated in Paris until they are first overhauled at the Post-office, when, if they are found to contain any obnoxious paragraphs, they are not distributed; and of the Paris journals, all those in opposition to the chief of "the powers that be" have ceased to appear, the few that do publish carefully abstaining from any statement or notice of occurrences which might compromise their safety. The *ex parte* news then, such as it is in general, is to the effect that in several towns of those districts the Socialists and Reds have attacked the peaceable inhabitants, putting to death several of the richest and most respectable, and giving themselves up to acts of indiscriminate violence, pillage, and bloodshed; and that they have succeeded in establishing a temporary reign of terror in those localities only where there were either none or insufficient troops to put them down; the soldiers being always represented as successful, and enthusiastic in *the cause of order and Prince Louis Napoleon*. The town of Clamecy, in the department of Nièvre, and the surrounding district, is especially mentioned as having suffered from the excesses and ravages of the Socialists.

If none but the Socialists are engaged in the movement, and if the opposition to Louis Napoleon is of the character attributed to it by the Government writers, it is absurd to suppress those local journals which can alone throw impartial light upon, and confirm, these accounts. It is that suppression of free opinion which makes people suspect that the matter is otherwise.

The insurgents are described as going about the country in bands of fifty and one hundred, robbing, murdering, &c.; and it is added by the writers who draw their inspiration from the Government offices, "that there is nothing national, nothing patriotic, in this movement; that it is pure *jacquerie*, and that the municipal councils and chambers of commerce, which, by protests against Louis Napoleon, had given a sort of political sanction to the proceedings of the Socialists, are now joining the authorities to put them down; that no alarm is felt by the Government as to the result, although it will be a work of time to quell the movement, and the greatest excesses are to be feared; that it is known that all this outbreak had been organised, and that some chiefs of the Mountain direct the operations; that orders have been sent by telegraph to the authorities to show no mercy to these plunderers and assassins; and that several journalists who had given the first signal for a rising have been arrested."

For the truth or probability of these representations we cannot vouch, as long as the ordinary channels of communication are impeded or stopped altogether by the Government. We, therefore, only give them as we find them. The following is the purport of the more important of the Government accounts:—

The latest news from Strasbourg reports the agitation to be over. The cavalry made two charges in the Place d'Austerlitz, and two barristers, MM. Beyer and Catoire, were arrested. After this all was quiet.

Nineteen persons have been arrested in the Jura, including M. Barbier, the editor of the *Tribune du Peuple*, which journal has been suspended.

In the Ain, near Villars, a conflict has taken place between a squadron of General Castellane's dragoons and a large body of insurgents, in which the latter were routed, and four prisoners taken. In a similar affair at Bayé-le-Châtel, five prisoners were made.

At Saint Sulin, near Macon, a severe engagement took place on the 6th between the military and armed insurgents to the number of five or six hundred. Five or six of the latter were killed, twelve taken prisoners, and the remainder completely routed.

The refugees in Switzerland have not succeeded in crossing the frontier into France.

From the south the latest news is more serious.

At Bézier a large armed band surrounded the Mairie. A volley was fired at them, which killed eight and wounded several. They then fled, but shortly afterwards returned with reinforcements, and fell upon two gentlemen, MM. Bernhard and Vernher, whom they killed and mutilated with hatchets. They were afterwards driven out of the town by the troops.

At Capestang scenes nearly similar are said to have occurred.

At Mayannes, Castelnarstin, and Maissac, there have been risings, but, so far as is yet known, without resistance, or bloodshed. A large number of prisoners have been made, who are forthwith to be tried at Toulouse.

At Montpelier, General Rostolan has taken 174 prisoners.

Telegraphic despatches state that there have been disturbances at Bayonne, Mulhouse, and in the Tarn-et-Garonne, but that the authorities are everywhere victorious.

The Prefect of the Haut Marne has ordered that any officer or soldier of the National Guard who may put on his uniform without having been legally convoked shall be arrested.

It is stated officially that complete tranquillity is restored to the departments of the Eure, Seine-et-Marne, Basse-Marne, Vaucluse, Côtes-du-Nord, Dordogne, Cantal, Arriège, Eure-et-Loire, Lot, Vosges, Haut-Rhin, Meuse, Côte d'Or, and Yonne.

The Council General of the Ile-et-Vilaine has protested against the act of the 2d December, with the exception of three members. The Council-General of the Loire-Inférieure has protested unanimously.

Colonel Reigis, Commandant at Havre, has declared, in an order of the day, that the Chamber of Commerce of that town has violated the constitutive law of its existence, by expressing its opinion upon the acts of the Executive. He intimates that if the Chamber of Commerce mixes itself up with politics he will dissolve it.

In Paris, meanwhile, the system of repression is carried on with a high hand and with undeviating persistency. The most rigorous censorship is exercised over the press. Several of the ex-representatives, especially members of the Mountain, have been arrested. Amongst these are MM. Carbonneau, Cayras, Chabert, Chavassieu, Gavarret, Gambon, Guiter, Perdiguier, Richardet, Mathé, Chaix, and Hugnenin, who represent severally the departments of Gers, Corrèze, Ardèche, Loire, Nièvre, Pyrénées-Orientales, Seine, Jura, Allier, the Hautes Alpes, and Haute-Saône; also MM. Burgard, Chamiot, Canet, and Lafon; whilst MM. Schœlcher (who was wounded on Wednesday, the 3d), Baucel, and Jules Favre have found it necessary to fly the country.

The number of prisoners at present is said to be 1800.

Preparations are making also to establish evidence on which to bring the generals confined at Ham to trial. M. Thiers, who was released from prison on account of the illness with which he was there attacked being so serious that it was feared he might die, and thus give rise, by his death, to a suspicion of foul play on the part of the Government, has not been permitted to remain in the country; he was removed from Paris on Wednesday, under an escort of gendarmerie, to the frontiers, *en route*, it was said, to Germany, and it was reported at the same time that M. Léon Faucher was to suffer a similar deportation.

This latter, however, is but a rumour, and has not been confirmed.

On Tuesday a decree was issued by Louis Napoleon which has brought all his despotic measures to a climax. In this extraordinary document he announces that he will transport to the tropical swamps of Cayenne, or to Algiers, for a term of from five to ten years, all persons, subjected to *surveillance* of high police, who break their ban (that is, quit the district in which they are obliged to live), or have belonged to secret societies. In other words, he proposes to transport all persons whom he may regard as obnoxious to him, or suspect of being opposed to his schemes of ambition. Residence in Paris is interdicted, also, to all persons under surveillance.

The decree is as follows:—

The President of the Republic, on the proposition of the Minister of the Interior—Considering that France has need of order, labour, and security; that for too many years society has been foundly disquieted and troubled by the machinations of anarchy, and by the insurrectional attempts of [illegible]mbers of secret societies and liberated convicts, always ready to be[illegible]nents of disorder; considering that, by their constant habits of [illegible]laws, insufficient, and that it is necessary to make modifi[illegible]con- ciliating the duties of humanity with the interest of [illegible]—

Art. 1. Any individual placed under the *surveillance*[illegible]all Residence at Paris and in the *banlieue* is interdicted to all individuals placed under the *surveillance* of the police. Art. 5. The individuals designated by the preceding article shall be obliged to quit Paris and its *banlieue* within ten days from the promulgation of the present decree, unless they shall have obtained permission to remain from the Administration. There shall be delivered to those who may demand it a *feuille de route et de secours* which shall fix their route to their place of birth, or that which they may have designated. Art. 6. In case of violation of the measures prescribed by Articles 4 and 5 of the present decree, offenders may be transported, as a measure of general safety, to a penitentiary colony at Cayenne or in Algeria. Art. 7. Persons transported in virtue of the present decree shall be subjected to labour in the penitentiary establishments; they shall be deprived of their civil and political rights; they shall be subjected to military jurisdiction; the military laws shall be applicable to them. However, in case of evasion from the establishment, the transported shall be condemned to imprisonment, which cannot exceed the time during which they may then have to remain in transportation. They shall be subjected to military discipline, and subordination towards their chiefs and keepers, whether civil or military, during the period of imprisonment. Art. 8. Regulations of the Executive Government shall settle the organisation of these penitentiary colonies. Art. 9. The Ministers of the Interior and of War are charged, each in what concerns him, with the execution of the present decree.

Done at Paris, at the Elysée National, the Council of Ministers being heard, the 8th December.

LOUIS NAPOLEON BONAPARTE.
A. DE MORNY, Minister of the Interior.

The Minister of the Interior has addressed a circular to the prefects, with instructions to carry out the provisions of the electoral law of March 15, 1849, in the ballot of the 20th and 21st of December. The lists of March 31, 1849, will be taken as the base of the new lists, which will include all citizens who have since that period acquired the age of twenty-one, and undergo other necessary modifications in conformity to the law of March 15, 1849. The electors will hand in a closed ticket, inscribed simply, "*Oui*," or "*Non*."

The Commander-in-Chief, General Magnan, on Monday, and Louis Napoleon on Wednesday, visited the wounded soldiers in the various hospitals. On the latter occasion, crosses and decorations were distributed to the men with his own hands by Louis Napoleon. He has also published a decree ordering that, when troops have been employed in active services in putting down riots, it shall be reckoned as if they were engaged in the field. The archbishop of Paris also visited the wounded in the hospitals of the Hôtel Dieu, Gros Caillou, St. Louis, Val du Grace, Charité, and Reule, on Wednesday

By another decree the Panthéon has been restored to its original purposes of religious worship. The church of St. Geneviève, the patron saint of Paris. This magnificent building, which since 1830 has been regarded merely as a splendid monument to those who fell in the revolution of that year, whose names are inscribed in golden letters upon its walls, was commenced in 1764 by the order of Louis XV. In 1791, the Constituent Assembly, in the spirit of the Revolution, changed the character and name of the edifice, calling it "Le Panthéon Français." In 1822 it was again restored as a church, and consecrated as such in the name of Sainte Geneviève by the Archbishop of Paris. But in 1830 it again became the Panthéon; and now, by a fourth transformation, it is once more a church.

A commission of three mayors, an architect, and doctor, presided over by the Prefect of the Seine, is appointed to value the damages done to innocent persons. A credit of 200,000 f. is opened to the Minister of the Interior to provide for the first needs.

On Monday night the first public reception took place at the Palace of the Elysée since the *coup d'etat*. It was crowded to excess, and it became necessary to throw open all the state rooms for the reception of the company. There was an extraordinary number of officers of all ranks present. The members of the *corps diplomatique* were also very numerous, and a considerable number of ladies, among them a good many of our countrywomen.

THE LATE EVENTS IN PARIS.

The wanton and indiscriminate massacre of unoffending spectaters, by the continuous *fusillade* of the flying crowds on the Boulevards in the afternoon of Thursday, the 4th inst., will for ever brand with infamy the troops and leaders engaged in that ferocious affair.

An admitted loss of 800 lives on the part of the "people," the civil its contra-distinguished military population, and that the work of little more than an hour, is a frightful episode in the "Revolution from above" which has just been accomplished in Paris. The number of the wounded is not mentioned, but it must be very large indeed, when the slain are so many. On the part of the troops there were 1 officer and 15 soldiers killed, and 105 wounded a disproportion to the civil loss that indicates with painful clearness the fearfully earnest and reckless spirit in which the fierce soldiers trained in the savage warfare of Africa assailed their own unarmed fellow-countrymen, who now suffer within their own homes, and at their own hearths, those atrocities which, when inflicted by the very same hands under which they themselves now cower upon foreign foes, they in their giddy thoughtlessness and vain ambition regarded as the fitting tribute to their absolutely-worshipped national idol—military glory. Fearful and instructive retribution! A few of the incidents of Thursday will show the reckless character of the onslaught. A respectable *marchand de vin*, near the Porte St. Martin, had gone from a moment outside his shop to speak to a person who was passing. The troops came up, and a Socialist who was standing by him shouted, "*A bas Napoleon!*" One of the soldiers who was in advance raised his musket to fire upon the Socialist before the officer could raise his sword to prevent the fire, and the ball, instead of hitting the Socialist, struck the *marchand de vin* on the temple, and he fell dead in sight of his wife, who was at the counter. A gentleman who resides on the Boulevard was struck on the hand as he was sitting in his drawingroom. A respectable tradesman was shot at his desk. In one house a gentleman was sitting in his drawingroom, with his wife and daughter, when five balls came through the window, and passed just over their heads, lodging in the wall opposite. Two gentlemen of fortune, brothers, who resided at Vaugirard, near Paris, were crossing the Boulevard, opposite the Passage Jouffroy, and were both shot dead.

At half-past three in the afternoon (of Thursday, the 4th), writes the correspondent of the *Morning Chronicle*, the troops extending along the Boulevard des Italiens, the Boulevard Mon-martre, and the Boulevard Bonne Nouvelle, were drawn up the whole way across the street, so as to touch the *trottoir* at each side. The foot-pavements were crowded with spectators, and in the balconies of the houses of each side were to be seen hundreds of ladies and gentlemen. There was not a barricade within a considerable distance, presumably not within sight. Things were in this position when, all of a sudden, a running fire was opened on the people on the foot-pavements and at the windows. Fortunately it was not by platoons, but by a running fire, so that a considerable number had time to escape, but still the carnage was dreadful. To one house, at the corner of the Rue Bergère] there were carried no less than 36 dead bodies, besides those carried elsewhere; and it may truly be stated that among this mass of victims there was not a single insurgent.

The excuse given by the Government papers for this wanton act was that shots had been fired on the troops from two or three different houses, which were named the Café de Balcon, the Café Tortoni, the Café de Paris, the Hôtel de Castille, and Deautoy's (a tailor) in the Boulevard des Italiens. It appears, however, that this was entirely a mistake. Both the *Constitutionnel* and *Patrie* now admit that they were mistaken.

* * * * * * *

If it be true, as is reported, that the order given to the troops was, "Spare nothing, but especially the *balcons* and the blackcoats," the massacre on the Boulevards will be handed down as one of the most wanton acts of cruelty ever committed.

Most of the four or five hundred persons killed on the spot were young men who had taken no part in the struggle. The same was the case with the hundreds who were wounded, and are now suffering untold agonies in hospitals. At least twenty of the wounded and ten of the killed were English, who happened to be at the scene of action when the unlooked-for discharge was made upon the troops from a house in the Boulevard Poissonnière. It is now ascertained from various sources that the authorities permitted and encouraged the erection of the barricades, in order to draw out their opponents, so as to strike a blow against them with advantage.

The correspondent of the *Daily News*, in support of this opinion, says —

Among the poor fellows who were dangerously wounded in the fight on Thursday at one of the twenty or thirty barricades was a commissary of police in citizen's dress. On being taken home to his mother, he confessed that he had wickedly assisted at the building of the barricade, and urged others to do the same, by direction of his superiors.

The fact confirmed me in the opinion I had before formed, when witnessing the operation of the insurgents at their strongest barricade, in the Porte St. Denis. That opinion was, that, seeing there was no policeman or soldier present, to prevent the laying of the first stone, it was evident the insurgents were led on and encouraged in all their demonstrations by the authorities.

The *Moniteur* announces the loss of the army in the late events to to have been one officer and 24 privates killed, and 17 officers and 167 privates wounded.

The *Patrie* publishes the following votes of the army :—

Number of votes	65,380
Votes for Louis Napoleon	61,456
Against	3,749
Abstained	84

UNITED STATES.

Advices from Boston to the 26th ult. state that great preparations continued to be made at New York for the reception of Kossuth. Letters had been placed in the hands of the pilots for the purpose of requesting Kossuth to stop for a day with Dr. Doane, the health officer at the quarantine. The steamer *Oregon* was then to be sent down with an official delegation, to escort him to the city. Kossuth will be landed at Castle Garden, where he will be formally received by the federal and the city authorities, and an address will be presented to him. He will then review the troops on the battery, after which a procession will accompany him to his quarters at Irving-house. On the following night a grand military and civic dinner will be given him and his companions by the city authorities.

Jenny Lind was to sing at Boston on the 26th; the excitement was quite as great as on her first visit some months ago. Every ticket was sold, and a premium was, in numerous cases, offered by those who were too late.

From Central America it is announced that the Panama railroad is finished from Navy Bay to within a short distance from the terminus at Manzanilla. The late riots and murder at Chagres had caused great excitement. The town of Chagres is now inhabited by the worst of characters from all parts of the British, French, and Dutch West Indies. The old fort of San Lorenzo has been garrisoned with militia until the regular troops can be sent from Panama.

WEST INDIES.

We have intelligence this week from these islands, and from Mexico.

Under head of Jamaica, November 15th, we learn that cholera continued to rage in several parts of the island. A gale of wind had done considerable damage on the coast about Black River and other localities. A slight shock of an earthquake had taken place.

In Mexico the country is for the most part in a state of intense distraction, particularly the state of Tamaulipas.

CAPE OF GOOD HOPE.

Accounts of the same unsatisfactory character as those for some time past have been received this week from the Cape. They are dated Nov. 4.

The Chief Sandilli, it was expected, would attack Fort Hare, and thus give our troops an opportunity of putting his forces off at one blow. The Chief Kreili, hitherto friendly, has declared against us.

The details of the actual state of things in the various leading localities of the seat of war are meagre and confused. Numerous depredations are reported from simultaneous inroads of the enemy in nearly all the frontier districts. On the 1st of October a body of 500 or 600 Kaffirs swept off the cattle from around Fort Brown, including the draught oxen of a large convoy of waggons. The Fingoe escort went in pursuit, and recaptured the greater number, and killed ten of the enemy. From Alice numerous desertions from the Kat River levy are mentioned, and an attack on the place was expected.

Colonel Eyre, when on patrol with about five hundred men, had discovered the grand rendezvous of the enemy, established in one of the deep beds of the Fish River, between Double and Commando Drifts, and within half a day's ride of Graham's Town. It appeared to contain several thousand Kaffirs and Hottentots, and vast numbers of cattle, sheep, &c. The position being almost inaccessible, and the number of the enemy so large, Colonel Eyre did not consider his force numerous enough for an attack, and therefore withdrew.

A patrol of about 1200 men, under Lieutenant-Colonel Michel, with artillerymen and two six-pounders, were about to proceed to the Fish River bush, to form "flying camps" on the ridge running from Fort Peddie to Bothas Post, and there, in company with the detachment under Lieutenant-Colonel Eyre and Major Wilmot, to encircle the principal stronghold of the enemy, and cut off his supplies.

The rumours from beyond Kei are more favourable. It was reported that the Kaffirs had made an attack on Whittlesea, and had been repulsed with heavy loss.

In the Sovereignty we learn that Bloem Fontein is in a very precarious situation, and Major Warden has brought difficulties upon the country which he finds it no easy task to obviate or remove. The noted Pretorious has sent a message to Major Warden, to the purport that he is coming down with a large force, in order to "prevent the effusion of blood." Should he and his Boers stir up and take part with Mosbesh in any extensive movement upon the colony, the consequences would, for a time, be most disastrous.

THE COAST OF MOROCCO.—FRENCH HOSTILITIES.—THE ENGLISH CAPTIVES.

In our late edition last week we noticed the bombardment of the Moorish towns of Salee and Rabat, by the French fleet, on the 28th ult., on account of the refusal of the local authorities to give an indemnity for some French property destroyed there. For eight hours the steam-ships under command of Admiral Dubourdieu continued to pour into those places a storm of shot and shell, until Salee was nearly razed to the ground, and Rabat was considerably damaged. The Moors, in the meantime, did their best in returning the fire from the Castle of Rabat, and from some other pieces of heavy ordnance which they brought to bear on the French fleet. One man was killed and seven wounded on board the *Henry IV.*, the admiral's ship. On shore the loss of life amongst the Moors was very great.

After committing this great devastation the fleet weighed, and on the 29th cast anchor in Tangier Bay. Immediately afterwards several officers of the squadron landed, and had an interview with Sidi Mahomed Eizbih, Bashaw of the province and Minister of Foreign Affairs of the Emperor Abderrahman, and Mr. Drummond Hay, the British Chargé d'Affaires. The conference, during which the population was in the greatest anxiety, lasted for some time; and shortly after the admiral's ship fired a salute of 21 guns, and the compliment was duly returned by the town, as token, as was generally understood, of a settlement of the differences having been agreed to by the Admiral Dubordieu and the Minister. The terms are not known at present. It is confidently reported that Mr. Hay's friendly intervention contributed to the happy issue of the conference.

The consternation which prevailed in the city was thus dispelled, and the population reassured.

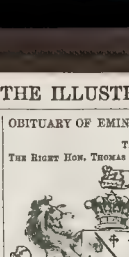
Mr. Borell has again resumed his functions as Consul in Fez.

In reference to the crew of the English merchant vessel *Violet*, who were lately captured by pirates on the Riff coast, we learn from Melilla, under date the 13th ult., that the negotiations for their ransom were in a state of forwardness, notwithstanding the difficulties arising from the covetousness of the captors, the exorbitancy of whose demands increases in proportion to the anxiety expressed for the liberation of the captives. Lieutenant Powell, the officer in command of H.M.S. *Janus*, who was severely wounded in the attack on the pirates, has been promoted to the office of commander. He will not be removed from the *Janus* in consequence of his promotion until the Moorish question is settled. All the surviving officers of the *Janus* who were in the late engagement with the pirates have been promoted.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

THE EARL OF SUFFOLK.

THE RIGHT HON. THOMAS HOWARD, sixteenth Earl of Suffolk, and ninth Earl of Berkshire, was the second son of John Howard, the fifteenth Earl. He was born the 18th of August, 1776, and succeeded to the family honours on the demise of his father, the 23rd of January, 1820. He married, the 14th January, 1803, Elizabeth Jane, eldest daughter of James Paul Cawthorne, by whom (who died the 18th April, 1836) he has had issue four sons and five daughters. His eldest son, Charles John, born the 7th November, 1804, succeeds him as seventeenth Earl. Thomas Earl of Suffolk died on the 4th inst., at his seat, Charlton House, near



Malmesbury, Wilts. His Lordship, the representative of an ancient distinguished branch of the noble house of Howard, was a warm admirer of general pursuits, and was much esteemed and beloved by his neighbours, friends, and all around him. In politics he supported the present Government. The Earl had latterly resided mostly in London, and had only left his town house in Charges-street for the country two days before his death.

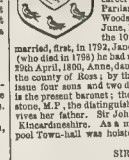
SIR W. P. CALL, BART.

SIR WILLIAM PRATT CALL, Bart., of Whiteford, in the county of Cornwall, was the elder son of John Call, an eminent engineer, and a commissioner of Crown lands, who was created a baronet the 28th July, 1791, and died the 1st March, 1801. Sir William, the subject of this notice, who succeeded him, was born Nov., 1781: he married, the 19th June, 1805, Louisa, third daughter of George, fifth Earl of Granard, by whom (who died the 25th June, 1839) he has had, besides four daughters, one son, his successor, now Sir William Berkeley Call, the present and third Baronet. Sir William died at his seat, Whiteford House, Cornwall, on the 3rd inst. The worthy Baronet resided wholly on his property, and was a very kind landlord; he is much and generally lamented.

SIR JOHN GLADSTONE, BART.

SIR JOHN GLADSTONE, Bart., of Liverpool, and of Fasque and Belfour, the county of Kincardine, was the eldest son of the late Thomas Gladstone, Esq., of Leith, and grandson of John Gladstone, of Tofftcombe, near Biggar, in Lanarkshire; he was born at Leith the 11th Dec., 1764. Going to Liverpool at the age of twenty-two, and embarking there in trade, the future Baronet rose from confined to extensive business—to be one of the merchant princes of Liverpool. His life in point of commercial skill and enterprise has, perhaps, been unprecedented. He led the way for the Liverpool trade with the East, and his vessel, the *Kenpisand*, was the first that sailed from Liverpool to Calcutta. His political career was also one of some note. He was a member of Parliament, and during that time represented Lancaster, Woodstock, and Berwick. He was created a Baronet the 27th June, 1846. Sir John had previously, by Royal licence, dated the 10th Feb., 1835, dropped the final *in* his surname. He married, first, in 1792, Jane, daughter of Joseph Hall, Esq., of Liverpool, by whom (who died in 1796) he had no issue. Sir John Gladstone wedded, secondly, the 29th April, 1800, Anne, daughter of Andrew Robertson, provost of Dingwall, in the county of Ross; by this lady, who died the 4th Sept., 1835, he has had issue four sons and two daughters. The eldest son, Thomas, succeeds him, and is the present baronet; the fourth son is the Right Hon. William Ewart Gladstone, M.P., the distinguished Conservative statesman; the daughters only survives her father. Sir John Gladstone died on the 7th inst., at his seat, Fasque, Kincardineshire. As a mark of respect to his memory the flag on the Liverpool Town-hall was hoisted half mast, and will remain so till after his funeral.

SIR GEORGE QUENTIN, K.C.H.



SIR GEORGE AUGUSTUS QUENTIN, eldest son of George Quentin, Esq., of Göttingen, was born in 1760. Near the whole of his life was spent in military duty. For five years he was in the Garde du Corps, in Hanover; he entered the British army, as cornet in the 10th Hussars, in 1793. He served gallantly throughout the Peninsular war, and was severely wounded at Talavera. He was aide-de-camp to the Prince Regent, afterwards George IV., from 1811 to 1825. In 1821 he was made a Knight Bachelor, and in 1838 he attained the rank of Lieutenant-General; he was since 1835 Equerry to the Crown stables; he was a C.B. and K.C.H. The distinguished veteran died on the 7th inst., at his residence in Great Cumberland-street, Hyde-park, at the advanced age of 92.

PROFESSOR DUNBAR.

GEORGE DUNBAR, a celebrated Grecian scholar, and professor of Greek literature in the University of Edinburgh, was born at the village of Caldingham, in Berwickshire, in 1774. In early life he laboured as a gardener, but an accidental lameness, which lasted through his subsequent life, incapacitated him from active bodily employment. His attention was meanwhile directed to literary pursuits, and, as it turned out, he was, from an humble stock, undoubtedly fashioned to much honour. He soon became a scholar, and in truth a ripe and good one. Going to Edinburgh, he readily obtained, on proof of his acquirements, the Greek Deaffs, and the patronage of Lord Provost Fettes. Having been shortly after selected as assistant to Professor Dalziel, he was appointed, on that professor's death, to the Greek chair in the Edinburgh University in 1806. The duties of this responsible position he discharged most zealously and ably. The published works of Professor Dunbar are too well known to need lengthened mention. The "Collectanea Minora," and the "Collectanea Majora," are of this kind. It is a book of lasting utility and reputation. Its consistent author had preserved a green old age, until attacked by a virulent internal malady, which compelled him to abandon his academic duties a short time ago. He died on the 8th instant, at his residence, Rose Park, Trinity, Edinburgh. Professor Dunbar had been twice married.

LIBERAL CHARITABLE BEQUESTS BY THE LATE MISS HARRIET DUNLOP, OF WILTON PLACE, BELGRAVE-SQUARE.—The testatrix died in her 83rd year, and bequeathed as follows:—To the Strangers' Friend Society for Relieving the Distressed Sick Poor at their own Habitations, and Friendly Female Society at Brixton, £400 each. Widows' Friend Society, Old Fish-street; Society for Protection of Houseless Poor, Old Broad-street; Orphan Asylum, Wanstead; Society for Suppression of Mendicity; Royal Institution for Diseases of the Eye, Cork-street, Burlington-gardens; Chelsea, Brompton, and Belgrave Dispensary; London Orphan Asylum, Clapton; and to the Governesses' Institution, £300 each. Also, by Thomas Harriott, Esq., formerly of the Stock Exchange, and of Windsor-terrace, City-road, £10,000 to the Wesleyan Missionary Society; to the Infant Orphan Asylum, Wanstead, £5000; London Orphan Asylum, £100; Stranger's Friend Society, £100; British and Foreign Bible Society, £500; Church Missionary society, £100; Poor Pious Clergymen's Society, £100; Kingswood and Woodhouse Schools, £100; to the Fund for the Support of Distressed Chapels in Wesleyan Connexion, £100; the residue of his property is left to the Fund of the Superannuated Preachers and Widows of Wesleyan Ministers. And also, by Miss Mary Ann Way, of Ashton Lodge, Lancaster, and Devonshire Parade, Bath, £1000 to the Aged Pilgrims' Society, Camberwell Branch Association; to the Denham (Lancashire) Girls' School, £500; London Society for Promoting Christianity among the Jews, £500; to the Poor Saints' Fund, Bethesda Chapel, York street, Bath, £500, conditionally that the Rev. J. A. Wallace is minister. And we also notice some small charitable bequests left by Miss Hopkins, of Bath, being a legacy of nineteen guineas to each of the following institutions:—United Hospital, Bath; Bath Penitentiary; Bath National School; Society for Promoting Christian Knowledge, and for the Propagation of the Gospel, and Extending Christianity among the Jews; and Society for Preventing Cruelty to Animals; and to the following, ten guineas each: Bathwick Infant School; Blind Asylum, and Orphan Asylum, both of Bath.

MONUMENT TO THE LATE GEORGE STEVENSON.—A meeting of the committee was held on Wednesday, at the Euston Hotel; Mr. G. Glyn, M.P., in the chair. Mr. Leech, M.P., stated, that very little publicity, 178 subscribers had contributed £2850 15s. 6d., and 3160 workmen £2885 2s. 7d.; total, £5835 18s. 1d. The expenses had been £71 18s. 4d., so that the available balance was not far short of £5300. Mr. J. Ellis, M.P., and Mr. Scott Russell moved and seconded a resolution that the Euston-square terminus should be the site for the proposed monument, which was carried. The following gentlemen have been named as a sub-committee to communicate with the London and North-Western board to procure a design and estimate for the erection of a suitable statue; namely, Mr. G. Glyn, M.P.; Mr. Peto, M.P.; Mr. Geach, M.P.; Mr. J. Ellis, M.P.; Mr. J. E. M'Connell, and Mr. Scott Russell.

PLANET BEYOND URANUS.—A curious fact for astronomers has just been ascertained. In the papers of the cel-brated Lalande, recently presented to the Academy of Sciences by M. Arago, there is a note to the effect that so far back as the 25th of October, 1690, he and Burckhardt were of opinion, from calculations, that there must be a planet beyond Uranus, and they occupied themselves for some time in trying to discover its precise position.—*Literary Gazette.*

IRELAND

THE ACTION AT LAW AGAINST THE CHIEF SECRETARY FOR IRELAND

The very extraordinary case of "Birch, proprietor of the *World* newspaper, *v.* Sir William M. Somerville, Bart., Chief Secretary for Ireland was heard in the Court of Queen's Bench, Dublin, on Friday and Saturday last.

Great curiosity was excited among the public of all classes by the affair, and the court was excessively crowded. The galleries were filled with ladies. Lords Gough, Courtown, and Monk occupied seats near the Chief Justice on the bench; and his Excellency the Lord-Lieutenant, who arrived shortly after ten, and before the sitting of the court, was ushered into the judge's chamber, where he waited until called on to give his evidence for the plaintiff.

According to the declaration of the pleadings, it was an action *assumpsit*, brought by the plaintiff against the defendant, to recover the sum of £7000. The declaration contained two counts for price and value of goods sold and delivered; a count for work and labour and materials supplied; a count for money lent, and an account stated.

Damages were laid at £7000, and the defendant pleaded the general issue.

Mr. Whiteside, Q.C., stated the plaintiff's case at great length. Mr. Birch had been retained by a distinct agreement with Sir William Somerville as a journalist in service of Government in the year 1848, when Ireland was disturbed by revolutionary doctrines. He gave his time and labours, and distributed his paper gratuitously in the country. Counsel stated that several payments had been made upon such understanding, and handed in several letters from Lord Clarendon's private secretary, and Sir William Somerville's private secretary, establishing such connexion.

The first witness called was the plaintiff himself, become eligible under the new law of evidence, and in a long examination and cross-examination, which occupied two hours, he proved that he had had several personal interviews with the Lord-Lieutenant, the Chief Secretary, and other official persons. Confidential conversations passed between them. He also deposed to the promises made to him, pecuniary and otherwise; and the various sums he had had given to him from their own hands at different times—one time £250, at another time £250, £100, £50, £20, &c.; and, on one occasion, when he called at the Viceregal Lodge, by appointment with Mr. Lorry Connelan, there were one hundred sovereigns lying on the table, and Mr. Connelan told him to take them, and take them up, and he did so. He received in all about £900. He estimated his services to the Government by the year, and he considered that £500 would be only a reasonable remuneration for the time he was engaged in rendering those services, by his leading article in the *World*, and the various other ways that had been stated. He estimated his services, he said, at £2000 a year. One of the principal objects for which he was engaged was to write down the rebellion press, the *Nation* and the *United Irishman*, in 1848, and to write up the Government; but he admitted, however, on cross-examination, that one of his editors, and the writer of many of the articles for which he claimed remuneration, was, at the same time, the sub-editor of the *United Irishman*, but he said that he did not know that fact at the time, but only learned it afterwards.

The Earl of Clarendon was next examined from the bench, and, having made the usual solemn declaration of a peer, stated that he first knew of Mr. Birch by having received various communications and applications from him tendering his services in support of the Government as proprietor of the *World* newspaper; and, although he knew nothing whatever of Mr. Birch's antecedents, he felt that at the critical period of '48 it was his duty, as the head of the Government, to accept the services of every man who offered himself in the support of law and order. He believed he had two or three interviews with Mr. Birch, but he did not augur much service to the Government from him, nor did he know much of his newspaper writings, for he never read them. He had, however, directed several sums of money to be paid to him through Sir William Somerville; and, in the whole, the plaintiff had received from him £2700, part of which came, in the first instance, from the public money on his responsibility, and every shilling of which he had long since repaid, so that the whole amount came entirely out of his own private pocket, paid to the plaintiff through the agency of Sir William Somerville, who acted for him on the occasion, and that was all Sir William Somerville or the Government had to do with the transaction His Excellency having withdrawn.

Mr. Corry Connelan, the former secretary of Lord Clarendon, was called, and admitted all the letters produced to have been written by him, and with the concurrence of the Lord-Lieutenant, to whom he then had been private secretary, and the different sums of money he had paid to the plaintiff on various occasions.

Mr. Meredith, the secretary of Sir William Somerville, made the like admission of his correspondence with, and dispensation of money to, the plaintiff. This closed Friday's proceedings.

On Saturday Mr. Brewster proceeded to address the jury at great length on behalf of the defendant. He read a lengthy correspondence between Sir W. Somerville and the plaintiff, in which the latter urged his claims and solicited assistance in money, and also sought to obtain a place for his brother. Sir W. Somerville, in his letters, denied that the plaintiff had any claims upon him—told him to state what his wishes or requirements were, and it would be submitted for consideration. Several of the plaintiff's letters also contained threats of exposure, if his demands were not complied with. Mr. Brewster also produced a release executed by the plaintiff to Lord Clarendon, on receiving the sum of £2000, making in all £3700 received by him from his Excellency for services rendered "in suppressing the rebellion of 1848." A letter from the plaintiff to Lord J. Russell was also read by counsel, and in it, after enumerating his claims on the Government, he thus addresses his Lordship:—"One thing, if the truth be told, cannot be denied, that you gave me, during a lengthened period, various sums, amounting to £3700; that by the letter of the Irish Secretary I might still have been a stipendary advocate of the Government; and that, having refused that proposal, every effort is now being made to ruin me."

At the conclusion of the learned gentleman's address the documents referred to by him were produced in evidence.

Mr. Keogh, Q.C., then replied on behalf of the plaintiff.

The Chief Justice briefly charged the jury, who returned a verdict for defendant, with 6d. costs.

The Chancellorship of Dublin University, vacant by the death of the King of Hanover, has been conferred on his Grace Lord John George Beresford, the Primate of all Ireland. The election took place on Saturday last. His Grace was a graduate of Oxford.

AEROLITES IN INDIA.

THE museum of the Asiatic Society in Calcutta has been lately enriched by two remarkable Aërolites, donations from officers in the East India Company's service. The first was presented to the society by one of its members, Captain Walter S. Sherwill, engaged in the revenue survey who procured the Aërolite from the Kurrukpoor hills, on the banks of the Ganges. An Engraving of this curiosity is presented to our readers it is 15 inches in length, 12½ inches in extreme breadth, and weighs 156½ lb.; its original weight, however, was 160 lb.; but several pieces have been broken off for the purpose of analysis, which, according to Mr. Piddington, the curator of the geological section of the museum, gives the following as the contents of the scoriaceous portions of this formidable projectile :—

Metallic iron	77 00
Nickel	1·00
Cobalt	3 20
Chromium	0·50
Silica	17 00
Alumina	1·00
Arsenic and selenium	traces
	99 20

For the second specimen the Society are mainly indebted to Thomas B. Mactier, Esq., the magistrate at Bancoorah, in Bengal, who proceeded to the spot, ten miles from Bancoorah, where the Aërolite fell: and saved what portions he could from the depredation of the superstitious natives, who were conveying the fragments away as fast as possible for charms, objects of worship, and for medicinal purposes.

This Aërolite fell on the 30th of November last, with a great noise, into a soft, muddy rice field, where it buried itself three feet in the soil, having in its fall scattered a shower of fragments around, within a radius

ELIE JEAN FILLEUL, "THE JERSEY PATRIARCH," DIED DEC. 3, 1851, AGED 102.—FROM A CALOTYPE.

of twenty feet. The Aërolite, judging from circumstances, must have been three feet in length; it is of a beautiful ash colour, friable, soft, and gritty, and somewhat resembles pumice.

DEATH OF A CENTENARIAN, AT JERSEY.

ELIE JEAN FILLEUL, the fine old man known as "the Jersey Patriarch," died on Wednesday week. His end was peace; he had no disease whatever. A correspondent, writing from Jersey, states that he was at the old man's bedside a few hours before his death: "they told me," says our informent, "that he was dying; he appeared to be simply short of breath; he was surrounded by his children and grandchildren; and a few hours after, without pain or struggle, he ceased to breathe."

Elie Jean Filleul was a native of the parish of St. Clement, in the island of Jersey, where he had lived for a century. He stated that he was born in the year 1749, and such is the belief of his neighbours and descendants; but it appears by the parish register that he was not baptized until 1755.

He was brought up to the business of a village tailor; he was in full possession of his faculties to the day of his death; he could thread a needle without spectacles, and his hearing was perfect. He was of a social and jovial turn, had lived well and worked hard. He scouted the notion that teetotalism is conducive to long life. He enjoyed a pipe of tobacco and a glass of ale, and related over them his "auld warld cracks" with infinite humour.

When Jersey was invaded by a French expedition, in 1781, under Baron Rullecour, Jean marched with the East Regiment of Militia (of which regiment he was a sergeant) to assist in the repulse of the enemy: he remembered all the circumstances attending that affair, and the *esprit de corps* which is so remarkable in the inhabitants of Jersey in general, existed to the last in the old man's heart; for in the month of August last, when a number of militiamen were at practice, target-shooting on the sands near Pontac, Jean joined the party, and, taking a musket from one of the young men, sent its bullet through the bull's-eye—the best shot by far that was made that day.

THE GREAT AEROLITE, FROM THE [illegible] HILLS, NEAR MONGHYR, INDIA

COLONY OF JEWS IN THE CENTRE OF CHINA.

IT has long been known that there is a colony of Jews residing at Kae fing-foo, in the centre of China. The fact was first brought to the knowledge of the European public by the Roman Catholic missionaries during the seventeenth century; since which time, the accounts received regarding them having been so few and meagre, their very existence has been almost doubted. Hebrew letters have been forwarded to them from time to time by various individuals, but have never elicited any reply; and up to the present year the only certain information we have possessed has been from the letters of missionaries. An expedition

CHAOU KIN-CHING.

having been recently set on foot, at the instance of the London Society for promoting Christianity among the Jews, the result has been quite as satisfactory as might have been expected. Two Chinese, in the service of the London Missionary Society at Shanghae, were despatched in November last on a mission of inquiry, and have returned, bringing accounts in every respect confirmatory of those who had preceded them and also six small sections of the law written in antique Hebrew, and two Hebrew rituals, all in manuscript. The descendants of the Hebrew race they found; who, although losing many of their ancient characteristics, were still living a distinct people in the middle of the Chinese city, notwithstanding they have in every respect adopted the Chinese dress and mode of living; they are still looked down upon and despised, not only by the privileged sects, but also by the Mohammedans, of whom there are a very large population in the same city. The last rabbi died nearly fifty years ago, and they have never found any one to supply his place. Not one among them can now read Hebrew, although the travellers, being admitted into the most holy place of the synagogue, found thirteen rolls of the law carefully preserved. Their religious service is now given up and the great portion of the people are in extreme poverty. On the return of the two travellers to Shanghae with the above account, it was resolved to despatch them a second time, with a commission to purchase

CHAOU WAN-KWEI.

all or any of the rolls that could be procured; and they were so far successful as to obtain six of them, which are now at Shanghae, and will be shortly forwarded to London for the benefit of biblical scholars. One of these is of considerable antiquity; the others are in excellent condition, written on very thick white sheepskins; each contains 239 columns, varying in width from three to nine inches each. Each roll contains the whole Pentateuch. Besides these rolls, they also brought about forty more sections of the law, five or six being duplicates; about a dozen rituals, some for the daily service, one for the Feast of Purim, one for the day of Atonement, and some others. There is also a genealogical table of the principal families living there, written in Chinese and Hebrew. A Hebrew and Chinese letter, which they had received last year from Mr. Layton, English Consul at Amoy, is also among the papers. Two of the native Israelites also accompanied them to Shanghae, one a literary man, who is now studying Hebrew under one of the missionaries. There is nothing in any of the books that have come to hand that can give any clue to the early history of this people. It is stated on a tablet in their synagogue that they first came to China during the Han dynasty (about the beginning of the Christian era), bringing tribute of coloured cloths from India. Their small books indicate a Persian origin. Nothing has yet been discovered in the Chinese records respecting the sect, but perhaps future research may throw some light on their history.

Annexed are the portraits of the two Israelites. Chaou Wan-kwei aged forty, is a Chinese student, and was a teacher of the children in his sect. Chaou Kin-ching, his brother, is about forty-three, and has a very slender knowledge of letters.

PART OF THE CROWN COURT, SHOWING THE GREAT HALL IN THE DISTANCE, ST. GEORGE'S HALL, LIVERPOOL.

THE NEW ASSIZE COURTS, LIVERPOOL.

The special commission for holding a winter assize was opened at the New Courts, St. George's Hall, on Saturday, by Mr. Justice Erle, who, with Mr. Baron Parke, arrived in Liverpool in the course of the afternoon.

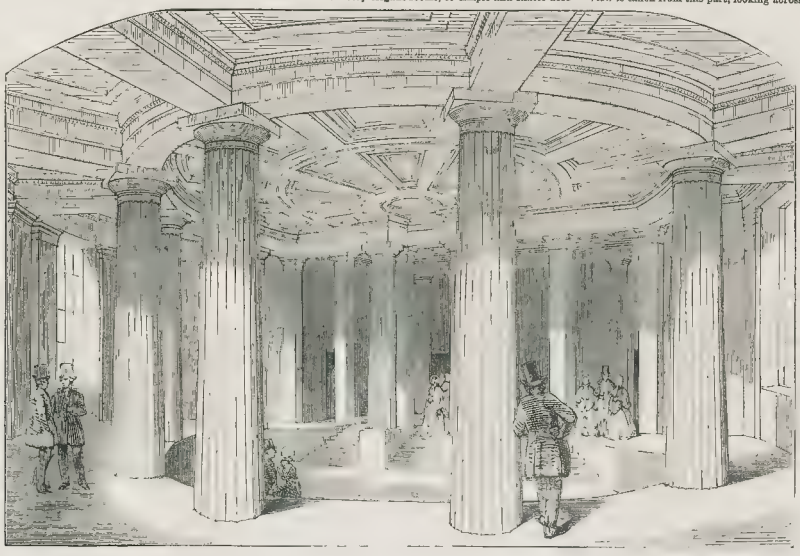
The judges took their seats on Monday morning at 11 o'clock, when Mr. Baron Parke, who presided in the Crown Court, proceeded to charge the grand jury; after which the learned judges adjourned for a short time and were entertained at a *dejeuner* by the mayor and corporation to celebrate the opening of the New Courts. Mr. Justice Erle presided in the Nisi Prius Court.

We give two Views of the New Courts: one being part of the Crown Court, and the other the North Hall, one of the lower Halls of entrance in the magnificent St. George's Hall.

The View of part of the Crown Court shows a screen of four columns of polished grey granite, within an arched way which separates it from the Great Central Hall, and which, in its vaulted immensity, forms an exquisite vista as seen through the columns; and the beauty of the view is heightened by the contrast of the red colour of the granite pillars in the Hall with the cold grey tint of those in the screen between the hall and the Crown Court. The Great Hall is yet incomplete; but its great size, correct proportions, and the elegance of style pervading every part of its enrichments, make it one of the most remarkable of the architectural productions of our day. Indeed, we believe this Hall, when finished, will be without a rival in its beauty and effect. It is reported that the organ for this Hall will be the largest in Europe; and it is *on dit*, also, that Mr. Willis, whose great organ in the Exhibition of Industry of all Nations attracted universal notice, has been appointed to construct it.

The Assize Courts are very elegant rooms, of simple and chaste decoration, and they open into the Great Hall, at either end by arched ways, of which our Engraving shows, as before stated, that to the Crown Court. Flights of steps lead into the Courts, and then there are gang-ways round the seats for spectators. We believe it is intended, should these beautiful entrances be found inconvenient through opening into the Great Hall, to hang draperies in the spaces between the columns.

The North Hall, which forms the second of our Illustrations, is semi-circular in plan, and, from its novelty of arrangement and pure classic taste of character, is eminently beautiful. The columns are Grecian Doric, and standing on a raised story, in which is an entrance doorway, their appearance is very fine. A flight of steps leads to the floor of the Hall, and thence other steps lead to a vestibule giving access to various offices and portions of the Assize Courts. The space between the semi-circular range of columns and the wall forms an ambulatory; and our View is taken from this part, looking across the Hall.



THE NORTH HALL, ST. GEORGE'S HALL, LIVERPOOL.

CALENDAR FOR THE WEEK.

SUNDAY, Dec. 14.—Third Sunday in Advent. Washington died, 1799.
MONDAY, 15.—Earl Stanhope died, 1816.
TUESDAY, 16.—Cambridge Term ends.
WEDNESDAY, 17.—Oxford Term ends.
THURSDAY, 18.—Bolivar the patriot died, 1830.
FRIDAY, 19.—Tycho Brahe born, 1586.
SATURDAY, 20.—Gray born, 1716.

TIMES OF HIGH WATER AT LONDON BRIDGE,
FOR THE WEEK ENDING DECEMBER 20, 1851.

The Collection includes 1750 Living Animals, having recently been increased by the addition of 60 species from the Collection at Knowsley

ORCHESTRAL SOCIETY: its Rise and Fall. See the LEADER of SATURDAY, DECEMBER 13th 6d, or free by post on receipt of six stamps. Office, 16, Wellington-street, Strand.

LONDON to DUBLIN, via HOLYHEAD, in 13½ Hours.—Three communications daily on week days, two on Sundays. Sea passage 4½ hours First Class, £3; Second £2. Return tickets (available for a fortnight): First class, £4 10s; Second £3. Children under Twelve, Half-price. For full particulars of the booking-through system between Fog and and Ireland, see "Bradshaw's Guide," page 122; "Walsh's Irish Guide," page 20; and "Fisher's Irish Guide," page 7.

ROYAL NATIONAL INSTITUTION for the PRESERVATION of LIFE from SHIPWRECK Established in 1824.
Patroness—Her Most Gracious Majesty the QUEEN
Vice-Patrons—H R H the PRINCE ALBERT, K G
President—His Royal Highness the Duke of NORTHUMBERLAND, F R S
Chairman of Committee—RICHARD WILSON Esq.
Chairman of Life-boat Sub-Committee—Commodore Sir THOMAS HERBERT, R.N. K C B
Chairman of Wreck and Reward Sub-Committee—Captain S HILLERY. Thirty-four
The Committee of Management earnestly APPEAL to the benevo-ent public for pecuniary aids now, to enable them to pursue their hitherto successful exertions in the cause of humanity.
Since the formation of the Institution, pecuniary rewards for saving nearly 7500 lives have been granted by the Committee, and 2600 special life-boats and life-preserving apparatus Donations and Subscriptions will be thankfully received by Messrs Willis, Percival, and Co; Coutts and Co; Herries, Farquhar and Co; Cocks, Biddulph and Co; and by Sir Claudius Stephen Hunter, Bart, Secretary, Sun and Co, navy agents, and at the Office of the Institution, 29, John-street, Adelphi
RICHARD LEWIS, Secretary.

CHARING CROSS HOSPITAL, West Strand.—The Committee most earnestly solicit the AID of the affluent for the Hospital, which is entirely dependent upon the subscriptions of the benevolent and the legacies of departed benefactors and stands greatly in need of assistance: the annual exertions have now greatly increased up n by urgent cases of distress. Those who have experienced the sufferings of sickness even were surrounded by every domestic comfort, can feel how great are the sufferings of the dwellings of poverty, where such comforts cannot exist, and how unspeakable must be the blessings which the benevolence of the public bestows upon their less fortunate fellow-beings. Subscriptions are most thankfully received by the Committee Treasurers, and Secretary; and by Messrs Drummond, Charing-cross; Messrs Coutts, 59, Strand; Messrs Jones, 37, Fleet-street; and through the principal banks of the metropolis.
JOHN ROBERTSON, Hon. Sec

CITY of LONDON HOSPITAL for DISEASES of the CHEST.—Anniversary Festival.—The Committee have the gratification to announce that the NEXT ANNIVERSARY FESTIVAL of this Charity will take place early in the month of March, on which occasion the Right Hon. CHARLES GRANVILLE has kindly consented to preside.
The Most Hon the Marquis of Stafford, the Earl of Carlisle, the Earl of Clarendon, K G, the Earl of Harrowby, the Ear. of Ellesmere, the Viscount Mandeville, M P, Lord John Russell, M P Lord Leigh, the Hon Henry Fitzroy, M P, Sir Horace St Paul, Bart, and Sir Joseph Paxton have already consented to serve as stewards. &c
A further list of influential names will shortly be advertised
5 Live pond-street, Finsbury.—Dec 6, 1851.

FREE CANCER HOSPITAL, 1, Cannon-row, Parliament-street, Westminster.
President—The Right Hon the EARL of ARLIN
Treasurer JOHN PARKINSON, Esq., 60, Lincoln's Inn-fields
Bankers Messrs COUTTS and Co., 59, Strand
The cancerous malady is dreadful in its character, and fatal in its results, consequently none that so loudly calls for aid from the affluent and knowledge from the scientific, than this most appalling and little understood incurable disease This charity was established in April, 1851. There are now wards of forty-five patients (chiefly females) already under treatment, many of whom, through God's blessing, have been greatly relieved The Charity is open to the afflicted poor on their own application, and is entirely supported by voluntary contributions. Ten guineas entitle a governor, a donation of ten guineas a governor for life
Subscript ons received by the Treasurer, Messrs. COUTTS and Co.; and by many of the Westend and City bankers
W. J. COCKERELL, Secretary.

Now ready, price 1s.,
THE ILLUSTRATED LONDON ALMANACK FOR 1852.
Being the eighth annual issue of this most beautifully embellished and useful Almanack; containing Twelve ENGRAVINGS of the MONTHS, Designed by WILLIAM HARVEY, and Engraved by Dalziell; TWELVE DESIGNS for SAVAGNAN, Engraved by Williamson; Events of the Month, with numerous Illustrations; Fifty ASTRONOMICAL DIAGRAMS, by JAMES GLAISHER, Esq., F.R.S., and of the Royal Observatory, Greenwich; a History and Tables of the Great Exhibition, and Twelve Portraits of the Royal Commissioners, &c. &c.
Published by WILLIAM LITTLE, 198, Strand, London.
*** Country Orders supplied for Cash only.

CHURCH-BUILDING SOCIETY.—A QUARTERLY REPORT of the Incorporated Society for Promoting the Enlargement, Building, and Repairing of Churches and Chapels is JUST PUBLISHED, and may be obtained as No. 7, Whitehall. It is illustrated by an Engraving of the Interior of the Parish Church of Sherborne, Dorset, as restored. The previous numbers of the papers are still in print

THE BEDFORD GOVERNESSES' INSTITUTION, 16, Harper-street, Red Lion-square, London, is established, among other objects, for supplying Families and Schools with reliable Governesses, and for affording protection and comforts of a Home to Governesses while seeking engagements. Terms, 1s per week for residents, and 3 per cent on the first year's salary on obtaining an engagement. Prospectuses sent free on application to Mrs Debenham.

DEAF and DUMB PRIVATE ESTABLISHMENT.—Mr JAMES RHIND, nearly 18 years late Principal of the Liverpool Institution for the Deaf and Dumb, and also years previously a Teacher in the London Asylum, now devotes himself to the education of a few Private Pupils. References—His Grace the Archbishop of Canterbury, the Venerable Archdeacon Brooks, Rev Augustus Campbell, Rev Dr M'Neile, &c. For terms, &c, address Mr Rhind, 52, Canning-street, Falkner-square, Liverpool.

GRAND ANNUAL CHRISTMAS NUMBER OF THE ILLUSTRATED LONDON NEWS.

Next Saturday, DECEMBER 20, 1851, will be published (in addition to the usual Number)

THE CHRISTMAS NUMBER
OF THE

Montalba; Stanley Mortimer, a Tale, by J. A. Herand, illustrated by Thomas; Three Kings of the East, an Ode; Christmas Carols, by W. T. Moncrieff, illustrated by Phiz; the Christmas Hearth, a Tale, by Westland Marston, illustrated by Foster; the Christmas Festival of Flowers, by Mrs. T. K. Hervey, illustrated by Gilbert; Christmas Eve (with a large Engraving); Adonis and Adona, a Tale for Christmas, illustrated by Thomas; the Street ing; Adonis and Adona, a Tale for Christmas, illustrated by Thomas; the Street ing, illustrated by Phiz; the Poppy and the Fir, and the Forest Brook and the Stone (Tales from the German), by John Oxenford; My Mistletoe Memories, by the "Old Bachelor," illustrated by Foster; Miss Henny, by Calder Campbell; National Characteristics, &c.

The MUSICAL SUPPLEMENT, GRATIS, will contain Three of the POPULAR MELODIES of ENGLAND. Arranged by Sir H. R. Bishop. The Poetry by Dr. Charles Mackay.

Price of the Two Numbers, One Shilling, with the TWO SUPPLEMENTS GRATIS; altogether consisting of Three Sheets, or Forty-eight Pages, illustrated with Engravings.

Office, 198, Strand. Dec. 11, 1851.

MUSICAL SUPPLEMENT.—This splendid addition to the ILLUSTRATED LONDON NEWS is only supplied to Subscribers, except at a considerably advanced price. The charge is half a crown, in a neat wrapper, to non-subscribers.

ANY subscriber not wishing to retain the Musical Supplement can have it exchanged for next week's paper if a single Number, and one-half the cost if a Double Number is issued, by sending it, clean and uncut, to the news agent.

The MUSICAL SUPLEMENT can be bound with the Volume or not, at the option of Subscribers; the folios being arranged to suit either case.

With the present DOUBLE NUMBER of the ILLUSTRATED LONDON NEWS is given a SUPPLEMENT, Gratis.

*** Replies to Correspondents will be found on Page 687 of the Double Number.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, DECEMBER 13, 1851.

WHILE our French neighbours see their Constitution knocked down and trampled under foot, we in England are quietly managing our business, and under the auspices of the Prime Minister preparing to reform ours, or at least to remove any of the more glaring abuses that may be found to exist in it. For the sake of a patched or broken window in the old and stately edifice of our liberties, we are not such Gallic friends would do, or suffer to be done; and because there may be an unsavoury drain or sewer, a fœtid St. Alban's or some such place, within the precincts, we are not going to sweep the whole ground as bare as a dining-table, and erect a new structure in another place and on a different principle. This is the only safe policy: we mend our broken windows; we see to the construction of our unsavoury sewers; and, if there are weak parts where the cold and the wet may penetrate, we repair and strengthen them, as we can find time and means for the task. The public has not heard any of the details of the new Reform Bill which Lord John Russell has announced, and seems, indeed, to take marvellous little interest in the subject. If we allude to it at all at the present time, it is more for the purpose of the contrast which it presents with the state of affairs among our neighbours, than from any idea that the public mind is likely to be much occupied with it, until the arrival of the day when Lord John Russell shall formally announce it to the country. It is worthy of remark, however, that the matter has not been altogether lost sight of; and that there has been a Reform Conference at Manchester, which, if it prove anything beyond the fact that the idea of a new Reform Bill is still in existence, proves that the English people are not very enthusiastic in demanding it.

But the real fact is, that the whole tendency and operation of politics in this country is reformatory. Month after month, and almost day after day, some social or political reform is debated and expedited. The public does not take up Reform as a whole, as the French public might do, but performs its work by slow degrees and by small details. Influential people take up such questions as they thoroughly understand, and work them systematically from year to year, until they achieve the triumph or the reform which they seek. The whole system of taxation is at the present moment undergoing—almost imperceptibly, but nevertheless very surely—a process of reform; and in the course of a few years it is more than probable that the excise and other duties levied by the ignorance of a past age, and which interfere with the health, the morals, and the honest industry of the people, will be altogether removed. Earnest and decided men are working at the subject—each in his separate sphere. One class is struggling against the taxes on knowledge involved in the excise duty on paper—another against the taxes on cleanliness involved in the excise duty on soap—and both are united in urging the removal of these taxes as positive impediments to the increase of the national wealth, and to the reproductive employment of the people. Others, again, are busily engaged in the great question of education, extending a knowledge of its importance, and ripening public opinion to receive and consider it with the earnest and conscientious attention which it demands. The sanitary reformers are also at work in a thousand ways; and throughout England the leading men in each separate locality, as well as in the great Parliamentary centre, are aiding that great question, which lies at the root of all politics, the social improvement of the people. Small questions and great ones all merge into this as a common centre; and it is a hopeful sign for this country, amid the convulsions, present and future, of Europe, that the only truly free people within its boundaries are at the same time the most practical and the most sober-minded.

The manner in which every needful reform in England is brought about is well exemplified by the proceedings that have taken place with reference to the arbitrary conduct of that important branch of the State service, the Board of Customs. That board, wielding an enormous authority, and sheltered under the ægis of that almost irresponsible body, the Lords of the Treasury, has lately acted, not simply in a vexatious or unjust, but most tyrannical, manner towards the two great Dock Companies of London—representing, between them, no inconsiderable portion of the mighty traffic of the world's metropolis. The Crown and the Treasury, as represented by the Board of Customs, were ignominiously defeated when the disputed case was brought under the cognizance of the law and of a jury; but the Customs, persisting in the iniquitous course, or exercising a moral and very tangible species of coercion over the Dock Companies, which the latter did not find it quite consistent with their ease, convenience, or, perhaps, their immediate trading interest, to resist, have virtually set the law at defiance, and manifested their determination to continue unreformed. Hereupon the merchants of London, knowing the work to be done, have set about it in earnest. They have seen the Prime Minister—laid the facts before him—shown him that the Board of Customs is a nuisance to the commerce of the greatest commercial empire in the world—that the Chancellor of the Exchequer does not, or will not, understand the subject—or, understanding the real merits, abuse the Customs in an injurious exercise of its powers—corrected the Prime Minister's own facts, when by his answers he showed himself to be partially informed and altogether wrong, and demanded the reappointment of the select committee of the House of Commons which sat last session to consider the subject. The charges made against the board were many and serious; and the wealthy merchants of London, who preferred them, reduced them to writing, that there might be no mistake, and only brought them forward after cool and careful consideration. The Prime Minister, as a matter of course, expressed himself in very guarded terms in reply, and declined to pledge himself to any acquiescence in the demand; but from what fell from his Lordship, and from the business-like habits, the high character, the influential position, and the known energy of the men who have taken up the question, there is no room for any doubt that the doom of the present Board of Customs is sealed, and that it will be remodelled at no distant period, or its existence rendered not quite incompatible with the rights of traders and the necessities of commerce. The State must have its revenue; but there is no reason why the revenue should be collected and enforced in a mischievous and tyrannical manner, to the detriment, or, it may be, to the ruin, of men who, more than any other, raise up the large fabric of British prosperity. The merchants of London will undoubtedly carry their point. In this country, common sense, aided by the national obstinacy, or perhaps we should say steadiness, always wins the day against every opponent, however powerful.

CHURCH, UNIVERSITIES, &c.

OXFORD.

PROFESSORSHIP of POLITICAL ECONOMY.—Mr. Barry, of Queen's College, has withdrawn from competition for the next vacancy in this office. The contest will now lie between Mr. Charles Neate, Fellow of Oriel; Mr. Robert Lowe, late Fellow of Magdalen; and Mr. G. K. Richards, late Michel Fellow of Queen's College, and formerly Scholar of Trinity. The candidates are all members of the bar. The present professor's term of office will expire in March next. The appointment is in the members of Convocation.

ECCLESIASTICAL NON-RESIDENCE.—In the late act relating to churches and chapels in Ireland there is a provision in the following words respecting ecclesiastical non-residence:—"That, if the incumbent, minister, or curate of any such proprietary church or chapel, or parochial chapel of ease, or district church or chapel, or perpetual curacy, erected, constituted, or endowed under the provisions of the or any other act, shall be absent from his cure for above the space of 61 days in any one year, without the licence of the bishop of the diocese having ecclesiastical jurisdiction over the said church or chapel or that had obtained for that purpose, such church, or chapel, or curacy thenceforth shall be deemed in law to be actually avoided, and such incumbent, minister, or curate thenceforth for ever after shall be disabled to hold and enjoy the same; provided always, that no penalty shall incur in respect of such non-residence until six months after notice thereof in writing given by the ordinary of the diocese to the patron or patrons having the right of nomination in such case."

PREFERMENTS AND APPOINTMENTS.—The following preferments and appointments have recently been made:—*Deanery Rural:* The Rev. H. Stowell, to Ecc es, in the diocese of Manchester. *Rectories:* The Rev J. Davis, of Llanvaches, to Llanvair Discoed, in the diocese of Llandaff; to Sedgeberrow, Worcestershire; the Rev. Richard Lewis, to Lampeter-Velfrey, Pembrokeshire. *Vicarages* The Rev. Joseph Nevins White, to Rushall, Norfolk; the Rev. Benjamin Marsden, to Gascombe, with Colve, and Hamlet annexed, Radnorshire; the Rev. Edward Dansey, to Abbotsham, near Bideford, Devon; the Rev. Charles Lushington, to Walton-on-Thames.

TESTIMONIALS.—Within following clergymen have recently received testimonia s of esteem and affection:—The Rev. Godwin Swift, curate of St Thomas's, Scarborough, from the parishioners, on his departure. The Rev. S Hastings, curate of St. Mary's, Southampton, from the parishioners generally and a second time from the choir. The Rev. G. Smith, from the teachers and friends of Amersham Sunday-schools, on his leaving that parish.

Sir Oswald Mosley has just presented a piece of ground for a school-room in the district of St. Matthew's, Manchester.

The long-pending appeal to the Archbishop of Canterbury by the Rev. Wm Jenkins, against the bishop of Llandaff's refusal to institute him to the rectory of Michaelstone-y-Vedw, to which he had been presented by Colonel Tynte, has been decided in favour of the appellant—his Grace having reversed the refusal of the bishop, and ordered the institution of Mr. Jenkins.

CATHEDRAL SERVICES.—The Dean and Chapter of Gloucester Cathedral have resolved to increase their number of lay clerks by adding six additional persons to the present staff, and intend to appropriate £50 annually for such purpose. The services of these additional lay clerks will not be of the same kind as the old staff, as they will be required only on the Sabbath and on saints' and other festiva. days. Furthermore, it is contemplated that ere long a great addition will be made to the number of foundation scholars, to lighten the duties of the present body, so as to enable each boy to receive a greater share of education at the college school than he is able at present to avail himself of in consequence of the heavy duties daily required of him at the Cathedra.

THE SHAKSPEARE KOSSUTH TESTIMONIAL.—Upwards of a thousand pennies have been subscribed towards the fund (that also draws its pence from he most remote districts) at the Manchester Athenæum.

NEW GERMAN CHURCH IN LONDON.—At the conclusion of a sermon delivered on Sunday at the German Catholic Chapel, Great St. Thomas Apostle, City, in celebration of the forty-second anniversary of its opening, Cardinal Wiseman, after some remarks on the meanness of the present chapel, announced to the congregation that the Redemptorist Fathers, who have the care of this mission, would immediately call upon them to subscribe to the erection of a new German church which should be worthy of their religion and country. The Cardinal said that the plan was projected, and he hoped that the next time he addressed them it would be in a new and beautiful church. The site of this church is not yet decided upon, but it is likely to be in Whitechapel, which contains a large German population.

COURT AND HAUT TON.

THE COURT AT OSBORNE.

The quiet routine which has pervaded the Court since the death of the King of Hanover has been very little disturbed during the past week. Her Royal Highness the Duchess of Kent and their Royal Highnesses the Duke of Cambridge and the Duke of Parma have been the only guests at the Royal table, if we except a flying visit of the Premier to Osborne on Tuesday, from whence his Lordship returned on the following day.

The Duchess of Kent closed her visit to the Queen and the Prince on Wednesday. The Duke of Cambridge and the Duke of Parma returned to London on Saturday.

The Court is expected to return to Windsor Castle for the Christmas holidays at the close of next week.

His Royal Highness the Duke of Cambridge, attended by Major the Hon. James Macdonald, left town on Tuesday morning, for Newburgh Park, the seat of Sir George Wombwell, in Yorkshire, where the Earl of Chesterfield, Lord Adolphus Fitzclarence, Capt. Fremantle, Colonel Blair, and a distinguished party are invited to meet his Royal Highness, to enjoy the sport of pheasant shooting.

The Duke and Duchess de Montpensier had granted a private audience to General Narvaez, and the general had dined with the English ambassador Lord Howden, at Madrid.

His Royal Highness the Duke of Parma has arrived in town from a visit to her Majesty and the Prince Consort at Osborne.

The Duke of Newcastle, who has been indisposed, is, we are happy to say, now considerably improved in health.

The Duke and Duchess of Richmond and Lady Cecilia Gordon Lennox have returned to town from Woburn Abbey.

The Marquis and Marchioness of Donegal left Eaton-place on Wednesday morning for Maidenhead, for the remainder of the season.

The Marquis and Marchioness of Ailesbury are entertaining a select circle at Tetenham Park.

His Excellency Senor Isturitz, the Spanish Minister, has left town for Spain. Mr. Gomyn will act as Chargé d'Affaires during his Excellency's absence.

Viscount and Lady Blanche Dupplin have arrived in Lowndes-street, from Dupplin Castle, N B.

Viscount and Viscountess Maidstone have left the St. George's Hotel for Badminton.

Lord and Lady John Russell and family have left Chesham-place, for Pembroke Lodge, Richmond, where his Lordship will remain until the meeting of Parliament, with the exception of official visits to Downing-street. The noble Lord and her Ladyship will, as usual, spend the Christmas recess at Woburn Abbey

Viscountess Palmerston received a circle of the *corps diplomatique* and aristocracy on Wednesday evening, at the family mansion in Carlton-gardens.

Viscount and Viscountess Canning have left Grosvenor-square on a visit to the Earl and Countess Cowper, at Panshanger.

Lord Skelmersdale, we are glad to learn, is convalescent.

Lord and Lady Fitzalan Howard have arrived in Lower Brook-street from Arundel Castle.

Lord Bateman has left town for Paris, *en route* for Italy.

The Lady Charlotte Toler, daughter of the Countess Dowager of Norbury, is about to be led to the hymeneal altar by the Hon. Richard Neville, eldest son of Lord Braybrooke.

Lord Ashton will, it is said, very shortly lead to the hymeneal altar Miss Gascoigne, of Castle Oliver, county of Limerick, so favourably known for her extensive benevolence in that part of the country, especially during the late famine years.

The Hon. Stephen Spring Rice, one of the Commissioners of the Customs, who has been seriously indisposed, is at present sojourning in the south of Europe for the benefit of his health, having obtained a lengthened leave of absence for that purpose.

His Excellency the Belgian Minister had an interview on Friday week with his Royal Highness Leo, Prince of Armenia, grandson of Leo VI., the late King of Armenia.

The Marquis d'Azeglio, Sardinian Minister, has left town for Paris, where his Excellency intends remaining until after Christmas.

The Duke and Duchess of Beaufort are entertaining a few select friends at Badminton Park. The noble Duke continues to improve in health, but his Grace is still unable to take pedestrian exercise.

Lord and Lady Clanricarde have arrived at Apsley House from Thoresby Park. We understand that the splendid estate of Conholt Park, near Andover, belonging to the late Right Hon. Mr. Pierrepont, goes to the Hon. Philip Sydney Pierrepont; but his personal property is inherited by Lady Charles.

There have been great rejoicings lately in Monaghan, county Armagh owing to the happy advent of a son and heir to the Right Hon. Lord Rossmore. His Lordship's reply to an address of congratulation presented to him by the inhabitants of the town was particularly appropriate.

Rear-Admiral J. W. D. Dundas, C.B., First Naval Lord of the Admiralty, held a levee at Whitehall on Tuesday.

NAVAL AND MILITARY INTELLIGENCE.

CONSTRUCTION OF THE MUTINY ACT.—The following circular memorandum, dated November 29, has been published by the Horse Guards: — "Doubts having arisen as to the proper construction of the 28th clause of the Mutiny Act, and 85th and 86th Articles of War, in respect to the legality of levying soldiers by courts-martial for 'disgraceful conduct,' in stealing or embezzling money or goods, the property of civilians, or in receiving the same, knowing them to be stolen, or in committing any offence amounting to actual felony, and by the Commander-in-Chief's desire, been referred to the law officers of the Crown, the Attorney and Solicitor-General have recorded a distinct opinion that soldiers may be lawfully tried and punished by courts-martial for such offences. Notwithstanding that decision, however, officers in command will be pleased to bear in mind, that the proper tribunals to deal with the class of offences are the civil courts; and will therefore, as heretofore, have recourse to courts-martial only in cases in which the civil authorities may decline or omit to prosecute; or where, from circumstances which render it difficult to bring the case before the said courts, it may be necessary, for the ends of justice and the maintenance of discipline, to resort to trial by courts-martial.—By command, G. BROWN, A.G."

REPAIR OF SMALL-ARMS.—A circular memorandum, dated the 1st, has been issued as follows:—"It having been represented by the inspector of small-arms that the expense of replacing and keeping up the snap-caps hitherto supplied to the infantry is considerably greater than that which would be required to renew the nipples when worn out or injured were snap-caps altogether dispensed with, the Commander-in-Chief has been pleased, on the recommendation of the Master-General and Board of Ordnance, to direct that the provision of snap-caps by that department shall henceforth be discontinued, and to intimate that, from and after the present month of January, no snap-caps will be issued in use, they are not to be replaced when worn out or lost By command, G. BROWN, A.G."

ADMIRALTY APPOINTMENT.—Lieut. Joseph Dayman (1843), to study steam at the factory at Woolwich Dockyard; Acting Assistant-Surgeon Henry Hanson (1851), to the *Fury* steam-sloop at Woolwich; Gunner John Lusth, to the *Fury*.

The Admiralty have ordered that the 100-gun screw-ship *St. Jean d'Acre* is to be put in frame at Devonport as soon as possible; and that the 700-horse screw-ship *James Watt*, building at Pembroke, is to be proceeded with, and no building hands placed at work upon her.

The *Pioneer* and *Intrepid* screw steam-vessels, formerly employed in the Arctic Expedition under Capt. H. T. Austin, C.B., have been taken into the inner basin alongside the factory at Woolwich, to have their engines examined and any defects found in them made good, preparatory to the vessels being again made ready, in the spring of 1852, for a further search for Sir John Franklin and his long-absent companions.

COAST-GUARD APPOINTMENT.—Captain Erasmus Ommanney, who has just arrived in command of the *Discovery* exploring ship from the Arctic regions, has been appointed Deputy Comptroller of the Coast-guard, in the place of the late Commander Sparshold, deceased.

CURIOUS COIN.—A correspondent writes as follows:—A curious coin was found here (Wythburn) the other day by Matthew Walker, while preparing the groundwork for repairing an old wall. The coin is about the size of a crown piece, but not of silver—at least it has not the appearance of that metal. It is in a perfect state of preservation. On the one side is a full-length figure of a bishop with his mitre, folding in his left hand a staff with a crucifix attached. On each side of this figure is a shield, the devices of which are obliterated. On the reverse side of the coin, and of which is a kneeling female figure, with hands clasped in attitude of prayer, from which descends a rosary with a pendent cross. The inscription I cannot decipher, although the letters (evidently abbreviations) are perfect. I will, sundes, the lesser, peruse the first opportunity, when, perhaps, I shall be able to give you more information about it. In the meantime, some of your readers may have the curiosity and opportunity of examining it for themselves.—*Westmoreland Gazette.*

ZAHN'S COLLECTION OF ANTIQUE CASTS.—Professor Zahn, who has been engaged during a period of more than twenty years in examining the ruins of Pompeii and Herculaneum, has exhibited at Berlin a collection of casts taxques in their kind. These are 8000 in number; and comprise all the remarkable sculptures of the above places, besides those found at Stabiæ, and those of the vast collection of the Museo Borbonico and other museums of the Two Sicilies. The casts from the Museo Borbonico are the first ever made, the King of Naples having accorded the privilege of taking these copies to M. Zahn alone, in Royal recompense for the Professor's great work on Pompeii and Herculaneum.

COUNTRY NEWS.

BIRMINGHAM AND MIDLAND COUNTIES CATTLE AND POULTRY SHOW.

The private show of this great exhibition of the agricultural produce of all England, but more particularly of the midland counties, was held in Bingley Hall, Birmingham, on Tuesday. Although this exhibition has not been long established three years, yet, in consequence of its central situation, in the midst of the breeding and grazing counties of England, it is already taking the lead in the exhibitions of agricultural stock.

The attendance on Tuesday was very large. Among the company present at mid-day we observed the Earl and Countess Howe, Earl of Dartmouth, Earl of Aylesford and party, Lord Sandys, Lord Leigh and Lady Guernsey, Lord Wrottesley and party, Lord and Lady Leigh and party, Lord Calthorpe and party, Sir O. Moseley, Sir Ottley Wakeman, Sir G Chetwynd, the Dowager Marchioness of Downshire, Lord Lewisham, the Hon. S. Lygon, the Marquis of Stafford, the Marchioness of Stafford, the Hon. and Rev W. Sommerfield; and Messrs. R. Spooner, M.P., H. G Wise, J. Greaves, J. Matthews, and great numbers of the nobility and gentry resident in the midland counties.

The following is a brief summary of the number of the stock exhibited:— Pigs, 104 pens, about 500; cattle, 138; sheep, 71 pens, about 350; poultry, 1056 pens, number of fowls exhibited from 4000 to 5000. The judges, who were selected with great care from all parts of England, were—For Cattle: Mr. John Booth, Killerby, near Catterick, Yorkshire; Mr. Price, Leominster; and Mr. Barford, Foxcote, Towcester. For Sheep: The same judges. For Pigs: Mr. Wetherell, Kirk-Sandes, Darlington; Mr. Swafford, Chesterfield, Derbyshire; Mr. Heseltine, Brig, Yorkshire; and Mr. Hollingsworth accompanied the judges in the capacity of referee as to the ages of the pigs. For Poultry: The Rev. E S. Dixon, Langford Hall, Norwich; Mr. J. Nash, York; Mr. Hinxman, Salisbury; Mr. Bailey, Mount-street, Grosvenor-square, London.

The show was considered to be, not only by the official judges, but by the hundreds of gentlemen present at it, one of the finest ever held. The cattle which has yet been exhibited in England. Prince Albert obtained the first prize for Hereford oxen or steers; while the second was assigned to a beautiful little animal bred by the late Sir Francis Lawley. The animals of Scotland were generally good; and, as a matter of course, Lord Hatherton, of Teddesley, carried off a fair amount of prizes. There was considerable competition for the prize medals, but they were ultimately given to the competitors names in the prize lists. The gold medal and extra prize of £10 for the best cow or heifer of any breed was considered as justly merited by Mr. Vaughan, of Cholsrey, near Leominster. The exhibition of Devons was also considered to be remarkably good; some of them in symmetry beautifully neat, and at the same time possessing, but not grossly so. Indeed, it was a feature in this exhibition that there were but few things exhibited which were extravagantly fed, or which presented any appearance of wastefulness. The judges, in whom all exhibitors seemed to have confidence, appeared to award prizes, not on account of size or weight, but on account of symmetry and usefulness. The display of Scotch and Welsh breeds was remarkably beautiful. In this branch of the exhibition Prince Albert again most successfully competed with northern breeders. In sheep the Leicester breed was, as usual, most conspicuous; and the Marquis of Exeter, and Mr. H. Leas, of Bascote-end, near Birmingham, bore off the highest honours for symmetry and condition, were completely distanced; while Mr. Taylor, of Moseley Hall, and other Warwickshire and Worcestershire gentlemen, who exhibited the finest specimens of useful pigs, were declared to be entitled to the highest prizes. There was, indeed, even among the uninitiated, a clear perception of the difference between Yorkshire and Midland Counties pigs. The touch was sufficient to prove the superiority of the breeding of the latter counties. There was not any one or two apoplectic pigs in the Exhibition; but there was one pen particularly which appeared to give universal disgust, and which was brought from the north of England. It was conveyed into the exhibition on a litter, and there it has remained ever since, without for a moment rising from its recumbent position.

The display of domestic, game, and ornamental poultry was very fine. The specimens of the Cochin China breed exhibited were considered unique, and more especially the hybrid between the domestic fowl and the pheasant was highly admired. The size and weight of some of the Cochin China breed were most remarkable. A young cock of this year's hatching weighed 11lb.; and a hen of the same breed, 10lb. The show of Dorkings was considered remarkably good. The show of pigeons was greatly improved, but still there is room for a further advance in the breed of this description of fowl.

EASTERN COUNTIES AGRICULTURAL RELIEF ASSOCIATION.—This association was originated by some farmers in the county of Suffolk, who, suffering much from the pressure of the times, determined to do their best to make known their grievances, and to obtain redress. Previous to the last meeting duties, whether desirable or not, were by no means likely to be reimposed, these men wisely determined to turn their attention to other measures, and to advocate such changes, for the general benefit of the agricultural classes, as would ensure the hearty co-operation of their brethren of every shade of political opinion. At present the list of remedies which they propose comprises the repeal of the malt tax, an equitable measure of assessment, and the removal of the present unjust tithe system, a thorough revision of the present mode of levying the county rates, and other similar measures. The movement soon found a large number of influential adherents in the county in which it originated, and the consequence of which has been that the association, at first known as the Agricultural Relief Association of Suffolk, has now adopted the title of "Eastern Counties." The first meeting of the association, since the adoption of this designation, was held on Saturday last, in St. Andrew's-hall, Norwich, when there was a large and influential gathering of tenant-farmers, landed proprietors, and others interested in the movement. Resolutions in accordance with the design of the society were adopted, and a number of new members were enrolled.

DINNER TO THE HON. R. J. WALKER, AT MANCHESTER.—This merchants and manufacturers of Manchester gave a dinner to the Hon. Robert J. Walker, late Secretary to the Treasury of the United States; Mr. Thomas Bazley, President of the Chamber of Commerce, acting as chairman, and Mr. M. Ross, of the Commercial Association, as vice-chairman, in the absence (through illness) of Mr. A. A. Turner, president of that body. About 120 persons attended: among those present were the Right Hon. T. Milner Gibson, M.P., J. Brotherton, Esq., M.P., Charles Hindley, Esq., M.P., Sir Elkanah Armitage, General Walbran (United States), J. Bright, Esq., M.P., R. Cobden, Esq., M.P., Colonel Colt (of revolving pistol celebrity), Mr. William Rathbone, jun., of Liverpool, &c.

PREVENTIVE AND REFORMATORY SCHOOLS.—A conference of gentlemen interested in the establishment of Preventive and Reformatory Schools was held at Dee's Royal Hotel, Birmingham, on Wednesday morning. The chair was occupied by Mr. M. D. Hill, Q.C., the recorder of the borough; and amongst those present were Mr. Alex. Thomson, Aberdeen; Mr. Adderley, M.P.; Mr. Locke, Ragged Schools Union, London; the Rev. Francis Bishop, Domestic Mission, Liverpool; Mr. Joseph Sturge, Birmingham; Mr. Power, Recorder of Ipswich; Mr. Hill, Ragged Schools, London; Mr. J. Fletcher, inspector of schools, &c. The chairman in introducing the business of the conference, dwelt at considerable length upon the necessity of taking steps to put down juvenile crime, and lamented that, as a criminal judge, he was compelled to administer a revengeful system of criminal jurisprudence. Mr. Power, the Recorder of Ipswich, gave some interesting details with regard to the advantage of reformatory instructions. He instanced fifteen thieves, some of whom were the cleverest and most accomplished in England, all of whom had become reformed, and were now industrious and useful members of society. He concluded by moving the following resolution:— "That the present condition and treatment of the perishing and dangerous classes of children and juvenile offenders disgrace every member of a Christian community." Other resolutions, declaratory of the views of the conference, were moved by Mr. W. Whitmore and deputies from various parts of the country, and agreed to. A numerous attendance evinced the objects of the conference, was held at Dee's Royal Hotel the same evening, when speeches were delivered by Mr. Hill, Q.C., Mr. Power, Serjeant Adams, and other advocates of preventive and reformatory schools, and resolutions passed declarative of the objects of the meeting.

ACCIDENT AT THE TEST OF ONE OF THE DUKE OF NORTHUMBERLAND'S PATENT LIFE BOATS.—On Tuesday, the appointed day for a special trial of the boat of Mr. James Beeching's life-boat at Liverpool, with the Duke present from the Waterloo-pier at noon, and, by the aid of a crane and a rope coiled round her, turned completely bottom upwards, when, with an almost imperceptible rapidity, she righted in what may be termed a "half wonderful" position. The boat was then manned, and rowed slightly and well; but, as a last test, the crew got on the "starboard gunwale," sinking her to near the water's edge. Some half a dozen more men (some of them partially intoxicated) then jumped on board, and overpowering the boat, which was only 28 feet long, capsized her, throwing the whole number, 16 persons, into the water. The boat would have immediately righted had they not clung to her gunwale, but the men, hanging on both sides, kept her down, and from the principle of construction she could not right. All were fortunately saved—one somewhat strangely: he had stuck to the boat, and she capsized over him; when, however, she was relieved of the weight hanging on her sides, and from the principle of construction she righted, and the crew were astonished to find him all safe, and not wet beyond the middle. He shook his shoulders, and declared he dared go anywhere in her.

THE EXPLOSION AT THE COLLIERY AT SHEFFIELD.—The colliery district around Sheffield, so noted for disastrous mining explosions, was the scene of another sad calamity on Saturday last. Three persons have perished in the Woodbank-pit colliery, two miles and a half south of Sheffield, worked by the Woodbank-pit colliery, two miles and a half south of Sheffield, worked by the Woodbank Coal and Iron Company. The names of the sufferers are Charles Stones, of Gleadless, aged 23, unmarried; Samuel Bacon and William Ramsden, youths of about 18 years of age, both of Handsworth Woodhouse. They were killed by a tremendous explosion from firedamp, which took place at Sa'-past three o'clock on Saturday afternoon, an hour or so after all but six or eight hands had left the pit that was surcharged with inflammable gas, so that all the colliers avoided entering it with exposed lights, but the youth Ramsden, though a collier, was a stranger there. He had descended the pit to visit Bacon, his companion, and for some reason unknown he went into the dangerous board-hole with a naked candle; the consequence was, that his light caused an instantaneous explosion, so powerful as to project large quantities of *débris* out of the mouth of the shaft, which is 164 yards deep. Ramsden's body was consumed to ashes; Stones and Bacon, who were respectively 15 and 40 yards nearer the shaft, were killed by the concussion. The pit is ventilated by only one shaft instead of two.

ROYAL CHARITY.—Two hundred and fifteen of the passengers in the ship *France*, of Philadelphia, from Antwerp for America, have been landed at East Cowes. On the situation of these unfortunates being made known to her Majesty, orders were given that they should be supplied with coffee, bread, and soup from an establishment fitted up for the purpose by her Majesty's orders at Kingston Farm, on the Royal estate. The Royal children contributed from their little gardens turnips, carrots, and other vegetables for the soup, and their little barrows might be seen every morning loaded for the unfortunate foreigners It is searce any how the ship could sustain the terrible shock that she received from some unknown vessel on the night of the 24th of November; she was cut down nearly to the water's edge, her wood-ware broken, and such was the force with which she was struck that the planks were driven out on her starboard side; indeed, she is such a wreck that it is thought that she is past repairing. Her cargo is being discharged into warehouses.

EXPLOSION IN A COAL VESSEL.—On Monday morning, about ten o'clock, the barque *Fortunatus*, of Stettin, Captain Lange, bound to Bremen with a cargo of coals she had taken in at Cardiff, was brought into Ramsgate harbour a complete wreck. On the previous evening, between six and seven o'clock, having passed Dungeness, the master went below to prick off his position on the chart. He had seated himself on a sofa in the cabin, and the boy had just brought him a candle, when he heard two slight hissing crackling sounds immediately after a terrible explosion took place, which drove in all the bulkheads of the cabin, and blew the skylight off. O deck all the beams from the front of the cabin-deck to the windlass forward were broken, and the deck torn up into small pieces; boats, caboose, and everything that was on deck shattered, and all lay in a confused mass down on the main. Two men were killed and one severely wounded, out of four who were on the deck at the time. The captain and remainder of the crew, who were below, were not much hurt. Fortunately, the weather was very fine, or, with the deck all out, and an opening in the topsides between the fore and main rigging, on the starboard side, nearly to the water's edge, the vessel must have gone down. A Deal boat, that happened to be cruising in the neighbourhood, went, shortly after the accident, to their assistance, and brought the vessel safely into Ramsgate harbour. Such was the force of the explosion, that pieces of the tarpaulin that covered the hatches, and pieces of coal, were found lodged in the tops. It was said that a French vessel that had taken in a cargo of the same coal, and was lying at Cardiff whilst the *Fortunatus* was loading, blew up there. The master of the *Fortunatus* presented no appearance of the coals igniting or heating in the vessel, nor had the master any reason to fear that gas was generating.

BREACHES OF THE FACTORY ACT.—A meeting was held on Sunday, at the Cotton Tree, Ancoats, Manchester, consisting of factory delegates, to consider the steps to be taken to prevent the continued breaches of the Factory Act now taking place in certain districts. The delegates stated at great length the modes in which that act was violated, and denounced in unmeasured terms the conduct of the manufacturers who infringed the rights of the working classes, and it was determined to endeavour to raise a fund to be expended in enforcing the penalties leviable under the act.

FIRE AND SERIOUS LOSS OF LIFE.—NEWARK, DEC. 8.—This morning, at a very early hour, a mounted messenger galloped into this town, exclaiming "Fire, fire!" It was quickly ascertained that the calamity had occasioned this announcement was then raging at Fiskerton, near Southwell, a few miles from Newark, where a flour-mill had become ignited by some friction occurring accidentally to the corn-screen. Nothing could be done to prevent in a number of sacks of corn and flour in a distance, and saving some adjoining property from destruction by pouring water upon it. Whilst carrying bags of grain and flour from the store-room, four of the men engaged in this duty were, in the twinkling, burned in the ruins of a large portion of the building, which fell whilst they were within its precincts; and a number of other persons very narrowly escaped a similar death. The mill, a very large building, belonged to Mr. Joseph Marriott, of Fiskerton; it was insured. The fire broke out shortly after two a.m, and was subdued, or had burnt itself out, by nine a.m. At noon two of the bodies had been found, and now (three p.m) search is being carried on for the others.

GAS EXPLOSION.—On Sunday morning last an explosion of gas took place in house No. 4, Clarence-street, Liverpool, occupied by Mr. Thomas Smith. The gas, which had been escaping during the night, on a candle being introduced into the room, suddenly ignited, and exploded Fortunately no lives were lost, but the whole of the front and back parts of the house, which is three stories high, were driven outwards, the floors of the rooms separated from the walls, and the wall, windows, and doors of the small kitchen, which is in the rear of the premises, forced against the back entrance, so as to prevent the possibility of ingress or egress

ELECTION INTELLIGENCE.

REPRESENTATION OF LISBURN.—Sir James Emerson Tennent has issued an address to the electors of Lisburn. On Monday a meeting of the electors was held in the courthouse at Lisburn, when the following, amongst other resolutions, was adopted:—"That we hold ourselves entirely free to see whether any suitable candidate come forward to solicit the support of the really independent electors"

REPRESENTATION OF EAST KENT.—It is rumoured, says the *Rochester Gazette*, that J. P. Plumptre, Esq., M.P., intends retiring from public life at or before the next general election, and that one of two hon. baronets, exceedingly popular in their respective neighbourhoods, will be invited to come forward—Sir E. C. Dering, Bart., and Sir Brook W. Bridges, Bart.

REPRESENTATION OF THE CARDIGAN BOROUGHS.—It is rumoured that at the next general election the present High Sheriff of Brisl), John Harford Batterbay, Esq., will be brought forward on the Conservative interest for the representation of the Cardiganshire boroughs.

REPRESENTATION OF BRISTOL.—The statement is now gaining ground, that at the next election Mr Frederick Peel, the present member for Leominster, will be brought forward by the liberals of Bristol in conjunction with Mr. Berkeley, the present Liberal representative.

EAST BRIDGEFORD.—The supporters of W. H. Barrow, Esq., M.P., in the famous contest for South Notts, have just received a present of a hare from R. Mundy, Esq., of Thrumpton.

GREENWICH.—Rear-Admiral Houston Stewart, C.B., one of the Lords of the Admiralty, intends becoming a candidate for the representation of the borough at the next election, in the room of Admiral Sir George Dundas, C.B., one of the present representatives, who will accept the Chiltern Hundreds on his appointment to be Commander-in-Chief on the Mediterranean station. Mr. Montagu Chambers and Mr. Merrywaather Tarner are already candidates, and have addressed the electors

REPRESENTATION OF NORTH DURHAM.—For the last few days a rumour has been afloat among the political *yeux mancz*, to the effect that, on the dissolution of Parliament, Mr. Shafto will not again appear in the ranks of the electors. It is also rumoured that G. R. H. Russell, Esq., son of the Hon. Mr. Hamilton Russell, of Brancepeth, will offer himself as a candidate for the seat.

MR. MECHI'S BALANCE-SHEET.—This long-talked-of result of seven years' energy, science, expenditure, and experience was delivered in a paper read by Mr. Mechi at the Farmers' Club on Thursday evening. The audience was numerous; and amongst them were many practical farmers, attracted evidently by the hope of discovering some hitherto hidden remedy for their present grievances. On certainly the balance-sheet, which was liberally distributed at the commencement of the meeting, immediately dispelled all hope, by £553 13s. 4d. appearing as the loss from October 30, 1850, to October 30, 1851. At the conclusion of the reading of the paper, an animated discussion arose upon the loss being attributed to the extraordinary outlay of £1588 17s. 6d. for oil-cake and corn bought as food for stock, a considerable portion of which, according to the rules of entering, should have figured on the credit side as unexhausted material. It was contended by a practical farmer, that, after so much experience, talk, and outlay, a more encouraging result was expected, and that it was no evidence of profitable farming to show an account with a loss of £553 13s. 4d. for one year, after a system of seven years, extravagant management. Mr. Mechi, in reply, stated that he considered the result the same results, in the shape of profits, for several years to come, without the necessity of any outlay for food not produced on his farm This balance-sheet was received with little or no favour by the practical farmers, inasmuch as it was the result of their own system, and one did not appear to contain a sufficient amount for oil-cake and corn bought as food for stock the year previous; and which, if credit is to be given for the year 1851, ought to be charged in the valuation of Oct. 30, 1851. The loss of £553 13s. 4d. included an allowance for Mr. Mechi's own skill and time, or family maintenance.

ST. ANN'S CHURCH, LIMEHOUSE.—This edifice, our readers will remember, was, with the exception of the outer walls, completely destroyed by fire on Sunday, the 7th inst. The prospect of its restoration seemed very far removed, although the parishioners had consented to the levying of a rate for that purpose, utterly inadequate, however; and a number of young gentlemen connected with the parish formed "The Limehouse Young Men's Church Restoration Society," earnestly set about raising funds, and succeeded in collecting £1300 in all on the rate. Chiefly by their assistance the church has been put into a state which enabled it to be opened for divine service on Thursday. The young men's society have rebuilt the galleries, restored the south windows, and reformed the lobbies and staircases of the church. The lower part has been refitted with temporary open benches. The expenses of these, with the work

THE SMITHFIELD CLUB C

OW, 1851.—GENERAL VIEW.

METROPOLITAN NEWS.

REFORM OF THE CUSTOMS.—A very large and influential deputation, headed by the three commercial members for London, and other members of Parliament, waited upon Lord John Russell on Tuesday, to present the resolutions agreed to at the meeting on Wednesday week regarding Custom-house reform. His Lordship expressed his desire that the question should be considered with a view to any improvement that might be consistent with the safety of the revenue. Two members of the deputation took the opportunity to point out the injustice inflicted upon the Dock Companies, expressing, also, their opinion of the course pursued by the Chancellor of the Exchequer; and these statements having been made, it was finally explained, that, apart from individual grievances, the resolutions were to be regarded as a general protest of the merchants of London against the whole of the existing system. Mr. Masterman read the memorial, the substance of which has appeared in our columns. Lord John Russell defended the Chancellor of the Exchequer against the compliments made in the representation of the deputation. Lord Granville was present at the interview. Mr. Masterman, M.P.; Mr. Powles, Secretary of the London Dock Company; Mr. Mitchell, M.P.; Mr. W. J. Hall, and Mr. M. Clarke took part in the conversation. Mr. Hall stated that he had lost £10,000 on some cheats of tea, owing to the vexatious course pursued by the Customs. Lord John Russell would not pledge himself to the re-appointment of the select committee of last session, although he declared he saw no absolute objection to it.

SOCIETY FOR PROMOTING THE AMENDMENT OF THE LAW.—The report of the special committee has been published. Their recommendations are "That the rule, or practice, which prevents the client from communicating with his counsel, except through the medium of his attorney, should be discontinued; and that, as a necessary consequence, the provisions of the Common Law Procedure Act which forbids a barrister to advocate a cause without being instructed by an attorney should be repealed. 2. That the attorney should have greater facilities for being called to the bar than he enjoys under the present system, which compels him to discontinue his practice before he can begin keeping terms. 3. That counsel should be responsible in damages for gross negligence. 4. That the power of conferring the degree of barrister-at-law should be resumed by the judges, instead of remaining delegated to the benchers; that a preliminary examination should be instituted; and that some one central authority (like the Oxford Convocation, or the Cambridge Senate) should be established to maintain forensic honour, and to enforce forensic discipline."

GOVERNESSES' BENEVOLENT INSTITUTION AND QUEEN'S COLLEGE.—A special court of the Governesses' Benevolent Institution was held at the offices in Sackville-street, on Saturday, to consider the opinion of the Attorney-General relative to the power which a supplemental charter would give them to separate Queen's College from the Governesses' Benevolent Institution, and refer the latter from all obligations with regard to the former. Mr. Edward Thornton having been voted to the chair, the Rev. D. Laing, the secretary, stated that the meeting had been called in compliance with a resolution of the 24th of May, directing that a case should be laid before the Attorney-General relative to the proposed supplemental charter. The opinion of the Attorney-General was that the only course to pursue was, for the society to surrender its present charter to the Crown, and apply for a new charter; or, in other words, two charters, one for Queen's College and one for the Governesses' Benevolent Institution. The hon. gentleman then proceeded to say, that, in the event of a separation of the two institutions, it had been arranged that Queen's College should pay to the Governesses' Benevolent Institution £1000 to cover the preliminary expenses of the establishment of the college and the obtaining the charter. The committee of education of the old age had further requested him to state, that the professors had no wish to govern themselves, but had also pointed the appointment of a scholastic council for the purpose. They, therefore, suggested that, in the event of any difficulty being found to prevent the surrender of the present charter, the committee of management of the present society might themselves appoint such a council to govern Queen's College, or delegate powers to the president of the institution or to the Archbishop of Canterbury to nominate such council. After a short conversation, the Rev. David Laing moved that the honorary solicitor be requested to proceed with the preparation of the new charters, and take the necessary steps to obtain them, in accordance with the opinion of the Attorney-General, with all conceivable speed. Mr. Nisbet seconded the resolution, which was passed *nem. con.*

SOCIETY OF ARTS.—Our readers are aware that several of the most distinguished professors in the different departments of science have undertaken, by a series of lectures, to point the moral of the mighty lesson taught this year within the walls of the Great Palace. These lectures are intended to illustrate the position which the arts and manufactures of this country at present hold; to show in what respects we are inferior to our Continental rivals; and to indicate the direction in which the improvement and elevation of a manufacturing population may in future be successfully applied. One series of these lectures has already been partly delivered at the Museum of Practical Geology, in Jermyn-street; another is now in course of delivery at the house of the Society of Arts. On Wednesday evening Professor R. Owen, F.R.S., delivered a lecture on the subject of the raw animal and vegetable products used in manufactures. He directed his attention to the animal products in the Great Crystal Palace. He gave precedence to wool, as the most important of animal products used in manufacture. Wool was a peculiar modification of hair found on the skins of certain quadrupeds. Nature had provided for the growth of the hair a most ingenious machinery, consisting of the bulb and the capsula, through which the animal secretions were gradually matured into wool. The care of sheep occupied a greater number of the human race than all other occupations put together: from the depths of Central Asia to the newest states of America the pastoral life was followed; so that wool was the most important of all animal products used in manufacture. The most ancient sacred and profane writers mentioned sheep and wool; Strabo, Herodotus, and Pliny were full of historical allusions. The classic authors of Greece and Rome describe the sheep of North Africa, Libya, Circassia, &c.; Homer celebrates the flocks of Thrace and Thessaly, Cæsar found in Germany the wool that clothed the Britons, and Britain for wools. The most successful exhibitors were the Austrians; next Saxony, then Silesia, and then the Zollverein. Next to the American wools were the Russian. Spain exhibited her merinos as they were a century ago, and had produced a new wool of unusually silky texture, so valuable that the exhibitor was awarded the council medal. The climate of England was not favourable to the fine wools, and we drew, therefore, on Australia, and the Cape, and on the Irish supplies. Our immense population caused our farmers to look more to mutton than to wool. The lecturer then referred to hair and bristles from Russia; and next to whalebone. He referred to the silkworm and Chinese moth. The French had received the medal for raw silk. The plumage of birds was commented on, as also horn, in which the Indian specimens distanced all competition. Ivory, tortoiseshell, pearl, and the substances used in making gilt and gelatine, were referred to. The ladies had, no doubt, admired the beautiful gelatine flowers in the Exhibition, but would be surprised to learn that the material had been obtained from dead rats. Professor Owen was much applauded for his interesting lecture.

METROPOLITAN COMMISSION OF SEWERS.—Mr. Lawes, the chairman, on Wednesday submitted the scheme agreed to by the committee for reducing the expenses of the establishment, which proposes the division of the whole metropolitan area at present under the rated jurisdiction into four surveyors' districts, and one or two on the south side of the Thames, as might be requisite. In the secretary's department, including the minute and correspondence departments, the accountant's and the law departments, he proposed to effect a saving of £639 12s., being a reduction of from £3334 12s. to £2695 per annum. In the engineer's department the reductions were considerable. Mr. Forster Brown, who had been secretary since 1st of January, 1835, with a provision of £200 a year for travelling expenses, had volunteered for the present to reduce his salary to £1000, the travelling expenses remaining as heretofore. In the Fulham and Hammersmith district, under the head of engineering would be reduced from £1613 12s. to £880; in Westminster, from £2150 8s. to £980; in the Tower Hamlets, from £1281 to £1085; and in the district south of the Thames, from £3407 8s. to £1950 8s.; total saving under this head £4217 10s. The result of the whole of the reductions in the staff would be that the expenditure would be henceforth £15,106 19s. 10d. per annum, instead of £22,156 8s. 2d. less. In 1850 the rate was 1s. 1d. per cent; there were rent, taxes, stationery, and pensions, which raised the present expenditure to £22,054 6s. 1d. In place of this the total estimated expenditure would now be £19,174 4s., showing an annual saving of £2,880 1s. 11d. The plan, after having been approved by the committee, it would remain for the court at a future period to appoint the officers under it. Sir John Burgoyne, Captain Vetch, and Mr. Dawson spoke in favour of this plan, and resolutions were passed adopting it.

SANITARY STATE OF LONDON.—The third annual report of Mr. Simon, the medical officer, was submitted to the City Sewers Commission on Tuesday, accompanied by tabular returns. It appears that during these ten years the general population of the City has increased about 3 2 5ths per cent. This increase has not been uniform through the sub-districts of the jurisdiction of the City Sewers Commission; in some it has been unimportant, in others there has been an actual decrease, amounting even to 4 7-10ths per cent; while in the whole East London Union the numbers have risen considerably above the aggregate rate of increase, and in the St. Botolph sub-district exceed those of the former census by upwards of 15 per cent. In proportion to increase, Mr. Simon fears, may represent the continued influx of a poor population, and may imply that habitations are now still more densely thronged by a squalid and sickly population. The deaths from diarrhœa in 1850 in the same period in 1851 have been 2978 persons, giving for the City aggregately a rate of about 13 deaths for every 1000 living persons. Last year's rate was 21·39 per 1000. The death rate, estimated at 24·48 on an average of three years is unduly high, being nearly double, Mr. Simon says, of that which better circumstances have elsewhere rendered attainable. In the 9476 deaths in three years, in 3469 instances, the persons died before they had reached the age of children under five years old, children of this age constituting about a tenth part of the City population, thus dying at about four times the rate, according to the average mortality of the district. Mr. Simon shows, that a large proportion of deaths arising from epidemic fevers, smallpox, &c., might have been prevented by proper sanitary measures. He calls upon the Commission, now that the Legislature has invested it with additional powers relating to the dwellings of the poor, public nuisances, &c., to act fearlessly and vigorously in the maintenance of public health, to see that, whilst landlords take rent for lodging, they do not give fever as the equivalent. He looks forward to the time when the less affluent classes, like the wealthy ones, will seek to establish vast barracks of model houses in suburban districts. Property, no less than life, is interested in the development of sanitary reform, looking at the high poor-rates of the city of London.

VOLUNTARY EDUCATION CONFERENCE.—A meeting of the members of the Society for Voluntary Education was held on Tuesday, at Crosby Hall: Mr. G. W. Alexander in the chair: there were also present Mr. Sturge, of Birmingham; Mr. Charles Gilpin, of the Common Council; Dr. Cox, Mr. Miall, Mr. Howard Hinton, Mr. John Burnet, &c. A letter from Mr. Pease, M.P., who is favourable to the principles of the association, was read. The society is equally opposed to the Manchester schema of secular instruction and to the system adopted by the Congregational Union, of giving instruction throughout one denomination alone. The society maintain that government ought not to interfere directly or indirectly in the education of the people, and that religious instruction should be communicated in an unsectarian and undenominational character. Various resolutions to this effect were passed, at also to extend the system to the British colonies.

COURT OF ALDERMEN.—On Tuesday the frauds committed by persons in the Share Market, by calling themselves regular brokers of the city of London, induced the Lord Mayor to appoint Sir Robert Sobbie to inquire into the matter for inquiry if there were legal grounds for prosecution. Alderman Wilson's motion, that the Lord Mayor should nominate a clergyman to the vacant rectory of St. James, Duke's-place, was carried. The Court of Common Council raised the rate of nomination; but an amendment of Alderman Wire for deputations from the Committee of Privileges, and from the Common Council, to arrive at an accommodation, was rejected.

UNIVERSITY COLLEGE HOSPITAL.—The committee at their last meeting had the satisfaction of receiving the munificent contribution of £100 from Richard Lumley, Esq., of Great Melton Hall, Wymondham, together with a notice that he had authorised his bankers to pay the like sum in future years as his annual subscription to the funds of the charity. The thanks of the committee, and of the subscribers, have been duly voted to Mr. Lumley, and he has been requested to allow his name to be added to the list of vice-presidents of the hospital.

SOCIETY FOR THE PROPAGATION OF THE GOSPEL IN FOREIGN PARTS.—This society has issued a special report, dated the 6th inst., with reference to the jubilee which has just been celebrated throughout the British dominions. It states that in many cathedrals sermons have been preached and charitory collections made; that on Sunday, the 2nd inst., a sermon was preached by the Bishop and the celebration of the Lord's Supper, at which about 400 communicants attended, aims to the amount of £185 were received. At Cambridge a sermon was preached on Advent Sunday at Great St. Mary's, by Dr. Jeremie, Regius Professor of Divinity; and on the following day a meeting was held in the Town-hall, which was presided over by the Vice-Chancellor. The amount collected in the two days, including a donation of £113 from the Master of Christ's College, exceeded £300. On the 2d instant full cathedral service was celebrated at Winchester, and was followed by a meeting, about £300 was collected. Other services and meetings have been recently held at York, Doncaster, Huddersfield, Grantham, Loughborough, Rugby, Hertford, Chelmsford, &c.; and in the week following Advent Sunday the secretary received £1400 as returns of collections. Similar jubilee celebrations have taken place in almost every part of the world. Letters from the American Bishops state that the appeal has been cordially responded to in that country; while in every one of the North American colonies, in Canada, New Brunswick, Nova Scotia, Newfoundland, the West Indies, India, Australia, and the Cape, the jubilee has been celebrated. The society, taking into consideration the probability of a short £300 was collected. Other services and meetings have been recently held at York, Doncaster, Huddersfield, Grantham, Loughborough, Rugby, Hertford, Chelmsford, &c.; and in the week following Advent Sunday the secretary received £1400 as returns of collections. Similar jubilee celebrations have taken place in almost every part of the world. Letters from the American Bishops state that the appeal has been cordially responded to in that country; while in every one of the North American colonies, in Canada, New Brunswick, Nova Scotia, Newfoundland, the West Indies, India, Australia, and the Cape, the jubilee has been celebrated. The society, taking into consideration the probability of a large influx of people into the newly-discovered gold regions of Bathurst, New South Wales, has guaranteed the support of three additional chaplains for that district, to be sent as soon as well-qualified men can be found. It is thought that for this particular service unmarried men should be preferred.

CHURCH OF ENGLAND YOUNG MEN'S SOCIETY.—The second of a course of lectures, in connexion with the East London Auxiliary of this society, was delivered on the 5th instant at the Beaumont Institution, Mile-end, by the Rev. Robert Buckereath, rector of St. Giles-in-the-Fields. The subject on this occasion was, "The Inspiration of the Bible," upon which the lecturer delivered an eloquent and able address to a very numerous and attentive audience. The previous lecture was delivered by the Rev. W.W. Champneys, and, judging from the interest manifested by the large audience which assembled, the society is proving eminently successful in promoting the useful objects of the society The chair was taken by George Hitchcock, Esq.

THE EARLY-CLOSING MOVEMENT.—At a soirée held on Monday night, at the Freemasons' Hall, in the room of Mr. George Hite nock, silkmercer, St. Paul's Churchyard, was presented with a fine portrait of her husband, in oil, painted by Sir John Watson Gordon, R.A., as a lasting testimonial of the gratitude of the young men of the establishment, for the efforts he had made to assistance he has rendered to every scheme having their welfare for its object, and especially for the example he set in being the first to carry out to the full extent the long-desired object of shutting up his premises at an early hour. The attainment of the latter object Mr. Hitchcock has long and earnestly exerted himself, contributing privately, within the last few years, to the funds of the association the munificent sum of £700. He (Mr. Hitchcock) formed the resolution of closing at six o'clock in the evening during the months of December and January, and one hour earlier on Saturday evenings during the other months of the year. The portrait bore the following inscription:—"Presented to George Hitchcock, Esq., by upwards of 2000 young men employed in business in the metropolis, as an expression of their high sense of Mr. Hitchcock's unceasing exertions to promote the welfare of the class to which they belong, and especially to commemorate his noble efforts to secure the abridgment of long hours of business."

SHIPWRECKED FISHERMEN AND MARINERS' ROYAL BENEVOLENT SOCIETY.—The committee have awarded a donation of £5 and a silver medal to the crew of the Calais pilot-boat, for their conduct in saving the lives of the master and crew, ten in number, of the French brig *Etoile de la Mer*, wrecked on the Long Sand. The committee notice with feelings of satisfaction that this is the second time this year they have had the pleasure of rewarding the crews of the *Pryan* and *Aurora's Increase*, they having shared with the smack *Wonder* in the noble work of humanity in preserving the lives of the crew of the *Loyalty* in January last, that vessel having been wrecked on the Whiting Sand. Mr. R. S. Hesseltine, of the Stock Exchange, has also forwarded £20 from himself and friends, as a reward to the gallant fellows. The case is also under the consideration of the French Government.

ROYAL HUMANE SOCIETY.—On Sunday morning a sermon in aid of the funds of this valuable institution was preached at St. Philip's Church, Regent-street, by the Rev. F. Hessey, D.C.L., in the presence of B. Hawes, Esq., the treasurer, and several of the members of the society, as also Lady Otway, Sir T Cochrane, &c. The rev gentleman took his text from the 16th chapter of St. Matthew, and 27th verse—"For the Son of Man shall come in the glory of his Father, with his angels, and then he shall reward every man according to his works." In alluding to the vast numbers who resorted to the Serpentine, &c., for the purpose of bathing or skating, according to the season, the rev. gentleman observed that the most energetic exertions made by the society, at considerable expense, invariably adopted to prevent accidents, in addition to those for the restoration of suspended animation. As a proof of their great success in preventing loss of life, he stated that for the last seven years there had been but 24 accidents, and of these, from the prompt attention and medical skill, but one fatal, while no fewer than 18 persons who had attempted suicide had been rescued. The eloquence of the rev. minister produced a liberal collect.

WESTMINSTER PLAY.—The play of Terence selected for representation this year is the "Eunuchus." The nights of performance will be Monday, 15th; Thursday, 18th; and Monday, 22nd.

IMPROVEMENT OF SOMERSET HOUSE.—Among the works of improvement which are certain to go on may be mentioned the completion of Somerset House. At present the unfinished aspect of the west end of this building, and the awkward area in Wellington-street, at the foot of Waterloo-bridge. The new building, designed by Mr. Pennethorne, will face Wellington-street, and will have two projecting wings, which will come out to the line of the street. A porch or portico in the centre will afford a way through into the quadrangle. The character and details of Chambers's fine building are to be adhered to, and the effect promises to be grand. The entrance will be on the level of Wellington-street, and the area beneath will be made use for dry-stamping. The foundations are already commenced.

STATUE OF ACHILLES.—For several days past a number of workmen have been engaged at the base of the southern pedestal, statue of Achilles, in Hyde-park, in laying down an immense slab, which is said to have been a prominent object in the Great Exhibition, to form an illustrative approach to the colossal statue. An inscription has been placed on the slab, in fortification of which the Duke, but the workmen are not allowed to be copied, such great secrecy being observed that a large canvas tarpaulin is fixed round the statue to exclude all strangers, and it is generally understood some slight ceremony will be observed when it is opened to the public, which will be in a few days.

ELECTRIC TELEGRAPH COMMUNICATION.—The number of telegraphic stations now open, and in connexion with the central station of the Electric Telegraph Company, in Lothbury, amount to 226, embracing all the principal towns in the kingdom, seventeen of which have been added since the 1st of June, and the communications are transmitted and answers obtained in a few minutes. Of the total 226 stations, nearly 70 are principal commercial stations, at which the attendance is what is called constant, that is, day and night, and the total length of line of communication extending over 2500 miles, with 800 in progress of suspension.

FALL OF TWO WAREHOUSES IN THE CITY.—Early on Sunday forenoon an alarming accident took place in Cannon-street West, City, by the falling of two new buildings, situate at the corner of Black Jack-lane, opposite St. Swithun's Church. An omnibus full of passengers which was passing along the street at the moment had a narrow escape with its inmates from destruction. The driver, hearing the shout made by the watchman, had the presence of mind to spur on his horses and got clear of the scattering walls. What remains of the building excites much surprise: the entire roof, a pointed one, some 60 or 70 feet long, remains suspended, as it appears, on the back and gable end walls. The accident is supposed t have occasioned by the breaking of an iron girder.

THE VICTORIA FUND.—Her Majesty the Queen has most kindly signified her intention of bestowing a new gratuity for the relief of the poor patients who have been liberated from the County of Middlesex Lunatic Asylum, at Colney Hatch; and this to be carried on in a similar manner to the Royal Adelaide Fund at the Hanwell Lunatic Asylum. Her Majesty has already forwarded £100 for the promotion of the charity.

CABINET COUNCILS.—A Cabinet Council was held on Saturday at the Foreign Office. The Ministers present were—Lord John Russell, the Lord Chancellor, the Marquis of Lansdowne, Lord Granville, Lord Minto, Sir George Grey, Viscount Palmerston, Earl Grey, the Chancellor of the Exchequer, Lord Broughton, the Right Hon. Henry Labouchere, the Earl of Carlisle, the Marquis of Clanricarde, the Right Hon. Sir Macdonald, Lord Lansdowne, and Earl Granville. The Council sat two hours. Another Cabinet Council was held on Monday at the same office, when the same Ministers were present; it sat two hours and a half.

EXTRAMURAL INTERMENTS.—A deputation from the London Necropolis and National Mausoleum Company, consisting of Sir James Duke, Bart., M.P., Mr. Henry Charles Lacy, M.P., Mr. W. J. Voules (deputy-chairman), Messrs. F. Dobinson, John Gardener, and C. R. Thompson (directors); Mr. W. A. Coombe (secretary); and Mr. Richard Churchill (secretary), had an interview with Lord John Russell, for the purpose of drawing his Lordship's attention to the site at Woking as capable of meeting the requirements of the public, for many years to come, in extent, accessibility, and cheapness; the site comprising nearly two thousand acres, and being within forty minutes of the most central of the London termini by the South-Western Railway, which passes through the land—a canal also passing through the land—and that bodies may be conveyed, the funeral service solemnly performed, and mourners return to London within two hours.

FRENCH RAILWAYS.—The Lords Commissioners of her Majesty's Treasury have been memorialised by the secretary to one of the principal railways in France, praying for the free admission of official documents issued by the directors of the railway for the information and use of shareholders of this country, and their Lordships have the matter under their consideration at the present time, it being the first instance of a request of the kind having been made.

THE NEW HOUSES OF PARLIAMENT.—Considerable progress has been made within the last few weeks in clearing away the old building materials from the neighbourhood of Old Palace Yard. The wheels of the erections which formerly hid the view of the new palace, from the Corporation-room to the Victoria Tower, have been removed, and the space which has been laid open serves materially to enhance the imposing appearance of the new Houses from the west. The unsightly timber erections near the entrance to Westminster-hall will be removed in the course of a few days, the materials having been disposed of by public auction on Monday last. Workshops have now been erected on a temporary wharf, adjoining Westminster-bridge, in order that the stones in the New Palace-yard may, prior to the opening of Parliament, be rendered as clear as possible.

EXHIBITION OF 1851.—A return made to the Executive Committee on Saturday evening shows that the following countries had entirely cleared on the Exhibition building by Dec. 6:—viz. Spain, Portugal, Tunis, Jer-ey, Switzerland, China, Bahamas, North Germany, Russia, Van Diemen's Land, Greece, Persia, Sardinia, Tuscany, Eastern Archipelago, Rome, Netherlands, Sweden, Norway, Denmark, Liberia, Nova Scotia, New Zealand, Bermuda, New Brunswick, St Helena, South Australia, Cape of Good Hope, Jamaica, West Australia.—Signed, THOMAS BELSHAW.

THE PALACE-KEEPERSHIP.—The Lord Chamberlain has issued the following circular:—"Lord Chamberlain's Office. Sir,—I am directed by the Lord Chamberlain to inform you, that, in consequence of complaints having been made to him respecting the introduction of certain characters or allusions into various scenic representations, to which no reference is made in the manuscript submitted for examination, his Lordship directs that in future all such additions, whether scenic or pantomimic, shall be noted in full on the manuscript, as stage direction.—I am, sir, your most obedient servant,

"N. H. MACDONALD.

"To ——

The Manager of the ——."

IMPERIAL SALT AND ALKALI COMPANY.—On Saturday, at a meeting before Master Tinney, the assignee of Mr. Richard Parker were, after some discussion, settled on the list of contributories in respect of 2000 shares; but, except with regard of 400 shares, the Master, in the event of there being any assets to distribute, decides nothing.

DESTRUCTION OF UNION-HALL BY FIRE.—This edifice, situate on the south side of Union-street, Borough, was, late on Saturday evening, totally destroyed by fire. For many years it was the chief police-office for the Surrey and Southwark districts, and since the removal of the magisterial business to the new office at Stones'-end, in the Borough, the premises have been occupied principally by Messrs. Pickford and Co., as railway carriers, and by Messrs. Smith and Co., hat and cap manufacturers, of Trinity-square, Southwark, the former holding the lower portion as offices and stores, and the latter the remainder and upper floors, forming their warehouse. The outbreak was exceedingly sudden. In less than a quarter of an hour the whole structure appeared enveloped in one body of flame A large number of the brigade engines were promptly in attendance, and as soon as a supply of water was procured, which was somewhat delayed, as the building was surrounded in every quarter by the firemen, to prevent the conflagration extending. Eventually this was accomplished, but all attempts to save the hall proved ineffectual. By eleven o'clock the building was completely consumed.

BIRTHS AND DEATHS.—Births registered in the week ending Saturday, December 6—Males, 788; females, 740; total, 1528. Deaths during the same period—Males, 624; females, 592; total, 1216. The above return has reference to the whole of the metropolitan districts. The official table says: The state of the public health, as indicated by a constant increase of mortality, is far from being favourable at the present time. During four weeks of November the deaths registered in the London districts increased in the following progression 989, 1022, 1132, 1279; and in the week ending last Saturday they rose to 1216. During the same five weeks the deaths among old persons of 60 years and upwards have numbered successively 272, 207, 249, 277, and 305. It will be seen from a review of ten previous years (1841—50) that in the week of 1847 corresponding to last week influenza raised the mortality to 2464; with the exception of that year they did not in any corresponding week exceed 1146, and were generally much less. The average of the ten weeks was 1133, and, if corrected for increase of population, 1235, compared with which the present week exhibit an excess of 81. It is hardly necessary to remark that if the unusual mortality of 1847 were excluded from the comparison, the result would be still more unfavourable for last week, which shows that the mortality of young persons was 14 per cent, of persons in middle life 26 per cent., and those of advanced age 35 per cent. above the average. The increase in the present return above that of the previous week has been derived almost exclusively from the aged part of the population. Affection of the respiratory organs generally preponderate: the increase is shown in the last five weeks:—148, 168, 276, 298, 333. Bronchitis is 136 out of the 333 cases, pneumonia 132, and asthma 30. Consumption exhibits an increase; the deaths in the present week are 189. Epidemic cases amount to 249 deaths, amongst which the smallpox carried off 24 children and 3 adults; measles, 17 children; scarlatina, 43; hooping-cough, 31; croup, 6; typhus, 3; diarrhœa, 2; dysentery, 1; cholera (a child); hydrocephalus, 7; phlegmasia, 61; erysipelas, 7. The deaths of a child, aged nine years, from fright, caused by a cracker being tied to the street-door, which she went to open; of a woman, aged 57, from intemperance; of a man from destitution; and three children from suffocation in bed, are recorded.

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, Greenwich, the mean daily reading of the barometer was above 30 in. on every day of the week but Thursday, when it was highest, it was 30 185 in.; on Wednesday 30 150 in.; and the average of the week was 30 134 in. The mean temperature was from 4 to 9 degrees below the average of corresponding days in 15 years, during the week ending on Friday and Saturday, when it rose 3 and 5 degrees above it. The mean temperature of the week was 38 8 deg., or about 3 degrees below the average. The wind was in the north-west in the earlier part of the week, and changed to south-west on the last two days.

NAVIGATION.—The returns of vessels employed in the foreign trade of the United Kingdom for the month and ten months ending Nov. 5, 1851, show that the amount of tonnage cleared outwards for the month was 24 336 tons less than in the corresponding month of 1850, but the outward clearances for the same period exceed those of last year by 47,317 tons. The entries inward for the ten months show, as compared with the same period in 1850 an increase of 734,826 tons, of which 219,775 tons were British. The increase in the outward clearances for the above period has amounted to 835,852 tons, of which 161,373 tons belonged to the United Kingdom and its dependencies.

THE NEW CHEAP CABS.—The cabs constructing for the new Economic Cab-riot Company are of a very light and neat description, and being built on the clarence principle, with all the latest improvements, lamps and patent axles, it will be difficult to distinguish them from private carriages. The drivers must be steady men, of good character, and will not be employed without providing security for honesty and sobriety as well as civility. A livery will be provided, and a number on the box will be required under the penalty of dismissal. The most stringent regulations will be adopted by the company to prevent any fraud or imposition being practised by them on passengers. The fares, at the rate of fourpence a mile, will only be one-half of the present fare; and as a preventive against extortion, an indicator on a very simple principle will be attached to each vehicle, the dial-plate of which will be in the interior of the carriage fronting the passenger, so that he can ascertain to a farthing the distance he has travelled: nor can the driver defraud the company, as the indicator will be secured on the cab leaving the yard in the morning, and on its return at night the dial will denote the number of miles passed over during the day; this precaution will be necessary on account of the drivers having fixed wages, not as the present cabmen, who have to pay a certain amount for the use of (in many instances) a broken-down horse and a wretched rickety cab. A large number of the above-mentioned cabs will be started early in the ensuing year; and, if the company are assiduous in carrying out their professions, there is very little doubt that the project will not only be remunerating to the shareholders, but also a decided advantage to the public

A LIVERPOOL TRADESMAN COMMITTED FOR FORGERY.—Mr. John Lant, who was remanded on Friday week, on a charge of forgery, underwent a second examination on Tuesday morning, before Mr. Mansfield and Mr. Roch, in the magistrates' private room, and was committed for trial at the present assizes

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Accounts have been received this week from Monte Video confirming the intelligence which we published a week or two back, of the capitulation of the troops of Oribe to Urquiza on the 8th of October. All the forces of the Argentine Confederation are preparing to attack the Dictator Rosas at Buenos Ayres.

In the ten months ending the 5th ult. there was an increase of 24,163lb. of tobacco entered for home consumption, compared with the ten months in the preceding year.

An official notice of the French Government states that the Neapolitan Government has granted to importations into Sicily by French vessels, which have called at intermediate ports, the reduction of 10 per cent. enjoyed by the United States and other nations.

The constituents of Mr. Sharman Crawford, M.P., at Rochdale, gave a public dinner to the hon. gentleman on Friday week, at the public hall there. It is understood that Mr. Crawford retires into private life on the dissolution of the present Parliament, and the electors were desirous of taking an early opportunity before the connexion was dissolved to testify the feelings of respect and confidence they bore him. Mr. Bright, Mr. Cobden, and several other friends of the hon. gentleman, were present on the occasion.

Priessnitz, the celebrated founder of hydropathy, died at Graefenberg on the 26th of November, at the age of 52. In the morning of that day Priessnitz was up and stirring at an early hour, but complained of the cold, and had wood brought in to make a large fire. His friends had for some time believed him to be suffering from dropsy of the chest, and at their earnest entreaty he consented to take a little medicine, exclaiming all the while, "It is of no use !" His world-see physician, however, remained to the last true to his profession. About four o'clock in the afternoon of the 26th he asked to be carried to bed, and upon being laid down he expired.

A remarkable instance of longevity was shown in the *Times* obituary of Wednesday, which contained the deaths of 18 persons, whose united ages amounted to 1207 years, or an average of rather more than 80 years.

According to the official accounts of imports, it appears that on the ten months ending the 5th ult. there was a decrease of 67,466 gallons on spirits entered for home consumption compared with the preceding year, and a decrease of 84,042 gallons on wine. This, of course, includes the whole time the Great Exhibition was open.

The *Hamburg Zeitung* states that the King had granted all the applications for permission to marry that had at the time of his accession been sent in from officers of the army. It is well known that the late King gave such permissions very sparingly.

The *Postampt Gazette* of Frankfort states that the Duke d'Aumale, Guastenburg has accepted the propositions made to him by the Emperor of Russia, on the subject of the succession to the throne of Denmark. Austria and Prussia have also declared their assent to it.

The Emperor of Austria has appointed the Elector of Hesse-Cassel to be Colonel of the 8th Hussars, which regiment will henceforth bear his name.

The *Official Gazette* of Milan announces that the Austrian state has remitted the remainder of their punishment to Dr. Gaetan Cheri, of that city, and to Louis Rigomanti, of Sarcsina, condemned, the former to ten years' imprisonment for high treason, and the latter to three years' imprisonment.

The pastor, Wilhelm Meinhold, the author of the "Amber Witch," died on Sunday at Charlottenburg, near Berlin. He was one of the leaders of the old Lutheran party in Pomerania, but had for some years lived in retirement. His son has joined the Catholic Church.

The demand for agricultural labour in Yorkshire is greater than it has been for some years past, and higher wages are asked and obtained.

We learn from Mr. Elihu Burrit, and the friends of the international arbitration project will be pleased to learn, that simultaneous and energetic steps will be taken in Great Britain and the United States to press it upon the consideration of the two Governments during the next session of Parliament and of the United States Congress.

The Bishop of Mondonedo has been raised to the dignity of Patriarch of the Indies. The new Patriarch, Don Tomas Ingiesias y Barcenas, was born in 1803, and was presented to the Pope for the bishopric of Mondonedo in 1849.

General Joaquin Armero, Military Governor of Madrid, has been presented by the Queen with the Grand Cross of Isabel the Catholic.

The Count of Recuerdo, a boy ten years old, son of Queen Christina and the Duke Rianzares, has been appointed supernumerary captain of the Reina Gobernadora Regiment, and was presented by the Duke of Rianzares when the regiment was inspected by General Cordova.

The Count and Countess Samil are at Florence, where several balls have been given in their honour. The Countess is daughter of the Grand Duke.

The British war-steamer *Scourge* is still at Leghorn. Nothing new has transpired with regard to the Stratford (*au-dessus* Aldborough) case. The young prisoners are still in prison, and though they have been frequently interrogated and brought to trial, their sentence is still unknown.

The Austro-Italian press still publishes its *quotum* of political sentences. These offences are unceasing, and even Austrian martial law seems unavailing to crush the perverse spirit of the anti-Austrian league. Many fresh arrests are said to have been made at Florence, Pistoja, Fescia, and Arezzo, in Tuscany.

Some Scotch clergymen, members of the Free Scotch Church, were at Rome a short time since, and took some steps for establishing a church of their persuasion in that capital No success, however, crowned their efforts.

The Duke de Berri and the Duchess de Berri are on their way to Venice, where they will spend the winter. The Grand Duke Constantine of Russia is still there, and it is said that he will not depart until the spring. The presence of these families may serve to enliven poor Venice, which, notwithstanding the re-establishment of the free port, still enjoys but a small share of commercial prosperity.

The Bishops of Sardinia have addressed a protest to the King against the erection of the new Protestant Church at Turin, in which they state that the permission accorded is contrary to the Constitution. A church is being placed at the disposal of the Protestant residents of Genoa.

The Prince de Joinville, the Duke d'Aumale, and the Count de Paris are at Esher, and, as reported, gone to the Continent.—*Globe.*

We understand, says the *Western Times*, that a well-known Protectonist andeviller has been valuing some estates in the neighbourhood of Rockbeare. His valuation is said to exceed, by 40 per cent., that made for the same property some five or six years since.

The discreditable practice of extorting pence ostensibly as fees and remuneration for the services of waiters is now prominently under public consideration at some of the city dining-rooms. The abomination has been abandoned at one of the largest establishments in Bucklersbury.

Prince Windischgrätz has left Vienna for his estates in Bohemia.

Letters from Milan speak of the late journey of the Archduke Albert to Italy as connected with the arrangements for the marriage of his Royal Highness's sister, the Archduchess Maria, with the Archduke Leopold. The Archduke proceeded to Bauzen for the purpose of conferring with the late Viceroy of Italy, the Duke of Reichstadt, brother-in-law. The lady, whose name was announced as having taken place at the palace on the 29th ult., is the sister of the Governor of Hungary, and daughter of the deceased veteran, the Archduke Charles (a title given in Europe, I article" and " bridegroom" are not always used in the German use of the words, to an affianced pair) the son of the Archduke Rainer.

There were no less than 87,594 foreign watches, and 64,784 clocks, imported into this country during the first ten months of this year—an enormous number, when taken in addition to the large quantity daily manufactured in this country.

Joseph Hume has received the honour of a burgess-ticket at the hands of the authorities of Elgin. At the last meeting of the town council the clerk read an acknowledgment of the honour from Mr. Hume.

A committee, consisting of upwards of forty gentlemen of the principal firms in London and the provinces who have exhibited articles at the Great Exhibition of the Industry of All Nations, has been formed for the purpose of presenting the acting members of the Executive Committee with some suitable testimonial in acknowledgment of their able and impartial conduct in all matters connected with the interests of the exhibitors. It is intended shortly to convene a meeting with the view of bringing the matter more fully before the public.

A letter from Brussels, of the 9th, states that the King has entirely recovered from his late indisposition, which confined him to his room for above a fortnight. His Majesty visits on the 9th at Brussels from Laeken. On the 16th instant, being the 21st anniversary of his Majesty's birth, there will be a grand "Te Deum" in the Church of St. Gudule. A military review will be held, and the usual festivities at Court will take place on the present occasion; it will be recollected that they were omitted last year on account of the death of the Queen.

The Court of Tuscany has gone into mourning for twelve days on account of the death of the King of Hanover.

A supplement of the official *Corfu Gazette* of the 27th ult. states, that the Lord High Commissioner of the Ionian Isles announced to the Senate that he thought it expedient to order the exile of M. Lisgaras from Zante to Fano, for having written an article in the Greek journal *Rapsi*, in which he had asserted the right of the Ionian Isles to be independent of England. It is added, that the Lord High Commissioner had exercised his discretionary power in this instance, as the author of the article had been previously acquitted by a jury. The measure was approved of by the Senate.

The house occupied by the mother and sisters of Kossuth, opposite the Karoly Palace, in Pesth, was surrounded on the night of the 30th ult., and perquisitions were made in their apartments. Kossuth's sisters, Mdmes. Ruttkay and Messelenj, and the tutor of the latter's children, were afterwards removed to another part of the building. The mother of Kossuth obtained permission to remain in the apartment, but she was placed under the surveillance of the police. The tutor was subsequently put in irons.

The English Ambassador to the Prussian Court has made a formal claim in favour of Mr. Hodgkin the correspondent of the *Daily News*, who had been sent away from Berlin by order of the police. It is probable that the order will be withdrawn.

CHESS.

TO CORRESPONDENTS.
